EARNED INCOME TAX CREDIT

THURSDAY, JUNE 15, 1995

HOUSE OF REPRESENTATIVES,
COMMITTEE ON WAYS AND MEANS,
SUBCOMMITTEE ON OVERSIGHT, JOINTLY WITH
THE SUBCOMMITTEE ON HUMAN RESOURCES,
Washington, DC.

The Subcommittees met jointly, pursuant to notice, at 10:20 a.m., in room 1100 Longworth House Office Building, Hon. Nancy L. Johnson, (Chairman of the Subcommittee on Oversight) and Hon. E. Clay Shaw, Jr., (Chairman of the Subcommittee on Human Resources) presiding.

Johnson and Shaw Announce Hearing on the Earned Income Tax Credit

Congresswoman Nancy L. Johnson (R-CT), Chairman of the Subcommittee on Oversight, and Congressman E. Clay Shaw, Jr. (R-FL), Chairman of the Subcommittee on Human Resources of the Committee on Ways and Means, today announced that the Subcommittees will hold a joint hearing on the Eurned income Tax Credit. The hearing will take place on Thursday, June 15, 1995, in the main Committee hearing room, 1100 Longworth House Office Building, beginning at 10:00 a.m.

This hearing will feature invited witnesses only. In view of the limited time available to hear witnesses, the Subcommittees will not be able to accommodate requests to testify other than from those who are invited. Those persons and organizations not scheduled for an oral appearance are welcome to submit written statements for the record of the hearing.

BACKGROUND:

To be eligible to receive the Earned Income Tax Credit (EITC), an individual must have earned income. To target the credit to low-income workers, the amount of the credit to which a taxpayer is entitled decreases when the taxpayer's earned income (or, if greater, adjusted gross income (AGI)) exceeds certain thresholds. The earned income and AGI thresholds are indexed for inflation and are also adjusted to take into account qualifying children. In 1995, a taxpayer with two or more qualifying children will not be eligible for the EITC if his or her income exceeds \$26,673. The income cut-offs decline to \$24,396 for a taxpayer with one qualifying children.

SCOPE OF THE HEARING:

There are three major EITC issues which the Subcommittees intend to examine. First, based on studies by both the Internal Revenue Service (IRS) and the General Accounting Office, there is an alarmingly high rate of errors and fraud in EITC claims. According to IRS data, the noncompliance rate could range as high as 30 to 40 percent annually. Given the fact that the federal government will spend between \$25 and \$28 billion per year over the next five years on EITC benefits, the loss to the taxpayers from noncompliance could be very high. The IRS took significant steps during the current tax filing season to detect erroneous and fraudulent EITC refund claims. The Subcommittees will examine the effectiveness of the IRS' efforts and whether additional changes are needed to reduce the credit's susceptibility to fraud and errors. We are especially interested in learning whether, as some tax experts have recently argued, fraudulent claims are an inevitable consequence of the value and refundable nature of the EITC benefit.

The second issue to be addressed is whether inappropriate beneficiaries may be receiving the EITC. Under current law a taxpayer may have relatively low earned income, and therefore may be eligible for the EITC, even though he or she may have other significant sources of nontaxable income. Although the credit is intended to help low-income workers, its eligibility criteria does not include all of the resources recipients may have to support their families. Earlier this year, the Administration proposed denying the credit to taxpayers with \$2,500 or more of interest and dividend income. This Administration policy was based on the rationale that the EITC should be targeted to families with the greatest need, not those with

WAYS AND MEANS SUBCOMMITTEES ON OVERSIGHT & HUMAN RESOURCES PAGE TWO

other resources upon which they can draw to meet family needs. The Subcommittees will examine the implications of changing the credit's eligibility criteria to take into account sources of income that are not currently counted for eligibility purposes.

The Subcommittees are also interested in receiving testimony on the labor market effects of the EITC. As long ago as 1990, the Ways and Means Committee heard testimony expressing concern that the EITC could actually reduce the aggregate level of work in the nation. This effect could occur because earners in the flat range of the credit may have reduced incentive to work additional hours. Even more important, the millions of earners in the phase-out range have an unambiguous incentive to reduce hours of work. The Subcommittees will examine the concern that the credit's large phase-out range may lead to a net reduction in work.

In announcing the hearing, Chairman Johnson said: "Even advocates realize that there are problems with the EITC. Rather than put our heads in the sand while these problems fester, we should take strong action now to make certain the EITC will remain available for the millions of American low-wage parents, especially those trying to leave welfare, who use the EITC exactly as it was intended." Chairman Shaw added that: "This hearing is very important because the design of the EITC has invited fraud. As we maintain the core of this program, we must root out the excesses.

DETAILS FOR SUBMISSION OF WRITTEN COMMENTS:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement, with their address and date of hearing noted, by the close of business, Thursday, June 29, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filling written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

- Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines histed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the
- 1. All statements and any accompanying exhibits for printing must be typed in single space on logal-cise paper and may not exceed a total of 10 pages including attachments.
- Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material about to revenued and quested or paraphrased. All exhibit material ast mooting those specifications will be maintained in the Committee files for review and use by the Committee.
- 3. A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting written comments by the Generalized, must hedude on his statement or submittees a list of all effects, person, or expanizations on whose behalf the witness appears.
- 4. A repplemental about must accompany each statement listing the name, full address, a telephone number where the witness or the definition representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This appreciance about will not be included in the printed record.

The above restrictions and limitations apply only to material being rabmitted for printing. Statements and exhibits or supplementary material submitted colorly for distribution to the Members, the press and the public during the owner of a public hearing may be exhautted in the form

Note: All Committee advisories and news releases are now available over the Internet at GOPHER.HOUSE.GOV, under 'HOUSE COMMITTEE INFORMATION'.

Chairman JOHNSON. The hearing will come to order.

My colleague, Chairman Shaw of the Human Resources Subcommittee, will be joining us briefly. In the meantime, I would like to welcome you all to this hearing, a joint hearing of the Oversight and Human Resources Subcommittees of the Ways and Means Committee on EITC, the earned income tax credit.

The EITC was first enacted into law in 1975 to offset the impact of FICA taxes and to help encourage those on welfare to enter the work force. The EITC was designed to reduce reliance on AFDC, Aid to Families With Dependent Children, and other transfers by

increasing the aftertax return for work.

With a focus of welfare reform on moving people from dependence on welfare benefits to the independence of work and earnings, the EITC plays a very important role, but the cost is high. Under current law, approximately 19 million families vill receive the credit in the year 2000 at an annual cost of almost \$30 billion, nearly double what the Federal Government will spend on welfare benefits, and well over two times the \$13 billion the government will spend on education.

Advocates realize that there are problems with the EITC. If we expect this important benefit for low-income workers to survive, we certainly cannot afford to lose the \$5 billion per year that Treasury and the IRS, Internal Revenue Service, estimate we have been losing to fraudulent and erroneous claims.

The credit susceptibility for fraud and errors is apparently due largely to its refundable nature and the fact that the amount of the credit a taxpayer receives is determined by information supplied by

the taxpayer and not readily verifiable by the IRS.

In addition, the standards of proof required in the EITC claims are not comparable to the standards of proof required for receipt of other government benefits such as AFDC, Medicare, and unemployment compensation. Establishing eligibility for these benefits normally requires the claimant to meet with government employees face-to-face to produce proof of identification, and other qualifying information. These controls are not part of the EITC Program.

During the 1995 filing season, the IRS took a number of steps to address erroneous and fraudulent EITC claims, and this morning we are going to hear about those efforts and their outcomes. Even if the IRS were able to perfectly verify SSNs, Social Security numbers, and wage and salary income, compliance problems would

still arise with regard to self-employment.

As long as the payroll tax and the EITC subsidy are roughly equal, taxpayers have no incentive to overstate income from self-employment to increase their EITC. Doing so would result in a larger credit, but would also obligate the taxpayer to pay higher Social Security taxes on their self-employed income.

As a result of recent expansions of the EITC, there are now strong incentives for taxpayers to manipulate the level of their income from self-employment. The IRS is not equipped well enough

to uncover overreporting of income.

Today we will hear more from the IRS about the results of their fraud prevention efforts and some indication of what can be expected next year to further protect the Nation's revenues. Assistant Secretary Samuels will also give the administration's views on reforms to the credit, and we will hear testimony about how to further reduce the credit susceptibility to fraud and errors and how to better target the credit to those who need it most.

I would like to submit my entire statement for the record and acknowledge my cochairman, Mr. Matsui of California of the Over-

sight Subcommittee.

The opening statement follows:]

Opening Statement by the Honorable Nancy L. Johnson Subcommittees on Oversight and Human Resources Joint Hearing on the Earned Income Tax Credit Thursday, June 15, 1995

Good morning ladies and gentlemen. I welcome you to this joint hearing of the Oversight and Human Resources Subcommittees on the Earned Income Tax Credit.

The EITC was first enacted in law in 1975 to offset the impact of FICA taxes to help encourage those on welfare to enter the workforce. Thus, the EITC was designed to reduce reliance on AFDC and other transfers by increasing the after-tax return to work. With the focus of welfare reform on moving people from dependence on welfare benefits to the independence of work and earnings, the EITC plays an important role.

But the cost is high. Under current law, approximately 19 million families will receive the credit in the year 2000, at an annual cost of almost \$30 billion — nearly double what the federal government will spend on welfare benefits and well over two times the \$13 billion the government will spend on education.

Even advocates realize that there are problems with the EITC. If we expect this important benefit for low-income workers to survive, we certainly cannot afford to lose the \$5 billion per year that Treasury and the IRS estimate we've been losing to fraudulent and erroneous claims.

The credit's susceptibility to fraud and errors is apparently due largely to its refundable nature and the fact that the amount of the credit a taxpayer receives is determined by information supplied by the taxpayer. Much of this information cannot be verified by the IRS at the time the refundable portion of the credit is paid out.

In addition, the standards of proof required on EITC claims aren't comparable with the standards of proof required for receipt of other government benefits such as AFDC, Medicaid or unemployment. Establishing eligibility for these benefits normally requires the claimant to meet with government employees face-to-face, to produce proof of identification, to prove the existence of their dependents, and to satisfy other conditions. These controls aren't available in the distribution of the EITC by the IRS through tax refunds.

During the 1995 filing season, the IRS took a number of steps to address erroneous and fraudulent EITC claims. Among other things, the IRS delayed refunds on *all* returns with an invalid or missing Social Security number to give greater time to verify the refund being claimed. It also checked the validity of all Social Security numbers, and checked for duplicate use of the same numbers.

The preliminary evidence suggests that these checks will help somewhat to reduce the losses from fraudulent claims. For example, through May 21, 1995, the number of dependents claimed for tax year 1994 when compared to the number claimed through the same time period last year, decreased by approximately 800,000. The IRS believes this is probably due to the fact that non-existent or non-qualifying dependents claimed in prior years were not claimed this year — perhaps because of publicity surrounding the fact that the IRS would verify Social Security numbers.

But even if the IRS were able to perfectly verify Social Security numbers and wage and salary income, compliance problems would still arise with regard to self-employment income. Between 1975 and 1990, the subsidy rate of the EITC was roughly the same as the combined employee and employer share of the payroll tax.

As long as the payroll tax and EITC subsidy are roughly equal, taxpayers have no incentive to overstate income from self-employment to increase their EITC. Doing so would result in a larger credit, but would also obligate the taxpayer to pay higher social security taxes on the self-employment income.

However, as a result of recent expansions of the EITC, there are now strong incentives for taxpayers to manipulate the level of their income from self-employment, and the IRS isn't well equipped to uncover overreporting of income.

Our tax laws and administrative safeguards are generally designed to identify cases where taxpayers understate their income, not overstate it. For example, information reports such as 1099s allow the IRS to verify that taxpayers haven't omitted items of income on their tax returns. However, if taxpayers voluntarily report more income than the information reported to the IRS suggests, there's little the IRS can do to detect this in the absence of a full-scale audit, and the payoffs to audits in this area are small relative to other areas.

Today, we'll hear more from the IRS about the results of their fraud prevention efforts and some indication of what can be expected next year to further protect the nation's revenues. Assistant Secretary Samuels will also give us the Administration's views on reforms to the credit. We will hear testimony about how to further reduce the credit's susceptibility to fraud and errors, how to better target the credit to those who need it most, and the credit's impact on incentives to work.

Rather than put our heads in the sand while problems with the EITC fester, we should take action now to make certain the credit will remain available for the millions of American low-wage parents, especially those trying to leave welfare, who use the EITC exactly as it was intended.

I welcome all our witnesses today and thank them for their willingness to testify.

Mr. MATSUI. I would like to thank Chairman Johnson first of all for holding these hearings. Second, I would like to thank the Chair for the fact that she and her staff, in working with our staff, came up with a very good witness list, one in which I think we will get a positive airing of both the problems and solutions on the issue of the EITC. I want to thank you for the way this has been handled.

Chairman JOHNSON. Our staff has worked together very well, as have we.

Mr. MATSUI. Thank you.

I welcome my colleagues, Mr. Petri and Mr. Hutchinson, and certainly the two administration witnesses, the Assistant Secretary for Treasury, Mr. Samuels, and the Commissioner of the Internal

Revenue Service, Peggy Richardson.

Let me, if I may, be very brief, but make four observations, Chairman Johnson. One, the purpose of the earned income tax credit is to do two things. It is to move people from welfare to work. Many low-wage earners do not make enough, particularly if they are at the minimum wage level, in order to make a decent living and survive, as a result of that, the earned income tax credit, which was first imposed in 1975 and then extended in 1990 and 1993, and also in 1986 in tax reform, is to provide an incentive to continue to work and to get off welfare. Second, it is to make sure that families that work and who have children find a way to get out of poverty. Those are the two basic elements of the earned income tax credit.

I would disagree with the observation that some make, including in the opening statement of the Chair, that the earned income tax credit has become a disincentive for people to work, because now the threshold is approximately \$29,000. A family of three or four making \$29,000 would not have any excess income to save and put in a bank account or perhaps buy a house and, as a result of that, they are going to need every penny they make.

We are not talking about people that make \$200,000 or \$300,000 a year that might have excess income so they do not need to earn any more money to live. We are talking about people really on the threshold. Anybody under \$30,000 with three or four in their family in America today cannot make it unless they continue to work

and work and work.

I would like to also respond to the issue of the growth of the program. I know that there has been some allegations in the press reports and others that the earned income tax credit is exploding in growth and we need to stop it and we need to reform it.

As I mentioned, in 1986 we had the first major expansion. In 1990, under President Bush—because it has always been bipartisan—we had another expansion, and then we had the third recent

expansion in 1993. These are still being phased in.

Of course, as they are being phased in, the program will grow. By the year 1997, the full phase-in will occur, and after that I can assure you that the only growth will be the result of indexing the rates and also population growth. We do not expect a growth anywhere in excess of 3 or 4 percent, whatever inflation should be, and I believe we will have charts to show that.

It is false to say that this program is exploding and will ultimately create a deficit problem. We knew exactly what we were doing under President Bush in 1990. We knew what we were doing under President Reagan in 1986, and we knew what we were doing in 1993 under President Clinton, and that program will fully phase in in 1997 and the growth will be exactly what all taxpayers receive in terms of the indexation of inflation.

The third area and the second point I would like to make is the issue of the error rate, which everyone has seemed to make a big deal about. First of all, it was the Treasury Department and IRS under President Clinton which recently decided to examine the EITC. They found that there could be some problems with approximately 29 percent of the filers making errors on their returns. Of course, that is a rather high alarming number. At the same time, that does not mean 29 percent of benefits were paid out. It means that errors were made in an individual's return.

Second, bear in mind that when that very limited study was done, it was only on electronic filing. It was not on the paper returns that many low-income taxpayers file. It was electronic filing, which most low-income people do not do. That is what actually caused the IRS and Treasury to have their ears perk up and say we had better check these numbers. That was, as I said, in January 1994.

Since that time, the Treasury Department has commissioned a study that came out in September 1994, from that study, they made a number of observations and now they have come up with a number of recommendations, for example, during GATT, the General Agreement on Tariffs and Trade, discussions when we matched the Social Security number of the individual claiming the credit with the return.

We made changes on electronic filing, and now the person on the first electronic filing cannot file unless they provide decent verification. As a result of that, we have now been able to identify in this filing year 4.1 million returns that have errors, and so the service and also Treasury are correcting this problem. Second, they have made additional recommendations, both to the Congress and also in terms of regulations, that we believe will actually satisfy the problem.

Let me conclude by making one last observation, if I may. I think that to some extent we need to talk about this issue in the context of the larger issue of our Tax Code. We are talking about approximately \$20 to \$25 billion a year for low-income wage earners, people that work, not people that are on welfare.

At a time when we just passed the budget resolution, that gives each person making over \$100,000 a year, over \$12,000 in tax reductions, an individual taxpayer with a family of three making under \$30,000, will get maybe \$1,500 or \$1,900. Penalizing these families and restrict them from getting this credit at all, was agreed to on a bipartisan agreement. We really need to consider and think about what our values are in America today.

I look forward to these hearings, Chairman Johnson and other Members of this Subcommittee and Committees. At the same time, I hope that we do not do something that will create a disincentive for Americans to work and actually do major harm to the children of America.

Thank you.

Chairman JOHNSON. Thank you.

I yield now to my cochair of this hearing, Mr. Shaw, with the comment that some of the Members who have been waiting to testify have some pretty severe deadlines, and so we will move forward.

Chairman SHAW. Madam Chairman, at this point I would ask that my opening statement be made a part of the record in order to expedite this hearing.

[The opening statement follows:]

Opening Statement by the Honorable E. Clay Shaw Subcommittee on Human Resources Joint Hearing on Earned Income Tax Credit Thursday, June 15, 1995

By almost any account, the Earned Income Tax Credit has been one of Washington's most popular anti-poverty programs. The number of beneficiaries, the generosity of the credit, and the cost to taxpayers have all grown dramatically under Presidents Reagan, Bush and Clinton. And the fundamental premise of the EITC -- that government programs should reward poor Americans who work rather than those who do not and rely on welfare -- has now become almost the fifth gospel here in Washington. I'll call it the gospel according to Charlie, after my good friend Charlie Rangel.

Yet we are now hearing new criticisms of the EITC. The Green Book, for example, tells us that 168,000 people with incomes over \$40,000 received the EITC. Even more troubling allegations involve fraud and abuse costing taxpayers billions of dollars. One witness at a recent Senate hearing said the EITC should stand for "Easy Income for Tax Cheats." Make no mistake about it -- this Subcommittee will act to defend the EITC against continued abuse.

The Subcommittee also will consider whether the EITC's eligibility criteria should be changed so that only families without other resources are eligible for the credit. For example, earlier this year the Administration proposed targeting the EITC to families with less than \$2,500 in interest and dividend income. A version of this proposal is now law, and we will explore the implications of related changes for families that benefit and taxpayers who support them. We will also examine whether current EITC rules actually may reduce the time some poor families spend working.

Finally, both Republicans and Democrats want the EITC to help parents get off and stay off welfare. Yet the Committee has received disturbing information that most welfare mothers, even those who work, have only the foggiest notion of what the EITC is all about. Welfare departments intent on helping mothers leave welfare must begin programs designed to teach mothers about the EITC. We have invited an entire panel of witnesses to address this issue.

Despite the fact that problems exist, many Americans believe the EITC remains an important part of our country's efforts against poverty. I am one. The EITC helps poor families with children or single parents escape and stay off welfare. It also increases the chances that poor children will learn from their parents the value of work. That lesson is one of the most important any parent can pass on to a child, yet in some parts of our country a personal understanding of the value of work is almost unknown. Until someone suggests a better alternative, the EITC will remain our best bet to reinforce the importance of work, not welfare, for millions of poor families.

Chairman SHAW. I would now recognize the gentleman from Tennessee, Mr. Ford, for any opening statement he might have.

Mr. FORD. Thank you very much, Chairman Shaw and Chairman Johnson. Let me thank the two cochairpersons for calling these hearings today.

I am going to be very brief, and I ask that my full text be made

a part of the record, if you do not mind, Madam Chairman.

Some have proposed to cut the EITC either by indexing or by a halt in the phased-in increases we have mandated. Make no mistake about it, cuts in the EITC constitutes a tax increase on millions of hard-working Americans who in most cases have very low wages and low income.

Chairman Archer, the Chairman of the Full Committee on Ways and Means, has made it clear that tax increases will not occur on his watch, and I am counting on him to make certain that his pledge apply equally to working poor people, as well as to the rich

and wealthy of this Nation.

I think when we think in terms of the earned income tax credit—and I think Mr. Matsui has said it very well—under both Democrats and Republicans in the White House, we have seen over a 10-year period a program that has expanded. The expansion was the intent all along on a bipartisan basis. It would be expanded to make sure that working Americans can move off many of the public assistance rolls and stay within the work force and bring in wages, and also under the EITC Program, that they would be able to have the necessary benefits that will be needed. It should come as no surprise that spending on this program has now increased because that is what we intended for this program all along.

I once again thank you, Madam Chairman and Chairman Shaw, for calling these public hearings today. Hopefully, we, as Republicans and Democrats, can address this problem on the EITC

and make sure that we move forward in the right direction.

Thank you.

[The opening statement follows:]

OPENING STATEMENT OF REPRESENTATIVE HAROLD FORD June 15, 1995

Today's hearing is an important one because it gives us a chance to examine the facts and dispel several myths that seem to haunt the EITC.

For example, critics charge that spending on the EITC is out-of-control. They are correct that EITC spending has grown. But that is because the Congress, under the leadership of both Republican and Democratic Presidents, decided that it should grow. Over the past ten years, we have repeatedly expanded the EITC — as a reward for work and as an alternative to increasing the minimum wage. It should come as no surprise that spending on this program has now increased. This is what we intended.

Some have proposed to cut the EITC, either by ending indexing or by halting the phased-in increases we mandated.

Make no mistake. Cuts in the EITC constitute a tax increase on millions of hardworking Americans.

Chairman Archer has made clear that tax increases will not occur on his watch. I am counting on him to make certain that pledge is applied equally – to the working poor as well as the idle rich.

Talk about cutting the EITC is motivated – first and foremost – by the need to pay for the tax cuts Republicans have proposed for the wealthy. But clever advocates of tax cuts for the rich are using alleged fraud in the EITC as a smoke screen to hide their true intent.

Let me be clear. Any fraud is unacceptable. Congress has taken legislative steps to address errors and fraud in the EITC. The Clinton Administration has proceeded aggressively to reduce the error and fraud rates they inherited in 1993. If additional legislative or administrative action is needed, let's do it. But we cannot allow unfounded allegations of widespread fraud to be the reason we carve up a program that helps millions of working Americans succeed in their climb out of poverty.

I know that many of my Republican colleagues share this commitment to the EITC. I look forward to today's testimony and to working with you to preserve this valuable anti-poverty tool.

Chairman SHAW. Thank you, Mr. Ford.

If the first panel would sit at the witness table. Mr. Petri, we have you down first. If you would not mind, let Mr. Hutchinson go first, because he has a conflict with another hearing here in the Capitol.

The Chair at this time will recognize Tim Hutchinson from the

State of Arkansas.

STATEMENT OF HON. Y. TIM HUTCHINSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ARKANSAS

Mr. HUTCHINSON. Thank you, Mr. Chairman. Thank you, Mr. Petri, for allowing me to go first. I appreciate the Committee's indulgence. I know Mr. Petri will be able to handle all the questions that you will have when I excuse myself.

I want to commend you for holding this hearing on the EITC, program which former President Ronald Reagan called the be antipoverty, profamily, job-creation measure to come out of the comment of the com

Congress.

Unfortunately, in many ways the EITC has strayed far from its original mission. It was designed as a small supplement to help compensate working families who pay payroll taxes. It has evolved into an alternative to traditional forms of welfare assistance. In addition, as it currently stands, the EITC is prone to serious abuse and fraud and is flawed in its design. We need to rethink its construction.

Mr. Chairman, as you know, I have been active in the welfare reform debate. I think that redesign of the EITC is the logical next step in welfare reform. As we continue to work toward the overhaul of our welfare system and the goal of making people more independent, I believe the EITC can be a very valuable tool in this endeavor.

Our Senate colleagues have proposed to roll back the 1993 EITC expansion in their fiscal year 1997 budget resolution. While I do not agree with the Senate action in their proposal, I do think it may be useful for House members to consider many of the reforms in the Senate proposal in a comprehensive overhaul and repackaging of the program.

I have been working on EITC reform legislation. Since the purpose and configuration of the EITC has changed so dramatically over the years, I am calling my legislation the Minimum Wage for Families Act to more accurately represent what I think is the real objective of the EITC. My proposal would make the EITC more

profamily and more promarriage.

Under the ever-expanding EITC, single individuals have been made eligible, and families with children in college receive benefits. We need to focus only on families with children, especially those under the age of 18. Disincentives to marriage have developed, as the size of the credit has increased. The bill would change that by incorporating a one-time \$2,000 marriage credit. Lump-sum payments, since they were very small at first, made sense. Now they do not and we need to change that.

My bill would make the EITC practically useful by prorating the EITC over the 12 months of the year. In addition, I would draw

from the previous work done by my colleague Nathan Deal to make

it easier for the EITC to be payable in advance.

Further, my legislation would link the EITC to other welfare programs. We need to do this. Hard-working families should receive direct cash assistance, instead of food stamps. We accomplish this goal by expanding cash benefits under EITC and including those cash benefits when determining eligibility for other traditional welfare programs. This change would empower working families to make more of life's decisions themselves by replacing traditional welfare programs with a cash payment.

In line with President Clinton's proposal, the bill would deny EITC eligibility to individuals who are living in the United States illegally or who do not have proper documentation for employment

purposes.

Mr. Chairman, for too long we have been locked in a sterile thirties debate on the concept of minimum wage. We need to break out of that way of thinking by allowing businesses to hire as many workers as they can, pay market wages and utilize government to take family incomes up to a minimum standard of living. An increase in EITC cash payment would mitigate any need for a minimum wage increase.

Under my proposal, a family with two dependents earning the current minimum wage will make \$7 an hour in total compensation. A family with one dependent will take home \$6 an hour. By supplementing employer provided wages with direct cash assistance from the Federal Government, we do not arbitrarily raise the cost of labor to business and destroy jobs for the very people we are

trying to help leave the welfare rolls.

In addition, this proposal conforms to our recently passed budget resolution. Estimates conducted by CBO, the Joint Tax Committee, and my staff on various specifics of the proposal indicate that the overall savings over 5 years from these reforms would be in the \$20

to \$30 billion range.

Mr. Chairman, the EITC needs to be returned to its original purpose. I think we have a golden opportunity and we should take this opportunity to implement the necessary reforms, and I look forward and welcome the opportunity to work with you and your colleagues on this Subcommittee to bring about constructive and productive changes in the EITC Program.

I thank you for the opportunity to visit with you today.

Chairman SHAW. Thank you, Mr. Hutchinson. You have certainly been one of the leaders in the House on welfare reform, and I think you quite correctly recognize that the EITC is a very important ingredient to welfare reform.

Thank you very much.

Mr. HUTCHINSON. Thank you. Thank you for your indulgence on allowing me to be excused.

Chairman SHAW. Tom Petri from the State of Wisconsin, welcome.

STATEMENT OF HON. THOMAS E. PETRI, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WISCONSIN

Mr. PETRI. Thank you very much. I appreciate the opportunity to testify here today.

The EITC is a vital adjunct of welfare reform and a far better way to help the working poor than is an increase in the minimum wage. In particular, the EITC is also the best way to help families with the expenses of child care, since it does not discriminate against parents who stay home and forgo income in order to care for their own children.

Many of us now believe there should be no such thing as welfare as we have known it for able-bodied people. It produces dependency and is profoundly demoralizing to those who struggle to support themselves without public assistance. Instead, the basic income for all able-bodied people should come from work—publicly supplied, if necessary. Wages alone are not enough for those with families and only minimum wage skills. They need a credit or voucher to help them buy a health plan and a wage supplement geared to their family size.

The EITC is the best way to supplement wages. It is universal and, therefore, without stigma or demoralizing effects. It can be adjusted for need as determined by both family size and earnings. Unlike a minimum wage increase, the EITC does not remove the first rung of the employment ladder for those with the least skills, and it helps millions earning more than the minimum wage.

The current EITC, however, contains serious flaws which must and can be fixed. First, it includes childless people who do not need it as much as others because they would be well above the poverty line without it, if they worked full time. That feature should be

eliminated, saving about \$1 billion next year.

Second, in its phase out range for families with incomes between \$11,000 and \$27,000, the current EITC imposes high marginal tax rates of 21 or 16 percent. When combined with Federal and State income taxes, Social Security taxes, food stamp, and housing subsidy phaseouts, and a possible future Medicaid voucher phaseout, this can create total marginal tax rates exceeding 100 percent, completely removing any incentive to improve earnings. We need to take a coordinated look at the combined incentive effects of all these kinds of programs, eliminating the marginal tax rates in some and reducing them in others, including the EITC.

Third, the current EITC contains grotesque marriage penalties. The extreme case is a couple, each earning \$11,000, with four kids. As two single-parent two-child households, they get \$6,740 of EITC next year. As one \$22,000 income household, they get only \$1,060. The EITC marriage penalty for that couple is \$5,680, and they also face an income tax marriage penalty of \$750 and other penalties

in other programs.

Finally, the current EITC provides no extra help to families with

the greatest need; that is, those with more than two kids.

Fortunately, we can solve all these problems by modifying the \$500 child credit in the Contract With America and coordinating that with the EITC. At the same time, we will get a good compromise with the Senate on the child credit issue. I have three versions of this compromise costing one-quarter, one-half and three-quarters of the cost of the \$500 child care credit. I will describe the three-quarters version briefly.

First, increase the child credit to \$1,100, and at the same time, eliminate the personal exemption for children under 18. This pro-

duces a net tax cut per child next year as follows: In the 15-percent tax bracket, a tax cut of \$718; in the 28-percent bracket, \$386 per child; in the 31-percent bracket, \$310 per child; the 36-percent bracket, \$192; and in the 39.6-percent income tax bracket, a reduction in taxes of \$90 per child.

Now that is progressive, but very competitive with the flat \$500 credit. Lowest bracket taxpayers get much more, the 28-percent bracket almost as much, even in the 31-percent bracket, taxpayers

get three-fifths as much.

Next, for the real payoff, integrate the \$1,100 credit with the EITC by making it refundable for those with earned income. Since it is a universal credit, it does not need to be phased out. You give that credit to high-income, as well as low-income people, and that was in the contract. Then change the EITC to a credit of \$1,000 per parent, phasing out single parents between \$9,000 income and \$19,000 income, and couples between \$16,000 and \$36,000 income. That cuts the worst case marriage penalty from \$5,680 to \$200, cuts the marginal tax rate in the phaseout to 10 percent. Both of these results are enormous improvements.

There are charts that accompany my submitted testimony. Under the illustrations in those charts, all lower income two-parent families get much larger credits than under current law. Single-parent families with incomes under about \$20,000 generally do slightly worse than under current law, but only slightly, and that is the price we have to pay for eliminating the marriage penalty. Of course, if they have more than two kids, they do much better.

Let me close by reviewing the advantages of this kind of integrated approach. One, it is less expensive. It provides a good compromise with the Senate. The tax cuts are progressive, but very competitive with the flat \$500 credit. The credit itself is more than doubled. The EITC marriage penalty is practically eliminated, marginal tax rates are slashed, and larger families get the help they need.

Finally, we support welfare reforms in which the basic income of the able bodied is wages plus general credits plus a general health plan voucher.

Mr. Chairman, we need the EITC to make welfare reform work. The current version has problems, but let us fix them, not do away with the whole program.

Thank you very much for your attention.

[Attachments to the prepared statement follow:]

KILLING MANY BIRDS WITH ONE STONE: A CHILD TAX CREDIT COMPROMISE THAT COSTS LESS BUT FURTHERS WELFARE REFORM OBJECTIVES

PROBLEMS TO BE SOLVED:

- 1. Need House-Senate tax compromise on child credit;
- 2. Current earned income tax credit (EITC) -- a vital adjunct to welfare reform because it enables low-skilled people with kids to support themselves by working -- has 3 big flaws:
- a. contains high marginal tax rates (21% or 16%) during phaseout -- when combined with other taxes and phaseouts (i.e. food stamps, housing subsidies, and a possible medicaid voucher), removes any incentive to get ahead because total marginal tax rate can top 100%;
- b. contains high marriage penalties (\$5680 + \$750 income tax penalty in extreme case);
 - c. provides no extra help to larger families with greatest need.

SOLUTION:

 For kids under 18, eliminate personal exemption (\$2550 in '96) and substitute \$1100 credit -- provides net tax cut per child by bracket in '96 as follows:

15%	bracket	(abo	out 0	to	\$40K	TAXABLE	196	jt.	return	income)	 \$718
28%	41	("	40K	11	97K	11	u	"	"	ıı j	 \$386
31%	11	("	97K	16	148K	11	11	**	11	")	 \$310
36%	11	("	148K	11	265K	II .	11	**	11	")	 \$182
39.6	% "	Ì	01	ver	265K	н	11	н	11	" j	 \$ 90

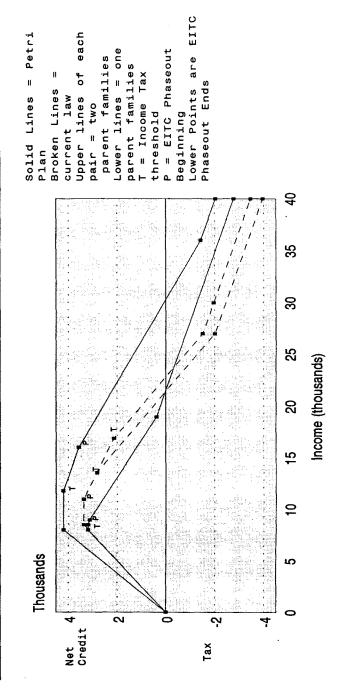

- 2. Universal \$1100 credit is refundable for those with earned income and substitutes for a major portion of the EITC -- no phaseout necessary because everyone gets it. Provide extra EITC to PARENTS -- maximum of \$1000 per parent -- phasing out for a single parent between \$9000 and \$19,000 income at a rate of 10%, and for two parents between \$16,000 and \$36,000 income at 10%.
- 3. Provide no other EITC; eliminate current EITC for childless people.
- 4. Optional (to save money): eliminate dependent care credit, which is unfair to parents who forgo income to take care of their own kids.

ADVANTAGES:

- Costs approximately 3/4 as much as flat \$500 credit;
- Tax cut is progressive;
- 3. Credit itself is doubled;
- Maximum EITC marriage penalty cut from \$5680 to \$200;
- EITC marginal tax (i.e. phaseout) rates cut from 16% & 21% (based on number of kids) to 10%;
- Provides extra \$1100 per child for WORKING poor families with more than two kids;
- Supports welfare reform in which basic income of able-bodied is wages plus general tax credits plus a general health plan voucher;
- Eliminates messy overlap between new credit and EITC;
- Though single parents with 1 or 2 kids get slightly less than current EITC, all two parent families get much more;
- 10. Hidden effect: cuts unnecessary EITC for students over 18;
- 11. Probably makes it easier for President Clinton to sign the bill.
- Shows Republicans can integrate several objectives in one creative solution.

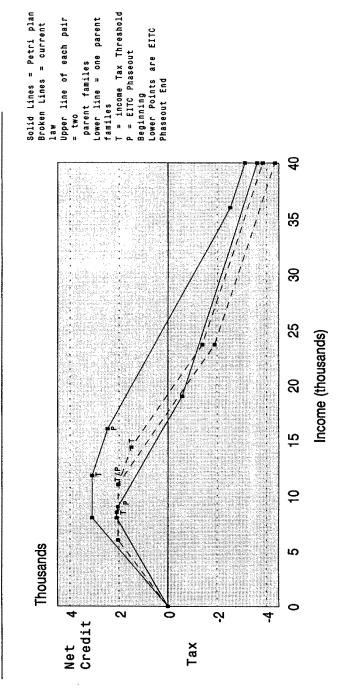

Combined Effects of Income Tax & EITC Petri Plan vs. Current Law

Two Child Families

Combined Effects of Income Tax & EITC

Petri Plan vs. Current Law One Child Families

Chairman JOHNSON. Thank you very much, Tom, for your very thoughtful testimony. You have been working on this legislation for about a decade now, and the depth of your knowledge is going to be a great help to us as we look at the problems that have developed.

Are there questions of Mr. Petri by the Members?

Mr. Gibbons.

Mr. GIBBONS. Madam Chairman, I just want to commend our colleague Tom Petri. I thought that was an excellent analytical workout of the problem we face and I want to tell you I am going to take your testimony and read it very closely. Both you and Mr. Hutchinson I thought were very constructive in your suggestions. I commend you for it.

Mr. Petri. Thank you. I think the one thing above all that you do as you work in this area is attempt to look at it from the point of view of the individual, rather than from the point of view of the advocates of each of the different programs. Integrate them, because otherwise you would get the law of unintended consequences—we will get it anyway, but it will get a lot worse as we find with things like the marriage penalty, which no one wants, but is the consequence of the current array of programs that we have got.

Mr. GIBBONS. Good thinking. Mr. RANGEL. Madam Chairlady.

Chairman JOHNSON, Mr. Rangel, Mr. RANGEL, I do not recall you

Mr. RANGEL. I do not recall your exact words, but it was something to the effect that a single person could do better if they worked full time. It is an assumption that there is full-time employment and that the worker would prefer to have a lower EITC by having a lower salary. Could you explain that? It is the first objection that you had.

Mr. Petri. I am having a little trouble hearing the question, but I think you were—

Mr. RANGEL. The current EITC, however, contains serious flaws which must and can be fixed. First, it includes childless people who do not need it because they would be well above the poverty line without it. My question follows, if they worked full time, it would save \$1 billion. Why would a person without a child want not to work full time? What makes you assume that they have elected to work part time in order to receive EITC?

Mr. Petri. I actually amended that testimony as I gave it to say it includes childless people who do not need it as much as others, that is to say, people with children.

Mr. RANGEL. Why would they not need it as much because they have a child?

Mr. PETRI. Because they are above the poverty line, if they are working full time. Obviously, if they are not working full time, they would need it, but presumably sometimes people will elect not—

Mr. RANGEL. Could you run away from that one and say, if they are not working at all, they do not get anything. If they are working part time, should we not assume that people who are poor want to work full time?

Mr. PETRI. If they are not working at all, they should certainly get disability assistance and they should have an opportunity for some sort of employment.

Mr. RANGEL. No, no.

Mr. Petri. If they choose then not to take that opportunity, I am afraid that there are others who really do not deserve to have——

Mr. RANGEL. There is an assumption in your testimony that people who are working part time without children can and should be working full time. Of course they should be, but I am assuming that there is no full-time employment with someone at these wages. My question is why would you say look for the billion dollars for this——

Mr. Petri. There is a problem there, we should be working to make sure there are full-time job opportunities or a combination of part-time job opportunities. My part of the country is probably different than yours, but the establishments are no longer advertising sales they are advertising help wanted.

Mr. RANGEL. If they have full-time employment opportunities

and they elect part time, I agree with you.

Mr. Petri. Well, if you are a single person, you can put together a number of part-time jobs to get the same income that you can from one full time.

Mr. RANGEL. It is really not that easy. It is a problem.

Thank you.

Chairman JOHNSON. Thank you.

Mrs. Kennelly.

Mrs. KENNELLY. Thank you, Madam Chairman.

First, I would just like for the record to say what I would have said if Congressman Hutchinson was still here. He said that he thought the EITC logically was the next step in welfare reform. I would just like to put on the record that President Clinton thought of it as the first step in welfare reform, because the EITC does keep people off welfare.

I would like to ask Congressman Petri a question. Your phaseout for couples ranges up to \$36,000. Of course, that is higher than current law. What I am worried about, does that take away from a single head of household who would have a lower income? Where do you get that additional money so that it goes up to \$36,000?

Mr. PETRI. I will refer to my expert on it. Mrs. KENNELLY. I have got one of those, too.

Mr. PETRI. Would you want to come up and address that?

Mr. FLADER. That does cost more money to extend the phase out, but it is the price of reducing the phase out rate to 10 percent, and the additional cost is in the order of \$1 or \$2 billion.

Mrs. Kennelly. My worry is where do you get it? Would it affect

single heads of households with lower incomes?

Mr. Flader. You can say that it is coming from any place you want to. The overall proposal costs about three-quarters of the \$500-per-child tax credit, and the savings come partly from the overlap between the \$500 tax credit and the current EITC. It is putting those two things together that gives you the ability to make these changes in the EITC without costing more money than the \$500 credit.

Mrs. Kennelly. Congressman Petri, the reason I bring this up is in a State like mine and maybe a State like yours, we have a disparity. We are a high-income State, but the ones that need and file for the EITC are single heads of households. I would just ask you to look at that as you proceed with your proposal.

Thank you.

Mr. Petri. Thank you. We would be happy to work with you on that.

Chairman JOHNSON. Are there other questions of Mr. Petri?

Mr. Levin.

Mr. LEVIN. A quick question to my friend Congressman Petri. I think your testimony is really interesting, but the horse is out of the barn, it seems to me. The credit is in the bill that is before the conference Committee, so I do not quite understand how this Committee goes back and does the kind of integration you suggest.

Mr. Petri. As I understand it, what is before the conference Committee is the budget resolution and there is a wide disparity between the numbers in the House and Senate. However they come out, you can come up with an integrated program in this Committee that will meet easily either one-quarter, two-quarters, or three-quarters of the range you are given in the conference Committee so far as any part of this tax cut is concerned.

I assume once they agree on the budget resolution, they probably will split the difference somewhere between the Senate's \$160 billion or whatever it is and ours of \$400 or \$380 billion or something like that, and then you are going to have to come up with tax change legislation and figure out what you are going to be doing. I guess you did pass a tax bill, but——

Mr. LEVIN. This Committee passed a bill, so you are essen-

tially---

Mr. Petri. The Senate has not passed it and I am sure there will

be plenty of opportunity as you move forward.

Mr. LEVIN [continuing]. You are essentially asking the Committee, once the budget resolution is passed, to reexamine the child credit that already passed here by majority vote.

Mr. Petri. What I am suggesting is that once the conference is finished on the budget resolution and agreement is reached on what the scope of any tax cut that this Congress would deal with under that resolution this year, that you will then have plenty of opportunity, working with your colleagues in the Senate, to make modifications in the credit.

As you know, I believe there were votes over there to restrict the amount. We have some votes to restrict the coverage. My proposal is to have it phased out in a progressive way and integrated with the EITC. With any change you are going to really make at the end of the day, it seems, to be responsible, you are going to want to take this child credit, the existing personal exemption, the EITC, and other need- and size-based programs that we have got and do the best you can to integrate them, so you do not end up with screwy incentives out there for people. I look at it as an opportunity to work in a bipartisan way to turn this into something that is progressive and that is going to be helpful as we move forward in the welfare reform area.

Mr. LEVIN. Thank you.

Chairman JOHNSON. Thank you very much, Congressman Petri.

Mr. Petri. Thank you.

Chairman JOHNSON. There are no more questions, and we will invite forward Assistant Secretary Samuels and Hon. Margaret Richardson, Commissioner of the IRS.

I would remind you both that your entire statements will be made a part of the record. If you could keep your comments focused and relatively brief. We have a good attendance at the hearing and questioning will take a long time, and we do have an excellent panel following you. We would appreciate that.

Mr. Samuels.

STATEMENT OF HON. LESLIE B. SAMUELS, ASSISTANT SECRETARY FOR TAX POLICY, U.S. DEPARTMENT OF THE TREASURY

Mr. SAMUELS. Chairman Johnson, Chairman Shaw and Members of the Subcommittees, I am pleased today to discuss the targeting of the EITC, as well as steps that are being taken to improve the EITC. Commissioner Richardson will address administrative matters more completely.

The administration is strongly committed to the goals of the EITC, which are to make work pay and to lift workers out of poverty in the most efficient and administrable manner possible. With its message of "work pays," the EITC helps reduce dependency on welfare and increase reliance on jobs. This is why the EITC has been supported on a bipartisan basis during its 20-year history. During the 7 years between 1986 and 1993, Congress voted to significantly expand the EITC in three major pieces of legislation under three Presidents, the Tax Reform Act of 1986, OBRA 1990, and OBRA 1993.

In connection with developing the OBRA 1993 changes to the EITC, this administration became aware of serious compliance problems with the EITC and committed itself to do everything in our power to improve compliance. That commitment has been aggressively demonstrated in both legislative proposals and unprecedented administrative actions.

On the legislative side, OBRA 1993 repealed the two supplemental credits that had added a great deal of complexity and were extremely difficult for the IRS to verify. Last year's Uruguay round legislation contained a number of administration proposals, including extending to all children the requirement that they be identified by their Social Security number for EITC purposes. That legislation also denied the EITC to nonresident aliens and required the Defense Department to include on W-2s amounts of nontaxable earned income.

In addition, the IRS has taken bold administrative steps to address compliance issues. Commissioner Richardson will describe the more significant of these actions.

Early indications suggest that the steps we have taken in the last 2 years are working to reduce significant EITC-related errors. Yet, there is more to be done and our commitment to do so remains unwavering.

Several proposals to improve the targeting and administration of the EITC were included in the President's 1996 budget; First, the proposal to deny the EITC to taxpayers having more than \$2,500 of taxable interest and dividends was included in modified form in H.R. 831.

Under a second proposal, only individuals who are authorized to work in the United States would be eligible for the EITC beginning in 1996.

A third proposal—and this is a very important proposal —would authorize the IRS to use simplified procedures to resolve questions about the validity of a Social Security number. Under this approach, taxpayers would have 60 days in which to either provide a correct Social Security number or request the IRS to follow the more labor-intensive current-law deficiency procedures. If a taxpayer failed to respond within this period, he or she would be required to refile with correct Social Security numbers in order to obtain the EITC.

Today, we are proposing an additional change that would extend those simplified procedures to reducing EITC claims by self-employed individuals who fail to satisfy their self-employment tax liability. We welcome the opportunity to work with the Subcommittees to address areas of EITC noncompliance, just as we would like to work on addressing error rates in other areas that contribute to the overall tax gap.

During the past several months, some observers have suggested that the EITC is growing uncontrollably. To the contrary, the increases in the EITC have resulted from carefully considered actions by Congress to gradually phase in the 1990 and 1993 expansions over a period of years. Once the 1993 expansion is fully phased in in 1996, future growth will be slightly less than projected growth of gross domestic product. As you can see on the chart provided, the growth, after the EITC is fully phased in, will be less than the growth in nominal GDP, gross domestic product.

Some claim that an appropriate response to compliance concerns is substantial across-the-board reductions in the EITC. The Senate budget resolution assumed the EITC would be reduced and tax burdens increased for over 14 million working Americans. Working families with two or more children would be hit the hardest, with an average tax increase of \$305 per year. Another proposal introduced in the Senate last week would result in even greater tax increases. We do not believe that raising taxes on millions of low-income working Americans is an appropriate response to the compliance concerns.

The administration's commitment to improving the EITC has been demonstrated through more than a dozen legislative and administrative actions since early 1993. In taking these actions, we have been guided by four key goals; to make work pay for those who might otherwise be on welfare, to ensure that an individual who works full-time throughout the year will not live in poverty, to target benefits to those with the greatest needs, while minimizing distortions, and to make it easier for eligible individuals to claim the credit and for the IRS to verify their eligibility.

The design of the EITC under current law reflects a balance among these four goals. I would like to address briefly each of

them.

First, for low-income families, the EITC makes work pay in two ways. Unlike many other assistance programs for low-income families, the EITC is limited to working families. Moreover, the credit amount initially increases—rather than decreases—for each additional dollar of earnings.

The positive link between the EITC and work can help offset the work disincentives created by other tax and transfer programs, such as Social Security taxes and food stamp benefits. The EITC, with its positive credit rate on low earnings, is the only program designed to help offset the marginal tax rates imposed by the other

programs.

The expansion of the EITC in OBRA 1993 was designed to increase the effectiveness of the EITC as a work incentive. The increase in the credit rate will encourage nonworkers to enter the work force and other low-income workers to increase their hours of work. While the overall effect of the OBRA 1993 expansion cannot be measured yet, we believe that the legislation will, on net, increase work effort.

Some workers with larger families will face slightly higher marginal rates as a result of OBRA 1993. However, they are unlikely to change their behavior much in response. These are individuals who are already very attached to work force. They cannot easily adjust their hours of work in response to a small change in tax rates; they need both their jobs and the EITC to meet their day-to-day needs, and most employers will not allow them the discretion to work fewer hours. The effect of the higher marginal tax rates on some workers in the phaseout range will likely be far outweighed by the effect of the increase in the credit rate.

A second goal is to ensure that a person who works at a full-time job for the entire year will not live in poverty. In order to lift a family of four dependents with a full-time worker earning the minimum wage out of poverty would require a combination of food stamps, enactment of the President's proposal to increase the mini-

mum wage, and the implementation of the expanded EITC.

Third, the benefits of the EITC should be targeted to families with the greatest needs and to those who can be best served by the positive incentives associated with the EITC. The credit rate is highest at very low earning levels where individuals are often mak-

ing the critical step from welfare to work.

Larger families have greater needs than smaller families, taxpayers with two or more children are entitled to a larger EITC than taxpayers with one or no children. Also, by providing the EITC to families with incomes of up to \$28,524 in 1996, the program provides modest relief from the effects of wage stagnation. We believe OBRA 1993 strikes an appropriate balance between encouraging increased work effort and minimizing the distortions resulting from the phase out of the credit.

The fourth goal of the EITC is simplicity and verification. If eligibility rules are simple, taxpayers can more accurately claim the EITC and avoid costly errors. With simple and verifiable eligibility rules, the IRS can also better ensure that the EITC is paid only to taxpayers who are eligible for the credit. Consequently, we strongly urge that simplification be given weight in evaluating any

proposal.

The administration evaluates other proposals to modify the EITC by the same criteria we apply to our own proposals. We are concerned that many of the options that may be considered in the com-

ing months will not meet these criteria.

Under the Senate budget resolution, the EITC will be eliminated for workers without qualifying children, and the OBRA 1993 increases will be scaled back. We estimate that 14 million working Americans will be adversely affected. EITC recipients with two or more children would lose on average \$305 in 1996.

A bill, S. 899, has been introduced in the Senate that would result in even more severe reductions of the EITC for millions of working families. In addition to the Senate budget resolution changes, the bill would repeal indexation of the EITC and further limit eligibility by adding new restrictions on the amount and types of income received by taxpayers.

The combined effect of S. 899, once fully phased in in the year 2000, would be to reduce the EITC for 19 million taxpayers by \$602 on average. The board to my right shows the effect on EITC recipients with two or more children of both the Senate budget resolu-

tion and S. 899.

Indexation is necessary to ensure that taxpayers do not lose eligibility for the EITC. Eliminating indexing does not address non-compliance problems. Consequently, the administration strongly

opposes proposals to eliminate indexation.

S. 899 would also limit eligibility by adding new restrictions on the amounts and types of income received by taxpayers. For example, the investment income cap would be lowered from \$2,350 to \$1,000. We have serious reservations about this proposal, since it discourages savings. Also, its complexity will increase error rates.

The bill also restricts eligibility by expanding the definition of income to include nontaxable Social Security benefits, child support payments, nontaxable pension income and tax-exempt interest. We would have serious concerns about imposing an additional tax on Social Security benefits of taxpayers who qualify for the EITC.

The tax system does not count child support as income to the custodial parent, because child support payments are a continuation of the other parent's obligation to support his or her child. Custodial parents should be encouraged to seek child support, rather than being penalized for obtaining it. Moreover, this change would be extremely difficult for the IRS to administer, because it does not currently receive information about child support payments.

The administration is committed to improving compliance with the EITC. Its significant actions in the last 2 years are clear evidence of this strong commitment. The compliance problems which the administration is addressing should not be used as an excuse to eliminate or reduce the EITC to millions of low-income working Americans who are playing by the rules.

Finally, my written statement contains additional areas of possible improvement we would like to explore with the Subcommit-

tees.

Madam Chair, this concludes my remarks. Thank you. [The prepared statement and attachments follow:]

STATEMENT OF LESLIE B. SAMUELS ASSISTANT SECRETARY (TAX POLICY) DEPARTMENT OF THE TREASURY BEFORE THE

SUBCOMMITTEES ON OVERSIGHT AND HUMAN RESOURCES COMMITTEE ON WAYS AND MEANS UNITED STATES HOUSE OF REPRESENTATIVES

Chairman Johnson, Chairman Shaw, and Members of the Subcommittees:

I am pleased to have the opportunity to discuss the targeting and labor market effects of the earned income tax credit (EITC), as well as steps that are being taken to improve the credit. While I will briefly touch upon compliance issues, Commissioner Richardson's testimony will address administrative matters more completely.

The Administration is strongly committed to the goals of the EITC which are to make work pay and to lift workers out of poverty in the most efficient and administrable manner possible. Since the EITC was created in 1975, bipartisan support for the tax credit and its goals has been growing. With its message of "work pays," the EITC helps reduce dependency on welfare and increase reliance on jobs. Prior to 1993, Congress voted to significantly expand the EITC in the Tax Reform Act of 1986 and the Omnibus Budget Reconciliation Act of 1990.

This Administration's commitment to the EITC has been demonstrated through a number of legislative and administrative actions since early 1993. In February 1993, we proposed an expansion of the EITC in order to improve its effectiveness in encouraging work and increasing the disposable income of working families. With certain modifications, Congress enacted the Administration's proposals as part of the Omnibus Budget Reconciliation Act of 1993 (OBRA 1993). The EITC is growing as it was designed to grow pursuant to the three expansions signed into law by Presidents Reagan, Bush, and Clinton respectively. As soon as those expansions are fully phased in, the EITC costs will grow at a slower rate than gross domestic product (Figure 1).

Since the passage of OBRA 1993, we have proposed further legislative changes to improve the administration and targeting of the EITC, while reducing its costs. Four of these proposals were included in the Uruguay Round Agreement Act of 1994 (URAA). As a consequence of that legislation, the EITC is denied to nonresident aliens and prisoners, taxpayers are required to provide a taxpayer identification number for each EITC qualifying child regardless of age, and the Department of Defense is required to report to both the IRS and military personnel the non-taxable earned income used in computing the EITC.

In this year's budget, we proposed that the EITC be denied to taxpayers with \$2,500 or more of interest and dividend income. A similar, but modified, provision was included in H.R. 831, which extended and expanded the 25 percent deduction for health insurance costs incurred by self-employed individuals.

We have also made several proposals which are still pending final legislative action. This year's budget includes proposals to deny the EITC to undocumented workers and to provide the IRS with the authority to use simpler and more efficient procedures when taxpayers fail to supply a valid social security number. In addition, the Administration proposed legislation last year that would permit demonstration projects to test alternative methods of administering advance payments of the EITC. We hope that Congress will act on these outstanding proposals.

As Commissioner Richardson will testify, the Administration has taken other significant actions to strengthen the integrity of the EITC. We have expanded our outreach efforts to ensure that eligible low-income individuals are aware of the EITC and the advance payment option. We have also conducted studies of EITC compliance and the broader issue of problematic refunds. Last spring, then-Secretary Bentsen appointed a Task Force to conduct an independent investigation of the refund fraud, and Under Secretary Noble presented their interim findings and call for aggressive action to the Ways and Means Oversight

Subcommittee last October. This year, we have intensified our scrutiny of returns claiming the EITC in order to prevent erroneous refunds from being paid to ineligible individuals.

While the House budget resolution does not assume reductions in the EITC, we understand that members of the Subcommittees are concerned about the effectiveness of this tax provision. Moreover, the Senate has assumed that the EITC would be reduced in its budget resolutions. We are concerned that many of the proposals that have been discussed in the Senate to change the EITC, though described as compliance measures, would not reduce error rates. Rather, these proposals would simply raise taxes on low and moderate-income working families. In fact, some alternative proposals to redesign the EITC would actually cause both non-compliance and work disincentives to increase. Before considering significant changes to this important tax credit which rewards work, we would urge the Congress to wait, as is assumed in the House budget resolution, until we have had time to observe the effects of both recent legislation and our enhanced compliance efforts.

In the remainder of my testimony, I will discuss in some detail the goals of the EITC and the actions taken by the Administration to strengthen the effectiveness of the EITC, as well as our views regarding proposals for possible modifications to the EITC.

Description of Earned Income Tax Credit for Low-Income Workers

The EITC is a refundable tax credit that is available only to low and moderate income workers who have earned income and meet certain adjusted gross income (AGI) thresholds. To be eligible for the EITC, a taxpayer must reside in the United States for over six months. Nonresident aliens are not entitled to the EITC beginning in 1995.

The amount of the credit increases significantly if an individual has one or two qualifying children. A child qualifies a filer for a larger EITC by meeting relationship, residency, and age tests. To meet the relationship test, the individual must be a child, stepchild, descendent of a child, or foster child of the taxpayer. The child must generally reside with the taxpayer in the United States for over half the year. For foster children, the residency test is extended to the full year. A qualifying child must be under the age of 19 (24 if a full-time student) or be permanently and totally disabled. By tax year 1997, a taxpayer must provide a taxpayer identification number (TIN) for each qualifying child.

Computation of the Credit. The credit is determined by multiplying an individual's earned income by a credit percentage. For a family with only one qualifying child, the credit percentage for 1995 is 34 percent. The credit amount increases as income increases, up to a maximum income threshold. For 1995, the income threshold is \$6,160. Therefore, if there is only one qualifying child, the maximum credit for 1995 is \$2,094 (34 percent of \$6,160).

The credit is reduced and eventually phased out once AGI (or, if greater, earned income) exceeds a certain phase-out threshold. For 1995, the phase-out threshold is \$11,290. The phase-out is accomplished by reducing the credit by a phase-out percentage. In 1995, for a family with only one qualifying child, the credit is reduced by an amount equal to 15.98 percent of the excess of AGI (or, if greater, earned income) over \$11,290. The credit is completely phased out and is no longer available to taxpayers with incomes above the end of the phase-out range. In 1995, this income level is \$24,396. The income thresholds for both the phase-in and phase-out ranges are adjusted for changes in the cost of living.

If there are two or more qualifying children, the credit percentage, income thresholds, and phase-out percentage are higher. For 1995, the credit percentage for families with two or more children is 36 percent of the first \$8,640 of earned income. Filers with earnings between \$8,640 and \$11,290 are entitled to the maximum credit of \$3,110 (36 percent of \$8,640).

The phase-out percentage for these families is 20.22 percent. As in the case of the credit for families with one child, the credit is phased out starting at \$11,290. However, the phase-out range for families with two or more children extends to \$26,673.

In 1996, the credit percentage for families with two or more children will increase to 40 percent of the first \$8,900 of earnings. Filers with earnings between \$8,900 and \$11,620 will be entitled to the maximum credit of \$3,560 (40 percent of \$8,900). The phase-out percentage will also increase to 21.06 percent, and the phase-out range will extend to \$28,524. Thereafter, the income thresholds for both the phase-in and phase-out ranges will be adjusted for changes in the cost of living. (The dollar amounts shown for 1996 are estimates.)

Workers who do not reside with qualifying children may claim the EITC if they are between 25 and 64 years of age and are not claimed as a dependent on another taxpayer's return. For these workers, the basic credit is 7.65 percent of the first \$4,100 of earned income for a maximum credit of \$314. In 1995, the phase-

out range for these workers is between \$5,130 and \$9,230 of AGI (or, if greater, earned income). The phase-out percentage is also 7.65 percent. The income thresholds for both the phase-in and phase-out ranges are adjusted for changes in the cost of living.

Advance Payments of the EITC. There are two ways to receive the EITC. Individuals can claim the credit by completing a Schedule EIC when filing their tax return at the end of the year. Alternatively, individuals with qualifying children may elect to receive a portion of their EITC in advance by filing a Form W-5 with their employer. These individuals are entitled to receive on an advance basis up to 60 percent of the credit allowable for a family with one qualifying child. The employer is not required to verify a person's eligibility for the credit.

At the end of the year, the employer notifies both the IRS and workers of the actual amounts of advance credits paid to individual workers on the Form W-2. When filing tax returns at the end of the year, these workers reduce the amount of EITC claimed by the amount of advance payments received.

Questionable Claims: The IRS must follow normal deficiency procedures when investigating questionable EITC claims. First, contact letters requesting additional information are sent to the taxpayer. If the necessary information is not provided by the taxpayer, a statutory notice of deficiency is sent by certified mail, notifying the taxpayer that the adjustment will be assessed unless the taxpayer files a petition in Tax Court within 90 days. If a petition is not filed within that time and there is no other response to the statutory notice, an assessment is made in which the EITC is denied.

Refundable Nature of Credit: The EITC offsets Federal taxes paid by low and moderate-income families. In recent discussions, there has been some confusion regarding the refundable nature of the EITC. In large part, this confusion appears to stem from the distinction between Congressional intent and budgeting conventions. Under conventional budget accounting practices, the EITC is shown in the budget as a reduction in taxes only to the extent to which it offsets a taxpayer's liability for taxes paid through the income tax system. This is because the EITC is claimed through the income tax system and as a practical matter, the credit can be most easily measured as an offset against the taxes paid through this system. Thus, under these conventions, about 23 percent of EITC costs in FY 1995 are shown in the budget as a reduction in Federal income taxes and other taxes paid through the income system, including self-employment taxes (SECA). About half of EITC recipients have an income or SECA tax liability prior to the receipt of the EITC.

Given that the EITC was created to offset the tax burden of low and moderate-income families, the EITC should not simply be measured as an offset to income and SECA taxes. When the reduction in the employee and employer portions of all social security taxes are included in the calculation, about 78 percent of EITC costs offset individual income and payroll taxes paid by recipients. Nearly all EITC recipients are subject to either individual income or social security taxes before qualifying for the EITC. Even this measure does not take into account other taxes which are offset by the EITC. During the consideration of both OBRA 1990 and 1993, the EITC expansions were also viewed as a way of offsetting the burden of increases in excise taxes, particularly the increases in the gasoline tax.

There has also been some confusion about the fact that most EITC recipients choose to claim the credit at the end of the year as a lump-sum payment rather than by adjusting their withholding or by taking advantage of the advance payment option. In that regard, EITC recipients are not very different from the majority of taxpayers who choose to receive a refund at the end of the year, rather than reduce their income tax withholding during the year. About 70 percent of non-EITC recipients receive an average refund of \$1,150 at the end of the year.

Goals of the EITC

In developing the Administration's agenda for the EITC, we have been guided by the three basic principles of tax policy: efficiency, fairness, and simplicity. Specifically, we have sought expansions and modifications to the EITC in order to achieve the following four goals:

- (1) to make work pay for those who might otherwise be on welfare;
- (2) to ensure that an individual who works full time throughout the year will not live in poverty;
- (3) to target benefits to those with the greatest needs while minimizing distortions; and
- (4) to make it easier for eligible individuals to claim the credit and for the IRS to verify their eligibility.

I would like to address each of these four goals in more detail.

For low-income families, the EITC <u>makes work pay</u> in two ways. Unlike many assistance programs for low-income families, the EITC is limited to working families. Moreover, the credit amount initially increases -- rather than decreases -- for each additional dollar of earnings. As a consequence, the EITC is

different from low-income assistance programs that are characterized by a reduction in benefits for each additional dollar of earnings. The EITC significantly increases the marginal return from working for both those who do not work at all and those who work less than full-time at minimum-wage jobs throughout the year.

The positive link between the EITC and work also helps offset the work disincentives created by other tax and transfer programs. Between 1983 and 1990, payroll taxes increased five times. Currently, workers are taxed at the combined employer and employee rates of 15.3 percent on the first dollar of earnings for the old-age, survivors, disability and health insurance (OASDHI) programs. Beyond a relatively low income health food stamp benefits are reduced by 24 cents for each additional dollar of earnings. The EITC, with its positive credit rate on low earnings, is the only benefit designed to help offset the marginal tax rates imposed by these other programs.

A person who works at a full-time job for the entire year should not live in poverty. As the EITC has increased in recent years, the minimum wage and other benefits received by low-income working families have declined in real value. Without an increase in the minimum wage, its real value in 1996 will decline to its lowest value in forty years. In addition, AFDC benefits are no longer provided for most families in which a mother works at least half-time. In the early 1970s, most states provided AFDC benefits as a wage supplement to a mother with two children whose earnings equaled 75 percent of the poverty level. Currently, only three states provide comparable benefits. In order to ensure that a family of four dependent on a full-time worker earning the minimum wage is lifted out of poverty, it would require a combination of food stamps, enactment of the President's proposal to increase the minimum wage, and implementation of the expanded EITC.

The benefits of the EITC should be targeted to families with the greatest needs and to those who can be best served by the positive incentives associated with the EITC. As a consequence, the credit rate is highest at very low earning levels, thus reaching individuals who are often making the critical step from welfare to work. Because larger families have greater needs than smaller families, taxpayers with two or more children are entitled to a larger EITC than taxpayers with one or no children.

Families with incomes slightly above the poverty level also require assistance. Wages have stagnated for many workers and declined markedly for low-wage workers. Between 1973 and 1993, real hourly wages of full-time male workers at the tenth percentile (that is, those whose wages are just above those of the lowest-paid 10 percent of workers) declined 16 percent, while real hourly wages at the median fell 12 percent. By providing the EITC to families with incomes of up to \$28,524 in 1996, the tax provision provides a cushion to protect moderate-income families from the effects of wage stagnation.

The EITC is designed to target assistance to the very neediest working families. We cannot target assistance to low-income families without causing marginal tax rates to increase for families with slightly higher income. However, we can seek to minimize such distortions.

The fourth goal of the EITC is simplicity and verification. If eligibility rules are simple, taxpayers can more accurately claim the EITC and avoid costly errors. With simple and verifiable eligibility rules, the IRS can also better ensure that the EITC is paid only to taxpayers who are eligible for the credit.

Simplicity is particularly important, because eligible individuals can claim the EITC directly when they file their tax return. It is likely that this simple application process has contributed to high participation rates among families eligible for the EITC. It has been estimated that between 80 and 86 percent of eligible persons claimed the EITC in 1990.

From the IRS's perspective, it is easier to verify eligibility for the EITC if the rules are simple. Moreover, because the IRS does not ordinarily interview EITC claimants, it is important that eligibility be based on criteria which can be verified as quickly as possible through independent reporting sources. Simplicity and verification prior to the payment of the EITC are key to the successful operation of the tax credit.

The Ways and Means Committee recognized the importance of the need for simplicity during consideration of OBRA 1990. At that time, data from the 1985 Taxpayer Compliance Measurement Program (TCMP) became available, showing an unacceptable number of erroneous EITC claims. In response, the tax-writing committees worked with the Bush Administration to address this problem. The simplification provisions contained in OBRA 1990 were a first step toward reducing EITC error rates. As described below, additional steps have been taken since 1990 to further reduce EITC error rates.

Legislative and Administrative Actions in 1993 and 1994

As I outlined in the beginning of my testimony, the Administration and Congress have taken a number

of important legislative and administrative actions during the past two years in order to improve the effectiveness and administration of the EITC. I would like to review with you our accomplishments during this period.

OBRA 1993. OBRA 1993 expands the EITC and makes the tax credit more effective in achieving its policy objectives.

First, OBRA 1993 increased the returns from working for those outside the workforce and for other very low-wage workers. For very low-wage workers without qualifying children, the EITC offsets the employee portion of the OASDHI tax. During the past decades, these workers had borne the full burden of increases in OASDHI taxes because they were not entitled to the EITC. For a family with one child, the credit rate for those with low earnings was increased by 11 percentage points from 23 percent to 34 percent. For a family with two or more children, the credit rate for those with earnings below \$8,900 in 1996 was increased by 15 percentage points from 25 percent to 40 percent. For low-wage workers with two or more children, the EITC will fully offset the combined employee and employer portions of the OASDHI taxes and the food stamp benefit reduction formula.

The OBRA 1993 expansion was also a critical step toward achieving the goal that a full-time worker should not live in poverty if he or she works throughout the year. In combination, a minimum wage job, food stamp benefits, and the EITC can lift a single parent with one or two children out of poverty. But, the income (including the EITC and food stamps and subtracting the employee portion of OASDHI taxes) of a family of four with only one full-time, minimum wage worker falls below the official poverty threshold. Prior to the passage of OBRA 1993, the poverty gap for a family of four would have been \$2,435 in 1996. The OBRA 1993 expansion significantly closes that gap. However, since the minimum wage has not kept pace with inflation, the job is not completed yet. This is why the President has proposed that the minimum wage be increased over two years by 90 cents.

OBRA 1993 reduced the poverty gap for minimum wage workers by increasing the maximum benefits by nearly \$1,500 in 1996 for a family with two or more children. For these families, this increase in the maximum credit, without a change in the phase-out range, would have resulted in a phase-out rate of 30 percent. In OBRA 1993, we tried to find a balance between the goals of providing low-income families with sufficient income support, while minimizing the marginal tax rates placed on families with higher, but still modest, levels of income.

Thus, the increases in the maximum credit were accompanied by changes in the income thresholds. For all families with children, the beginning of the phase-out range was lowered by about \$1,600. As a consequence, the phase-out rate actually fell slightly for a family with one child since the end of the phase-out range was left unchanged. To reduce marginal tax rates among families in the phase-out range, eligibility for the EITC was extended to families with two or more children that have incomes in 1996 of up to \$28,524 (or about \$3,000 above the prior level). The combination of these factors increased the phase-out rate from 17.86 percent to 21.06 percent, rather than 30 percent.

While the effect of OBRA 1993 can not be measured yet, we believe that the legislation will, on net, increase work effort. While some workers with larger families will face slightly higher marginal tax rates, they are unlikely to change their behavior much in response. These are individuals who are already very attached to the work force. They cannot easily adjust their hours of work in response to a small change in tax rates: they need both their jobs and the EITC to meet their day-to-day needs, and most employers will not allow them the discretion to work fewer hours. The effect of the higher marginal tax rates on some workers in the phase-out range will likely be far outweighed by the effect of the increase in the credit rate. By making work pay, the OBRA 1993 increase in the credit rate will encourage non-workers to enter the workforce and other low-income part-time workers to increase their hours of work.

Finally, OBRA 1993 simplified the eligibility criteria for the EITC beginning in 1994 by eliminating the two supplemental credits for health insurance coverage and for taxpayers with children under 1 year of age. These two supplemental provisions added several paragraphs to the instructions, 10 additional lines on the Schedule EIC, and two additional look-up tables. The IRS could not easily verify eligibility for the supplemental credits because it did not receive independent verification of taxpayers' eligibility for them. These changes should improve compliance by reducing errors and improving verification.

URAA. URAA contains several provisions to improve the targeting of the EITC to those with the greatest need. Under this legislation, nonresident aliens are denied the EITC beginning in 1995. Under prior law, nonresident aliens could receive the EITC based on their earnings in the United States, even though they were not required to report their world-wide income to the IRS. Thus, it was possible for a wealthy foreign student to obtain the EITC based on his or her earnings as a teaching assistant at an American university.

In addition, prisoners will not be eligible for the EITC based on their earnings while incarcerated.

In the past, prisoners generally would not have been able to craim the EITC because they did not reside with a qualifying child for over half the year. When the EITC was made available to workers without children in 1994, it became possible for prisoners to receive the EITC based on their earnings at prison jobs. Because this provision was made effective for tax year 1994, the EITC will not be paid to these individuals.

URAA also contained two provisions to improve the administration of the EITC. By 1997, taxpayers will be required to provide TINs for all dependents and EITC qualifying children, regardless of their age. By requiring EITC claimants to provide the TINs of all children, regardless of age, URAA improves the ability of the IRS to verify the eligibility of a taxpayer for the EITC.

Under the legislation, the Department of Defense is required to provide military personnel and the IRS with information regarding basic housing and subsistence allowances (or in-kind equivalents) and income excluded by reason of service in a combat zone. These changes will not increase their taxable income but will improve accuracy in reporting and verification of earned income. The savings from this provision are somewhat offset by another provision which extends EITC eligibility to military personnel stationed abroad.

Administrative Actions. The Administration has taken a number of steps to ensure that eligible individuals know about the EITC and the advance payment option. While many eligible persons receive the EITC, deever than 1 percent of EITC claimants receive the credit through advance payments. The reasons for the low utilization rate are not fully known. One possible explanation is that workers simply do not know that they have the option of claiming the credit in advance. A General Accounting Office study in 1992 provided some support for this theory when investigators found widespread ignorance about the advance payment option among low-income workers.

The Administration has intensified its efforts to alert taxpayers of their eligibility for advanced payments. As one of the first steps, President Clinton announced a Federal campaign in 1994 to enroll eligible government workers in the advanced payment system. The Treasury Department and a group of business executives have also joined forces to encourage private-sector employers to notify their workers about the advanced payment option. As required by OBRA 1993, the IRS sends out notices to EITC claimants after the filing season, informing them about the advance payment option and (although not required by the 1993 legislation) also supplying a Form W-5 for their use:

As Commissioner Richardson will explain, the Administration has also taken steps to ensure that those who are not eligible for the EITC do not receive it. During a two-week period in January, 1994, the IRS conducted a pilot study to determine what additional enforcement tools might be necessary to detect and prevent erroneous refunds during the remainder of the 1994 filing season. The results of the pilot compliance study, drawn from a sample of over 1,000 taxpayers who filed electronically during a two-week period in January, 1994, found that about 26 percent of every dollar claimed in the EITC was in excess of the actual amount owed to the taxpayer.

The results of this pilot study are not representative of the EITC filing population as a whole. Nonetheless, the IRS has taken a number of responsible and needed steps to limit the EITC to those who are entitled to the credit. Beginning this year, the IRS is validating the social security numbers on all tax returns claiming the EITC. Refunds on returns with incorrect or missing numbers are being delayed while the IRS checks the accuracy of the refunds claimed. We estimate that the effects of the social security validation tests, along with conventional enforcement activities and the repeal of the complicated supplemental credits, should reduce the error rate to 19 percent.

Using the results of the pilot study and other information, the IRS is also increasing its screening and review of all returns to ensure that only those taxpayers entitled to refunds receive them. As a consequence, refunds may be delayed on other questionable returns. Moreover, other legislative steps, described above, are still being implemented over the next several years (e.g., the requirement that taxpayers provide a taxpayer identification number for all children regardless of age). Finally, Congressional action on the Administration's remaining legislative proposals, described below, should further reduce error rates. In combination, implementation of these additional enforcement procedures and legislative actions will make it more difficult for taxpayers to erroneously claim the EITC and further reduce error rates.

Finally, the IRS stopped providing Direct Deposit Indicators in the 1995 filing season to lenders who were providing refund anticipation loans. This action is also expected to reduce compliance problems that were associated with refund anticipation loans. The IRS's actions this filing season have been applauded as both responsible and necessary by Ways and Means Oversight Subcommittee Chairman Johnson and Ranking Member Matsui in a recent "Dear Colleague" letter to House members.

¹ U.S. General Accounting Office. <u>Farned Income Tax Credit: Advance Payment Option</u> is Not Widely Known or Understood by the Public. (GAO/GGD-92-26, February 19, 1992).

FY 1996 Budget Proposals

The Administration included several proposals to improve the targeting and administration of the EITC in this year's budget submission. We are ready to work with the Congress on those proposals which have not yet been enacted.

Deny EITC to taxpayers having more than \$2,500 of taxable interest and dividends. Under this proposal, the EITC would be denied to taxpayers having more than \$2,500 of taxable interest and dividends beginning in 1996. This threshold would be indexed for inflation thereafter.

This proposal would improve the targeting of the EITC to the families with the greatest need. Under current law, a taxpayer may have relatively low earned income and be eligible for the EITC, even though he or she has significant interest and dividend income. Most EITC recipients do not have significant resources and must rely on their earnings in order to meet their day-to-day expenses, but taxpayers with significant interest and dividend income can draw upon the resources that produce this income to meet family needs.

This proposal, with some modification, was included in H.R. 831, which extended and expanded the 25 percent health insurance deduction for self-employed individuals. H.R. 831 lowered the asset income threshold to \$2,350 and expanded the categories of income subject to the threshold to include tax-exempt interest and net positive rents and royalties. The asset income threshold is not indexed.

In developing the Administration's proposal, we considered a broader list of asset income subject to the cap. We recognized that a broader list might increase equity, by treating the recipients of certain other types of asset income in the same manner as those who receive interest and dividend income. An expanded list would also reduce the incentive to choose a particular type of investment based on its tax or refund consequences. However, we were also concerned because the inclusion of net positive rents and royalties would add complexity to the determination of the EITC. These items are not reported separately on the Form 1040. We did not include the broader list of asset items because we were also concerned that low-income taxpayers could not convert real estate holdings and other types of assets into cash as easily as savings accounts and stocks in a time of need.

While we did not oppose the inclusion of tax-exempt interest and net rents and royalties in H.R. 831, we are very concerned about the asset income threshold not being indexed. We believe that the asset income threshold should be indexed in the same manner as all other income parameters for the EITC. Without indexation, the number of persons affected by this provision will increase over time. By 2000, the threshold would be equal to about \$2,075 in 1996 dollars and would increase the number of affected taxpayers from about 550,000 to 650,000.

EITC Compliance Proposals. Under this budget proposal, only individuals who are authorized to work in the United States would be eligible for the EITC beginning in 1996. Taxpayers claiming the EITC would be required to provide a valid social security number for themselves, their spouses, and their qualifying children. Social security numbers would have to be valid for employment purposes in the United States. Thus, eligible individuals would include U.S. citizens and lawful permanent residents. Taxpayers residing in the United States illegally would not be eligible for the credit.

In addition, the IRS would be authorized to use simplified procedures to resolve questions about the validity of a social security number. Under this approach, taxpayers would have 60 days in which they could either provide a correct social security number or request that the IRS follow the current-law deficiency procedures. If a taxpayer failed to respond within this period, he or she would be required to refile with correct social security numbers in order to obtain the EITC.

In combination, these provisions would strengthen the IRS's ability to detect and prevent erroneous refunds from being paid out. In addition, the proposals would improve the targeting of the EITC by providing the credit only to individuals who were authorized to work in the United States.

<u>Tax Systems Modernization</u>. The budget submission for the IRS contains funding for the continuation of its tax systems modernization (TSM). We urge the Congress to continue to fund TSM. TSM is vital to the long-run efficiency of the IRS's collection functions. TSM will also enhance the IRS's ability to detect erroneous EITC claims.

Demonstration Projects Proposal

In June 1994, the Administration introduced the Work and Responsibility Act (H.R. 4605). One of the provisions in H.R. 4605 would provide additional flexibility to States with respect to the EITC. We continue to support this proposal.

The proposal would allow four demonstration projects to determine the effects of alternative methods of delivering advance payments of the EITC. States would apply to the Department of the Treasury to provide advance payments of the EITC directly to eligible residents through a State agency. Such agencies could include food stamp offices, Employment Services, and State revenue departments. State plans would be required to specify how payment of the EITC would be administered. To finance these payments, States would reduce payments of withholding taxes (for both income and payroll taxes) from their own employees by the amount of the advance payments made during the prior quarter. The four selected projects could operate for three years beginning in 1996.

This pilot program is designed to determine whether another approach would be more effective for delivering advance payments than the current employer-based system. For example, a State could choose to allow all eligible EITC recipients to apply for advance payments. By receiving the credit as they earn wages, workers would observe the direct link between work effort and the EITC. Through a State program, individuals could have a choice of receiving the credit from a neutral third-party, without fear of the consequences of notifying their employers of their eligibility for the EITC. Moreover, they could receive assistance in determining the appropriate amount of the EITC to claim in advance.

A State could instead choose to target the advance payments of the EITC to welfare recipients -- as a way of driving home the message that "work pays." These individuals may not kn in about the EITC, and how it can "make work pay," because they do not have to file a tax return if their adjusted gross incomes are below the tax thresholds (which are generally less than the poverty thresholds).

If the legislation passes, we will evaluate these demonstration projects in order to understand better how individuals respond to receiving advance payments of the EITC. We will pay careful attention to whether the use of State agencies can increase both utilization of the advance payment system and labor force participation by non-workers.

States also have the resources to verify many of the eligibility criteria for the credit better than employers, reducing the risk of erroneous payments being made to ineligible persons. This option would also allow for an evaluation of alternative delivery systems on compliance.

Other Suggestions

The Administration evaluates other proposals to modify the EITC by the same criteria we apply to our own proposals:

- (1) Does the proposal make work more attractive to those outside the workforce and to others with minimal ties to the workforce?
- (2) Does the proposal reduce the poverty gap for full-time workers?
- (3) Does the proposal improve the targeting of the EITC to the needlest individuals and families in the least distortionary manner? and
- (4) Does the proposal make it easier for eligible taxpayers to accurately claim the EITC and for the IRS to verify their eligibility before refunds are paid out?

We are concerned that many of the options that may be considered by the Subcommittees do not meet these criteria.

1. Senate Budget Committee Resolution

The Senate budget resolution assumes that the Senate Finance Committee will reduce the EITC by \$13 billion between FY 1996 and 2000 and \$21 billion between FY 1996 and 2002. The resolution further assumes that these savings can be achieved by repealing the EITC for workers without qualifying children, reducing the EITC rates for families with children, and adopting the Administration's EITC compliance proposals from the FY 1996 budget. Under the resolution, the credit rate for a family with two or more children would be reduced from its 1995 level of 36 percent to 35 percent. In addition, the credit rate for families with one child would be reduced from 34 percent to 30.15 percent. According to Treasury's estimates, the EITC proposals in the Senate budget resolution would reduce the EITC by \$16.6 billion over the next five years and \$25.6 billion over the next seven years. The Senate budget resolution would reduce the EITC for 14 million working families, on average, by about \$239.

These proposals would generally limit the effectiveness of the EITC in reducing poverty. For example, in 1996, the maximum EITC for families with two or more children is scheduled to increase from \$3,110 to \$3,560. This is the level necessary, in combination with a 90 cent increase in the minimum wage, to close the poverty gap for a full-time minimum wage worker who supports a family of four. Under the Senate budget resolution, the maximum credit would be \$445 less than current law.

By lowering the credit rate for families with children, the proposal also reduces the effectiveness of

the credit for encouraging work effort. Under the proposal, many EITC recipients with earnings of less than \$8,900 could receive a smaller EITC than in 1995. The reductions in the credit rate would also adversely affect those who are currently outside the workforce, but who are choosing between work and welfare.

The Treasury Department estimates that 14 million EITC recipients would have their taxes raised by these proposals. Of these 14 million, 10 million would be workers with children. About 8 million EITC recipients with two or more children would lose, on average, \$305 in 1996. About 2 million very low-wage workers with only one child would lose, on average, \$137 relative to current law. (See Figure 2 and attached table.)

The budget resolution also assumes the repeal of the EITC for 4 million very low-wage workers who do not reside with qualifying children. The OBRA 1993 expansion of the EITC for these workers was designed to help offset the work disincentive effects of the social security tax. If repealed, these workers will lose up to \$324 in 1996. At the poverty level (\$8,200 in 1996 for a single individual under age 65), a single taxpayer would have a combined income and social security tax liability of \$1,394 (including \$240 of income tax liability prior to the receipt of the EITC and including both the employee and employer portions of social security taxes). Under the proposal, this taxpayer's tax liability would increase by \$101. On average, low-wage workers who do not reside with qualifying children would incur a tax increase of about \$173 in 1996.

2. S. 899

Last week, Senators Roth, Nickles, and Pressler introduced a bill (S. 899) to reduce the EITC. S. 899 adopts many of the proposals assumed in the Senate budget resolution. However, it would reduce the EITC far more deeply than was considered in the resolution. According to Treasury estimates, S. 899 would reduce the EITC by \$37 billion between FY 1996 and 2000 and \$66 billion between FY 1996 and 2002.

Under S. 899, indexation of the EITC would be repealed. As a consequence of the repeal of indexation and the lowering of the credit rates, EITC recipients would be entitled to a maximum tax credit of \$3,024 in 1996, a reduction of \$536 relative to current law. The maximum tax credit amount would not change after 1996. By 2000, the maximum credit amount would be reduced by \$1,016 -- or 25 percent -- relative to current law.

Indexation is necessary to ensure that taxpayers do not lose eligibility for the EITC. Under current law, an estimated 16.7 million taxpayers with children will claim the EITC in 1996. If benefit thresholds are not adjusted for inflation, participation would shrink to 14.8 million by 2000.

Eliminating indexation does not address the issue of non-compliance at all. Instead, it denies eligibility and reduces the EITC for millions of taxpayers who work hard, pay their taxes, and play by the rules. A number of tax provisions are indexed for inflation each year. These include the personal exemption, standard deduction amount, the width of the income tax brackets, the phase-out ranges for the personal exemption and deduction amounts, and the social security earnings ceiling. It is inappropriate to suspend indexation on the one provision which is solely targeted to low-income taxpayers.

S. 899 would also limit eligibility for the EITC by adding new restrictions on the amounts and types of income held by recipients. The investment income cap would be lowered from \$2,350 to \$1,000. Net capital gains and passive partnership and estate income would also be added to the investment income cap. We would have serious reservations about lowering the investment income cap from \$2,350 to \$1,000.

The bill's sponsors argue that at prevailing interest rates, it is inappropriate to provide the EITC to taxpayers with assets which can generate a \$1,000 of investment income. While we agree that taxpayers with large amounts of assets should not receive the EITC, we view the \$1,000 investment income cap as too restrictive. Low and moderate-income families should be encouraged to save for down-payments on homes, start-up capital for businesses of their own, their children's education or their own retraining. For example, the median price for a home purchased in 1994 by a first-time homeowner was \$125,000, with an average downpayment of 13.7 percent of the price (or \$17,125), while the costs of a four-year education at a typical state university exceeded \$25,000. Under the proposal, the EITC would be denied to many families saving for these investments in their futures unless they liquidated their savings or shifted their investments to exempted assets.

- S. 899 would also restrict eligibility for the EITC by expanding the definition of income. For purposes of determining eligibility for the EITC, adjusted gross income would be expanded to include non-taxable social security benefits, child support payments, non-taxable pension income, and tax-exempt interest. We are very concerned about proposals to expand adjusted gross income to include these items.
- S. 899 would effectively impose an additional tax on social security benefits of taxpayers who qualify for the EITC. The EITC would be reduced by up to 20 cents for each additional dollar of social security

benefits. Low-income elderly workers with children could be subject to higher taxes on social security benefits than some of their better-off neighbors. In part, a portion of workers' social security benefits (as well as non-taxable pension income) represent the return of their own contributions from previously taxed income. The proposal could affect non-elderly workers with young children, too. The EITC would be reduced or eliminated for a low-wage worker whose disabled spouse receives disability insurance benefits. Reducing the EITC benefits of social security recipients could also compound the work disincentives already present in the social security programs.

The tax system does not count child support as income to the custodial parent because child support payments are a continuation of the other parent's obligation to support his or her child. Custodial parents should be encouraged to seek child support, rather than being penalized for obtaining it. As a result, we have serious reservations about this provision as well. This provision would also add complexity to the determination of EITC eligibility and would be difficult to verify. In particular, the IRS does not currently receive information about child support payments.

In combination, these proposals would raise taxes on 19 million taxpayers, on average, by \$602 in 2000 (measured at 1996 income levels). Taxpayers with two or more children would be most adversely affected by these provisions. For eight million taxpayers with two or more children, the EITC would be reduced, on average, by \$886 in 2000 (measured at 1996 income levels).

The Administration is committed to improving compliance with the EITC rules. Its actions in the last two years are clear evidence of this commitment. The compliance problems which the Administration is addressing should not be used as an excuse to eliminate or reduce the EITC to all low-income working people. Consequently, the Administration strongly opposes proposals to eliminate indexation or to add complexity to the EITC eligibility criteria.

3. New Initiatives

The Administration is committed to taking additional steps to improve the administration of the EITC beyond the steps which have been taken or proposed in this year's budget. We would be particularly interested in exploring with Congress legislative proposals to improve the ability of the IRS to verify eligibility for the EITC.

First, we are announcing our intention to send to Congress a new legislative proposal which would provide the IRS with additional authority to prevent the payment of problematic refunds. We will propose that the IRS be authorized to use simplified procedures to reduce the amount of a taxpayer's EITC by the amount of unpaid self-employment taxes shown, either directly or indirectly, as being due with the return. Under this approach, taxpayers would have 60 days in which they could either demonstrate that they did not owe social security taxes on reported income or request that the IRS follow the current-law deficiency procedures. If a taxpayer failed to respond within this period, he or she would be required to refile with correct information on earnings and social security tax liabilities in order to obtain the EITC.

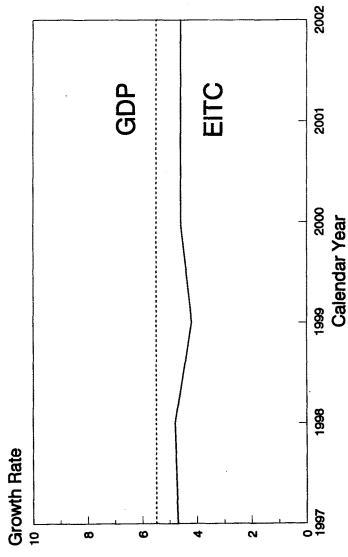

This proposal will ensure that taxpayers pay social security taxes on self-employment income which is also applicable toward their EITC. This proposal would reduce the incentive for taxpayers to over-state income in order to appear eligible for a larger EITC. While there is no conclusive evidence at this time of widespread EITC abuse by self-employed taxpayers, we recognize that the credit structure could lead to such problems in the future. This proposal is designed to deter this potential problem. We will also continue to carefully monitor this issue to determine the scope and nature of any potential or actual abuse.

Second, we are beginning a study to examine the benefits and costs of improving information-sharing between the IRS and States. The study will build on existing IRS efforts to improve information-sharing with State agencies. For example, during the past year, the IRS has been working with the State of California to determine whether wage data from the unemployment compensation system can assist the IRS in validating EITC claims. The new study will examine whether information from State welfare agencies would be useful in determining whether an EITC qualifying child was claimed by the appropriate taxpayer. The study will determine if State data can be made available to the IRS in a timely and consistent manner, and whether changes in disclosure laws are required to facilitate data exchange.

We would also like to explore with the Subcommittees other options for improving the administration of the EITC. For example, reporting requirements for non-taxable earned income, which is used in the calculation of the EITC, could be enhanced.

This concludes my remarks. Thank you once again for providing me with the opportunity to testify. I would be pleased to answer any questions that the Subcommittees may have.

Chairman JOHNSON. Thank you. Commissioner Richardson.

STATEMENT OF HON. MARGARET MILNER RICHARDSON, COM-MISSIONER, INTERNAL REVENUE SERVICE; ACCOMPANIED BY TED BROWN, REFUND FRAUD EXECUTIVE, IRS

Ms. RICHARDSON. Madam Chairman, Mr. Chairman and the distinguished Members of both Subcommittees, I want to thank you for the opportunity to be here today to discuss the IRS' efforts to improve the administration of the EITC.

When I became Commissioner a little over 2 years ago, I recognized the need to improve the administration of the EITC to ensure that it was available only to those working Americans who earned

it.

As Assistant Secretary Samuels has stated, legislation that was recently enacted will improve the EITC's effectiveness. The administration has also submitted additional legislative proposals—and another one which was mentioned by Mr. Samuels today—which would aid very much in the administration of the EITC.

In addition to these important legislative initiatives, beginning with the 1994 filing season and continuing through this filing season, the IRS has taken several steps to improve the administration of the EITC. A preliminary analysis of the returns that have been filed so far this year indicates that our efforts have paid off.

This morning, I would like to describe for you what we have done this filing season to improve EITC compliance and to tell you about

our future plans.

As part of our continuing efforts to improve compliance, the IRS implemented numerous systemic verifications and enhancements for the 1995 filing season. These initiatives include the increased verification of taxpayer SSNs, additional checks of returns claiming refundable credits, including the EITC, and increased compliance resources devoted to preventing and detecting erroneous and fraudulent refund claims before those claims were paid.

An important part of our strategy this year included delaying refunds that, as a result of computer analysis and fraud identification profiles, appeared on the surface to be erroneous. This additional time for review helped us check questionable claims and detect fraud schemes, including those schemes that employed dupli-

cate uses of SSNs.

During the filing season, the IRS devoted substantial resources to ensuring that taxpayers claiming refunds used the proper SSNs. We have been checking paper returns for missing, invalid or duplicate SSNs, and we have not been accepting electronically filed returns without correct, valid SSNs for the taxpayer, the taxpayer's spouse and for the dependents that were claimed. As of June 2, 1995, over 10 million missing, invalid or duplicate SSNs have been identified.

To further address noncompliance problems related to refundable credits, during this filing season we performed additional checks on returns claiming these credits to ensure that only those taxpayers who were entitled to them received them.

A preliminary analysis of the returns that have been filed so far this year does indicate that our efforts are paying off. As of May 26, the number of EITC claims by filers with qualifying children had decreased by 257,000 below last year. Prior to the 1994 tax year, EITC claims had increased each year since 1989. We believe that our efforts this filing season have kept those who had not earned the EITC from claiming it.

Also, through May 21 of this year, approximately 800,000 fewer dependents were claimed compared to that time last year. Thus, for the first time in several years, the number of dependents being

claimed did not increase.

The reduction in EITC claims and in the number of dependents is particularly significant, considering that the number of individual returns that were filed through May 26 is up over 1 million over this time last year.

In addition to enhancing our systemic filters to detect more questionable refund claims during this filing season, thanks to the additional compliance resource that Congress provided us this year, our 5-year compliance initiative, for the first time in a number of years we were able to substantially increase the enforcement resources dedicated to examining questionable claims, as well as to identifying fraudulent schemes.

Electronically filed returns that had duplicate SSNs were rejected. By rejecting these returns, erroneous claims and fraud schemes that in past years had made it into the system were kept out. In addition to the systemic screens, as of May 26, we had identified over 2,600 fraud schemes and we delayed \$65 million that had been claimed on over 46,000 electronic and paper returns.

Beginning last filing season and continuing this filing season, we have also delayed refunds with questionable EITC claims until those returns could be examined. As part of this initiative, from January 1994 through April 1995, 370,000 returns were examined and \$330 million in refunds were not paid because taxpayers were not able to verify that they were entitled to the EITC they claimed. As we continue the examinations of more than 700,000 EITC returns that are currently in our inventory, we would expect comparable results—EITC claimed in error never being paid.

Although the 1995 filing season is almost at an end, we have already begun planning our strategy to prevent all erroneous or fraudulent refund claims, including EITC claims, for next filing season. Information learned this filing season will be the basis for modifying and refining our current procedures. We will revise the standards for participation in the electronic filing program and adapt our fraud and error detection systems accordingly. If necessary, we will put in place new technology and additional filters.

The proposed legislation that is now pending would significantly aid our administration of the EITC because it would require EITC claimants to provide valid SSNs for themselves and their qualifying children, and it would permit us to treat an EITC claim the same way we do math errors when a Social Security number is either not provided or the Social Security number provided is not valid.

A similar procedure to the one currently used to correct math errors is appropriate and needed. Although we have the technological capability to identify returns without obvious mistakes, because the statutory deficiency procedures require multiple actions and are

more complex than math error procedures, we can only reach a

limited number of taxpayers with our current resources.

The proposed math error procedure would be used only in those instances where a taxpayer's EITC claim has not been substantiated by a valid SSN. Banks do not let their customers withdraw money without providing the necessary information, including an appropriate account number and a PIN, personal identification number. Congress should give us comparable tools.

Madam Chairman, Mr. Chairman, the IRS is committed to stopping EITC noncompliance, while at the same time ensuring that all hard-working Americans who earn the EITC receive it. The assistance of you and the Subcommittees in enacting the legislation that is pending would greatly assist our efforts to achieve these two im-

portant goals.

Thank you very much. This concludes my prepared remarks and I will be happy to answer any questions that you or your colleagues have

[The prepared statement and attachment follow:]

STATEMENT OF MARGARET MILNER RICHARDSON COMMISSIONER OF INTERNAL REVENUE BEFORE THE

SUBCOMMITTEES ON OVERSIGHT AND HUMAN RESOURCES HOUSE COMMITTEE ON WAYS AND MEANS

JUNE 15, 1995

Madame Chairman, Mr. Chairman and Distinguished Members of the Subcommittees:

I appreciate the opportunity to be here today to discuss the IRS's efforts to improve the administration of the Earned Income Tax Credit (EITC).

The BITC is a credit that is available only to low and moderate income workers who have earned income and meet certain income thresholds. The amount of the credit increases if the worker has one or two qualifying children. The EITC is designed to make work pay and to lift workers out of poverty in the most efficient and administrable manner possible. Since becoming Commissioner over two years ago, I recognized the need to improve the administration of the EITC and to ensure that the BITC is available only to those hard working Americans who have earned it.

To improve the BITC's effectiveness, in 1993, the Administration supported a proposal to simplify the credit by eliminating the two supplemental credits for health insurance coverage and for taxpayers with children under 1 year of age. The proposal was enacted as part of the Omnibus Budget Reconciliation Act of 1993. In the 1994 GATT legislation, the BITC was denied to nonresident aliens and prisoners. Taxpayers are required to provide a taxpayer identification number for each BITC qualifying child, regardless of age. Also, members of the Armed Forces stationed abroad are now eligible for the credit, and the Department of Defense is required to report to both the IRS and military personnel non-taxable earned income paid during the year that is included in computing the BITC.

The Administration has submitted additional legislative proposals which are still pending legislative action. The proposals include a provision that would deny the BITC to undocumented workers, and a provision that would authorize the IRS to use simpler and more efficient procedures when taxpayers claiming the BITC fail to supply valid social security numbers.

In addition to these important legislative initiatives that will aid in the administration of the EITC, the IRS, beginning with the 1994 filing season and continuing through this year's filing season, has taken several steps to improve the administration of the EITC. A preliminary analysis of returns filed so far this year indicates that our efforts have paid off.

This morning, I would like to share with you what the IRS has learned about BITC compliance, describe for you the IRS's actions during this filing season to improve BITC compliance, and discuss with you our future plans.

FILING SEASON STUDIES

During the 1994 filing season, as part of our efforts to gain a better understanding of the characteristics and extent of BITC compliance, the IRS performed a small study of electronically filed returns over a two week period. The study of 1059 returns selected in the last two weeks of January was designed to provide the information needed to put controls in place quickly for the rest of the 1994 filing season that would prevent and detect BITC compliance problems, including fraud. This study is now final, and a detailed report of this study is attached as an Appendix.

Information from this 1994 filing season study was used to develop additional controls to stop EITC noncompliance, including fraud, for the 1995 filing season. In addition, to expand our understanding of EITC compliance, we are conducting another study this year. This study involves a statistically valid, random sample of approximately 2,000 refund returns filed electronically and on paper throughout the 1995 filing season claiming the EITC.

Results from the 1995 study will be used to expand our understanding of issues identified during the first study. The field work and analysis of results will be completed this fall, and we will be pleased to share the results with the Subcommittees.

To improve compliance in all areas, including EITC, the IRS must continually assess emerging trends and constantly revise prevention mechanisms. Strategies, which are perfectly satisfactory today, may be useless tomorrow. The study of refund returns filed during this filing season will provide valuable information to better hone our strategy for next year's filing season and beyond.

FISCAL YEAR 1995 INITIATIVES AND RESULTS

As part of our continuing efforts to improve compliance, the IRS implemented numerous systemic verifications and enhancements for the 1995 filing season. These initiatives include increased verification of taxpayers' social security numbers (SSNs); additional checks of returns claiming credits, including the EITC; suitability checks and increased monitoring of Electronic Return Originators (EROs); and increased compliance resources devoted to preventing and detecting erroneous and fraudulent refund claims before the refunds are paid. In addition, an important part of our strategy included delaying refunds that, as a result of computer analysis and fraud identification profiles, appeared erroneous or perhaps fraudulent. This additional time for review helped us check questionable claims and detect fraud schemes, including duplicate uses of SSNs.

Closer Scrutiny Of Returns

Internal IRS studies and the report of an outside expert confirmed that erroneous or fraudulent refund claims, including EITC claims, often involved the use of incorrect or invalid SSNs.

As a result, during the 1995 filing season the IRS has devoted substantial resources to ensuring that taxpayers claiming refunds used the proper SSNs. A correct, valid SSN must be provided for the taxpayer, spouse, and dependents before an electronically filed return will be accepted. As of June 2, 1995, over 4.3 million occurrences (not returns) of missing, invalid, or duplicate SSNs have been identified on electronically filed returns resulting in the affected returns being rejected and, thus, prevented from entering the filing system electronically.

The checks of SSNs are not limited to electronically filed returns, however. We are also checking paper returns for missing, invalid, or duplicate SSNs. As of June 2, 1995, over 6.3 million SSN errors were identified on returns filed on paper which resulted in correspondence with the taxpayer and a delay of the refund.

We spent a lot of time both before and during this filing season urging taxpayers to use correct SSNs for themselves and their dependents. The importance of using accurate SSNs this filing season was emphasized in many ways, including a message to that effect on the cover of all tax packages and through many public announcements. Although the verification of SSNs caused delays for some taxpayers legitimately claiming refunds this year, once the SSN is corrected, these taxpayers should not experience delays in future years because of SSN problems.

To further address noncompliance problems related to EITC and other credits, such as motor fuel excise tax credits, during this filing season, we performed additional checks on returns claiming these credits to ensure that only those taxpayers who were entitled to such credits received them. On some returns, refunds were delayed to allow us additional time to verify claims prior to issuing the refunds.

At the beginning of this filing season, the IRS estimated that 82 million individual returns claiming refunds would be filed in 1995 and up to eight percent of these refunds could be delayed as a result of the screens and filters put into place. Through June 2, 1995, 79.2 million refunds have been issued -- 76 million were issued for the full amount of the refund; 3.2 million were partial refunds. Only 4.2 million refunds have been delayed in their entirety -- numbers that are consistent with our original estimates.

A preliminary analysis of returns filed so far this year indicates that our efforts to perform additional checks of refund claims and to verify SSNs have paid off. As of May 26, 1995, 17.3 million returns have been filed claiming the EITC. While the total number of EITC claims has increased by 3.2 million over last year, this increase is solely attributable to claims by filers without qualifying children who were first eligible to claim the EITC in 1994. If the BITC filers without qualifying children are disregarded, EITC claims have decreased by 257,000 from last year. We project that by the end of the filing season, EITC claims with qualifying children will decrease by 100,000 - 200,000 over last year. Because prior to the 1994 tax year, EITC claims had increased each year since 1989, it appears our efforts this filing season may have kept those who had not earned the BITC from claiming it.

Additionally, through May 21, 1995, the number of dependents claimed for tax year 1994 when compared to the number of dependents claimed in tax year 1993, (based on returns filed through the same period last year) has decreased by approximately 800,000. We believe that, if this pattern continues, when the 1995 individual returns have been filed (including extensions) either fewer dependents or no more than the same number of dependents will have been claimed for 1994 as were claimed in 1993. If so, this would be the first time in several years that the number of dependents being claimed did not increase. Our preliminary analysis shows that this result is probably due to the fact that non-existent or non-qualifying dependents claimed in prior years were not claimed this year. The reduction in EITC claims and in the number of dependents claimed is particularly significant when you realize that the number of individual returns filed through May 26, 1995 has increased over last year.

We at the IRS recognize that we must balance our efforts to detect and prevent BITC noncompliance with the need to ensure that those hard working Americans who are eligible for the EITC receive it. This filing season, although we performed additional checks to ensure fraudulent or incorrect claims did not get into the system, we also sent over 420,000 notices to taxpayers who appeared to qualify for the BITC but who had failed to claim it on their 1994 tax returns.

Our screens are designed to detect erroneous or suspicious returns. Unfortunately, some taxpayers who have filed complete and accurate returns also had their refunds delayed. We regret the inconvenience caused them, but I believe that most taxpayers want us to maintain the integrity of the tax system by making certain that only those who are entitled to refunds get them --even if additional time is needed to verify the accuracy of refunds claimed.

Enforcement Activities

In addition to enhancing our systemic filters in order to detect more questionable refund claims during the 1995 filing season, we substantially increased the enforcement resources dedicated to examining questionable claims as well as identifying fraudulent schemes. Criminal Investigation Division resources in our Questionable Refund Detection Teams were increased by 11 percent and Examination resources were increased by 277 percent - over 1,700 enforcement staffyears are being devoted to detecting and preventing refund fraud.

This filing season, electronically filed returns that had duplicate uses of SSNs for dependents and EITC qualifying children were rejected. By rejecting these returns, erroneous claims and fraud schemes that in past years made it into the system were kept out. In addition to these systemic screens, as of June 2, 1995, we had identified 2,685 fraud schemes, delaying \$65.9 million claimed on over 46,700 electronic and paper

Beginning last filing season and continuing this filing season, we have delayed refunds with questionable EITC claims until the returns can be examined. As a part of this initiative, from January 1994 through April 1995, 370,780 returns were examined. As a result of these examinations, \$330 million in refunds were not paid because taxpayers were unable to verify that they were entitled to the EITC claimed. As we continue the examinations of more than 700,000 additional returns with questionable EITC claims that are currently in the Examination Division inventory, we expect comparable results -- EITC claimed in error never being paid.

FUTURE PLANS

Although the 1995 filing season is almost at an end, under the direction of Mr. Brown, the Filing Fraud Executive, we have already begun planning our strategy to prevent all erroneous or fraudulent refund claims, including EITC claims, for next filing season.

Valuable information learned this filing season will be the basis for modifying and refining our current procedures. We will revise the standards used to screen EROs and adapt the systemic screens used to detect fraud and errors during this filing season; if necessary, we will put in place new technology and additional filters.

To identify more sophisticated fraud schemes, we are working with the Los Alamos National Laboratory to design software which detects anomalies and matches patterns in large data sets. Five new anomaly detection/pattern recognition tools have been tested at the Cincinnati Service Center this filing season. Preliminary results indicate that these tools will significantly enhance our ability to detect filing fraud schemes.

While we will continue to enhance our detection and prevention efforts, the key to improving our ability to detect increasingly sophisticated fraud schemes is our Tax Systems Modernization Program. Without modern technology -- hardware and software -- applying expert systems analysis to large databases is virtually impossible. Tax Systems Modernization will not only provide the computing power and capacity needed to apply sophisticated fraud detection systems, but, equally as important, it will also provide more timely access to information.

In addition to enhancing our technological capabilities, the Clinton Administration has proposed legislation to aid significantly our administration of the EITC and especially our efforts to improve EITC compliance. This legislation would require EITC claimants to provide valid SSNs for themselves and their qualifying children and permit the IRS to treat an EITC

claim in the same way it does math errors when an SSN is either not provided or the SSN provided is invalid.

Under current law, if the IRS detects an EITC claim with a missing or invalid SSN, before the refund claim is denied, it is subject to multiple actions under the statutory deficiency process, a process that typically takes about 8 months. The proposed procedure would authorize the IRS to recompute a taxpayer's tax liability if a tax return contains an EITC claim with a missing or invalid SSN. Before any adjustment is final, the IRS would send the taxpayer a notice asking for a correct SSN. If the taxpayer did not respond within 60 days (under statutory deficiency procedures taxpayers get two notices, a 30-day notice and a 90-day or statutory notice) the taxpayer's refund would remain adjusted.

A procedure similar to the procedure currently used to correct math errors is appropriate and needed. Although the IRS has the technological capability to identify returns with obvious mistakes, because the statutory deficiency procedures require multiple actions and are more complex than math error procedures, we can only reach a limited number of taxpayers with our current resources. The proposed math error procedure would be used only in those instances where a taxpayer's BITC claim has not been substantiated by a valid SSN. Banks do not allow their customers to withdraw money without providing all the necessary information, including an appropriate account number and a PIN. Congress should give the IRS comparable tools.

CONCLUSION

Madame Chairman, Mr. Chairman, the IRS is committed to stopping EITC noncompliance, while at the same time ensuring that all hardworking Americans who earn the EITC receive it. The assistance of you and your Subcommittees in enacting the Administration's proposals to aid in the administration of EITC would greatly assist our efforts to achieve these two important goals.

This concludes my prepared remarks. My colleagues and I would be happy to answer any question you or other Subcommittee members may have.

1994 Earned Income Tax Credit Compliance Study

I. Introduction

The Internal Revenue Service undertook this study early in the 1994 filing season in order to identify ways of reducing refund fraud associated with the Earned Income Tax Credit (EITC) during the remainder of the 1994 filing season. This information was also viewed as critical for designing new fraud control interventions for the 1995 filing season. Although the initial scope of the study was focused on identifying apparently fraudulent or intentionally overstated claims for EITC, it became evident that the results provided broader information on taxpayer understanding and compliance with EITC qualification requirements.

It is significant that this compliance study was the first of its kind conducted by the Service. As noted in the following sections, the validation of sampled EITC claims was very different from traditional IRS compliance measurement programs. Therefore, its unique character offers valuable information on taxpayer compliance but these "first-time" results provide limited comparability to previous studies because of the difference in methodology.

It is also important to understand that this study was never intended to provide an overall assessment or measurement of EITC compliance for the entire filing season. Because the study only included early filers on the electronic filing system, it cannot be interpreted as representative of all electronic filers or all paper filers claiming the BITC during the 1994 filing season. For this reason, the Service recognized the need to design a more comprehensive compliance study for the 1995 filing season. The 1994 study did not seek to measure or quantify "fraud" in the BITC, but sought to provide useful information about the types of errors or abuse that could be used by persons to file fraudulent or overstated claims with the IRS.

II. Sample Design

The study sample was drawn from tax returns claiming the EITC and filed electronically during two early weeks of the 1994 filing season (January 14 thru January 28, 1994). A computer program was written to select every 1,001st EITC return with the 517th return as the initial starting point for sampling in each of the five IRS processing centers that receive electronically filed returns. This systematic sampling procedure ensured that the number of returns sampled at each center would be approximately proportionate to their EITC filing volumes during the sampling period. In order to maintain geographic balance in the sample, the sampling rates were manually adjusted in some centers. This systematic method of sample selection was designed for simplicity.

The total sample selected was 1,068. During the field validation phase, additional cases were dropped from the sample. These deleted cases included returns where the BITC schedule was attached but no BITC amount was claimed, returns filed from overseas military addresses (FPO/APO), and returns where the taxpayer had died or could not be located. <1> The final sample count used for the analysis was 1,059.

<1> The cases that were dropped from the sample because the IRS could not locate the taxpayer were limited to situations where the taxpayer could not be located, nor could information on the return be confirmed or validated from other sources. In other cases that were retained in the sample, the taxpayer could not be located but information was validated by employers, preparers or other family members.

Returns that were filed electronically in the 1994 filing season were subject to a variety of validity and consistency checks before being "accepted" by the IRS. This included checking all Social Security Numbers (SSNs) listed on the return and matching the dependent's birth date to the Social Security Administration record. If any SSN was invalid, the return was rejected and could not be included in the sample. The sample included returns with "SSN applied for" for a child under one year of age.

As noted previously, this sample was not designed to provide representative data for all BITC filers during the 1994 filing season. However, to examine how the early electronic filers claiming the EITC differed from all EITC filers, data from the sample was compared to the Statistics of Income Sample of 1993 filers. (Table 1 summarizes this information.)

Sample period - Between January 14 and January 28, 1994, the electronic filing system accepted 1,273,000 tax returns claiming the BITC. The average BITC claimed was approximately \$1,163. Head of Household (HOH) claimants comprised about 78.8% of the total. Married Filing Joint (MFJ) filers accounted for 20% of the total and the remaining 1.3% were filed by Single filers with dependents.

Filing Season - For the 1994 filing season, 15,117,000 returns claiming BITC were filed according to the 1993 tax year Statistics of Income data. The average BITC claim was estimated to be \$1,025. HOH Filers represented 63.7% of BITC claimants, MFJ and Single filers accounted for 32.9% and 3.4% respectively.

The sampled BITC returns filed electronically during the last two weeks of January 1994 differed from BITC claims filed during the entire filing season in the following categories:

- -- During the filing season, 64% of EITC claimants are head of households, compared to 79% during the last two weeks of January.
- -- During the filing season, 13% of EITC filers claim Schedule C income. In the EITC study, only about 1% of filers claimed Schedule C income.
- -- During the filing season, about 15% of filers claiming the BITC have adjusted gross incomes below \$5,000. In the BITC study, about 8% of the sample have adjusted gross income below \$5,000.

III. Methodology for Determining Errors

- A. The initial step in building case files from the sampled returns was conducted in the service centers. Transcripts of the taxpayers' prior filings were obtained and associated with the sample return. The case file was then transmitted (usually within 3-5 days of the filing of the return) to a Special Agent (criminal investigator) for contacts to verify the EITC claim.
- B. The Special Agent assigned the sample return was required to contact the taxpayer, the electronic return originator/transmitter, the tax return preparer (if different from the electronic return originator) and, the employer (if W-2 wages were the source of EITC qualifying income). The agent was also instructed to contact other third parties if needed to validate the EITC claim. These contacts were made face-to-face at the residence or business location rather than requiring the taxpayer or witness to appear at IRS offices. The agent was required to complete his/her inquiries within seven days, so that the findings

could be used to make necessary changes in the 1994 questionable refund screening procedures. The agent tested the accuracy of qualifying earned and adjusted gross income, the filing status of the taxpayer and the existence and qualifications of qualifying children reflected on the EITC schedule. If the agent believed the claim was incorrect, he/she also made a subjective assessment of the reason for the error (e.g., the error was part of a fraudulent refund scheme, the error was made intentionally or was due to unintentional error/misunderstanding). When the agent considered his/her inquiries complete, they telephoned an experienced agent who acted as the national coordinator on the study. This senior agent reviewed the findings to ensure completeness of the inquiry and consistency with the other inquiries being conducted across the country. If satisfied, the senior agent approved the return of the file to the originating Service Center.

- C. After the file was returned to the originating Service Center, it was reviewed. If the return was deemed "part of a scheme," it was controlled as a fraudulent refund claim, and no refund was issued. If the claim needed adjustment (i.e., the claim was classified as having an intentional or unintentional error), the return was referred to the Examination Division for a correspondence audit with the taxpayer. If the claim were viewed as correct, the refund was released. Copies of these files were then forwarded to the Cincinnati Service Center for transcription into the sample database.
- D. All completed sample files were transcribed into a database for analysis. During this initial stage, tax examiners reviewed all case files to determine if they agreed with the Special Agent's assessment. The tax examiners' assessments of the cases were included in the data base. Subsequently, tax examiners reexamined the case files to determine the reasons for taxpayers' errors. Based on this more comprehensive review of the facts reported in the case file, the tax examiners changed their assessments in some cases. The database also contains this information.

Over the following months, data inconsistencies and errors were identified and corrected. The results from correspondence audits were added to the files as these contacts were completed. Also, additional comparative information was added to the database as it became available. For example, information reports (W-2s and 1099s filed with the Service) were matched to the sample files during the fall of 1994. Returns were also matched to the duplicate use SSN file to identify cases where other persons had also claimed the qualifying child.

Lastly, all cases were reviewed to assign "best and final" codes to the case file. When complete information was still not available from the Examination Division, the tax examiner made a "best and final" determination on the basis of the available evidence. These determinations were used for the purposes of the study only and did not affect the taxpayer's receipt of the refund.

IV. Calculation of Error Rates

A. Overclaims The following results represent the estimated number of taxpayers in the sample period population who claimed more than the correct credit. The error rates are reported as values and percentages of dollars. These statistics are weighted figures.

OVERCLAIMS TOTAL \$ CLAIMED AMOUNT OF OVERCLAIMS

VALUES \$1,480,000,000 \$386,000,000

PERCENTAGES 100% 26.1% <2>

<2> 38.8% of the 1,273,000 returns overclaimed BITC.

B. Underclaims The following results represent the estimated number of taxpayers in the sample period population that claimed less than the correct BITC. The error rates are reported as values and percentages of dollars. These statistics are weighted figures.

UNDERCLAIMS TOTAL \$ CLAIMED AMOUNT OF UNDERCLAIMS

VALUES \$1,480,000,000 \$13,000,000

PERCENTAGES 100% 0.9% <3>

<3> 6.1% of the 1,273,000 returns underclaimed BITC.

V. Estimate of "Net" Overclaim Rate

The estimates shown in Section IV, provide information on the amount of BITC claimed erroneously by taxpayers whose returns were accepted by the IRS. In some cases, the IRS would have detected erroneous claims by using conventional enforcement techniques (e.g. matching of returns to information reports). These estimates also do not reflect legislative and administrative changes which were implemented in 1995 in order to reduce errors. Since the study was conducted, the IRS has begun to reject electronic returns which either do not include a taxpayer identification number for BITC qualifying children or use a social security number for a child which has already been used by another taxpayer. In addition, the Schedule BIC no longer includes the supplemental credits for health insurance. These provisions were repealed in the Omnibus Budget Reconciliation Act of 1993, partly because of concerns by the IRS that it could not easily verify eligibility for the supplemental credits prior to the payment of a refund.

The overclaim rate can be adjusted to reflect the potential effects of conventional IRS enforcement activities and legislative changes which were in effect during the 1995 filing season. Adjustment for these actions would have reduced the estimated amount of overclaims by \$104.3 million (from \$386.3 million to \$282.0 million), reducing the dollar overclaim rate from 26.1% to 19.1%. As a consequence of certain IRS enforcement activities and legislative changes, the dollar amount of overclaims would have been reduced by about 27%. <4>

<4> In 1990, the IRS found that enforcement activities reduced the gross income tax gap between 23 and 26 percent for tax year 1987

Notably, this "net" estimate does not reflect the full extent of increased 1995 IRS enforcement activities. During the 1995 filing season, the IRS implemented new screening tests to detect questionable EITC claims. The screens were designed to identify returns with problem refunds which would not have been identified through more generalized detection methods, such as matching returns with information reports. In designing these new screening tests, the IRS has used the results of the 1994 EITC compliance study, as well as other information, in order to better identify problem refunds. During the 1995 filing season, such refunds may be subject to delays of up to eight weeks, while IRS further investigates. The net estimates do not reflect the effects of the new screening tests.

TABLE 1

Comparison of Weighted Sample Characteristics of 1993 EITC Claimants

Category	EITC Compliance	Study	1993 Statistics	of Income
	Number of Returns	Percent of Total		Percent of Total
Total Returns	1,273,000	100.0%	15,117,000

Supplement	147,000	11.5%	1,803,000	11.9%

 $^{(\}star)$ Estimate is not statistically reliable because of small sample size.

Chairman Shaw. Thank you, Ms. Richardson.

I would like to commend you and the IRS for many of the savings, and the compliance work that you have done in this area. It is a difficult area, and it is a rapidly growing expenditure of the Federal Government.

I was looking at Mr. Samuels' chart that was up there. Would someone please place that back up on the board? I think it is important to point out that the growth shown on that particular graph under the GDP is somewhat impressive, I would also like to point out that it is from 1997 to 2002, so this is something that has not happened.

I think we need to look at the historical perspective of what has happened. If my figures are correct, I show in 1985 that the program was \$2.16 billion, and it has grown, if we use the 1996 project, to \$25.86 billion. That is an increase of 1,100 percent. This makes it the fastest growing antipoverty program that we have.

It is interesting, because if you compare it with AFDC, it is far larger than AFDC, which is only about \$15 billion, Head Start is \$3.5 billion, food stamps is \$25 billion, so that we can see that the size of the program itself is just about the size of food stamps now. As a matter of fact, unemployment insurance is only \$27 billion, and housing is \$21 billion. This really adds up to be one of the huge entitlement programs that we have, and the phenomenal growth of the system I think requires a very close look.

In discussion with the members up here on the panel, it is not our intention at this time to try to gut this program. We consider this a very important part of welfare reform. I do not think that the majority side or the minority side has any intention of gutting the program, but there are some significant adjustments we should make.

In the Republican budget, it was viewed that we could save a little less than \$3 billion. In the President's budget, he viewed that we could save about \$3 billion. If there is one area that I think we are very close on, I think it is in this particular program that the Republicans and the Democrats agree on.

The Senate came up with a much larger figure, but they made a substantial alteration to the program that we on the House side have not spoken on.

Mrs. Johnson, do you have any questions? Chairman JOHNSON. Thank you, Mr. Shaw.

Mr. Samuels, there are just a couple of things that I wanted to go through with you. Do you have cost estimates on the three proposals that you have made and on the additional proposal?

Mr. SAMUELS. Madam Chair, the pending proposals that were in the President's budget raise approximately \$3 billion over 7 years. We do not yet have a revenue estimate for the proposal that we described this morning.

Chairman Johnson. Do you have any demographic information about the EITC rights of single workers? We only discussed this yesterday, but would you for the record get back to the Committee on those receiving the EITC who have no children, what are the age groups, what percentage goes to what age group.

Mr. SAMUELS. Madam Chair, our preliminary information—and we went back after we discussed this yesterday—is that workers

without qualifying children residing with them, share approximately the same age demographics as the rest of the EITC population, except workers without qualifying children have to be between 25 and 65. Obviously, there are no taxpayers under 25 who would receive it. As far as we can tell at this point, it is not that different from the rest of the EITC population, and we will be getting you more details on that.

Chairman JOHNSON. Thank you.

I would like to ask you one more question. I still have time to ask Commissioner Richardson a question. Later on, we are going to have some testimony to the effect that a credit reduces work incentives, based on some pretty solid work. Has the Treasury looked at this issue?

Mr. Samuels. Yes, we have and our view, as I mentioned in my remarks, is that we believe that, on balance, there will be a net increase in work as a result of the 1993 changes. We have looked at these studies, and a lot of them do not take into account those who were not in the work force moving into work, which is a very important purpose of the program. You have that positive incentive for those who are not in the work force to move into the work force, and for those who are at very low income levels to increase their work, and we think these effects overcome the work disincentive in the phase out period, on balance.

Chairman JOHNSON. Thank you.

Commissioner, I want to commend you on the steps that you have taken this tax filing season to address some of the problems of fraud and abuse in this program. At the beginning of the season when we held a hearing on this issue, the administration testified that they thought there was \$5 billion in fraud. It looks from the figures that you have given us today that that may have been an underestimate. I do commend you on your current program.

On the other hand, I want to ask you about an article that appeared in Tax Notes in the June 5 edition, and I quote, "Both the 1985 and 1988, TCMP, Tax Compliance Measurement Program, surveys indicated that nearly 40 percent of taxpayers who took the

EITC were not entitled to it.'

If you remember the figures that Mr. Shaw just read about how this program's costs have risen, 40 percent has got to be a real concern. "This did not lead to a legislative fix, and no real compliance program was put into place until the 1995 filing season. Analyzing Treasury's figures, the lack of quick action on the EITC problem could have cost \$10 billion."

No tax gap reports were ever issued based on the data of the 1985 and 1988 Tax Compliance Measurement Program reports. In fact, the last income tax gap report published by the IRS was from the 1982 tax compliance measurement report. How can Congress effectively meet its responsibilities to take legislative action to address areas of noncompliance, if the IRS does not bring compliance problems to the Congress' attention in a more timely manner?

Ms. RICHARDSON. I am not familiar with the article that you are citing from, but I believe that we have been trying to address this problem and I know we spent a good bit of time last year with this Committee, not just this current filing season, but last season talk-

ing about the EITC, what we could do, what we were planning to do.

One of the things that we did was try in a more scientific, if you will, or statistically valid way to analyze where the problems were and what needed to be done. In 1993, some of the problems related to the complexity, as Mr. Samuels testified. Congress did address two of the areas that had led to a lot of the complicating features, and I guess this is the first filing season that we are feeling the impact, positively, I might add, of having simplified the credit for a large number of people. We certainly have been trying to address the problems, both legislatively and with the help of this Committee and the Congress, as well as how through our stepped-up compliance resource efforts.

Mr. SAMUELS. Madam Chair, could I just add one thing?

Chairman JOHNSON. Yes.

Mr. SAMUELS. First, I want to thank you and the members of the Oversight Subcommittee for supporting the Treasury and the IRS and its enforcement efforts. As you know, the IRS began this filing season to match all SSNs and we needed your support to continue with that program, and we are very grateful for it. That is the only way we are going to get this compliance issue under control.

The other thing I would just mention is that when Treasury reported on refund fraud, the estimate was \$1 to \$5 billion for all refund fraud, not just EITC. We have refund fraud in other areas for which we are very concerned, as well. The estimate was \$1 to \$5

billion and it was for all refund fraud.

Chairman JOHNSON. I wanted to mention this at this time, because while we certainly have moved forward and the Commissioner has done an excellent job this filing season, they need to be far more aggressive. It is clearly there and the need to better use the information from our TCMPs is very great and we really cannot justify letting information lie for sometimes a decade before we act upon it. As we look at whether to allow another TCMP, which has some disadvantages for the taxpayers, we really have to look at how we get that information more readily, how it gets reported publicly, how we have access to it, as well as you have access to it. Some of those issues have not actually been very well worked out in the past.

Thank you, Mr. Chairman.

Chairman SHAW. Mr. Matsui will inquire.

Mr. MATSUI. Thank you.

I would like to thank both of the cochairs again for their approach on this issue, and certainly for the hearing and the manner in which it is being conducted.

I am going to be very brief. I have just three areas. In terms of the growth of the program, in 1985, of course, the program had started in 1975, and in 1985 that was before the 1986 Tax Reform Act. If I am not mistaken, in the 1986 Tax Reform Act that was sponsored by President Reagan and also Members of the House and Senate, we expanded significantly the EITC. In fact, we added about 6 million more taxpayers that were able to use the EITC. Is that correct, Mr. Samuels or Commissioner Richardson?

Ms. RICHARDSON. It was greatly expanded. I am not sure of the exact number.

Mr. SAMUELS. Mr. Matsui, we think it was probably around 4 million.

Mr. MATSUI. Four million. Since that time, the 1990 bill that increased it and the 1993 bill that increased it, obviously the purpose was to increase it to add more people to the credit, and, second, to increase or decrease the threshold so more of the working poor

would qualify.

Let me move to the second area, because there has been a lot of talk about individuals who have no minor children who receive this credit, which was an expansion of the program. We are talking about, believe it or not, for that person a maximum of \$314 a year. So, if that is a disincentive to work, I want to meet that individual.

But that is what we are talking about, is that not right?

Mr. SAMUELS. One point on that, Mr. Matsui, is that there was a suggestion that a single low-wage worker without qualifying children who was working full time for the entire year at the minimum wage was receiving excess EITC. In fact, that person would receive \$40 of EITC, and it would offset \$336 of income tax that that person owes. We think that when you look at it in that context, even at that level, that you do not have a problem.

Mr. MATSUI. In other words, at the minimum wage, we are talk-

ing about \$40?

Mr. SAMUEL. For somebody working the entire year, right.

Mr. MATSUI. Now, if the maximum credit is \$314, the study on the Tax Notes that was referred to, the TCMP—and maybe somebody can help me with this—there was a notion that there was up to 40 percent in errors. That was a 1988 study, if I am not mistaken, is that correct?

Mr. SAMUELS. That is correct.

Mr. MATSUI. Since 1988 when actually the expansion occurred in 1986, in 1990 and 1993, and certainly since September 1994 there have been some major changes, as you suggest, plus the 12 additional recommendations that you are making at this particular time, is that correct?

Mr. SAMUELS. That is correct, Mr. Matsui.

Mr. MATSUI. That data is based on old information that does not reflect all of the steps that have been taken?

Mr. SAMUELS. Right.

Mr. MATSUI. One would question the relevance of the TCMP study at this particular time.

Thank you. I have no further questions. Chairman SHAW. Mr. Zimmer will inquire. Mr. ZIMMER. Thank you, Mr. Chairman.

Commissioner Richardson, in 1994, the IRS eliminated the DDI, direct deposit indicator, claiming that the refund anticipation loans that have been offered to taxpayers eligible for the EITC are a source of fraud and that the elimination of the DDI, direct deposit

indicator, will reduce this fraud.

The Treasury Department's own Tax Refund Tax Force found, and I am quoting, "The issuance of the DDI should neither increase nor decrease the likelihood that the IRS will be the victim of ELF fraud." What specific evidence does the IRS have that indicates that the refund anticipation loans are a source of fraud, and how specifically does the DDI facilitate fraud?

Ms. RICHARDSON. I would like to ask Ted Brown, who is our refund fraud executive, a special agent with the IRS, to address that, because he has spent a significant amount of time on this issue, and particularly on the direct relation between the DDI and fraud.

Mr. SAMUELS. Also, Mr. Zimmer, if I can just mention before Mr. Brown responds, I believe that the quote that you read from the Refund Fraud Task Force assumed that all information and all matching could take place. It was a quote in the context of a situation that does not exist. That was my recollection of it.

Mr. Brown. Congressman Zimmer, the issue of refund anticipation loans was that they act as an attraction to fraudsters more than a direct link. They are on a track much like banks do not cause bank robberies, but people go there because that is where the

money is.

The refund anticipation allows fraud artists or fraudulent claimants to receive the proceeds of their claim within 24 to 48 hours. We can find no equivalent fraud claim situation where the payoff is that fast. It also removes the direct relationship with the IRS with the fraud claimant. It isolates, protects and insulates that claimant from coming through our system. If we identify a fraudulent claim subsequently, the perpetrator has already received the proceeds and in most cases has disappeared.

The primary concern we had with refund anticipation loans is that it increases pressure on the system, makes the system an easy target and the perpetrators get their money quickly and can disappear before our own detection systems could prevent that from

happening. That is the direct linkage that we found.

Ms. RICHARDSON. Also, Mr. Zimmer, it reduces any incentive for the lending agency to assess the creditworthiness of the borrower and we do not feel the government should be guaranteeing that a loan was going to be repaid. We think that is the job of the lender.

Mr. ZIMMER. Let me just repeat my question. I said what specific evidence does the IRS have that the refund anticipation loans are

a source of fraud? Do you have evidence of this?

Mr. Brown. We know that there are fraud schemes that we have identified that the use of the refund anticipation loan made attractive. You could create false documentation, create a false return, take it to an electronic return originator and submit that claim. They were not set up to detect fraud, they transmit the return to us and they make a loan for the proceeds, net their own fees and charges. The perpetrator within 24 to 48 hours gets the proceeds and disappears.

In many cases, even when we are successful in detecting the fraudulent return days later, that person is much more difficult to track down at that point and successfully prosecute because of that insulation. Yes, we have examples where that was the attraction, that is what made that fraud more attractive than filing a return

directly with the service.

The other concept in fraud control is called exposure period. If you can attempt to file a false claim and get paid in 24 hours or 48 hours, that is much more attractive than if you have to wait 6 or 8 weeks for a refund check to come to an address, and be present to receive your proceeds. That increases the risk. The obvious analogy is for bank robbery. The longer you stay in the lobby,

the greater your chances of apprehension, and that is exposure period in its most simple form.

Mr. ZIMMER. Is not the risk to the lender, rather than to the

fraudulent taxpayer or the IRS?

Mr. Brown. Only if we detect the fraud before we made the payment, which usually occurs on an electronic return in 8 to 10 days.

Mr. ZIMMER. This is an electronic return issue more than a re-

fund anticipation loan issue?

Mr. Brown. The banking industry made refund anticipation loans on electronic returns where we gave the direct deposit indicator acknowledgement saying that, yes, our preliminary screens indicate that there was no offset, no debtor offset and we were willing to pay the refund at that point.

Mr ZIMMER. Now, could you explain to me—and you and Commissioner Richardson have alluded to this—how specifically does the direct deposit indicator facilitate fraud? You said something about guarantee of payment. That is not what it is.

Mr. Brown. No, it is simply an electronic indication that, after we have received their return, it has passed the initial screens; that is, SSNs appear to be valid, there are no math errors on the return and, more importantly, that there are no debt offsets. Debt offsets mean either that this taxpayer does not owe a prior tax liability which is still open or that there is a debt that we are collecting for some other State or Federal agency, child care support being one of the large groups.

When we give that flag within 24 hours, it says at least at this point it looks like we will honor your request for a direct deposit repayment, and at that point the banks release the payment to the person who has made the claim. Then in our normal processing over the next 8 to 10 days, if we do not identify the fraud, we then make the payment to the bank. In most cases they receive their

payment before we are able to identify the problem.

Ms. RICHARDSON. It was virtually certain that a refund would be paid if a direct deposit indicator was given or there was no indication, that there was a debt offset, so the bank would make the loan and then receive the refund on behalf of the taxpayer, if you will, and a guarantee repayment of the loan.

Mr. ZIMMER. I do not understand why that is the fault of the

DDI.

My time is up. Thank you.

Chairman Shaw. Mr. McCrery is now recognized for 5 minutes. Mr. McCrery. Thank you, Mr. Chairman. I thank you and Mrs.

Johnson for holding this hearing.

I think it is clear that there is bipartisan support for this program. It happens to be my favorite assistance program, because it does reward people who work. I see it more as a means, though, to supplement wages and produce a living wage, so to speak, for low-income people in this country and a much more efficient way to do that than raising the minimum wage. I am very interested in continuing this program and seeing that it accomplishes its purpose.

The one danger to this program, though, is fraud and abuse. I want to compliment the IRS and Treasury for the efforts that you have made so far in trying to prevent fraud and abuse in this program. I think there is more work to be done, and occasionally this Committee may be called upon to provide you with more tools to use to accomplish that. We want certainly to work with you, I do,

at least, want to work with you to provide you those tools.

I have had the opportunity to meet with the Commissioner and go into these matters in great detail and I am satisfied that the IRS under Commissioner Richardson is trying to make this program work, and I encourage you to continue those efforts and to work with us on this Committee.

Ms. RICHARDSON. Thank you.

Mr. McCrery. I do have some concerns about the way the program is structured now. I do want these two Committees to look at benefits for single persons, as opposed to persons with families with children, and I think perhaps there are some changes that can be made to make the program more effective in those respects.

Mr. Samuels, did you happen to be listening to Representative

Petri's presentation?

Mr. SAMUELS. Yes, sir.

Mr. McCrery. If so, did you have any thoughts on that? It

seemed a rather interesting proposal to me.

Mr. SAMUELS. Mr. McCrery, my very preliminary reaction—and I think it was raised in a question—was that the proposal would shift EITC away from single parents with children to married couples with children, and it seemed to us that that was not a good policy. That was my very preliminary reaction and we will clearly look at this very carefully and give you our views on it. That is what we thought the result would be, just hearing it for the first time and looking at the schedule.

Mr. McCrery. That is an interesting comment. I wish you would look at that and give us your comments in more detail, because it does concern me that there is a significant marriage penalty in the EITC the way it is done now, and we may want to address that without unduly taking away from single parents, because certainly they have as hard or a harder time making ends meet than a married couple. It is of some concern and I thought Representative Petri had an imaginative proposal that deserves some attention.

Thank you for your efforts, and we look forward to continuing to

work with you to make this program work.

Chairman SHAW. Mr. Gibbons.

Mr. GIBBONS. I think we are caught in the Topsy syndrome here, by that I mean we have got a program that has grown like Topsy, and it has some problem with it and we need to straighten it out.

I am glad, though, to hear that it is still so widely respected by both Democrats and Republicans as far as being a viable, good type

of program, and we certainly need to correct it.

The GAO recently did an audit and filed a report on compliance, and I just ask this question in order to put this compliance order in perspective with overall taxpayer compliance. As I recall, and correct me if I am wrong, they said that 64 percent of all of the returns of self-employed were erroneous. Is my recollection correct? Is that the correct figure, 64 percent of all self-employed returns were erroneous in the GAO report? I think that is right, is it not?

Mr. SAMUELS. Mr. Gibbons, the GAO published a report last week entitled "Reducing the Tax Gap," and they indicated that self-

employed tax return filers did have a compliance problem and that the IRS estimates that income reporting compliance for self-em-

ployed taxpayers to be about 41 percent.

Mr. GIBBONS. I think that waves a red flag at this Committee. We had better pay some attention to that. I spent most of my life being a self-employed person and filing a self-employed return and I realized how difficult it was. I have a lot of self-employed friends, and I am sorry that the noncompliance rate is that high.

These are generally honest, hard-working people with a good education, and if they have that kind of compliance rate, it sure sends a warning to me that there is something wrong in the system out there, it is not the fault of Mrs. Richardson or Mr. Samuels, but I guess all the fault comes back here to the Congress and we

had better pay some attention to it.

As I recall—somebody is going to get sick of me recalling all these things—I was a conferee when we created this program back in 1975, and it happened about 4 o'clock in the morning here in this room. We were all exhausted and the Chairman of the Senate conferees, Mr. Long, brought up his earned income credit. He had put it in the Senate bill over there and we all sort of agreed that it was a pretty good idea, and we looked at the staff and said we hope you all can carry it out, and they said we can and that is how this thing got into law.

I did the first Oversight hearing on this, Mrs. Johnson, back when you were a young lady—a real young lady. Boy, I walked into

that one, didn't I? [Laughter.]

Anyway, it was not a big problem then. The program was only a few years old and we were just looking at it in the Oversight Subcommittee and it really was not that bad, but it seems like the compliance problems have gotten greater. I have just been looking over these worksheet forms that we have got here. I do not want to blame you for them, Ms. Richardson, or even Mr. Samuels, but I guess I have to blame the Congress.

You have got to be an accounting graduate to understand this worksheet form that we have here. You have to be a very patient and meticulous person to work that thing out. I think we probably need to go back and rethink some of the things we have done in this program. For instance, we really need to simplify what is income. I think we need to do that. Would you like to comment on

maybe simplifying what is income in all of this?

Mr. Samuels. Mr. Gibbons, I would be pleased to address that. Before I do, could I just mention that you referred at the beginning to the program growing like Topsy, and some people have said it is a program out of control. The program has grown as Congress said it was supposed to grow. The reason I say that is that when some people say it is out of control, they mean that it is growing in a way that nobody anticipated. We have the chart there to dispute these charges.

The EITC has grown in steps pursuant to the 1986, 1990, and the 1993 expansions. That is as Congress decided. It is not a program where costs were suddenly way beyond what anyone thought when Congress passed it. Once the EITC is fully phased in, in 1997, we expect growth to stabilize. We think the program is on

track in accordance with what Congress has required.

Mr. GIBBONS. I guess my criticism is more directed to Congress than it is to you because we are the ones that created this Topsy. It is really not as bad as some of the other programs we have created.

Mr. SAMUELS. With respect to simplifying the definition of income, the credit is now based on one's earned income and then is phased out based on the greater of earned income or adjusted gross income. If one was going to look at whether adjusted gross income was the right measurement one issue is that for example, self-employed taxpayers' adjusted gross income reflects deductions for health insurance and some of their SECA taxes. If you move away from adjusted gross income, there will be some distortions between the wage earner who is employed and the self-employed.

We would be pleased to consider whether there are ways of trying to simplify it, but that would be an issue that we think we

would have to look at very carefully.

Mr. GIBBONS. Well, the red light is on and I will not transgress on everybody's time but I have got a lot of questions about this program and I would suggest that all of us read the instructions that go along with this form and see if there is not some way we can improve it, not just you but all Members of this Committee.

Thank you.

Chairman SHAW. Thank you, Mr. Gibbons.

The Chair will now recognize Mr. Camp for 5 minutes.

Mr. CAMP. Thank you, Mr. Chairman.

Commissioner Richardson, I have a question I would like to ask you. I commend your efforts in the area of fraud and wish that you would continue to pursue it so that the viability and broad support this program has is not eroded.

Right now, recipients can get advanced EITC, up to 60 percent of the benefit. And the Governor of Michigan has a proposal that would let people receive advanced EITC through State agencies so that people on welfare would file at the State level the same form they now file at the Federal level to get this advanced EITC.

The amount would be obviously calculated based on their earnings as it is now. It would allow them to get this monthly payment in a separate check. The benefits of this proposal, I think, would give an increased incentive to people who are working and on welfare to receive this money as they are working rather than in a lump sum at the end of the year and help with the whole concept of work paying. I think this might increase the number of people who are on welfare to take advantage of the EITC.

I would like to receive your comment on this. Mr. Samuels, if you

have any comment, I would be happy to hear that also.

Ms. RICHARDSON. Mr. Camp, I am a very strong supporter of the advanced EITC. I think it makes good sense in a lot of ways. We have labored mightily, if you will, to try to promote it and expand it over the last couple of years. One of the disappointments—and we have been successful—but one of the disappointments I have is that we have expanded from 52,000 or almost 53,000 taxpayers claiming it last year to only 189,000 this year, in the same time period.

It is a significant percentage increase but it is not a lot of the claimants. From the standpoint of our efforts to reduce fraud we

think it is an important feature. When I was out in Minnesota a few weeks ago talking with my counterpart in the State of Minnesota, I learned they are very anxious to do something similar to what the State of Michigan would like to do.

I know we are very supportive, as is the Treasury. Mr. Samuels can address it, helping both Michigan and Minnesota work on these plans. We think it can help our compliance and help the peo-

ple who have really earned the EITC.

We are supportive of the advanced notion and we will do anything we can to help the States make it work in concert with their benefit packages.

Mr. CAMP. I appreciate that.

Mr. Samuels. Mr. Camp, last year the administration proposed that there be a pilot program involving four States, and Michigan could be one of those pilots if the proposal was enacted. We support these pilot programs. We think they are very important. It will give us information about how the program is working, and how we can make it work better. In my written testimony, we state that we support the legislative amendments that are needed to permit these pilot projects to take place. In trying to make my remarks as brief as possible, I failed to mention our support for these pilots, but I want to state, for the record, that we strongly support those pilot programs. We think we should try to do that as quickly as possible so that we can see how the States can assist hard-working, low-income taxpayers in receiving the EITC on a monthly or periodic basis throughout the year. We think that is a very good proposal.

Mr. CAMP. Is the advanced EITC available to all those who qual-

ify or only those who have children?

Ms. RICHARDSON. Only those who have children.

Mr. CAMP. All right, thank you very much. Thank you, Mr. Chairman.

Chairman SHAW. Thank you, Mr. Camp. The Chair will now recognize Mr. Rangel. Mr. RANGEL. Thank you, Mr. Chairman.

Earlier this year I was extremely critical of this so-called Contract With America because, in my opinion, it was penalizing people who were poor and dependent on government. I said they had to go to work and, yet, it did not seem to say where those jobs were to come from.

This time, I would like to compliment the Chairs of both the Oversight Subcommittee as well as the Human Resource Subcommittee because they emphasize what most of us have been say-

ing, that most people want to work.

I think that this program removes the temptation of trying to evaluate how much you get from welfare and how much you get from working. This is a unique type of program that encourages people to get into the work force and stay. It gives them an opportunity to look for better jobs once they get on their feet.

I do not see where it is exploding because it levels off in 1997. It does what we want. I do not even know how we could measure the cost, Chairpersons, because in a large number of cases it has completely eliminated the need for AFDC and other supportive

programs.

I want to thank both of you and your Subcommittees for working with the administration toward the common goal to eliminate the errors and frauds that have been committed in the past and even more so to continue to work because still a lot of errors exist in this program.

I might even suggest, if the rules permit, that maybe we could have a work force, Republicans and Democrats just to get in a room with the administration and talk this thing out to see how we can perfect it without a lot of hearings and when we come to hearings

just do what has to be done.

I do hope that in this newly created atmosphere of bipartisanship, which the President and the Speaker has started and I do not fully understand, that we could, keep people who want to work, working. I think, overall, it is good for our Nation and certainly good for our economy.

I want to thank the administration for admitting that there have been a lot of errors and requesting legislation in order to keep them down and corrected. Whatever contribution I can make I

want to be a part of it.

Thank you.

Chairman SHAW. Thank you, Mr. Rangel, for that most historic statement. [Laughter.]

The Chair now recognizes Mr. Collins. Mr. COLLINS. Thank you, Mr. Chairman.

Mr. Samuels, in your testimony you mentioned the fact that the President is addressing some of the problems with the EITC in his budget. Which one of those budgets? Was that the one early on that failed by 100 percent in the Senate or the one introduced this week?

Mr. SAMUELS. Mr. Collins, it was in the original budget submission and it was in the one that was made public this week.

Mr. COLLINS. It was in the one that was made public?

Mr. SAMUELS. Both of them.

Mr. COLLINS. It was in both, well, that is good. Consistency is unusual, that is great. It has been said that the EITC is a reward for work. But I have a lot of problems with that. I think reward for work should be based on productivity and the pay should come

from the employer.

However, I see the EITC as being not so much coming from the employer as it is coming from fellow employees. I base that on the fact that if you have two people working side by side on an assembly line or some job, and they are earning equal amounts of money, say, \$8 an hour, and the one worker has a wife and one child and the other worker has a wife and two children. There is quite a difference in the two as far as the net tax liability.

In fact, the couple with the one child or the worker with the one child will actually pay \$368 more in tax liability and receive \$319 less in EITC for a total difference there of about \$687 liability to

the government.

Therefore, it appears that you are taking from the one worker with one child and supplanting the worker with two children with part of the income.

I have a problem with that. I think the reward for work, again, should come from productivity and then in pay from the employer.

With the EITC it appears that a lot of it comes from fellow employees.

Two, the purpose of the EITC was to rebate or to offset the Social Security or the FICA taxes. However, when that same worker reaches the age of 62 or 65, depending on the age, they are still eligible for the Social Security. Again, they will be subsidized by other employees.

I think we have some real problems in this system and I hope the administration does come forth with some proposals that will

help clarify this problem.

I thank you for being here, and you, too, Ms. Richardson, thank you.

Ms. RICHARDSON. Thank you.

Chairman Shaw. Thank you, Mr. Collins.

Ms. Dunn.

Ms. DUNN. Thank you, Mr. Chairman.

I wanted to make one point that I would like Ms. Richardson and Mr. Samuels to be aware. When we wrote the portion on child support in the welfare bill that passed the House of Representatives we believed that one major thing that could become a Federal responsibility was our assistance to States who were seeking deadbeat parents and seeking the funds that they owed to these children, believing those funds, which as I recall totaled \$34 billion owed to children, would be a good way to get these kids off the welfare cycle.

In doing that we decided to establish a national registry and that would be an access resource that could be accessed by the units

that exist in all the States.

I wanted to bring this to your attention because my question is, as long as we have employers who are submitting W-4s to the national registry and States have access, do you see this, Ms. Richardson for example, as a potential source of information as you are checking on EITC incomes, since that tells exactly and specifically

what these folks are making in their jobs?

Ms. RICHARDSON. I am not intimately familiar with the details of your proposal, but, yes, I think that could be very helpful. One of the things that I think we have to be very aware of as we are asking the IRS to do these kinds of things is that we are dealing with very antiquated technology right now. Our ability to verify information and do it in a timely fashion is very much dependent on our being able to continue to receive the funding and support for our tax systems modernization.

We will not have the capacity to do some of the things that people would like us to do in the compliance area and in the area you have mentioned without having a modern information system.

Mr. Samuels. Ms. Dunn, I think that it would be an issue that we would like to look at. At the end of my testimony, we mention areas we want to explore, and one of them is sharing data with the States. This registry would be the type of thing that we would want to carefully look at. I appreciate your bringing it to our attention, and we will look at it very carefully.

Ms. DUNN. Thank you and I am glad that you have that attitude because I, too, want to get rid of overlap but, on the other hand, we want to provide any resource that would be helpful and useful

in finding information. This, as I understand, has also survived in the Senate welfare bill which has not been voted on but in conference, I suspect that we will be able to have that source as a resource.

Thanks.

Mr. PORTMAN [presiding]. I have one final question as the interim chairman here, as everyone else has gone to vote. I told Chairman Shaw that I could run very fast over to the vote if he

would let me ask a question.

First of all, I want to thank both of you for being here and for the very interesting testimony. Mr. Brown, I think we had the opportunity to meet in Cincinnati a few months ago and I learned quite a bit about the efforts that you have undertaken in northern Kentucky and back here in Washington in terms of fraud. I tend to believe, in the context of Mr. Zimmer's questions, that we are making a lot of progress in that area. I think you are doing the right things and we still want to see some results.

Commissioner Richardson, I think you all ought to be com-

mended for handling the fraud problems that have arisen.

Ms. RICHARDSON. Thank you.

Mr. PORTMAN. My question really goes to the income issue. We talked earlier about dividend and interest income and I am very much in agreement with the administration proposal on that. I think others have raised that issue before, the notion that unearned income ought to be part of the calculation.

How about other forms of income? I can give you a quick list here. I think you are probably familiar with this issue, but Social Security income, Railroad Retirement benefits, pension annuity income, veterans benefits, workers' compensation, unemployment compensation, alimony payments? Should not those items also be included in that they represent replacements for earned income?

Mr. SAMUELS. Mr. Portman, I believe that some of those items, like alimony, are included in adjusted gross income. So, in effect,

it is counted.

I think there are two separate issues. One issue is that we have a new provision that is a modified form of the administration's proposal. If a taxpayer has more than \$2,350 of interest, dividends, and net rents and royalties, then that person is not entitled to the EITC.

There has been some suggestions that maybe one might want to expand the items of income includable under the investment income cap. For example, in a bill that has been introduced in the Senate, distributions from trusts and estates would be added to that amount. When thinking about ways to make the credit better targeted, I would urge the Committee to think about whether you are going to increase complexity which increases error rates and whether the IRS verify these new rules.

For example, on trusts and estates, we have calculated that there are about 10,000 to 20,009 EITC recipients who have income from

trusts and estates.

If you wanted to deny the EITC to those taxpayers, you will be, in effect, increasing the burden of all 21 million people who are claiming the EITC in figuring out how to calculate the credit.

Mr. PORTMAN. I can appreciate that and if it is a very small number then that goes to Mr. Gibbons' point. I would just think on Social Security though, we would have a number of recipients and

that might be one we could include.

Mr. SAMUELS. Right. I think Social Security is another one where I think when you look at the details, you will have concerns. Under the proposal, EITC recipients who would now be receiving non-taxable Social Security benefits, would be required to add them back into income. This would affect some recipients who are receiving EITC because they have qualifying grandchildren living with them.

The question is whether you want to treat that Social Security recipient somewhat differently by taxing their benefits because one or both of the grandparents is working and caring for their grandchild, but not taxing the benefits of the neighbor next door who is

not caring for a grandchild.

The other situation may be a married couple, where one spouse is working and the other is receiving disability from Social Security because an accident or some kind of illness. With Social Security, you have to just decide whether these are the types of situations where you would like to cut back on the EITC. I think it is something we would be pleased to discuss with the Committee, but those are the considerations.

Mr. PORTMAN. Madam Commissioner, if you would be so kind as to put any answer in writing because I have to make the sprint across the avenue?

Ms. RICHARDSON. OK.

Mr. PORTMAN. If you will be willing to stay for additional questions, I think on the other side of the aisle we have some questions.

Ms. RICHARDSON. I just have two simple pleas on that point, something that is easily verifiable and something that is simple. That really makes our job much easier. Thank you, very much.

Mr. PORTMAN. Thank you all and we will recess for 4 or 5 minutes.

Thank you.

[Recess.]

Chairman JOHNSON [presiding]. We will resume the hearing. In view of the other panelists that we have ahead of us, we can begin the hearing. Before I recognize my colleague from Michigan, I

would like to ask the panelists each for some information.

Mr. Samuels, would you please get back to us—I want to make this as a formal request on behalf of the Committee—with an analysis of Mr. Petri's proposal? As I listened to his testimony I shared your concern but I believe that later on in his testimony, he did answer that issue of the possible shift away from support for singles.

Knowing him, as I do, and knowing the depth of work he has done on this issue over about the last 12 or 15 years, I think it is important that this Committee take seriously his testimony. He is the only Member who has ever gone into this in great detail and he knows a lot about it and he is extremely smart and I think we all need to look at his proposal. If there is some way we can alleviate the marriage penalty we certainly have an obligation to do so.

I would look forward to hearing from you on that.

Mr. SAMUELS. We will be pleased to do that.

Chairman JOHNSON. And Commissioner Richardson, this goes to Mr. Gibbons' comments earlier and his frustration with the amount we do and do not know about the effectiveness of our Tax Code.

The last time this Committee received any tax cap reports was in 1982. I would like to formally ask you and the IRS to provide us with tax gap reports from the 1988 TCMP and those would include the employment tax gap reports, the individual income tax gap report, and the corporate income tax gap report.

[The aforementioned report is being held in the Committee files.]

Thank you.

I will now recognize Mr. Levin.

Mr. LEVIN. Thank you, very much, Mrs. Johnson.

Like my other colleagues, I very much welcome the spirit within which this hearing is being held. Let me just mention to you—our numbers have dwindled here—but I think the issue remains very important.

My concern is what is going to happen in the budget conference? Because there is a major gap between where the House is and

where the Senate is on the EITC.

Chairman JOHNSON. Well, I think the budget conference will come up with its proposal, but each Committee will have its target

and how we achieve those targets is going to be up to us.

Line item in the budget resolution does not actually govern appropriations decisions nor do they actually govern tax decisions. Our job is to assure a workable fraud-free EITC and make any other reforms we think are appropriate. I do not consider our work governed, at this point, by the budget conference.

Mr. LEVIN. I am glad to hear you say that though, at some point, the budget resolution can carry instructions that would be so stringent a budget target for this Committee that it might tend to move

us in a direction that is different from the spirit here.

Look, I think the fraud and abuse problems have to be grappled

with and to the credit of this administration it is doing that.

Let me just ask, so that we all are clear on this, the Senate number would have what implications, Mr. Samuels, beyond fraud and abuse? I take it that there you cannot get \$20 billion from doing

what we need to do on fraud and abuse, is that right?

Mr. SAMUELS. That is correct, Mr. Levin. The Senate budget resolution assumes enactment of the administration's compliance proposal. That is the proposal to deny the EITC to undocumented workers and to allow the IRS to use the simplified procedures for dealing with taxpayers who do not provide correct Social Security numbers.

That proposal is their only compliance initiative. The balance is a cutback in the program. As the board up there shows, an EITC taxpayer with two or more children, on average, would have a tax increase of \$305 in 1996, and that number does not include the compliance amount. That is everything other than the compliance amount. Obviously for low-income workers who are receiving the EITC that is a significant amount.

Mr. LEVIN. Right. I just raised this because I really think that this discussion here, and it has been a useful one, will hopefully

have some impact on the conference committee. Otherwise, those who have spoken here in support of EITC could be put into a position where it would be very difficult to carry out, the gist of this

hearing.

Chairman JOHNSON. I think as the Congress looks at every appropriated program, we will also look at every tax expenditure program and look at what is in the public's interest as we seek to establish a spending pattern that will lead to balance by the year 2002. I cannot guarantee to anyone here, that as we look at the relative value of every program that we will not look at the relative value of the EITC Program. But, I consider that a different issue than making the law state of the art and the best law that we can make it.

I also think it is very clear from this hearing and from the history of this program that there is very deep bipartisan support for

this particular program.

Mr. LEVIN. We are all together on effectively weeding out the fraud and the abuse. If I had time I wanted to ask our two distinguished witnesses to comment on the incentive. Later there will be testimony on whether or not the EITC is an incentive or a disincentive.

Do you want to comment briefly on that?

Mr. SAMUELS. Yes, Mr. Levin, we believe that the EITC is, on balance, a net incentive.

Mr. LEVIN. But the argument in some of the testimony is that especially in the higher income, in the ranges as you move up of

those covered by the EITC it becomes a disincentive.

Mr. SAMUELS. Families in the phaseout range tend to be people who are much more attached to the work force. We would not expect them to respond by cutting back on their work, except, in the situation where both spouses are working, and one might decide to reduce their work hours to stay home and take care of the children because of the EITC. We do not think that is a bad outcome.

Obviously, there is a work disincentive any time you have a phaseout but we think the group that is subject to the EITC phaseout is more attached to the work force. For those who might reduce their work hours, the choice may be to stay at home and take care of children.

Mr. LEVIN. Thank you, Madam Chairman.

Chairman JOHNSON. Mr. Herger?

Mr. HERGER. Thank you very much, Madam Chair. I want to commend both of you at the Treasury and the IRS for taking some much needed steps to eliminate the fraud and abuse in the EITC program. Even with the changes, the EITC still adds a layer of complexity to our current system.

Mr. Samuels, I might ask of you, in your opinion, is there any way that we could perhaps juggle the income tax or FICA tax rate brackets like perhaps setting a floor on FICA tax, while providing the same relief to the same families, and at the same time reduce this complexity of the Tax Code with the EITC the way it is currently set up?

Mr. Samuels. Mr. Herger, we have looked at those suggestions. Let me just say as you know we are really committed to thinking of all possible ways to make the program as efficient as possible.

My reaction so far to what I have heard of these proposals is that the promise of simplicity and reduction in error rate is a mirage. We would be here talking about exactly the same issues; how to

target the FICA floor to the right population?

If you are trying to administer this through a payroll tax system, how are employers going to decide which employee is supposed to be able to get the benefit? You have employees who have multiple jobs. You have couples. Employers will have to figure out who is supposed to get the appropriate benefit, because you are not going to give the FICA floor to everybody. You have to target it.

I think that you would find, at the end of the day, that we really would not have made any progress in either simplification or targeting. And, in addition, it means that you would require employees to go to their employers and explain to them that they are entitled to this benefit, and many employees do not want to have

that conversation.

As Commissioner Richardson mentioned, we have been working hard on outreach programs to encourage the advanced payment. While we have seen some success, overall as a percentage of the total, it is still a small fraction of the total number of EITC recipients. We keep asking ourselves why we cannot we do better in getting recipients to claim the advanced payment, because we think that would be a good way of delivering the EITC.

One conclusion is that employees do not like to go to their employers and explain to them that they are entitled to this program. Given the relationship between the employer and employee, I think that there is some question about whether employees would choose to describe what their circumstances are to their employers. In addition, I think sometimes there is a question of whether the employer might say, "Well, now, I know you are getting this benefit, so, I am not going to give you that raise." Finally, we have had very serious problems with the targeted jobs tax credit which is also a credit for employers. These are different programs, I am just giving you a very broad view. Our experience with the targeted jobs tax credit was very unhappy, and we have said we would not support its extension unless it has some serious changes made to it.

When we have looked through these proposals, we think that you wind up with a different set of problems in some sense, but these problems are going to be as serious or more serious than what we currently have. We now have a program that a lot of people understand, and where we feel we are making progress on the error rate issue with the steps that the IRS has taken. That is very important to the proposals we have made and Congress has passed. We have proposals here, before you, which we think will make a significant difference.

We think we are on track and we need your support to continue that and we appreciate your support so far this year on trying to get a handle on this issue.

Mr. HERGER. Thank you, Mr. Samuels.

Chairman SHAW. Mrs. Kennelly.

Mrs. KENNELLY. Thank you, Mr. Chairman.

Mr. Chairman, I would like unanimous consent to place an opening statement in the record.

Chairman Shaw. Without objection. Any Member who has an opening statement, it will be made a part of the record. [The opening statement and attachments follow:]

OPENING STATEMENT OF BARBARA B. KENNELLY

EITC Hearing

"The best anti-poverty, the best pro-family, the best job creation measure to come out of the Congress." These are the words of President Ronald Reagan.

As an advocate for the EITC, I agreed with President Reagan, and worked with him on the 1986 indexing expansion changes. I worked with President Bush on the largest-ever expansion in 1990. I worked with President Clinton on the 1993 simplification and expansion. Historically this is a program that has enjoyed strong bipartisan support.

I am pleased that we are having this hearing today to examine problems with the EITC. Let there be no mistake—where errors are made, they must be corrected and where even one dollar of fraud exists, it must be found, stopped and those responsible prosecuted.

I would hope that on a bipartisan basis we can focus on finding solutions to the real problems in the EITC. I would hope that we can distinguish an honest taxpayer mistake from criminal fraud, correct the former and punish the latter without taking benefits away from innocent hardworking EITC families. And perhaps, I would hope that we can acknowledge the multitude of things the Internal Revenue Service has done to stop fraud and find errors as well as recall the many changes the Congress has made in this program in the past 2 years that should address error and fraud. In this area, I would like to include for the record 12 steps the Administration has taken to reduce error rates.

And once we have a real picture of what the problem is and the changes that are in place to address the problem, I would hope on a bipartisan basis, we can take the additional steps necessary to eliminate fraud and minimize errors in the program.

In 1993 some 84,856 families in Connecticut received the EITC. We

have tremendous income disparity in Connecticut. For instance, in 1995 45% of all Connecticut families with one child that file as head of household will generally qualify for the EITC while a mere 9.9% of Connecticut families with one child that file married filing jointly will qualify.

Similarly, in 1995 48% of all Connecticut families with two or more children that file as head of household will generally qualify for the EITC while just 10.8% of Connecticut families with two or more children that file married filing jointly will qualify.

The EITC is particularly critical for these families headed by one parent--often a divorced parent with children or a young mother struggling to get off welfare. It is on their behalf that I am very concerned about proposals in the Senate-passed Budget Resolution that would increase their taxes. CT families with one child would have their taxes increased by \$1,436 over 7 years by the Senate Budget Resolution. CT families with two or more children would have their taxes increased by \$1,778 over 7 years by the Senate Budget Resolution.

What I find particularly troubling is that 90% of the reduction in the EITC in the Senate Budget Resolution has nothing to do with reducing errors, eliminating fraud or ensuring that those not entitled to the credit do not receive it. This Member is willing to do whatever is necessary to reduce errors, eliminate fraud and ensure that those not entitled to the EITC do not receive it. But this Member has NO interest in increasing taxes on struggling families in Connecticut.

I am also greatly troubled by the suggestion that we count child support payments as income for EITC purposes. This simply makes no sense and would represent a major step backward in child support enforcement. Such a change would add unbelievable complication to the EITC--complication that only leads to additional errors. The one thing this program doesn't need is more errors!

Further, the IRS has no data on child support payments, therefore, it would be impossible for the Service to verify this information. I am particularly troubled that non-custodial parents are already taxed on child support payments. To count child support payments as income for EITC purposes would amount to double taxation. I do NOT support taxing child

support payments!

Such a change could also actually lessen child support payments whereby divorced payments who find themselves in danger of losing the EITC could negotiate to maximize the EITC and minimize child support payments.

Inclusion of Social Security in income for EITC purposes raises equally troubling questions and should be rejected.

Finally, the House-passed version of welfare reform would eliminate the restriction on how States treat the EITC for AFDC recipients. Under the House-passed bill, States could elect to count all or part of the EITC as income available to an AFDC family and reduce AFDC benefits accordingly. Lump-sum EITC refunds, which 99% of EITC families receive, could be treated by States as an asset immediately available to an AFDC family, thereby disqualifying them from AFDC. Surely EITC is supposed to be an incentive to work, a helping hand in making the transition from welfare to work. I would hope that within the context of EITC reform we can revisit this issue.

Thank you.

TO IMPROVE THE EITC AND REDUCE ERROR RATES 12 ADMINISTRATION MEASURES

Source : Truemany, May 13, 1995

Simplicity and Veriffability

- The Clinton Administration recognizes that error rates are a problem and has acted aggressively to reduce them.
- Specifically, the Clinton Administration is committed to structuring the EITC so that deserving and eligible individuals--and only those individuals--are able to claim and receive the EITC.
- If eligibility rules are simple, taxpayers can more accurately claim the EITC and Two key means to this end are the simplicity and verifiability of EITC claims. avoid costly errors.
- If eligibility rules are verifiable, the IRS can better ensure that the EITC is paid only to those who are eligible.
- The Administration has taken 12 measures to ensure the simplicity and verifiability of the EITC and to reduce erroneous or undeserved claims.

OBRA 1993

- The EITC was simplified by repealing the complex supplemental credit for health insurance
- Some taxpayers made mistakes in their claims because they did not understand the complicated eligibility criteria.
- The EITC was further simplified by repealing the supplemental credit for children under the age of one. ri
- eligibility criteria for the young child credit, and the rules were difficult to administer. This should also improve EITC compliance, as taxpayers could not understand the •

Uruguay Round Agreement Act of 1994

- 3. The EITC was denied to nonresident aliens.
- Under prior law, nonresident aliens could receive the EITC based on their earnings in the United States, even though they are not required to report their worldwide income :
- Prisoners will not be eligible for the EITC based on their earnings while incarcerated. 4.
- The EITC was never paid to prisoners, and this ensures that it will not be paid to them, now or in the future.
- Taxpayers will be required to provide a taxpayer identification number for each EITC qualifying child, regardless of age.
- This will allow the IRS to verify eligibility for each child claimed by the taxpayer.
- The Department of Defense is required to report to both the IRS and military personnel non-taxable earned income paid during the year that is included in computing the EITC. છં
- This will ensure that military personnel receive the benefit for which they are eligible.

Verifying and Delaying Questionable Refunds

The IRS has instituted a series of tough new administrative measures to reduce error and fraud in the EITC. The IRS now scrutinizes the social security numbers of all EITC qualifying children.

∞:

- Children's social security numbers are checked to make sure the numbers are valid, and no child is claimed more than once.
- EITC returns filed electronically. This year, the IRS is tightening its validation tests Last year, the IRS only validated the social security numbers of children claimed on and checking all returns--whether they are filed electronically or on paper.
- Refunds on returns with missing, invalid, or duplicate social security numbers will be delayed, while the IRS investigates further. :
- EITC refunds may also be delayed if the IRS has questions regarding the validity of the 6
- Certain taxpayers will be required to provide additional documentation to verify that their EITC claim is valid before the credit is awarded.

As of April 21, 1995, the IRS has delayed refund checks to 6.5 million filers as a consequence of these two actions.

Intensifying Scrutiny of Electronic Return Originators

- quick signal from the IRS that a taxpayer was going to receive a refund check. Preparers fraudulent, the IRS -- not the preparer -- was left with the bill if the taxpayer disappeared used this information to advanced taxpayers loans on their refund checks within a couple indicators (DDIs) to preparers of electronic returns (EROs). The DDIs gave preparers a days of filing a return. With the DDI, the taxpayer would receive a loan, and the IRS would pay the refund directly to the ERO. If the return was later determined to be Beginning with the 1995 filing season, the IRS is no longer providing direct deposit with the refund anticipation loan. ⊙.
- Eliminating the DDI provides EROs with greater incentives to check the eligibility of EITC claimants. Preparers will not find it in their interest to advance refund anticipation loans to filers who may not be receiving a refund from the IRS.
- responsible for refund fraud. The IRS has taken several steps to stop this practice: In its enforcement activities, the IRS has also found that some EROs have been
- Fingerprint and credit checks are conducted on certain new ERO applicants.
- IRS is conducting additional compliance checks to ensure that EROs are meeting new, stricter requirements for participation in the program.
- The IRS is working with the Justice Department to prosecute preparers and EROs who take advantage of the EITC to defraud the Federal government.

Preventive Actions

- The 1994 Schedule EIC was shortened and simplified to make it easier for low-income taxpayers to understand if they are eligible for the credit.
- required to provide valid social security numbers for all dependents and EITC qualifying Taxpayers were also warned on the cover of the 1994 tax return that they would be 12.
- invalid social security numbers received letters from the IRS alerting them to be more In December 1994, over 180,000 taxpayers who filed in 1994 with incorrect or careful on their 1995 tax returns. :
- IRS participated in extensive media campaigns before and during the filing season to emphasize the need for accurate SSNs. •

Additional Proposals To Reduce Errors Still Pending

- The Administration submitted additional proposals as part of the President's FY 1996 budget which are still pending final legislative action.
- The EITC would be denied to undocumented workers.
- 60 days to provide a correct social security or, if they failed to do so, could refile with the The IRS would be authorized to use simpler and more efficient procedures when taxpayers fail to supply a valid social security number. Taxpayers entitled to the credit would have correct information to obtain the EITC.
- In combination, these provisions would strengthen the IRS's ability to detect and prevent targeting of the EITC by providing the credit only to individuals who were authorized to erroneous refunds from being paid out. In addition, the proposals would improve the work in the United States.
- IRS's collection functions. TSM will also enhance the IRS's ability to detect erroneous systems modernization (TSM) program. TSM is vitel to the long-run efficiency of the The FY 1996 budget for the IRS contains funding for the continuation of its taxpayer
- Last year, the Administration also proposed State demonstration projects to provide alternative ways of delivering advanced payments of the EITC.

We hope that Congress will act on these proposals soon.

Mrs. Kennelly. Mr. Samuels and Ms. Richardson, thank you for coming this morning, but also thank you for your work in making the EITC work. It is a good program and I know if it had not been for your efforts in the last year or so we would not be where we

are today.

Before I ask a question, I would just like to make two points. One, I think we have to be awfully careful not to interchange the word, error and fraud and then come up with a percentage of abuse. Fraud is against the law and it should be prosecuted, but a lot of people make errors, as you know, on the IRS forms. I thank the Chairman for his remarks this morning and for support of the program.

I think we have to remember that in the Senate, that 90 percent of the dollars that they are looking to take from the EITC are not in fraud or error related, it is literally to withdraw money from the

program, I thank the Chairman for appreciating that.

Mr. Samuels, back to the Senate, they have suggested that we include child support enforcement and Social Security when figuring out the EITC and I wonder how you feel about that?

Mr. SAMUELS. Well, on the child support, we have a concern about that proposal. We should be encouraging a taxpayer who is responsible for taking care of children to get the child support that he or she, generally she, is entitled to.

If you add child support to income, you are going against that policy. For that reason, there has been a very long tradition of ex-

cluding child support from taxable income.

The second problem with child support is that the IRS does not have any way to verify whether somebody is getting child support. By adding child support to income, you then set up a situation where we are inevitably going to have errors because one, people have never been required to include it in income; and two, we have no way of checking.

I think it would be setting up a situation which would increase the complexity of the calculation for millions of working Americans and, at the same time, cause a potential for errors. We have signifi-

cant reservations about that proposal.

With respect to including Social Security payments, I think when you were out voting we discussed that proposal. I said the considerations to take into effect are that you have kind of two situations. First, a person who is receiving Social Security working and taking care of maybe a grandchild would all of a sudden be treated differently than their neighbor who is getting Social Security and is not taxed on their Social Security because they do not work or care for their grandchild.

Then you would have a situation where one spouse is working and the other spouse is on disability. I do not think anyone anticipated that the disability insurance program might result in a loss

of tax credits.

Those are some of the considerations on Social Security that we think you ought to evaluate. Again, we do not receive reports on Social Security from the Social Security Administration (e.g., 1099s) so that we can check, so it would also raise a compliance issue.

Mrs. KENNELLY. Ms. Richardson.

Ms. RICHARDSON. Congressman Kennelly, my two principles would be that whatever changes are made we need to keep them simple and easily verifiable. Those are the two things that are the most important to us as an administrator in making the program work. We hope any changes that are considered can be easily verified and will not do anything to add to the complexity for the taxpayers.

Mrs. KENNELLY. Thank you. Quickly, Mr. Samuels, can you just comment on one of the suggestions in the Joint Tax Committee Report that the EITC be replaced by an employee FICA credit. Have

you heard of that one?

Mr. SAMUELS. Yes. Mr. Herger asked me about that and I said that I thought it would be a mirage. When you actually look at these proposals, we will be back here talking about the same problems—targeting, compliance, how do you know whether the person is entitled to it—so we do not think these proposals are an improvement.

Mrs. KENNELLY. You think that is a nonstarter?

Mr. SAMUELS. Yes.

Mrs. KENNELLY. Thank you, sir.

Thank you, Mr. Chairman.

Chairman SHAW. I would like to follow up for just a moment on some of the questioning that you had with regard to income that is excluded. You spoke of child care being excluded in the computation. Is alimony—

Mr. SAMUELS. Alimony is included in income. It is deductible by the—

Chairman SHAW. It is; so, is there any taxable income that is not included in the computation of the EITC?

Mr. SAMUELS. Taxable scholarships and fellowships are not included for earned income purposes but they are included for the adjusted gross income purposes. I think basically all the items—

Chairman SHAW. You work off of the adjusted gross income?

Mr. SAMUELS. Yes, sir.

By the way if I might just follow up on one thing in my response to Mrs. Kennelly on the Social Security, I am told that we do get 1099s for Social Security benefits in order to determine whether someone is subject to tax on benefits. I would like to correct my remarks on that point.

Chairman SHAW. Mr. Gibbons.

Mr. GIBBONS. Thank you, Mr. Chairman.

Let me ask you, Ms. Richardson, just what capacity does the IRS have? Can your machine read taxpayer return information to include the Social Security number? Can your machine read that or do you have to hand-read it?

Ms. RICHARDSON. Congressman Gibbons, today we are doing some scanning of tax returns. I believe we are doing some of the 1040 EZs. But by and large we are still locked into a system where if people file on paper, we keypunch in the data from the face of the return. For returns filed electronically the data is completely captured electronically and we do not have to transcribe the information.

Mr. GIBBONS. Now, once you get that data which most of it must be hand-punched in, I guess, can your computers identify correct

or incorrect SSNs for a person?

Ms. RICHARDSON. We have been able to do that this year. We have, as part of our fraud detection efforts, stepped up our ability to match SSNs, to check for duplicate numbers, and to assure that the names and the numbers match with what is on the Social Security records.

Mr. GIBBONS. You have only been able to do that this year?

Ms. RICHARDSON. We have done it this year.

Mr. GIBBONS. All the years prior to that you really could not do

it, is that right?

Ms. RICHARDSON. I think that is correct and then we made a concerted effort as part of our antifraud efforts to transcribe all the numbers and assure that not only the taxpayer and the taxpayer's spouse, but dependents were also transcribed and matched.

Mr. GIBBONS. Can your computers tell you whether taxpayer A and taxpayer Z are perhaps claiming the same child dependent?

Ms. RICHARDSON. We can do that this year. One of the reasons we slowed the refund process down was so that we could do a du-

plicate Social Security number check.

Mr. SAMUELS. Mr. Gibbons, if I could just add, because the IRS has that capability and they have been engaging in this matching this year, that is a reason why we strongly urge the Committee to consider our proposal to simplify dealing with taxpayers who do not provide correct Social Security numbers. The IRS does not have to go through complicated methods of denying EITC if someone does not provide a correct Social Security number.

We think that is a very important proposal and would greatly as-

sist us in our compliance efforts.

Mr. GIBBONS. I can see that the invention of false children and false dependents could be a real problem unless you have some way of identifying them other than off of some given name.

About the Social Security system, I guess it is the only way we

have got of doing that, the Social Security number.

Mr. SAMUELS. As you may recall, Mr. Gibbons, in the GATT, General Agreement on Tarriffs and Trade, legislation we have required that a Social Security number be obtained for all children, regardless of age. We are phasing that provision in.

Prior to the GATT change you were not required to have a Social Security number for a child under the age of one, and now we are requiring it for all children, on a phased-in basis, so that we will

have a complete file to match.

Mr. GIBBONS. You will not have those any time real soon. When will all that be effective?

Ms. RICHARDSON. 1997, in the next 2 years.

Mr. GIBBONS. 1997?

Mr. SAMUELS. Yes. Mr. GIBBONS. You mean for-

Mr. SAMUELS. Right now it is all children the age of one or older. Now we are phasing it in for children under the age of one. We wanted to make sure that the Social Security Administration had the ability to provide the numbers because we didn't want to have a requirement that people could not meet. Based on our discussions with the Social Security Administration we developed a phase-in schedule based on how old the child is. For tax year 1995, it is for any child 2 months or older, and then it is 1 month or older next year.

We phased it in to make sure that people could, in fact, get the numbers and that was one of our proposals that was in the Uruguay round legislation, which we think is quite important to

our compliance effort.

Mr. GIBBONS. Yes, I recall that.

Now, let me see if I am correct. In calendar year 1997, you will have a complete web, is that right?

Ms. RICHARDSON. In order to claim a child as a dependent or to claim a qualifying child for the EITC, that child will have to have a Social Security number no matter what age.

Mr. GIBBONS. You will be able to tell by that time whether one or more, two or more families are claiming that same child, is that

right?

Ms. RICHARDSON. That is correct. We are actually able this year to verify duplicate numbers. I believe that if a child under one did not have a Social Security number we required additional verification that the child was, indeed, who the taxpayer claimed before we allowed the credits to go forward.

Mr. GIBBONS. It will not have eliminated that potential loophole

until 1997, is that correct?

Mr. SAMUELS. Excuse me, what I understand, Mr. Gibbons, is that the legislation will be effective in tax year 1997, for all people. It is really in the filing season for 1997 returns we will have it.

With respect to periods before then, the IRS, as I understand the Commissioner's comments just now, is taking special measures for those returns where there are children under the age of one without a Social Security number. They are asking for additional information to fill the gap between now and the time we can do it all with the computers.

Ms. RICHARDSON. That is correct, Mr. Gibbons. I would say that that problem has been addressed this year. Although the requirement to have the numbers is not there until, or fully phased in until 1997, we are verifying before claims are allowed, that, indeed, the child belongs to the person, or it is a qualifying child or prop-

erly claimed as a dependent.

Mr. GIBBONS. Well, the reason why I try to get such detailed information on this is that it has long seemed to me and by information that I have picked up on the street as you wander around, that there always has been quite a game where dependency was a test of what you either owed or you got as a benefit.

There is a little faking in that area. I was trying to put it gently. They have been borrowing kids around and borrowing—I do not

want to claim it as fraud, but it certainly is fraud, I guess.

Ms. RICHARDSON. Well, one of the, perhaps salutary effects of what we have done this year is that we have 800,000 fewer dependents who were claimed this year over the same period last year.

Mr. SAMUELS. That is a very important point that shows the results of what the Commissioner has been doing. This year we have seen a decrease in the number of dependents and we have actually

seen a decrease in the number of returns filed by taxpayers with children which we did not expect. It is less than last year so it is less in absolute terms-

Mr. GIBBONS. Are you telling me that the Clinton administration

has reduced our roles of dependency by 800,000?

Ms. RICHARDSON. We have 1 million more returns that have been filed this year, at the same time, over last year. We have 800,000 fewer dependents who have been claimed this year on all returns, and then for EITC purposes the number of returns claimed that had people with qualifying children is down by about 257,000.

Yes, we feel that the steps we took this year, particularly those

involving verification of SSNs, have been effective.

Mr. GIBBONS. Well, I realize we have not killed any children or

anything like that.

Ms. RICHARDSON. We are not aware that there was any major illness, so we believe it has been attributable to our fraud efforts.

Mr. GIBBONS. Well, that is good.

Chairman Shaw. What I would like to add here is just a brief question along that same line. Why do we not just go ahead and require the Social Security number to be issued with the birth certificate? Everybody is going to need one, whether it be for a poverty program or later becoming a taxpayer. Why not just go ahead and give each child a Social Security number simultaneously with a birth certificate?

Mr. SAMUELS. Mr. Chairman, as I understand it, that will be the effect.

Chairman SHAW. Is that 1997?

Mr. Samuels. That is correct, that is 1997.

Chairman Shaw. Is that what is actually required in 1997, is that the Social Security number is-

Mr. SAMUELS. Yes, and so that will show up when we do——Chairman SHAW. Why do we phase that in, why do we not just

go ahead and do it?

Mr. SAMUELS. I think that we wanted to make sure that we were not putting parents of newborns in the position that all of a sudden they would be asked to do something, and the States who administer the registration of births could not deliver. There was just a great concern that no one wanted to put a requirement on people who would then bitterly complain because States had not worked out a way of actually producing the Social Security number.

As we were talking about this last year, among the staff, we would have somebody say, "Well, yes, my wife just had a child and we are still waiting for the number." That was the reason it was

phased in.

So, we think-

Chairman Shaw. Are we getting into a problem with an un-

funded mandate, though?

Mr. SAMUELS. No, I do not think so. I think that we just really needed people to adjust their systems and make sure the Social Security Administration can provide the information that the States need. The States are registering births anyway. It was just a matter of getting the systems, I think-

Chairman Shaw. Yes, they could probably use that as a filing

number themselves.

Mr. English, do you have any questions? Mr. ENGLISH. Thank you, Mr. Chairman.

Just briefly. I would like to thank the panelists for joining us today to participate. What we are doing today, I think is very important. Because the reevaluation of the design of the EITC is extremely timely right now. I think this program, this tax provision is very important for the working poor. It has enjoyed bipartisan support in the past.

It has a very important role in our discussions on other areas of public policy, such as welfare reform and changing the minimum

wage.

I think there are a number of issues here which you have already covered, including the inaccuracy—and I hesitate to use the word, fraud, but that is obviously a significant part of it—the inaccuracy of many forms that are filed—the marriage penalty which I think is a very significant issue and the question which Mr. Samuels has raised, ably here, on simplification.

I have a couple of questions. First of all, Mr. Samuels, has the Treasury looked at the marginal tax rates of people who are leaving poverty, who are leaving the welfare system to become working poor and take a low-paying job?

Can you give us any data on the marginal tax rates that they face?

Mr. SAMUELS. Mr. English, we have looked at that and we can provide you with some specific information. I would say that in evaluating the marginal tax rates there are two issues. As you move into a job, you would be giving up significant benefits if you were receiving assistance. A purpose of the EITC is to offset the marginal rates which are caused by moving off of welfare to work. Also, for example, once you start to work, your first dollar is subject to FICA tax.

When you are thinking about what you are giving up and what you are moving to, you have to worry about the first dollar being subject to the FICA tax. And then, at a certain point, you are subject to income tax.

A worker without qualifying children, for example, becomes subject to income tax below the poverty line. There are significant marginal rate problems for these low-income workers that are a concern. The EITC is supposed to help people by increasing their net wage and offsetting these marginal tax rate problems. It is the only program we have like that.

Mr. ENGLISH. I would welcome your specific information. Mr. Steuerle, who I believe is here to testify today from the Urban Institute, previously indicated that the marginal tax rate can be in the range of 85 percent or perhaps even higher under certain circumstances.

Was that the finding of Treasury?

Mr. SAMUELS. Well, let me just give you some numbers here. The food stamp phaseout rate is 24 percent. The AFDC phaseout rate is 66 percent during the first 4 months of employment and 100 percent thereafter. When you start adding these together you have very high margin tax rates.

Mr. ENGLISH. Your finding has been that the EITC plays a significant role in lowering that marginal tax rate and making it easier to move from welfare to work.

Mr. SAMUELS. Yes, we do.

Mr. ENGLISH. I noted in your testimony that you are opposed to lowering the investment income cap as proposed in the Senate bill on the grounds that it might discourage savings and might contribute to error.

Can you give us any hypotheticals on why you see that as a sig-

nificant problem?

Mr. SAMUELS. Mr. English, when we proposed an investment income limit we picked \$2,500, which was reduced in H.R. 831 to \$2,350. We tried to pick a number that we thought would improve targeting, but also not discourage a low-income family from saving for a first house or for medical emergencies, or for education for their children. As you know, we have a very serious problem of savings in this country. The Committee has had significant hearings on this. We are also very concerned about it.

What troubles us is that if you lower this cap down to \$1,000, you could hurt people who are trying hard to build a little nest egg. The cap, is also a cliff. If you have \$1,001 you lose all of your EITC. When we designed the \$2,500 proposal, we pointed out that there

is a cliff, and we do not like cliffs as a policy matter.

We were trying, as Commissioner Richardson said earlier, to have something that was simple, easy to understand and was not going to create more complexity that would, in turn, lead to errors.

With a \$2,500 cap, we tilted to no phaseout and a cliff. You can see the dramatic result for somebody if they had \$1,001 of interest from a savings account, some savings bonds, and they lose all their EITC. It is especially difficult for a population that probably does not keep that close a track on fluctuations in their investment income.

Mr. ENGLISH. Sure. And those points are well taken. Thank you, Mr. Secretary, thank you, Commissioner, and thank you, Mr. Chairman.

Ms. RICHARDSON. Thank you.

Chairman Shaw. Thank you, Mr. English.

That does conclude the questioning.

Yes, Mr. Gibbons.

Mr. GIBBONS. I do not mean to be monopolizing this question thing here.

Chairman SHAW. You go right ahead and then I will ask another

one, too.

Mr. GIBBONS. I am wondering if you could explain to me why we have put certain things in certain categories as far as what is income?

For instance, I am looking at—on page 8 of the form that you all have for this, and you have got a chart, on page 304, that shows what is income and what is not income for the EITC.

I have sat through these things for a long time and I have forgotten some of the reasons we use to get to where we are. Maybe you can refresh my recollection.

It seems to me that food stamps are just as much income as cash is. Why did we not classify food stamps as income?

Mr. SAMUELS. Well, Mr. Gibbons, I think that the answer, at least in my mind, is clear. The level of food stamps was set, with the notion that it was not taxable income. If you wanted to tax it, then you ought to take that into account when setting food stamp benefit levels.

That program was established without the notion that that amount is income. In addition, you have a phaseout of food stamps. You have in effect a marginal tax rate for food stamps. As I recall, it is 24 percent. As your earned income goes up, you lose 24 cents on the dollar.

We, in effect, are taxing, through the phaseout, the food stamp amounts already. It seems to me it would be inappropriate, in effect, to hit it twice.

I think that that was the reason why food stamps were not included. Apart from the fact that then we would have to figure out how much they were, who they were given to, and Commissioner Richardson would have a very difficult time in trying to determine, if one theoretically wanted to try to include food stamps, who, in fact—

Mr. GIBBONS. Well, I realize technically it would be a tough problem, particularly since you are just learning how to check SSNs. It seems like to me that I can go down here to Safeway in Southwest Washington, there are a lot of food stamps used there. I go through the line with them and their food stamps are just as much money as my dollar bills are money.

So their food stamps are not taken into consideration at all in

family income for the EITC?

Mr. SAMUELS. No, sir. As I was saying, if you wanted to do that, you would have to take account of one, that they are, in effect, subject to a tax because they are phased out. You lose 24 cents on the dollar.

Mr. GIBBONS. I realize that.

Mr. Samuels. But, two, if you wanted to do that, you would have to say to yourself, well, should I increase the food stamp benefit—I mean on what level do you want to have people receiving food stamps? As you know, in order to bring a family of four, with a fultime worker earning the minimum wage, out of poverty they need food stamps, they need the minimum wage—not today's minimum wage, but they need a minimum wage that has been increased as the President has proposed by 90 cents—and they need the EITC. They need all three of those so that a family of four with a fultime worker earning the minimum wage can be out of poverty.

If you want to include food stamps in income, and if you believe that is an appropriate objective for full-time workers to have incomes above the poverty level and we certainly do, then you are going to have to increase the EITC or you are going to have to do

something to make up the difference.

As I said, that goal right now is not met. We are not with the current system. With today's minimum wage, today's food stamps and today's EITC—we are not bringing that family of four with a full-time worker at the minimum wage out of poverty.

Mr. GIBBONS. I understand that. I am not arguing with you about that. Just looking over this list, on page 304 of the form book, a lot of it does not appear to make a heck of a lot of sense

as far as equity is concerned between citizens. You know, I have taken up more time than I should have here. Perhaps I ought to have a private conversation with you and with my staff to argue about why we have classified this thing as we have.

Mr. SAMUELS. Mr. Gibbons, we would be pleased to sit down and

go over that with you and your staff.

Chairman SHAW. I believe that we should take another look at it. I would, Mr. Samuels, direct your attention to page 269 of the Tax Guide for 1994, which provides for a number of things that are not included. For instance, taxable items such as alimony.

The chart I am looking at may be wrong, but you will have to

take that up with Ms. Richardson. I did not write it.

Mr. SAMUELS. Mr. Chairman, alimony is included for adjusted gross income purposes, not earned income purposes. If you are receiving a substantial amount of alimony and let us say that you

had small earned income but a lot of alimony—

Chairman SHAW. Well, if we go back—I do not want to belabor the point, because it either is or it is not—but when we were talking before it was a question of adjusted gross income. I am not trying to get in an argument with you but I am saying, I am following up on what Mr. Gibbons said. To me these items that are listed on page 269, interest and dividends, Social Security and railroad retirement benefits, welfare benefits including all of them, pensions or annuities, veterans benefits, workmen's compensation benefits, alimony, child support, unemployment compensation, taxable scholarship or fellowship grants that were not reported—well that one, I can see where we may not want to include that—variable housing allowances for military. I think all of that goes into somebody's standard of living.

That is what we are trying to do with the EITC, make it so that we do not have working poor. I think that most of these items should be taken into consideration. I realize there are going to be some reporting problems because many of these do not go on the income tax returns. Perhaps this is something we ought to take another look at and I think Mr. Gibbons is quite correct in bringing this up.

Mr. SAMUELS. Mr. Chairman, we would be pleased to work with you on that. If I could just say that the EITC is a credit based on your earned income. There is a phaseout limit which puts all these other items—

Chairman Shaw. That is correct, but the purpose behind it was to eliminate the term, "working poor," because Congress feels—both Democrats and Republicans—if you are working you should not be poor.

Mr. SAMUELS. Right.

Chairman SHAW. So we should take everyone's resources into consideration in deciding whether they are poor. Your problem is compliance, and I understand that and perhaps we can work together to make a few midcourse adjustments on that.

I thank this panel very much. We kept you for an extraordinarily long period of time. You have been very cooperative with us, and we very much appreciate the time you have given us this morning.

Ms. RICHARDSON. Thank you, Mr. Chairman.

Chairman SHAW. The next panel we have includes: Marvin Kosters, a resident scholar of the American Enterprise Institute in Washington, DC; Robert Greenstein, executive director of the Center on Budget and Policy Priorities in Washington, DC; Mr. Eugene Steuerle, senior fellow of the Urban Institute of Washington, DC; Karl Scholz, Ph.D., associate professor, Department of Economics, University of Wisconsin; Jonathan Forman, professor, College of Law, University of Oklahoma. Welcome.

We have each of your written statements. You may proceed as you see fit. If you care to summarize, that would be fine, because

we do have your statements up here at the desk.

Dr. Kosters.

STATEMENT OF MARVIN H. KOSTERS, PH.D., RESIDENT SCHOLAR, AMERICAN ENTERPRISE INSTITUTE, WASHINGTON, DC

Dr. KOSTERS. Thank you, Mr. Chairman.

I appreciate this opportunity to be here and say a few words about the EITC. Much has been said about its growth and about the problems that are associated with it. It seems to me that this is a good time to take a look at it to see whether, this is a good way to spend as much money as is scheduled to be spent on it, and to see whether some of the problems really need to be fixed anyway.

There are several issues that I cover in my testimony. Just to summarize, take first the problem of fraud. It has received a good deal of discussion here, but I think that we need to recognize that there is more involved here than simply fraud. The high subsidy rate that can encourage work also encourages token work. Filling out the payroll tax forms and paying those, makes it legal, essen-

tially.

You will have, when it is fully phased in next year, a subsidy rate up to about \$10,000 of earnings of 40 percent compared with a payroll tax—a combined payroll tax rate—of a little more than 15 percent there will be incentives there to exchange work, for example, or perhaps just do the paperwork for it. Such arrangements will be difficult for the IRS to ferret out. No matter how much in the way of increased enforcement is put in place, it would be hard to identify such arrangements or do something about them. There is also the marriage penalty problem and, finally, there is the work incentives issue.

The first thing I would say about the EITC, as it is scheduled to go into place next year is that the cutoff quite high in relation to incomes of the families that are talked about in terms of the working poor.

Some 40 percent of families would be below the income cutoff next year when the EITC is phased in, and families with children; and this can be compared to a poverty rate of less than half that

in 1993, about 18.5 percent.

The income cutoff is quite high in relation not only to family incomes, but it is even higher in relation to the typical earnings of an individual worker. If you take workers as a whole, across the country, almost 50 percent of them earned less than \$25,000 in 1993.

Now, the main rationale for the growth and popularity of the EITC seems to be that it encourages work. I think it is useful to take a somewhat closer look at that. I believe that the favorable effects on work have been exaggerated and the reason is simply because so many, so far up the income distribution are encouraged to work less rather than more.

We have, for those 40 percent of families with children who are below the income cutoff, 20 percent, or half of that group below the income cutoff, work is fairly significantly discouraged. The real question is whether that 20 or 30 percent who are discouraged or not encouraged to work, would be offset to any significant extent by the 10 percent where no one is working but where someone might be encouraged to consider work. There is some evidence of that, that Professor Scholz has developed, I read that evidence as

saying, roughly, "maybe."

It seems to me that we need to recognize that the EITC discourages work for many families. For some families where work is discouraged, their incomes are likely to be actually lower after their EITC payment than it was before. If we take Professor Scholz' numbers, for example, and if we suppose that hours of work will increase as much as he estimates for people who are encouraged to work, we need to recognize that the amount of output, the amount of GDP, is still likely to decline. This is because the wages of those drawn into the work force are likely to be lower, significantly, lower than the wages of those further up the income distribution where there is likely to be a net discouragement of work.

It seems to me that the EITC should be looked at carefully we should see whether its administration ought to be transferred to a welfare bureaucracy that is already in place, and to see whether the subsidy rate should be very sharply cut back to say, the 15- to 20-percent range. Some of the income support payments might then be transferred to a welfare bureaucracy to administer and, perhaps, some of the rest could be used to reduce deficits in the future.

Thank you, Mr. Chairman.

[The prepared statement and attachment follow:]

Testimony of

Marvin H. Kosters American Enterprise Institute

Committee on Ways and Means Subcommittees on Oversight and Human Resources U.S. House of Representatives June 15, 1995

Improving the Earned Income Tax Credit

Mr. Chairman and members of the Committee: Thank you for this opportunity to give my views about the earned income tax credit (the EITC) and how it could be improved.

The EITC has become a major income transfer program. It redistributes income to low-income people who work, with most of its payments going to workers with dependents. Since it began in 1975, the program has been greatly expanded, most recently in 1993. Provisions enacted then will not be fully phased in until next year. By that time, its cost will have almost quadrupled since 1990.

The argument most frequently made for redistributing income through the EITC is that it encourages work. Although some are encouraged to work by the EITC, others face incentives to work less and their numbers have increased as the program has grown. In addition, the expansion of the EITC has led to higher marriage penalties and increased incentives for uneconomic activities and fraudulent claims. For these reasons, I believe the earned income tax credit should be scaled back sharply. Some of the payments now being made under the EITC to the poorest working families could better be administered by agencies responsible for other income maintenance programs.

The Scope of the EITC

The projected cost of the EITC in 1996 is \$26 billion in budget outlays and offsets to personal income tax payments. This is roughly comparable to the costs of food stamps (\$27 billion) and housing assistance (\$27 billion). The cost of medicaid is much larger (\$96 billion). The federal share of family support payments (AFDC) is considerably smaller (\$18 billion), but when state and local expenditures are included the total is somewhat larger (about \$33 billion). The EITC has become a major component of total federal expenditures to redistribute income to families with low incomes

A brief description of how the EITC works is necessary to discuss its effects. I will describe its application to a family with two dependents when current law is fully phased in next year. At incomes of up to about \$8,900, the credit provides a subsidy of an additional 40 cents for each dollar earned, up to a maximum credit of about \$3,560. Families in the relatively narrow income range between \$8,900 and \$11,600 are eligible for the maximum credit. The credit is reduced by 21 cents for each additional dollar earned where the credit is phased out in the income range between about \$11,600 and \$28,500. Families with one dependent receive a smaller maximum credit and are subject to correspondingly lower subsidy and phase-out rates. Low-income workers without dependents are also eligible for a small credit, but I will not discuss how they are affected.

Eligibility for the EITC of families with children depends on their income level and work status. The data that I use to see how many families are affected and how they are affected are from the Current Population Survey. This information on households with children that are likely to comprise tax filing units is shown in the table at the end of this statement.

A large share of families with children have incomes below the EITC income cutoff level according to these data. About 40 percent of families with children have incomes low enough to qualify for EITC payments. This 40 percent who are eligible for the EITC on the basis of their income level can be compared with a poverty rate for families with children of 18.5 percent in 1993. Payments under the EITC evidently extend to families with incomes well above the working poor as defined by the conventional measure of poverty. The families in these two bottom income

quintiles in which someone is working are directly affected by the EITC. The families in the other three quintiles are affected indirectly by the need to pay higher taxes to finance the EITC payments.

Effects on Work

To examine the effects of the EITC on work incentives, it is necessary to distinguish further between families by their work status and income level. Families with someone already working and with income in the range where they are eligible for the EITC account for 30 percent of families with children. These families are eligible to receive credit payments without any change in their work behavior. The program may induce them to modify their work choices, however, and the work incentives they face depend on their income levels.

For families with the lowest incomes -- up to \$8,900 for families with two or more dependents -- the amount of the credit increases as they work more and earn more. For every dollar they earn they receive a 40 cent subsidy in addition, and they are accordingly encouraged to work more through this "substitution effect." However, the credit payment they receive would permit them to maintain or even increase their income without working as much, and this "income effect" discourages work. Thus despite the large subsidy to their wages, the increased income they receive reduces pressure to work more. Whether they will work more or less depends on how their work behavior responds, and the evidence suggests that the net effect of these offsetting forces is likely to be quite small. These working families with the lowest incomes account for about 7.4 percent of all families with children (as shown in the table), and they are likely to experience little net work encouragement or discouragement.

Families with somewhat higher incomes receive the maximum credit in an income range that includes an additional 3.8 percent of families. They receive no additional encouragement to work through the substitution effect, while the additional income they receive from the credit produces an incentive to work less. Families in this income range will tend to work less.

For families with still higher incomes, where the credit is being phased out, the reduction in the amount of the credit payment as they earn more money is equivalent to an additional tax on earnings. For every additional dollar they earn, 21 cents are in effect taxed away by a reduction in their credit payment. For them, work is discouraged both by the reduction in net earnings from additional work, and by the additional income from the credit payment they still receive; the (negative) substitution effect is reinforced by the income effect. Families in this income range face the strongest incentives to work less, and they account for about 19.5 percent of all families with children.

Studies that have examined the implications of the EITC among working families generally conclude that their work effort is likely to be reduced compared with work behavior in the absence of the program.² Less work and lower earnings offsets some of the effect on incomes of EITC payments. Indeed, the evidence suggests that many working families eligible for the EITC will actually have lower incomes than they would have in the absence of the program.³

In view of this discussion of work incentives for families with someone working, what is the basis for the view that the EITC encourages work? Low-income families with no one working are unambiguously encouraged to work by the EITC. For them, the EITC amounts to a bonus for working as long as their income remains below the eligibility cutoff, but they receive credit payments only if they are induced to work and generate earnings. Although the EITC definitely has a positive effect on work incentives among these families, they account for only about 10 percent of all families with children.

Whether work is on balance encouraged by the EITC depends on whether enough people in the 10 percent of families with no one working choose to work, and to work enough, to offset the reduction in work effort expected for the 30 percent with someone already working. More than twice as many families face work incentives that definitely discourage work compared with those who are encouraged to consider working. Is it likely that less work in response to negative work incentives among working families could be offset by greater incentives to work among families with no one working? One study that examines the question concludes that fairly generous assumptions about work choices are necessary for the EITC to actually encourage work instead of on balance discouraging work.

Can anything be done to improve the balance? In my view, the EITC discourages work for too many families, too far up the income distribution. Family income cutoffs are quite high in relation to earnings of the typical worker. For example, among adult high school graduates (25 years old or more), half earned less than \$18,000 in 1993, and half of college graduates earned less than about \$31,000. For all adult workers, 57 percent earned less than \$25,000 in 1993. Credit payments under the EITC extend farther up the earnings scale than can reasonably be viewed as covering only the working poor.

Reducing the maximum amount of the credit, reducing the income limits for eligibility for the credit, and reducing the subsidy and implicit tax rates would reduce the number of working families for whom work is discouraged, while the number of low-income families with no one working -- and who would be encouraged to consider working -- would be unchanged. Downsizing the EITC would reduce the strength of positive work incentives for families with no one working, but negative work incentives for families with someone working would be correspondingly reduced, and work would be discouraged for fewer families. In addition, of course, less income would be redistributed, and the transfers that remained would be shifted toward lower income families with children.

Reducing the income cutoff level and phasing out payments more quickly is another approach that could be considered. But unless the size of the maximum credit were also reduced, this would increase the implicit marginal tax rate on earnings and strengthen incentives to cut back on work for the remaining families. If the credit payment is large, there is really no escape from the dilemma of a punitively high implicit tax rate or extension of payments to a large number of families higher up the income distribution.

The Marriage Penalty

It has long been recognized that tax liability under the individual income tax is often higher for two individuals who are married than it would be if they were single instead. Under a personal income tax system with progressive marginal tax rates and equal taxation of married couples with the same incomes, complete marriage neutrality cannot be achieved. Until recently, however, marriage penalties have not been a problem for families with relatively low incomes because they either paid no taxes or their tax liabilities were small and rates were very low. The EITC brought the marriage penalty to low-income families, and the big expansion of the credit in the 1990s made it a significant problem.⁵

The marriage penalty is particularly severe for people who -- if they were not married -would each be eligible for the maximum credit. Under the most adverse circumstances the marriage
penalty could amount to over \$5,000, which for the family affected would be about 25 percent of
the combined income of the married couple. Such a tax penalty creates an economic disincentive
for marriage, and it reduces economic rewards from employment for married secondary workers
compared with their unmarried counterparts.

The marriage penalty could be reduced by introducing a two-earner credit, based on the same logic as the two-earner deduction in the individual income tax law from 1981 to 1986. This would, of course, increase the cost of the program. The problem could also be ameliorated by reducing the size of the EITC. A significant reduction in subsidy and phase-out rates and in the maximum credit amount would greatly reduce the importance of the marriage penalty.

Incentives for Waste and Fraud

The high subsidy rate for earnings at low family incomes produces incentives to engage in both legal and illegal activities to take advantage of payments under the EITC program. Because the earnings subsidy rate very substantially exceeds payroll tax liabilities, the EITC makes some work attractive that would not otherwise be undertaken. In other words, it encourages activities that could be characterized as taking in one another's laundry when doing one's own would make more sense. Activities of this sort could be perfectly legal, but they would contribute little to economic well-being and mainly produce transfers for EITC recipients.

The rewards produced by credit payments and subsidy rates that are high in proportion to income have also apparently stimulated illegal activities. Audits by the IRS have shown a high incidence of credits claimed that are in excess of amounts for which families were eligible, and

many credit payments for which families were ineligible. Efforts have been made to make the program more easily administrable, and this might help to reduce errors. But the subsidy rate and the size of credit payments have also been increased substantially, increasing incentives to make fraudulent claims.⁶

The primary function of the IRS is collecting tax revenue under a system that is largely self administered. Assuring compliance with EITC provisions poses some awkward problems for a tax collection agency. Its activities are oriented primarily to identifying hidden or under-reported income, not to looking for ways in which income from earnings might be exagerated. Earlier tax reforms removed many low-income families from the tax rolls, but the EITC has swept many low-income families back in. Auditing these returns, each with a relatively small dollar amount at stake, is quite expensive in relation to the revenue impact of errors and noncompliance that are identified. The IRS may also be reluctant to press too hard to recoup overpayments, and it may find them very difficult to collect. Yet, unless reasonable compliance can be assured, the IRS is likely to be seriously embarrassed and the EITC program discredited.

In considering the auditing and compliance role of the IRS for the EITC, it should be recognized that a large bureaucracy to administer welfare payments and other social services is already in the field. This bureaucracy is often criticized for devoting too much attention to documentary paperwork and auditing, and too little to counseling and helping families in other ways to improve their circumstances. It makes little sense in this context to establish a separate, parallel bureaucracy in the IRS to administer another program to supplement incomes of low-income families, many of whom also receive benefits under other programs.

As in the case of work incentives and the marriage penalty, the compliance problem is greatly exacerbated by the size of the EITC. Smaller subsidy rates and credit payments would reduce incentives to claim credits to which a family is not entitled. If the size of the EITC were significantly reduced, whether the beneficiaries received partial payment of their estimated credit contemporaneously with their paycheck, or in a lump sum at the end of a tax year (as most now choose), would also be a matter of less consequence.

Summary

The major problems with the EITC have become more significant as the program was expanded. Although intended to encourage work by helping to "make work pay," the EITC discourages work for too many, too far up the income distribution. As it is currently structured, the EITC also imposes a significant marriage penalty on low-income working people. And serious compliance problems have become evident in administering the EITC. All of these problems would be greatly ameliorated by making the EITC less generous.

Since payroll taxes absorb a significant portion of earnings for workers with low incomes, a strong case can be made for relieving those with the lowest incomes from the burden of these taxes while maintaining comprehensive program coverage. An EITC that is significantly more generous, however, introduces more disincentives to work, builds up a significant marriage penalty, and invites fraud. I believe that we have expanded the program too much and that we are now placing too much reliance on the EITC under the guise of improving incentives to work.

I think the EITC has become too generous and should be cut back to its size in the early 1990s, before it was most recently expanded. I do not argue that income transfers to families with the lowest incomes should necessarily be reduced, but the total cost of income maintenance programs could be reduced significantly without reducing payments to low-income families with children. The goal of providing income support to families with the lowest incomes would be better served by scaling back the EITC and placing more reliance instead on other income support programs. These other programs should also be reformed, of course, to place more emphasis on making work a condition for eligibility when this is appropriate.

Endnotes

- 1. Income levels for the EITC are indexed for inflation. The estimates reported are from Reducing Entitlement Spending, Congressional Budget Office, September 1994.
- For example, Earned Income Credit: Design and Administration Could be Improved, U.S. General Accounting Office, September 1993; "The Earned Income Tax Credit: Participation, Compliance, and Antipoverty Effectiveness," John Karl Scholz, National Tax Journal, Vol. 47, No. 1, 1994; "Promoting Work through the EITC," Janet Holtzblatt, Janet McCubbin, and Robert Gillette, National Tax Journal, Vol. 47, No. 3, 1994; and "The EITC and the Working Poor," The American Enterprise, Marvin H. Kosters, May/June, 1993.
- 3. "Effects of the Earned Income Tax Credit on Income and Welfare," Edgar K. Browning, National Tax Journal, March 1995.
- 4. "The Earned Income Tax Credit and Transfer Programs: A Study of Labor Market and Program Participation," Stacy Dickert, Scott Henser, and John Karl Scholz, paper prepared for NBER Tax Policy and the Economy conference, November 1994.
- 5. It should be recognized that under some circumstances the EITC can give rise to a marriage bonus. I do not regard that as a problem. From the point of view of socio-economic indicators, marriage is one of the most common ways in which families move off of welfare and out of poverty. For extensive discussion of the marriage penalty, see "Alleviating Marriage Penalties in the Income Tax and the Earned Income Tax Credit," Anne L. Alstott, <u>Tax Notes</u>, February 27, 1995.

Source: Estimates are based on the March, 1992 current population survey data reported in <u>The Earned Income Tax Credit EITC</u>, <u>Current Law and the Clinton Proposal</u>, Thomas Gabe, Congressional Research Service, May 25, 1993. The assumptions used to develop these labulations differ in several ways from circumstances that will prevail in 1996, but these differences are not likely to affect estimates of proportions of families very much because both family incomes and thresholds for EITC eligibility move up proportionately with inflation.

Chairman SHAW. Thank you, Dr. Kosters. Mr. Greenstein.

STATEMENT OF ROBERT GREENSTEIN, EXECUTIVE DIRECTOR, CENTER ON BUDGET AND POLICY PRIORITIES, WASHINGTON, DC

Mr. Greenstein. Thank you, Mr. Chairman.

I think as the hearing is making clear this morning, probably the principal issue that needs to be addressed in the EITC is the question of error rates. We should be mindful, both of the progress that

is made and of how far we still need to go.

I think Congresswoman Johnson mentioned some of the studies done in the eighties. I think the most recent studies, one of them released just last week, suggests that where we are now is that we have cut the error rate or the Service has cut the error rate about in half from where it was when those studies were done in the eighties. It is still too high and we have a way to go. I am not going to go into detail here, but perhaps during the questioning period, if you are interested I could go through the studies that I think indicate we have roughly cut the error rate in half but we have a further amount to go.

Well, the GAO, General Accounting Office, by the way, has also noted some of that progress in reducing errors. But, I think, part of the discussion here of the EITC and of the growth in the credit, which Congressman Gibbons referred to, is to discuss why the

Congress, on a bipartisan basis, has expanded the credit.

The growth of the credit is closely related to erosion in wages for low-paid work. What this board shows you is that since the late seventies the poverty rate for families with children in which a parent works has gone up nearly 50 percent. When wages for low-skilled work erode this not only reduces living standards and increases child poverty, but it lessens incentives to work and it lessens the gains from working relative to receiving welfare.

As a result of that, starting in the mideighties, there was a bipartisan policy emphasis here, in Washington, of increasing the returns from low-paid work with the EITC as the principal policy instrument for doing that. It was started by President Reagan who proposed a large expansion in the EITC that was part of the Tax Reform Act of 1986, President Bush proposed another large expansion in the late eighties that was in the 1990 budget agreement, and then President Clinton in 1993.

These expansions of the credit basically reflected a policy shift away from the minimum wage and away from welfare and to the EITC instead. As you know, the minimum wage is at its second

lowest level in purchasing power in 40 years.

What is less well known is the following fact. In the early seventies, before the EITC existed, the number of States in which a mother with two children, who worked and earned wages equal to three-quarters of the poverty line, in which she got welfare as a supplement to her wages was 49. Today it is three.

We basically do not provide AFDC to these families any more, we have moved them out of the welfare system. We have had the minimum wage erode, we have greatly expanded the EITC instead.

These were conscious policy choices.

The credit was also expanded in part to offset the payroll tax. It increased in 8 years out of 11, between 1980 and 1990 and the excise tax increases of both 1990 and 1993.

The EITC expansions were also designed to obtain a goal that has broad bipartisan support that if a parent works full time, year-round, the parent should not have to bring up the children in pov-

erty.

One of the first places this was written down was actually in a volume the Heritage Foundation published in January 1989 to guide President Bush when he came in. Heritage called for expanding the EITC enough to bring families of four with a full-time worker to the poverty line without raising the minimum wage. That essentially has been the thrust of these policy expansions.

As a result of that, as Assistant Secretary Samuels said, these expansions really were not out-of-control growth. They were not an anticipated growth. Once the 1993 expansion fully phases in, the credit drops to about a 4-percent-per-year growth rate which is inflation and population growth.

If the Bureau of Labor Statistics modifies the consumer price

index, the EITC growth rate would drop a bit further.

The final point on this issue is that these expansions in the credit do not look quite so large when you put them in the context of what happens to the minimum wage and to the EITC and to AFDC. What this board shows you is that if you take a mother with two children who works 20 hours year-round at the minimum wage to 40 hours—anywhere from half time to full time year-round at the minimum wage—her disposable income today, when the EITC expansion passed in 1993 fully phases in, is \$1,500 to \$3,000 lower than it was in 1972, before the EITC was created.

The reason is that the withdrawal of AFDC and the erosion of the minimum wage and the increases in the payroll tax more than balance out the entire EITC.

This is a reason both why I think in reforming the credit we need to be very careful not to do things that make the gain from working less, and the gains from working relative to welfare less. I think that means not scaling back the 1993 expansion, not deindexing the credit. It is also the reason why Governors, like Governor Engler in Michigan, and Governor Carlson in Minnesota—both of whose welfare commissioners I have talked to in the last week or so about this—both regard the EITC and the EITC as passed in 1993 as a very important part of the welfare reform to move families to work that they are trying to implement in their States.

A couple of quick words on the work incentive point that Dr. Kosters has raised. I also think the work incentive point needs to be looked at carefully in terms of who the people are that the EITC encourages to work more and who it may encourage to work less.

As Dr. Kosters just noted, and I think as Congresswoman Johnson noted earlier, the economic literature suggests that people whose earnings are in that range from zero up to about \$8,900 are encouraged to work more because as they work more their credit goes up and that there may be encouragement to work a bit less where the EITC line is coming down.

However, as Bob Reischauer, the CBO Director, noted in 1990 and as virtually every study on this issue has found, the principle

group who is encouraged to work less are secondary earners in twoearner families. In nontechnical terms, the additional income the EITC provides enables some mothers in two-parent working families to choose to spend more time with their children.

That is the principal work discouragement of the EITC. As

Reischauer noted, that is not necessarily an adverse policy.

Finally, the studies that Marv referred to and I think the Congresswoman referred to, most of them only covered the effect of the credit on people who were already working. New studies, which I guess Professor Scholz will talk about, also look at, for the first time, the effect of the credit on people who otherwise would not work at all, and find that it brings a significant number of them into the work force.

In summary, on the work incentives, we have people who otherwise are not in the work force at all encouraged and brought into work and brought into the labor market; people, primarily single parents, working very little, encouraged to work more; and primarily secondary earners, mothers in married, two-parent families enabled to spend a little more time with their children.

I do not think you can simply lump those altogether, and say the effect is not positive. There is a similar issue—which I am out of time so maybe I will cover during the questions—on the marriage penalty. In two sentences, it is a marriage penalty for two earners

thinking about marrying each other.

The EITC also provides a big marriage bonus for welfare mothers who, otherwise when they marry, they lose all their welfare, they may lose all their Medicaid. But if a nonworking welfare mother marries a guy at a \$10,000 or \$12,000 wage neither can get a major EITC now. They marry and they qualify for the first time. He is earning and she has kids and it actually greatly lessens the disincentives to marry otherwise in the welfare system.

Again, we got to be careful. It is a marriage penalty for some, that is a problem. It is a marriage bonus for the group most want to encourage to marry, people who can get off welfare by getting married and are, without the EITC, discouraged from doing so.

The last point I want to make is that there has been some discussion of the workers without children. Before Congress extended the small credit to workers without children in 1993, the CBO data shows from 1980 to 1993, the Federal tax burdens of the poorest one-fifth of nonelderly households without children jumped 38 percent. The reason was that those eight payroll tax increases and several excise tax increases for families with children were offset by expanding the EITC. The tax burdens of workers without children went through the roof. The 1993 extension of a small credit to workers without children, was designed to help offset that, if we are concerned about having very high Federal tax burdens on any low-income workers, those with children and those without.

Thank you.

[The prepared statement follows:]

TESTIMONY OF ROBERT GREENSTEIN, EXECUTIVE DIRECTOR CENTER ON BUDGET AND POLICY PRIORITIES

House Committee on Ways and Means: Subcommittees on Oversight and Human Resources June 15, 1995

I am executive director of the Center on Budget and Policy Priorities, a non-profit public policy organization that examines federal and state fiscal policies with an emphasis on policies affecting low- and moderate-income families. Funded by foundations, the Center has been engaged in analyzing issues related to the earned income credit for a number of years. Last year, I also served as a member of the Bipartisan Commission on Entitlement and Tax Reform. In my testimony today, I would like to make several points.

- Progress in reducing EITC errors was made in the 1990 reconciliation bill, but more
 needs to be done. This year, the IRS has taken some badly needed steps that appear to
 be producing significant error rate reduction. Legislation the Treasury Department
 submitted with the budget also should help reduce errors. Efforts are needed to
 identify additional steps to lower error rates.
- While seeking to reduce EITC error rates, we should be mindful that the EITC has major strengths. It addresses a key trend that has caused a substantial increase in child poverty in recent years, the erosion of wages for low-paid work. The EITC also helps substantially in making work more remunerative than welfare. It is an important building block for welfare reform that places some limitations on cash assistance and seeks to move families to work.
- Certain reforms in the EITC eligibility structure are desirable. The imposition earlier
 this year of a "wealth test" on the EITC was a sound move. Consideration should be
 given to counting some additional types of income in determining whether a filer
 meets this test if doing so would not add too much complexity. Proposals to bar EITC
 receipt for tax filers in which either the parent or the qualifying child is residing here
 illegally also should be enacted.
- Some proposals, however, need to be regarded with considerable caution and would be unwise. A proposal to end the indexing of the EITC would cause large increases over time in the tax burdens of millions of low-income working families whose wages are simply keeping pace with inflation; it also would conflict with the goals of work-based welfare reform. Rolling back the EITC changes enacted in 1993 would be undesirable as well, reducing the advantages of work over welfare, making it more difficult for workers to escape poverty, and raising tax burdens for some.

The Basis for the EITC

The need for, and growth of, the EITC in recent years is closely related to the erosion of wages for low-paid work. Between 1977 and 1993, the poverty rate for families with children in which the family head works grew by nearly half. In 1977, some 7.7 percent of such families were poor; by 1993, some 11.3 percent were. More than 60 percent of all poor families with children contain a worker. In addition, Census data show that the proportion of full-time year-round workers paid a wage too low to lift a family of four to the poverty line rose by one-third between 1979 and 1993, from 12 percent of full-time year-round workers in 1979 to 16 percent in 1993.

Eroding wages for low-skilled work reduce living standards and increase child poverty. They also lessen incentives to work and decrease the gains from working relative to receiving welfare. Starting in the mid-1980s, these trends led to a bipartisan policy emphasis on increasing the remuneration from low-wage work, with the EITC as the principal policy instrument for accomplishing the task.

President Reagan proposed a major EITC expansion in 1985, which was included in the 1986 Tax Reform Act. Congress passed a further expansion in 1990, with support from the Bush Administration. President Clinton proposed a final expansion that Congress passed in 1993.

These expansions signaled an increased reliance on the EITC and a decreased reliance on the minimum wage as an instrument of wage policy. The purchasing power of the minimum wage is now at its second lowest level since 1955. Next year, it will be at its lowest level since 1955.

These expansions also reflected another policy shift — the EITC has supplanted AFDC as a means for supplementing the wages of poor single parents with children. In 1972, before the EITC was created, 49 states provided AFDC as a wage supplement to a mother with two children whose

earnings equal 75 percent of the poverty line. Today, just three states do. Policymakers have largely opted to move these families out of the welfare system and instead to reward their work effort through the EITC.

The EITC expansions also were designed to help offset the effects of a series of increases in the payroll tax. One of the EITC's purposes has always been to help offset regressive payroll taxes. Payroll tax hikes took effect in 1980, 1981, 1982, 1984, 1985, 1986, 1988, and 1990. Similarly, the EITC expansions also were intended to help offset increases in regressive excise taxes. Excise taxes were most recently raised in 1990 and 1993.

Finally, the EITC expansions were designed to attain a goal that has enjoyed strong bipartisan support — that if a parent works full-time year-round, the parent should not have to raise his or her children in poverty. This goal has been espoused across the political spectrum. For example, the volume that the Heritage Foundation published in January 1989 to guide the incoming Bush Administration called for expanding the EITC sufficiently to bring families of four with a full-time worker to the poverty line.

Specifically, this goal is that wages from full-time year-round work at the minimum wage (net of payroll taxes) should lift a family of four to the poverty threshold when combined with the EITC and food stamps. When the 1993 EITC expansions are phased in fully, the nation will be close to attaining this goal and would reach it with a modest increase in the minimum wage.

EITC growth rates over the past decade thus do not reflect unanticipated cost increases; the rate of recent EITC growth is due to explicit policy decisions by Congress and three Presidents to expand the credit for the reasons just cited. Nor do the recent growth rates signify that the program is spinning out of control. The CBO and Joint Tax Committee forecasts show that once the EITC expansions phase in fully by fiscal year 1997, EITC growth will slow sharply to a little more than four percent per year, with that remaining growth being due to inflation and growth in the U.S. population. Moreover, the EITC growth rate will be smaller than this if the Consumer Price Index is modified in a fashion that reduces the measured inflation rate. Even without changes in the CPI, the CBO forecast indicates that as a percentage of the Gross Domestic Product, EITC costs will decline after 1997.

Moreover, the EITC expansions do not look quite so large when placed alongside the nearelimination of AFDC as a wage supplement to single mothers working at least half-time and the large drop in the buying power of the minimum wage. An analysis conducted by the Department of Health and Human Services shows that when the EITC expansion enacted in 1993 is phased in fully, the disposable income of a mother with two children who works half-time throughout the year at the minimum wage will be nearly \$3,000 lower than it was in 1972, after adjusting for inflation. (Disposable income includes wages, average AFDC benefits, food stamps, and the EITC, minus federal income and payroll taxes.)

The HHS analysis found similar results for single parents with two children who work 30 hours a week throughout the year at the minimum wage as well as for those working 40 hours a week. (See Table 1.) In both cases, the family's disposable income will be at least \$1,500 below 1972 levels, after adjusting for inflation, when the 1993 EITC expansions take full effect. In short, single parents working at the minimum wage will have less disposable income than they did in the early 1970s before the EITC was created.

The EITC expansions should be seen as part of a larger set of economic and policy developments. Economic forces pushing down wages for low-skilled work, combined with policy decisions in the minimum wage and AFDC areas, confronted policymakers with a need to increase the EITC substantially to avoid large reductions in the living standards of working poor and near-poor families with children.

Beneficial Aspects of the EITC

The 1986, 1990, and 1993 EITC expansions reflected decisions to help cushion the erosion of wages for low-paid work, while placing less emphasis on the minimum wage and AFDC as mechanisms to accomplish this goal. The expansions also reflected the desire of policymakers to make work more remunerative than welfare and bring families with a full-time working parent closer to the poverty line. Finally, these expansions reflected a recognition that with its faults, the EITC remains one of the soundest of the low-income transfer programs.

Table 1

Average Disposable Income For a Mother and Two Children From Wages, AFDC, Food Stamps, EIC, and Federal Taxes (in 1994 dollars)

Number of Hours Worked Per Week At Minimum Wage Throughout the Year

Year		20 Hours	30 Hours	40 Hours	
1972		\$13,827	\$14,976	\$16,057	٠

1972-1995

The EITC differs from most other means-tested transfer programs in two crucial respects. First, it is limited to those who work; those who do not work may not receive it. It thus helps to make work more remunerative than non-work rather than the other way around.

Second, unlike welfare benefits that decline as soon as income begin to rise — and can thereby discourage people from entering the labor force — the EITC increases as earnings rise up to \$8,900 (for a family with at least two children). It does not begin to decline until a family's income surpasses \$11,620 (in 1996) and then declines much more gradually as earnings rise than public assistance benefits do.

Moreover, the major EITC benefit — the EITC for families with children — is limited to parents that live with their children. Absent parents do not receive major EITC benefits.

The result is that the EITC rewards work and encourages those who are not working to enter the labor market. It also distinguishes the working poor from the non-working poor and custodial parents from absent parents. As Gary Burtless of the Brookings Institution has noted, the EITC probably has stronger beneficial effects and more modest adverse side-effects than most or all other programs to boost the incomes of low-income families.

Current EITC Issues

EITC Error Rates

In 1990, staff of the Senate Finance Committee, the House Ways and Means Committee, the Treasury, and IRS worked on a bipartisan basis to craft reforms to reduce the error rate. These reforms were enacted into law in that year's reconciliation bill. The GAO subsequently commented favorably on these changes, noting that they "should substantially reduce the number of erroneous EITC claims." But the changes enacted in 1990 addressed only part of the problem. Much more remained to be done. This was shown by a frequently cited, but sometimes misunderstood, IRS study of tax returns filed in January 1994.

The IRS study found that 26 percent of the EITC benefits claimed by filers whose returns were examined were claimed in error. This does not mean that the EITC loss rate was 26 percent. The IRS found that about 26 percent of the EITC benefits claimed on the tax returns it examined were claimed in error, not that 26 percent of the benefits actually paid were erroneous. The IRS detects some erroneous claims made on tax returns and avoids making overpayments on them. The actual overpayment rate in January 1994 would have been somewhat lower than 26 percent.

The 26 percent figure also may overstate the error rate in January 1994 for another reason. The 1,000 tax returns examined in the study were not representative of EITC returns filed in 1994. The returns examined in the study were limited to returns filed electronically during the first two weeks of the 1994 tax filing season. Electronic filing has been more susceptible to refund fraud than conventional tax filing, and some families that file in January do so before they have received all of their W-2 forms. In addition, some of the characteristics of the 1,000 filers examined in the

study do not match those of EITC filers overall. Many experts believe that EITC error and fraud are likely to have been higher among returns filed electronically in the first two weeks of the filing season than among EITC returns overall.

Recent Actions to Combat Error and Fraud

Since the time the study was conducted, the IRS has instituted a series of new procedures to address problems the January 1994 study identified. These changes appear to be lowering the error rates.

In 1994, the IRS checked little of the information on tax returns containing an EITC claim before sending out EITC checks. That has now changed sharply. In addition to verifying the Social Security numbers of all adults claiming the EITC, the IRS now also verifies the numbers of all children in EITC families — before sending EITC payments — to make sure the claims are valid and no child is claimed twice. (In 1994, the IRS did some checking of Social Security numbers, but the checking was less rigorous and less comprehensive. For example, in 1994 the IRS did not check to ensure that no child was claimed twice, and on many returns, the IRS did not verify children's Social Security numbers at all.) The IRS now also pulls EITC returns falling into any of several error-prone categories, sends these families a questionnaire, and requires families to provide additional documentation verifying their claims before payment is made.

Several million EITC returns have been delayed this year due to apparent discrepancies found in Social Security numbers or while EITC claims are verified. Nothing remotely on this scale has been done before.

In addition, during the first half of the 1994 tax filing season when the study was conducted, some filers could claim that they had applied for Social Security numbers for their children but had not yet received them. These filers could still receive the EITC. This procedure created an opportunity for abuse. It has since been fixed. Today, such EITC claims are denied.

Also, the GATT legislation enacted last fall includes a provision requiring Social Security numbers for infants who are claimed on a tax return. Until now, parents have not had to provide Social Security numbers for children under the age of one. This new provision, which takes effect in tax year 1995, will eliminate another potential problem area. To the extent that some problems involving Social Security numbers may remain, they would apparently be resolved by legislation the Treasury Department has submitted to Congress to strengthen the IRS' powers to deny questionable EITC claims.

Finally, the IRS has altered procedures relating to "refund anticipation loans." In the past, EITC applicants that used a commercial tax preparer were usually able to walk out the door with a check in the amount of their EITC benefit within a couple of days after they filed their tax return. Under the new procedures, checks are no longer provided on such a rapid basis, and use of refund anticipation loans apparently has fallen sharply. Those attempting to abuse the system who sought in the past to "take the money and run" can no longer do so.

Effects of These Actions

A new IRS study released last week indicates that if the procedures instituted this year had been in place in 1994, the January 1994 study would have found an error rate of less — and possibly significantly less — than 19 percent.

The IRS was able to determine the effect that some, but not all, of the new procedures (principally the procedures relating to Social Security numbers) would have had if they had been in effect in January 1994. The IRS found these procedures would have reduced the overclaim rate from 26 percent to 19 percent. The IRS was not able to measure the effect of the procedures instituted this year to delay those EITC claims that fall into an error-prone category while the IRS investigates and directs the filer to provide verification of certain aspects of the EITC claim. Had IRS analysts been able to factor in the effects those procedures would have had, the new procedures instituted this year would almost certainly have been found to have reduced the overclaim rate in the January 1994 sample below 19 percent.

Some long-overdue change in the processing of tax returns claiming the EITC is now occurring. Prior to 1991, the IRS did not obtain much of the basic information that establishes whether a family is eligible for the credit. Such information is now captured on Schedule EIC,

which was introduced in 1991. And until this year, the IRS made limited use — before making EITC payments — of the information it did receive. This is now changing.

The EITC and Work Incentives

Important issues are sometimes raised about the EITC and work incentives. Based on economic theory, it is generally assumed that the EITC encourages work among those working little or not at all. It is also assumed that the credit acts as a modest work disincentive for other families, primarily those whose income exceeds \$11,620 (in 1996) and whose EITC benefits are reduced as their earnings rise.

The issues relating to the credit's effects on work incentives are sometimes misunderstood. The effect of the EITC on the level of work performed by families whose incomes exceed \$11,620 is not clear. For the EITC to discourage these families from working more, the affected families would need to understand how the EITC is reduced as their earnings rise — that is, they would need to be cognizant of the EITC's effect on their "marginal tax rate." It is not clear how many families know this.

Furthermore, if the EITC does have some work disincentive effects on families whose EITC benefit falls as their earnings increase, these effects may not be adverse from society's standpoint. Both Robert Reischauer, then director of the Congressional Budget Office, and Henry Aaron, Director of Economic Studies at the Brookings Institution, made this point at an American Enterprise Institute symposium in 1990. Reischauer and Aaron noted that the families the EITC encourages to work more are likely to be quite different from the families the EITC may encourage to work less. The families encouraged to work more are heavily made up of single parents who work little if at all, precisely the group whose work effort we most want to boost. By contrast, the families whose EITC benefits decline as their earnings rise — families with incomes over \$11,620 — include large numbers of two-parent families. Reischauer and Aaron noted that a major part of the EITC's probable effect in inducing modestly less work among families in this income range is its effect in enabling a parent — usually the mother — in two-parent working families to work a little less so she can spend more time with her children.

Reischauer observed that this should not necessarily be regarded as an adverse outcome and that it may be desirable from society's standpoint for a parent in two-parent working families to be able to spend more time with her children. He cautioned that lumping increased work effort among single mothers who otherwise would work little or not at all with reduced work effort among married mothers in two-parent working families who wish to spend more time with their children can confuse rather than illuminate debates on the EITC's effects.

Reischauer and Aaron's point is supported by academic research and a GAO analysis. The GAO estimated that the percentage reduction in hours worked as a result of the EITC is four times greater among wives in two-parent families than among husbands in such families. In addition, the GAO's estimates showed little percentage change in work effort among single parents.²

In addition, the GAO study and most other previous studies examined the EITC's effects only on those already in the labor force. These studies did not examine whether the EITC draws non-workers into the labor force. New research by John Karl Scholz of the University of Wisconsin indicates the EITC has a strong positive effect in inducing single mothers outside the labor force to and begin working. The research of Scholz and his colleagues suggests that the increase in the number of hours worked by parents whom the 1993 EITC expansions will draw into the labor force will exceed the decrease in hours worked by those (principally wives in two-parent families) who may work somewhat less because of the expansion.³

Another recent piece of recent academic research, examining the EITC's effects on work effort among single mothers, produced similar results. It concluded that the EITC succeeds in increasing work among single mothers who previously have been out of the labor force and accomplishes this without diminishing work effort among single mothers whose EITC benefits decline as their earnings rise.⁴

In Congressional testimony before this Committee in 1993, the GAO succinctly summarized the EITC's effect on work. The GAO stated: "[The earned income tax credit] works. It offsets payroll taxes, increases progressivity of the tax system, and provides a positive work incentive to the lowest income group with only a slight disincentive to other recipients."

The EITC and Marriage Penalties

The issue of the EITC and marriage penalties is another complex area. The EITC penalizes marriage for some and rewards it for others. It does not represent an unambiguous marriage penalty.

In arguing that the EITC imposes a large marriage penalty, some critics cite a hypothetical case involving two potential marriage partners, each of whom is a custodial parent with at least two children living with them and each of whom earns about \$11,000. This hypothetical case does not provide a satisfactory basis for policymaking. It is the hypothetical case in which the marriage penalty is greatest and is exceedingly rare in the real world.

There are few cases in which two people who wish to marry each other are both custodial parents who each live with at least two children and each have incomes in this range. Most male single parents are *not* custodial parents, are not eligible for a significant EITC benefit, and do not lose EITC benefits if they marry.

Census data indicate that of all marriages that occurred in 1990, fewer than two-tenths of one percent involved a man with two or more children marrying a woman with two or more children. The likelihood of such a marriage in cases in which both parties are custodial parents and also have incomes around \$11,000 appears to be close to zero.

This does not mean the marriage penalty issue is not significant. But more typical examples should be considered when assessing the potential effects of the EITC on marital formation. The most common example in which the EITC can penalize marriage involves a single working mother with one child who is considering marrying a man who earns modest wages but does not live with a child or receive the EITC. The EITC such a couple would receive if they marry could be lower than the EITC the mother currently gets. If a single mother with one child who earns \$5,000 working part-time marries a male earning \$10,000, the EITC benefit in 1996 would drop \$82. If she marries a man earning \$15,000, the EITC would decline \$881. (These figures are for 1996, when the EITC changes enacted in 1993 are phased in fully.)

If the mother earning \$5,000 has nwo children, marrying a man earning \$15,000 would cause a smaller EITC loss — about \$200. And if such a mother marries a man earning \$10,000, the EITC benefit would increase about \$850. On the other hand, if the mother earns \$10,000 herself and has two children, the EITC benefit loss becomes larger. For example, if she marries a man earning \$10,000, the loss is \$1,760.

The EITC thus can penalize marriage. It also can reward marriage substantially. The EITC offers a sizeable marriage incentive to a single mother who has no earnings and receives AFDC. Since marriage is one of the principal routes out of welfare, it is particularly important to encourage marriage among this group.

In the absence of the EITC, a non-working mother on AFDC who contemplates marrying a man with low earnings risks losing a great deal. If she marries, she and her children will become ineligible for AFDC and also lose some of their food stamps. In addition, she likely will become ineligible for Medicaid. Depending on her children's ages and her husband's earnings, some or all of her children may lose Medicaid coverage as well. The marriage penalties embedded in the welfare system are strong.

The EITC helps to offset these losses and ease these penalties. By marrying, the couple will gain an EITC benefit of up to \$2,157 if they have one child and up to \$3,564 if they have two or more children (when the 1993 expansions phase in fully). This will partially — and in some states, wholly — make up for the mother's loss of AFDC benefits when she marries.

For poor single mothers with little or no earnings, the EITC thus significantly lessens the marriage penalties the welfare system creates. It can provide these women an incentive to marry and leave welfare. This point is sometimes overlooked when the EITC and its effects on marriage are discussed. It is not accurate to speak of the EITC as simply penalizing marriage. It penalizes it for some and rewards it for others, including the group for which there is the greatest concern for encouraging marriage, single mothers on welfare.

Proposals to Alter the EITC

Additional steps would be useful in reducing errors. In particular, legislation the Treasury Department has submitted to strengthen the IRS' ability to deny questionable EITC claims would

represent an important addition to IRS' error-fighting arsenal. In addition, the IRS is currently conducting a study of EITC errors in tax returns filed in 1995. These findings should lead to additional administrative actions to combat errors and may also suggest some additional legislative steps that might be taken.

I am concerned, however, that a number of EITC proposals now emerging in Congress are not compliance provisions designed to reduce error rates. Some emerging proposals would reduce EITC benefits largely through broad-scale benefit reductions, not through new procedures to improve the accuracy of EITC payments.

Some of these proposals would affect millions of honest families in which a parent works for low wages. These include proposals to repeal part or all of the 1993 EITC changes and a proposal to repeal the indexing of the EITC for inflation.

Repealing Part or All of the 1993 EITC Expansion

The budget resolution the Senate approved in May assumes partial repeal of the EITC expansions enacted in 1993. Those expansions substantially increased the EITC for families with two or more children and also established a small credit for very poor workers without children.

The 1993 provisions were designed to attain the bipartisan goal that families (or at least, families of up to four people) should not live in poverty if a parent works full time throughout the year. This goal was endorsed across the political spectrum in the years before 1993. Accordingly, the 1993 law set the EITC for a family with two or more children at the level that would bring a family of four with a full-time minimum wage worker to the poverty line if the family also received food stamps (and if the minimum wage kept pace with inflation, as President Clinton had earlier recommended).

The 1993 expansions also were designed to reduce the work penalties built into the welfare system and to make low-wage work more remunerative than public assistance. When families leave welfare for work, they lose cash welfare payments, some of their food stamps, and, ultimately, some or all of their family's Medicaid coverage. The increased EITC payments help to offset this loss and make the overall compensation package from working compare more favorably with continued reliance on public assistance.

The 1993 EITC expansions helped to promote work in another way as well. Payroll taxes consume 15.3 cents of each additional dollar a poor family earns while food stamp benefits consume 24 cents. For families with two or more children and low-wages, the EITC will fully offset these adverse effects, providing a 40-cent credit for each additional dollar earned when the 1993 expansions are in full effect.

The 1993 law also aided very poor workers without children. It created a small EITC that provides a maximum credit of a little more than \$300 — and an average credit of about \$170 — for poor workers between the ages of 25 and 64 who do not live with children and have incomes below about \$9,500 (in 1996).

A small EITC was extended to these workers partly because their federal tax burdens had escalated sharply since 1980 as a consequence of a series of regressive payroll and excise tax increases. A Congressional Budget Office analysis showed that between 1980 and 1983, the average federal tax burden of the poorest fifth of non-elderly households rose 38 percent. This dwarfed the increase in tax burdens borne by any other group of households in any income category. By 1993, the percentage of income that the poorest fifth of non-elderly households without children was paying in federal taxes was double the percentage of income paid by the poorest fifth of families with children and more than five times the percentage paid by the poorest fifth of elderly households.

The sharp increase in the tax burdens borne by these households occurred primarily because of a series of increases in Social Security, gasoline, and other excise taxes. For low-income families with children, these regressive tax increases were generally offset through EITC expansions. For poor workers without children, no offsetting actions were taken before 1993. Accordingly, the 1993 law established a modest EITC that offsets the payroll tax these workers pay on their first \$4.230 in income (in 1996) and phases out when income reaches \$9,500.

In addition to offsetting a portion of these tax increases, the EITC for poor workers without children also has the effect of nearly completing a piece of unfinished business from the $1986\,\mathrm{Tax}$

Reform Act. One of the Act's goals was to eliminate income tax burdens on workers below the poverty line so they were not taxed deeper into poverty. The 1986 Act accomplished this goal for all filing units except non-elderly single individuals. Prior to the extension of the EITC to these workers, a single worker began owing federal income tax when his or her income was about \$1,300 below the poverty line. The EITC has raised the income level at which these workers begin owing income tax close to, although not all the way to, the poverty line.

The Senate Budget Resolution

The EITC changes assumed in the Senate budget resolution would repeal the small EITC for workers without children. These changes also would cancel entirely the final phase of the EITC expansion for families with two or more children, scheduled to take effect in tax year 1996, and scale back the EITC benefit structure in place in tax year 1995.

Poor workers without children would face a substantial increase in their federal tax burdens; the payroll taxes they pay on their first \$4,230 of earnings would no longer be offset. In addition, their federal tax burdens would rise to higher levels than these burdens had reached before the 1993 law took effect, because these workers would be affected by the gasoline tax increase enacted in 1993. The Treasury Department estimates that 4.4 million workers would face an average tax increase of \$173 if the credit for workers without children is repealed.

Families with children also would be affected significantly. Eight million families with two or more children would lose a maximum of \$445 and an average of more than \$300. In addition, about two million families with one child would lose up to \$244 each. As a result of these changes, the number of families in which a parent working full-time at a low wage would fail to escape poverty would rise somewhat, while the extent to which work paid more than welfare would be lessened.

Few of the low-income workers who would be adversely affected by these changes would benefit from any of the tax cuts currently under consideration. CBO data show that because the proposed children's tax credit is not refundable, the one-third of the children in the country with the lowest incomes would not benefit from it. If a children's credit is enacted for families with incomes of up to \$250,000 while the EITC is scaled back, the effect will be to grant a children's credit to families at relatively high income levels while withdrawing part of a credit for families with children that are working at low wages.

The EITC and Inflation Adjustments

A proposal also has been advanced to end indexation of the EITC. Curiously, this proposal would undo a Reagan initiative. It was President Ronald Reagan who proposed in 1985 that the EITC be indexed.

The Reagan proposal was designed to fix a problem in the EITC benefit structure. If the EITC is not indexed, millions of working poor and near-poor families find that if their earnings simply keep pace with inflation, their EITC benefits decline each year while their payroll taxes climb. The result is the imposition of steadily increasing tax burdens on working families that have experienced no increase in purchasing power.

A family's EITC benefit begins to phase down when the family's income passes a certain income level. For every dollar that a family with two children earns above \$11,620 (in 1996), the EITC is reduced 21 cents. This \$11,620 income threshold is indexed for inflation. If indexation is repealed, a family with income at or above \$11,620 whose income rises at the rate of inflation will find its EITC falls even though the family's purchasing power has not increased.

Such a family also will owe more in payroll taxes. For each dollar its earnings rise, the family's payroll taxes will increase 7.65 cents while its EITC drops 21 cents.

The effects of failing to index the EITC would grow with each passing year. If a family's income simply kept pace with inflation and EITC indexing had ended, a family with two or more children and income of \$12,000 in 1996 would, five years later, receive an EITC \$460 smaller than the credit it had received in 1996. The family's EITC would be more than \$1,000 lower than it would have been had the EITC continued to be adjusted for inflation. And while its EITC was falling, the family's payroll tax would have climbed \$167.

In real terms, the purchasing power of such a family's EITC would decline by 27 percent in the five-year period. For some working families, the decline would be steeper. Families that earn

\$20,000 and whose wages simply keep pace with inflation would find that the purchasing power of their EITC would decline more than 50 percent over five years if indexation ended.

Ending indexation of the EITC would be unwise. It would result in substantial increases over time in federal tax burdens for large numbers of low-income working families that have experienced no increase in their standard-of-living. It also would make millions of working poor families with children poorer over time and turn a steadily increasing number of near-poor working families into poor families, by pushing them below the poverty line. The Treasury Department estimates that by 2000, nearly 18 million tax filers would be adversely affected by this proposal.

Ending the indexation of the EITC also would be inconsistent with the goals of "making work pay" and promoting work over welfare. If the EITC is not adjusted for inflation, the gain from working at a low-wage job rather than relying on welfare will erode as the real value of the EITC declines over time.

Finally, ending EITC indexation would be inconsistent with other Congressional action being taken this year. There is no discussion of ending the indexation of other features of the tax code such as the personal exemption, the standard deduction, or the tax brackets. If EITC indexation ends, families at higher income levels would continue to be shielded from the effects of inflation on their tax burdens while working poor and near-poor families faced substantial tax increases. Moreover, the House of Representatives has passed legislation to index capital gains tax benefits, the estate and gift tax, and depreciation deductions used primarily by large corporations. It is difficult to discern how ending EITC indexation fits in with these other policies unless the principle is that affluent investors and large companies need protection against the effects of inflation on their taxes but low-income working families do not.

Proposals such as repealing part of the 1993 EITC changes or ending EITC indexation have a common feature. They would leave low-income working families facing eroding wages for low-skilled work, a sharply lower minimum wage in real terms, and the near-elimination of cash welfare assistance for families working more than half-time with reduced help from the earned income credit. The policy instrument supported for years by many who oppose raising the minimum wage and advocate reducing public assistance programs would itself be scaled back or partially withdrawn.

The "Wealth Test"

Several other EITC proposals warrant comment. In April 1995, Congress passed legislation denying the EITC to families with more than \$2,350 in income from interest, dividends, rents and royalties. The Clinton Administration had proposed a similar provision, with a limit of \$2,500, adjusted for inflation.

Three issues have been raised concerning this provision. Should additional forms of income should count against it? Should the \$2,350 level should be lowered? Should the \$2,350 level be indexed?

Additional forms of income probably should count against this limit if this cannot be done without making the EITC too complex. (Increasing the complexity of the credit is a sure way to push error rates back up.) Some have proposed counting estate and trust income, net passive business income, and net capital gains income against this limit. This proposal appears sensible if it does not add too much complexity.

On the other hand, I would not recommend lowering the threshold from \$2,350 to \$1,000, as has also been suggested. A threshold that low would disqualify some poor and near-poor working families that are saving for legitimate reasons, such as to send a child to college, purchase a home, start a business, or meet a medical emergency (an increasing concern as the number of low-income working families that lack health insurance rises). Prudent policy would not force families saving to make an investment in their future to choose between losing their EITC and consuming enough of their savings to remain below the EITC limit.

A preferable approach would be to reduce the \$2,350 limit modestly to \$2,000 and index it for inflation. (Whatever the level at which the threshold is set, the level ought to be adjusted for inflation. Otherwise, the credit will ultimately be denied to families with a strong need for it as the limit erodes over time.) This would generate approximately the same level of savings over the next 10 years as the provision that Congress passed in April 1995, while insuring that as the years

pass, the limit does not squeeze out a steadily increasing number of low-income working families with a legitimate need for the credit.

Counting Social Security and Child Support Payments

Senators Roth and Nickles have proposed that Social Security, tax-exempt interest, non-taxable pension distributions, and child support be counted as part of adjusted gross income (AGI) for purposes of determining eligibility and benefit levels for the EITC. The argument for counting Social Security is that Social Security benefits represent income these families receive, and this income makes these families less needy. Among the arguments against this proposal are that counting Social Security benefits as part of AGI when determining EITC eligibility and benefit levels would effectively subject Social Security beneficiaries who are raising children to larger taxes on their Social Security benefits than some other Social Security beneficiaries with higher incomes. In addition, counting all of Social Security as part of adjusted gross income for EITC purposes could be problematic because a portion of Social Security benefits represents a return of payments that beneficiaries made from income on which they have already paid taxes.

While there are pros and cons to this proposal, it will be difficult to justify it if the provision enacted in 1993 that makes 85 percent of Social Security benefits taxable for more affluent beneficiaries is repealed. If that is done and Social Security also is counted as part of AGI for EITC purposes, the effect will be to reduce tax burdens on Social Security beneficiaries at high income levels while increasing tax burdens on Social Security beneficiaries at lower income levels.

Counting child support as part of AGI for EITC purposes would be ill-advised. This change, which would reduce the EITC for many divorced working mothers, would pose both administrative and tax equity problems. The Internal Revenue Service has no information on the child support payments that a custodial parent receives, and it lacks a reliable means of securing this information. Consequently, such a proposal would be difficult for the IRS to enforce and almost certainly would result in higher error rates. The General Accounting Office recently noted the difficulties of administering a requirement of this nature.

Counting child support in this manner also would cause double-counting of income. Noncustodial parents already pay income tax on the income from which child support payments are made. Counting child support payments as part of AGI and lowering the EITC as a result effectively taxes this income twice.

Finally, such a policy change could lead to a reduction in child support collections. Since some of the non-custodial parent's support payments would effectively be taxed away, some non-custodial parents would have a reduced incentive to make child support payments.

Conclusion

Steps have been taken in recent years to reduce EITC error rates. More needs to be done. Some other changes in the EITC also may warrant consideration.

But we should not lose sight of the EITC's strong virtues. The EITC is boosting the incomes of millions of poor and near-poor families with children that are working and staying off welfare. With the steady erosion of wages for low-paid work over the past 20 years and the likely continuation of this trend in the future, the EITC plays a critical role. It also provides an important underpinning for welfare reforms to move families from welfare to work and helps to offset regressive taxes that low-income workers face.

In addition, the EITC has helped change the federal income tax system from a system that pushes working poor families deeper into poverty to a system that helps lift them out. An analysis by the Department of Health and Human Services found that in 1984, the tax system pushed 1.8 million people living in families with children below the poverty line. When the recent EITC expansion is phased in fully, the tax system will lift more than two million such people out of poverty.

The EITC has been substantially tightened this year to reduce errors and attack fraud. Further improvements are needed. But deep reductions in the EITC benefits of honest low-income working families would not represent sound policy.

 taxes, with the employer's share of the tax being passed through to employees in the form of lower wages.

Chairman JOHNSON. Thank you very much for your testimony, Mr. Greenstein.

Next will be Mr. Steuerle.

STATEMENT OF C. EUGENE STEUERLE, PH.D., SENIOR FELLOW, URBAN INSTITUTE, WASHINGTON, DC

Mr. STEUERLE. Thank you, Madam Chairperson. It is an honor to work again with these Subcommittees on this issue. I, as Mr. Gibbons, have a bit of age on this issue. I worked on the issue as long ago as 1978 when we tried to simplify the EITC so that we could get it to more eligible people. In the tax reform effort in 1984–86, I introduced indexing into the Treasury proposals at that time as a means of increasing the EITC. I am honored again to work with you on this issue.

My own conclusions to date can be summarized as follows, first the EITC represents an important step in my view in society's attempt to find an alternative to welfare. Second the EITC can best be assessed against alternatives to help low-income households and workers, but not really as a stand alone provision. Third, as currently designed, I have serious questions whether the EITC can be fully enforced by the IRS. And finally, EITC reform can be better accomplished within broader reform of our tax and transfer structures.

I will try to speak very briefly on each of those points. The EITC was expanded substantially in the Tax Reform Act of 1986 and in the budget agreements of 1990 and 1993.

Interestingly, the Clinton administration likes to claim the EITC expansions as one of its major achievements. In fact, the largest expansions of the EITC occurred under Presidents Reagan and Bush, at least when measured in terms of total costs.

Over the years the EITC has been argued to fulfill several purposes. One is to provide assistance to low-income individuals; a second to provide work incentives; and third, more recently it has been contrasted favorably to increases in the minimum wage.

The EITC does not meet any of its goals perfectly. As a compromise, however, it often meets its combined goals better than other alternatives including a pure welfare system and mandates on employers such as minimum wage increases.

The history of the EITC makes it clear that as an incremental step toward a different design of our combined tax and transfer system what makes the EITC distinct and unique and different from the welfare systems is its requirement that at least some income be earned in order to receive the credit. In a sense the phase-in range for the credit is nothing more than a rough work test.

Does this EITC create distortions? Well, as an economist I would have to argue of course it does, as do all taxes and transfers. On net, is it a positive work incentive for the population as a whole? I find that highly unlikely especially when one takes into account the taxes being paid by the taxpayers who have to support the system.

This argument, however, I believe begs the question on the EITC. It is less clear that providing say, \$3,000 of earned income credit to someone who earns a modest income is any less of a work

disincentive than providing \$3,000 of pure welfare benefits to someone who does not work at all.

Moreover, among those who might be given the greatest additional incentives to work are those welfare recipients whose participation in the work force would integrate them more fully into the rest of society—a point just emphasized by Mr. Greenstein.

Unfortunately, as currently designed, I do have serious doubts that the EITC can be fully enforced by the IRS. As best as I can tell there have been three major sources of noncompliance with the EITC.

The first had to do with individuals claiming the EITC even when they had not provided adequate information to meet various support tests and similar eligibility criteria. A second source of noncompliance derived from excessive claims on number of children, a discussion you had quite extensively with the previous panel.

My impression is that the IRS and Treasury, along with recent and proposed Congressional reforms, are going a long way to deal with these two particular problems. A final problem, however, is more fundamental. Now that the EITC rate is substantially in excess of all Federal tax rates, including the Social Security tax, there is a powerful incentive for households not in the welfare system to overdeclare earnings even when there are none. This incentive is gradually creating what I call a new superterranean economy.

The IRS audits only a minor fraction of returns. Even if it audited everyone it would be very difficult to disprove whether self-employment income was real or fictional. Moreover, in some cases legal work creation becomes profitable, as when neighbors simply exchange babysitting and then claim the EITC.

It is unclear how far this problem has developed to date. Nonetheless, I believe that it is crucial that the problem be attacked sooner rather than later.

My final point is that the EITC reform can be better accomplished within broader reform of our tax and transfer structure. Reform of these systems as they apply to low-income individuals is almost never attempted on a comprehensive basis. As one consequence, the combined tax rate on AFDC recipients is still extraordinarily high, in excess of 70 percent at one times minimum wage; at two times minimum wage, and even at three times minimum wage.

More comprehensive reform would allow one to try to deal with these complex interactions—for instance, by trying to integrate together the child credit that is in the tax bills in Congress with the EITC. This issue was discussed with you by Congressman Petri, John Forman has also got some suggestions along these lines.

Barring this more comprehensive approach something still must be done about potential overdeclarations of income. Someone besides the taxpayer, in particular in the case of self-employment income, has to be involved in the monitoring of the declarations of income. For tax systems traditionally that has been the employer who reports income to the IRS and for welfare systems that has traditionally been local welfare agencies. In sum, the EITC is not a perfect program. It represents a compromise among many competing goals. Its current design may represent merely a step toward replacing welfare with a broader support system more oriented toward work. At a minimum, the EITC today must be reformed to avoid the creation of a larger super terranean economy where overdeclarations of earnings can generate excessive claims for the credit. Ideally reform would be considered along with other welfare and tax reforms including any child credits that might be considered by Congress at this time.

Thank you.

[The prepared statement and attachments follow:]

STATEMENT OF C. EUGENE STEUERLE, PH.D. SENIOR FELLOW, THE URBAN INSTITUTE, WASHINGTON, D.C.

Mr. Chairman and Members of the Committee

Among the many provisions being considered for reform this year is the earned income tax credit (EITC). In size and scope the EITC has become one of the most important elements of the nation's combined tax/transfer scheme applying to low-income individuals. A major reason for its expansion is that the EITC generally has obtained bipartisan support within the context of major tax and budget reforms. I myself introduced EITC indexing into the 1984 Treasury proposals leading up to tax reform in 1986. It is not surprising that after such a period of legislative expansion, we would begin a more in-depth examination of the credit. An important part of that examination relates to how well the credit fulfills its various goals and whether there are alternative or better ways of fulfilling the same objectives. My own conclusions can be summarized as the following:

- (1) As a society, we are engaged in a fundamental, but difficult, attempt to try to find alternatives to welfare. The EITC, as a device to try to make work more attractive than welfare, represents an important step in that direction.
- (2) All transfers and taxes distort some choices, and the EITC is no exception. The EITC can be best assessed against alternatives that attempt to help low-income households and workers, not as a stand-alone provision.
- (3) As currently designed, the EITC cannot be fully enforced by the IRS and, to deter abuse, must be supplemented by further restrictions or restructured.
- (4) EITC reform often can better be accomplished within broader reform of our tax and transfer structure.

Background

The growth of the EITC in recent years has been relatively swift; indeed, it has been perhaps the fastest growing of all federal budget items whose growth is due to recent legislative action. Table 1 traces some of that growth. As can be seen, the credit was expanded substantially in the Tax Reform Act of 1986 and the budget agreements of 1990 and 1993. Interestingly, the Clinton Administration likes to point to the EITC expansion as one of its major accomplishments, while some critics like to blame this Administration for any defects of the credit. Yet the largest expansions of the credit took place under Presidents Reagan and Bush -- at least when measured in terms of total cost.

Over the years, the EITC has been argued to fulfill several purposes. One is simply to provide assistance to low-income individuals. In this regard, it has achieved modest success, as can be seen in the antipoverty statistics of Table 2, although it pales in comparison with social insurance programs such as Social Security. Of course, the EITC is targeted to many low-income families whose income is in excess of the fairly low, official poverty levels.

A second purpose of the EITC is to provide an offset to Social Security taxes and, perhaps, other federal taxes. For most families today, the combined employer and employee Social Security tax rate is more important than the income tax rate. It is not hard to understand why: the Social Security tax rate is 15.3 percent on all earnings, while personal exemptions and standard deductions set tax-exempt amounts that insure that low-income individuals pay almost no income tax. For incomes in excess of tax-exempt amounts, the income tax rate for most taxpayers is 15 percent only on the excess amount.

The EITC expansions of 1990 and 1993, however, could not be justified as offsets to federal taxes. The rate of credit was scheduled to rise as high as 25 percent under the 1990 agreement and as high as 40 percent under the 1993 agreement (see Table 3). Since most individuals at low-income levels do not pay income tax, and the Social Security tax rate is 15.3 percent, the EITC pays out far more to many individuals than they pay in any form of federal tax.

While the 1990 and 1993 reforms mainly increased the rate of credit, they made some other changes as well, such as an expanded credit for families with more than one child and a reformed definition of eligibility that was based more upon the home in which a child resided and less upon the amount of monetary support provided. These reforms did not change fundamentally the structure of the EITC system, the income levels at which a maximum credit would be reached, and the levels at which no credit would be made available.

A final rationale for the credit was to provide work incentives. Here, the target was primarily individuals who were on or who might otherwise receive welfare. The connection to other types of

transfers -- in particular, Aid to Families With Dependent Children (AFDC) -- is made fairly obvious by the restriction of the credit primarily to families with children. This work incentive goal cannot really be separated from the broader transfer and antipoverty goals. That is, the EITC cannot be justified as work incentive alone, but only as an alternative to other mechanisms to try to make transfers to low-income individuals.

Although comparisons to AFDC have been made throughout the history of the credit, more recently it has also been contrasted favorably to increases in the minimum wage. Many economists believe that increasing the minimum wage reduces the jobs that would be made available to workers whose productivity is between an existing minimum wage and some, new, higher level. Analyses of minimum wage workers, moreover, show that many of them are in middle-income families: older workers with assets and pension income, and married couples where one spouse already works at much higher wages. Accordingly, the EITC has received much support as an alternative not only to welfare, but to minimum wage increases. In this regard, some health reform proposals, such as that of President Bush in 1992, included a health credit modeled largely after the EITC. Again, the argument was that such a credit would be superior to the implicit increase in the minimum wage that would follow a mandate on employers to buy health insurance.

In sum, the EITC does not meet any of its goals perfectly. As a compromise, however, it often meets the combined goals better than other alternatives, including a pure welfare system and mandates on employers.

From Welfare to a Work-Oriented Support System

Whether as a transfer to low-income individuals, an offset to other federal taxes, or a better subsidy than pure welfare or employer mandates, the history of the EITC makes it clear that it is an incremental step toward a different design of our combined tax/transfer system, as it applies to low-income individuals. Indeed, budget accounting uniquely counts separate portions of the EITC as both tax reduction and expenditure outlay -- demonstrating, once again, the need to view our tax and transfer systems in an integrated fashion.

What makes the EITC different from most welfare systems is its requirement that at least some income be earned in order to receive the credit. In a sense, the phase-in range for the credit is nothing more than a rough work test. Relative to welfare that pays the highest benefits to those with no earnings or income, the phase in of the credit has been designed to provide a maximum benefit at income levels approximating a full-time minimum wage job.

Recent years have witnessed several attempts to convert our welfare system more into a work-oriented support system. EITC expansions are only one example. Mandates that welfare recipients work and attempts to time-limit welfare are others. So also are targeted jobs credits and attempts to increase so-called disregard (minimum amounts of income that can be earned without loss of welfare benefits). None of these mechanisms, unfortunately, has solved many of the complex problems related to work and marriage penalties in transfer programs. Nonetheless, I would hate to see us reverse course and go back toward a purer welfare system. We seem to be in a transition stage, but without a clearcut map on how we will continue to proceed.

EITC Distortions and Effects on Work

Does the EITC create distortions? Of course it does, as do all elements of our tax and transfer system. On net, is it a positive work incentive for the population as a whole? Highly unlikely. All transfers are backed up by taxes -- first, by direct taxes to support the system, and, second, by indirect taxes when benefits are phased out as the income of beneficiaries increases. On net across all of society, the financing of transfer systems will tend to increase the potential taxes or losses from working more to a greater extent than the transfer might increase the potential gains to some individuals from working more. Of course, the eventual effect on labor force participation depends greatly on response rates to such incentives.

This argument, however, begs the question. If we as a society are committed to providing some minimal levels of well-being to individuals, especially children, then it is much less clear that providing, say, \$3,000 of EITC benefits to someone who earns a modest amount of income is any less of a work disincentive than providing \$3,000 of pure welfare benefits to someone who doesn't work at all. The EITC can best be assessed, therefore, against other alternatives that are designed, in part, to provide transfers to low-income individuals. Moreover, among those who might be given the greatest additional incentive to work are those welfare recipients whose participation in the workforce would integrate them more fully into the rest of society.

Compliance and the Superterranean Economy

Unfortunately, as currently designed, I doubt seriously that the EITC can be fully enforced by the IRS. The question of abuse, however, is a complex one that is easily confused because there have been several potential sources of abuse, some of which have been dealt with and some not.

Although the data from the IRS are incomplete, as best as I can tell, there have been three major sources of noncompliance with the EITC. The first had to do with individuals claiming the EITC even when they had not provided adequate support to meet support tests and similar eligibility criteria in the tax system. Some recent reforms went a long way to correcting this problem by changing some of the eligibility criteria and making the primary test the presence of the child within the home of the claimant. I should mention that the complex support tests and head of household tests in the current tax law remain a source of confusion and error even beyond the EITC.

The second source of noncompliance derived from excessive claims of children (and even fictional adults) within the household. Again, while the jury is partly out on the size of this problem that remains, my impression is that the IRS and Treasury have made considerable headway toward solving this problem, and that both Congress and the Administration will probably support some further procedures to insure the validity of social security numbers of taxpayers and their claimed children.

A final problem, however, is more fundamental. In normal tax and transfer systems, there is a tendency to underdeclare income to avoid taxes and the loss or phase out of benefits as incomes rise -- creating what is sometimes called the *subterranean* economy. Now that the EITC credit rate is substantially in excess of the Social Security tax rate -- that is, in excess of the only direct tax paid by many EITC recipients -- there is a powerful incentive for households not in the welfare system to overdeclare earnings even when there are none. This incentive is gradually creating a new *superterranean* economy.

Since the IRS audits only a very minor fraction of returns, usually much less than 1 percent of returns of low-income individuals, it is very difficult for it to monitor superterranean economy work that never takes place. Even if it audited everyone, it is very difficult to disprove that whether self-employment income was real or fictional. Moreover, in some cases, legal work creation becomes profitable, as when neighbors exchange babysitting for each other in order to benefit from the credit.

It is unclear how far this problem has developed to date. Welfare recipients, for instance, may still lose more than they gain from overreporting income. In this regard, let me note that the research on EITC noncompliance to date is inadequate and has been inadequately designed to get at the extent of some of these problems. Nonetheless, I believe that it is crucial that the problem be attacked sooner, rather than later. To deter further abuse, the EITC must be supplemented by further restrictions or partially restructured.

EITC Reform Within the Broader Tax and Transfer Structure

EITC reform often can better be accomplished within broader reform of our tax and transfer structure. The simple fact is that reform of these systems, as they apply to low-income individuals, is almost never attempted on a comprehensive basis. Most tax/transfer reforms, including of the EITC, have traditionally not been comprehensive, but, instead, have represented patches onto the existing system. As one consequence, as shown in Figure 1, the combined tax rate on AFDC recipients who take minimum wage jobs is still extraordinarily high — even if one assumes full implementation of EITC expansions adopted in 1993. And that rate remains above 70 percent at 1 1/2 times, 2 times, even 3 times minimum wage. What that means, more generally, is that work in the formal sector still doesn't pay much, making occasional work in the informal sector a better deal, despite recent EITC expansions.

More comprehensive reform would allow one to try to deal with complex interactions among programs, for instance, by trying to integrate together the child credit that is in tax bills in Congress with the EITC in ways that would reduce the very strong penalties on work and marriage in the current system. A more universal child credit, for instance, might be combined with an EITC phased in at a rate equivalent to the Social Security tax rate.

Barring this more comprehensive approach, something still must be done about potential overdeclarations of income. Someone beside the taxpayer has to be involved in the monitoring of declarations of income. For tax systems, traditionally that has been the employer who reports income to the IRS; for welfare systems, local welfare agencies have served as monitors.

Underreporting in the traditional tax system has always been a serious problem for independent contractors, sole proprietors, and some self-employed precisely because there is no one else keeping books on the same transactions. This same group is the one for whom potential overdeclaration of income would be hardest to audit.

An EITC with a subsidy rate of 15.3 percent might also be combined with a employer job credit that was required to be passed on to employees, but was refundable only to the extent of other taxes paid over by the employer to the IRS. <u>Thus</u>, total EITC might be limited by amount of tax payments made by a company on its behalf and as withholdings on employees. Or for those with minimal income tax liability, some form of earnings supplement might be made available through welfare agencies.

Again, I do not wish to imply that a more administrable system will not entail costs or a loss of benefits to some individuals. But the current system, in my view, is unsustainable because it has no basic way to audit or enforce compliance on the overreporting of earnings. If we keep building on this system of subsidizing jobs – a task that could well be taken up by the states with block grant money – we must develop better administrative mechanisms.

Conclusion

Relative to pure welfare systems and many types of employer mandates, the EITC represents an attempt to increase transfers to low-income individuals without some of the extraordinary work penalties of traditional welfare or some of unemployment and other costs imposed on low-income workers by minimum wage increases and other mandates imposed on employers.

The EITC is not a perfect program. It represents a compromise among many competing goals. Its current design may represent merely a step toward replacing welfare with a support system better oriented toward work. At a minimum, the EITC soon must be reformed to avoid creation of a superterranean economy where overdeclarations of earnings generate excessive claims for the credit. Ideally, its reform would be considered along with other welfare and tax reforms, including any child credits that might be provided.

Chairman JOHNSON. Thank you very much. Mr. Scholz.

STATEMENT OF JOHN KARL SCHOLZ, PH.D., ASSOCIATE PROFESSOR, DEPARTMENT OF ECONOMICS, LA FOLLETTE INSTITUTE OF PUBLIC AFFAIRS; AND INSTITUTE FOR RESEARCH ON POVERTY, UNIVERSITY OF WISCONSIN-MADISON

Mr. SCHOLZ. Thank you, very much, Madam Chairman and Members of the Committee, for inviting me to testify on the effectiveness and design of the EITC. The EITC plays a central role in policy as it affects the working poor. Over the past 20 years there has been a striking change in the bottom of the Nation's earnings distribution, beginning in the seventies but accelerating over the eighties.

In 1973, the median male, without a high school diploma earned \$24,000. By 1989, the median worker with the same level of education earned nearly \$10,000 less in constant dollars. The trend is nearly dramatic for males with only a high school degree. The erosion of the Nation's labor market opportunities for people with low levels of education has placed enormous strains on the Nation's antipoverty program. Against this backdrop, the EITC has provided an important supplement to the earnings of low-skilled workers.

Many low-income families are not required to file a tax return even though by filing they may receive the EITC. If the credit is to be successful at meeting the objective of making work pay, families who are eligible for the credit should receive it. The best available evidence suggests that that indeed happens to a large extent; the participation rate of the EITC is around 80 to 86 percent.

The participation rate of the credit is strikingly high when compared to the AFDC and food stamp participation rates. The United Kingdom has an EITC-like program called the family credit administered through the transfer system and directed toward families with children. Official estimates place the participation rate of the family credit at only around 50 percent. Thus, both compared to the other inkind transfers in the United States and comparable work-related benefits in the United Kingdom, the EITC gets high marks for reaching those who are eligible for the benefit. This is the primary advantage of administering the EITC through the income tax system.

Nearly 50 percent of EITC payments by 1996 will go to taxpayers with incomes below the poverty line, and 36 percent of total EITC payments, more than \$6 billion, will directly reduce the poverty gap—the difference between total cash income and the poverty line. More than 75 percent of EITC benefits go to taxpayers with wages that would place them in the bottom 25 percent of all workers with children. That is below \$7.30 an hour. Thus, the EITC is well targeted

geted.

As people have mentioned, the EITC has different labor supply incentives depending on where the taxpayer's income is relative to the subsidy, flat and phaseout ranges of the credit. The subsidy range of the credit provides mixed incentives to work; the flat and phaseout ranges provide an unambiguous incentive to reduce hours of work. Most EITC recipients are in these ranges which raises the concern that the EITC may lead to a net reduction in the work ef-

fort of low-income workers. As Marv mentioned, this concern is borne out in studies on this issue.

The economic magnitude of these effects is small. The estimates that I deem most reliable suggests that the average reduction in hours worked, will be around 11 per year or one-half a percentage point of their total annual hours.

Moreover, to the extent that taxpayers are unaware of the effects of the credit on aftertax wages, both the positive effects of the credit and the subsidy range, and the negative effects of the credit on

taxpayers in the phaseout range are overstated.

In sum, the best available empirical evidence suggests that the EITC has a small but detrimental effect on the hours of workers. The credit exerts unambiguously positive labor market incentives on the decisions of whether or not to work.

The empirical work on this topic shows that the increase in net wages, provided by the EITC, positively affects labor market participation and negatively affects public assistance participation,

particularly among single parents.

This increase in participation is likely to offset or more than offset the reduction in hours worked. The evidence suggests that the EITC probably will, in aggregate, increase the hours worked by low-income people, but the positive effect is likely to be small. Thus, the EITC is not a magic bullet solution to the problems of low-wage labor markets.

At the same time, the modest positive labor market effects of the EITC should be contrasted to the detrimental effects on both labor market participation and hours of work associated with other

income transfer programs.

In the past years, a large number of ineligible taxpayers claimed the EITC according to unpublished data from the IRS Taxpayer Compliance Measurement Program. In 1988, over 30 percent of EITC claimants were ineligible; roughly one-third of the dollar claims were inappropriate.

The GAO testified in 1993 that the credit has been the source of more taxpayer mistakes than any other individual income tax

provision.

The future viability of the EITC depends on the ability of the IRS to reduce noncompliance. Doing so requires two distinct tasks. First, programs must be put in place to detect accurately and re-

port the degree of noncompliance and its causes.

I was pleased to read IRS Commissioner Richardson's testimony that the IRS will be doing a detailed EITC compliance study that is to be completed in 1995. Without credible numbers on the EITC noncompliance and evidence about the source of noncompliance, it is difficult to design policy to address the problem.

The IRS has now taken the second step needed to address noncompliance and that is giving greater scrutiny on verifiable items on tax returns. The IRS created an uproar this filing season due

to refund delays as it reviewed SSNs more closely.

Nevertheless, this effort together with matching employee and employer W-2 reports seem to be the best way of combatting the noncompliance that jeopardizes the program.

As long as the credit is based on items the IRS is able to verify there is nothing inherent in the credit that would lead to unusually high levels of noncompliance. Moreover, other areas of the Tax Code, for example, schedule C also have large amounts of noncompliance associated with them.

As a matter of sound policy, the costs of reducing noncompliance in every aspect of the Tax Code should be compared to its benefits, so the IRS uses taxpayer resources in as efficient a way as possible.

Just to conclude, the erosion of the bottom of the Nation's labor market imposes a pressing policy problem. The EITC is a sensible, well-targeted policy to address the problem. The credit is threatened by noncompliance.

I now sense that the IRS is taking strong steps to attack this problem. Their efforts should be given time to work. The reason for

this is that in other respects the credit is working well.

Most eligible taxpayers receive the credit; its labor market effects are probably in aggregate beneficial, and without a doubt, they are less pernicious than alternative ways of assisting the working poor; the credit is well targeted toward poor and near-poor families; and last, families receiving the EITC are working, an action that, in my opinion, should be encouraged.

Thank you.

[The prepared statement follows:]

Testimony before the Committee on Ways and Means, Subcommittees on Oversight and Human Resources

John Karl Scholz
Economics Department, La Follette Institute of Public Affairs,
and the Institute for Research on Poverty
University of Wisconsin-Madison

Thursday, June 15, 1995

Mr Chairman and Members of the Committee:

Thank you for inviting me to testify on the effectiveness and design of the earned income tax credit (EITC). The EITC plays a central role in policy as it affects the working poor. Over its history, the EITC has received strong bipartisan support, as reflected by the fact that it was increased in 1986 and increased sharply in 1990 and 1993. The real value (in 1993 dollars) of the maximum EITC varied between \$739 and \$1,068 between 1975 – the year the EITC was adopted – and 1990. By 1996 the real value of the EITC will be roughly three times its 1990 level as a consequence of the 1990 and 1993 legislative changes.

The effectiveness of the EITC depends on (i) whether or not people eligible for the credit actually receive it, (ii) the labor market effects of the policy, and (iii) ensuring that those not eligible for the credit do not receive benefits. The first part of my testimony focusses on these aspects of policy design. The final section discusses a variety of EITC-related policy options.

Labor markets for low-skilled workers in the U.S. have not performed well over the last 20 years

To understand the role of the EITC, and in particular, its charmed existence over the past 20 years, a couple of facts about the labor market for low-skilled workers in the U.S. are useful. As Table 1 shows (next page), there has been a striking change in the bottom of the nation's earnings distribution, beginning in the 1970s, but accelerating over the 1980s. In 1973, the median male without a high school diploma earned \$24,079 (in 1989 dollars), by 1989 the median worker with the same level of education earned \$14,439. The trend is nearly as dramatic for males with only a high school degree. In 1973, the median male had an income of \$30,252, by 1989 the median male with a high school degree had an income of \$21,650. Average hourly earnings in private nonagricultural industries peaked in 1973 at \$8.55 per hours (in 1982 dollars) and, in 1994 were \$7.40 per hour. The erosion of labor market opportunities for people with low levels of education has placed enormous strain on the nation's antipoverty programs. Against this backdrop, the EITC has provided an important supplement to the earnings of low-skill workers.

The participation rate of the credit of the EITC is high

A family receives the EITC by filing a tax return, but many low-income families are not legally required to file returns. A married couple with two children, for example, was required to file a tax return in 1994 only if they had income above \$16,150, though with an income considerably less than

that, the couple would be entitled to an EITC of over \$3,000. If the EITC is to be successful at meeting the objective of "making work pay," families who are eligible for the credit should receive it.

Source: Robert Haveman and John Karl Scholz, "Transfers, Taxes, and Welfare Reform," National Tax Journal, June, 1994, 417-434

It is surprisingly difficult to estimate the percentage of EITC-eligible taxpayers who receive the credit – the EITC participation rate. Household surveys generally collect the information needed to determine eligibility but do not provide information on EITC recipiency. Tax data are best for estimating EITC recipiency, but not all households file tax returns so they are unsuited for estimating EITC eligibility. In an earlier paper I used unique data that allowed me to determine EITC eligibility and EITC recipiency in the same data set: specifically, I use data from the 1990 Survey of Income and Program Participation (SIPP) matched by social security number to selected items from individual income tax returns. The paper describes, in great detail, the steps needed to calculate participation rates. Of the roughly 10 million taxpayers eligible for the credit in 1990, I estimate that between 75 to 90 percent received the credit. For reasons given in the paper, my preferred estimates place the participation rate at 80 to 86 percent.

The high participation (or take-up) rate of the credit is striking when compared to the AFDC participation rate of 62 to 72 percent and the food stamp participation rate of 54 to 66 percent.² The

¹For a more detailed discussion of participation rates, see John Karl Scholz, "The Earned Income Tax Credit: Participation, Compliance, and Anti-poverty Effectiveness," <u>National Tax Journal</u>, 47(1) (March, 1994): 59-81.

²These figured are calculated from the 1986 and 1987 panels of the Survey of Income and Program Participation (SIPP) by Rebecca M. Blank and Patricia Ruggles, in their paper "When Do Women Use AFDC and Food Stamps? The Dynamics of Eligibility Versus Participation," mimeo, Northwestern University and the Urban Institute, Washington, D.C., June, 1993.

United Kingdom has an EITC-like program called the Family Credit. It is administered through the transfer system and directed toward families with children. Official estimates place the participation rate of the Family Credit at around 50 percent. Thus, both compared to other in-kind transfers in the U.S. and comparable work-related benefits in the United Kingdom, the EITC gets high marks for reaching those who are eligible for the benefit.

The EITC is well targeted

Nearly 50 percent of EITC payments by 1996 will go to taxpayers with incomes below the poverty line and 36 percent of total EITC payment will directly reduce the "poverty gap" – the difference between total cash income and the poverty line. Because of the design of the credit, however, all benefits (other than those obtained fraudulently) go to taxpayers with incomes that are no more than 73 percent of the median family income in 1993. Put differently, the highest income an EITC-eligible taxpayer can have is \$27,000 while the median family income in 1993 was \$36,959. In this sense, the EITC is fairly well targeted to working poor or near-poor families.

There is little evidence that a significant number of EITC recipients are high-wage, part-time employees. Based on tabulations from the Survey of Income and Program Participation, I calculate that more than 75 percent of EITC benefits go to taxpayers with wages that would place them in the bottom 25 percent of all workers with children (below \$7.30 per hour). More than 95 percent of all EITC benefits are paid to workers with wages below the median of \$11.11 per hour. The EITC could be even more tightly targeted to lower income taxpayers by increasing the phase-out rate of the credit. Given the evidence on labor market incentives discussed below, doing so would probably not have particularly large deleterious labor market effects.

The EITC's labor market incentives vary with the income of the taxpayer

The EITC has different labor supply incentives depending on the taxpayer's income relative to the subsidy, flat, or phase-out range of the credit. The subsidy range of the credit increases the worker's marginal return to labor. For taxpayers with incomes in the subsidy range, the wage subsidy is thought to encourage work. At the same time, the income supplement provided by the EITC is thought to decrease recipients' labor supply because more money in hand means that they will choose to work less. The net effect is ambiguous. Households in the flat range of the credit receive the maximum EITC payment and no marginal subsidy for increased work, so these households have no marginal incentive to increase their hours of work, and the EITC supplement provides incentive to work less. In the phase-out range, the EITC is reduced as additional income is earned, which is akin to an additional tax on earnings. Thus the additional tax and the additional income both encourage workers to decrease their hours of work. For households that are not working, it is hoped that the wage subsidy provided by the EITC will encourage participation in the labor market.

The aggregate labor market effects of the credit depend on the distribution of taxpayers within the credit's ranges and the degree to which they respond to incentives. In my National Tax Journal paper I estimate that 77 percent of EITC recipients will have incomes that fall in the flat or phase-out range of the credit in 1996, which raises the concern that the EITC may lead to a net reduction in the labor supplied by low-income workers. The fact that an incentive exists, however, does not necessarily mean that people act on the incentive in an economically significant manner. In the following sections I describe work performed with Stacy Dickert and Scott Houser on the likely effect of the EITC on

labor market behavior.3

The EITC will have a small, negative effect on the hours worked by people already working

A large body of work in economics examines the effect of taxes and transfers on the hours worked by those in the labor market. Dickert, Houser and I survey this literature and use the empirical results from these studies to simulate the effects of the OBRA93 EITC expansions from 1993 to 1996.

Table 2 (next page), which is drawn from our paper, shows the effect of the 1993 EITC expansion, using 3 sets of labor supply estimates from studies that explicitly model the tax and transfer system. Between the estimates labelled "MaCurdy, Green, and Paarsch" on the low end, and "Hausman" on the high end, the estimates appear to span the range of estimates found in the literature. As expected, we find that the EITC will reduce hours for every group except those in the subsidy range of the credit. Studies of labor supply find that secondary earners are more responsive to changes in taxes and wages than are primary earners. Accordingly, our estimated labor supply responses are larger for secondary-earners in two-parent families than they are for primary earners or single-parent families

Our reading of the literature suggests Triest's estimates most closely reflect consensus estimates from various branches of the literature. Triest's estimates imply that taxpayers in the subsidy range of the credit will increase hours by roughly 38 hours per year, while taxpayers in the flat and phaseout range will reduce hours by 3 and 21 hours per year, respectively. When aggregated, EITC recipients are estimated to reduce hours by an average of 11 per year. Hausman's estimates are roughly 8 times as large, while the MaCurdy et al. estimates show virtually no response. Our estimates are consistent with, but update earlier estimates from a 1993 study by the General Accounting Office.

While the credit, in aggregate, is likely to reduce the hours worked by workers, the economic significance of these effects is small. Moreover, to the extent that taxpayers are unaware of the effects of the credit on after-tax wages, both the positive effects of the credit in the subsidy range, and the negative effects of the credit on taxpayers in the phase-out range, is overstated. Thus, the best available empirical evidence suggests that the EITC has a small, but detrimental, effect on the hours of workers.

The EITC will have a small, positive effect on labor market participation that probably is sufficient to make the aggregate effect of the EITC on hours of work positive

What's missing from the literature and our calculations from Table 2 are estimates of the EITC's effect on labor market participation. The credit has unambiguously positive labor market incentives on the decision of whether or not to work. Few papers provide guidance for thinking about the size of the effects of the EITC on labor market participation. This is somewhat surprising, as there is widespread agreement among economists that the strongest empirical labor market effects of wages and nonlabor income are on participation, rather than hours of work.

³The following discussion of the tax treatment of low-income households and the effects of the EITC on labor market participation and hours of work is described in more detail in Stacy Dickert, Scott Houser, and John Karl Scholz, "The Earned Income Tax Credit and Transfer Programs: A Study of Labor Market and Program Participation," <u>Tax Policy and the Economy</u>, James M. Poterba (ed.), National Bureau of Economic Research and the MIT Press, 1995, volume 9, pages 1-50.

Note: See Dickert, Houser, and Scholz (1995) (the complete citation is in footnote 3) for further detail. Median monthly hours are in parentheses.

We identify the effects of the EITC on labor market participation by making use of the striking variation across states in the after-tax return to work. The typical low-income family in Texas, for example, faces relatively low cumulative tax rates — this calculation reflects both explicit tax rates from the federal income and payroll taxes, and implicit tax rates from benefit-reduction rules of food stamps and AFDC. Low tax rates are primarily a consequence of the low levels of AFDC benefits available to families in Texas. A household in similar circumstances in New York faces considerably higher rates, primarily because of the higher level of AFDC benefits. We find, for example, that average tax rates can exceed 85 percent for New York families receiving AFDC that enter the labor market and work anywhere from 8 to 35 hours per week. This implies that this family, when making labor market over a broad range of hours. If tax rates affect labor market participation, we expect labor market

⁴We characterize this variation using a detailed, microsimulation model we have developed that uses monthly data for the 1990 calendar year drawn from the Survey of Income and Program Participation (SIPP). The model is coded in the computer language C, runs on a personal computer, and contains detailed modules for SSI, AFDC, food stamps, the federal income tax, state income taxes, and payroll taxes. See Dickert, Houser, and Scholz (1995) for further details.

participation to be higher in low-benefit states than in high-benefit states, holding other observable characteristics constant.

Our study shows that net wages positively and significantly affect labor market participation and negatively affect transfer program participation, particularly for single parents. Moreover, this result is not an artifact of our particular empirical specification, but clearly emerges in the underlying data even when we do not control statistically for other factors.

The empirical evidence on the effects of the OBRA93 EITC expansion on labor market behavior is summarized in Table 3 (next page). We model the effect the EITC increase on net-of-tax wages, and calculate the implied change in the probability that individuals work. At the mean, the EITC increases the net wage of single-parent families by 15 percent. This leads to a 6.2 percent increase in their probability of working. If each new labor market entrant works an average of 20 hours per week for 20 weeks a year, the hours of single parent families would increase by roughly 72 million hours per year. Similar calculations show that the annual hours of primary earners in two-parent families would increase by roughly 12 million hours.

The EITC will probably discourage labor force participation of secondary workers in two-parent families, as entering the labor market is likely to place the family's income in the flat or phase-out range of the credit. Specifically, on average we calculate that the after-tax return to work for secondary earners will fall by nearly 5 percent as a consequence of OBRA93. We expect that to decrease labor market participation of secondary earners, leading to a reduction of roughly 10 million hours when using the same assumptions as above. Thus, we estimate that the aggregate increase in hours generated by increased labor force participation would be roughly 74 million hours.

The increased hours resulting from higher rates of labor force participation can be compared to the reduction in hours caused by the credit shown in Table 2. We use Triest's (1990) labor supply parameters for the simulation. We estimate that the annual hours of work for single-parent families in our sample will fall by 26.4 million hours, for primary earners they will fall by 13.6 million hours, and for secondary earners they will fall by 14.5 million, leading to an aggregate reduction of 54.5 million hours.

Taken together, the simulations suggest that the aggregate reduction in hours supplied by working households, 54.5 million, would be more than fully offset if new labor force participants work an average of 20 hours per week, 20 weeks per year. If either hours, or weeks worked are lower the offset will be smaller, while if new labor market entrants work more than 400 hours a year, the aggregate effect will be a larger positive number. The important point, however, is that one cannot forget about the participation margin when thinking about the labor market effects of the EITC.

Our evidence, like other papers before us, show that labor market participation appears to be sensitive to changes in wages and taxes. Hence, a policy like the OBRA93 EITC expansions that substantially increases the after-tax return to working for those not in the labor market are likely to elicit greater labor market participation. This increase in participation is likely to offset (or more than offset) the reduction in hours among those who work. The modest positive labor market effects of the EITC should be contrasted to the detrimental effects on both labor market participation and hours of work associated with other income transfer programs.

EITC noncompliance has been too high, but sensible steps are now being taken to address the problem

In past years a large number of ineligible taxpayers claimed the EITC, according to unpublished data from the IRS's Taxpayer Compliance Measurement Program (TCMP). In 1988 10.4 million taxpayers claimed the EITC, whereas the TCMP for that year estimates that only 7.1 million were entitled to the credit, indicating that over 30 percent of EITC claimants were ineligible. Of the \$5.6 billion in EITC claims, the 1988 TCMP estimates that nearly \$2 billion (33.6 percent) were claimed inappropriately. A General Accounting Office official testified in 1993 that "the credit has been the

The estimation of the change in hours from new labor force participation assumes that, on average, these persons work 20 hours per week for 20 weeks per year.

²We use the estimated net wage and virtual income elasticities from Triest (1990).

source of more taxpayer mistakes than any other individual income tax provision."

Noncompliance takes many forms, though one of the frustrations with thinking about this topic is in assessing the relative importance of different circumstances. Parents that are separated (or even living together) may file separate returns and both claim the same child as a dependent. Taxpayers may make up children. Taxpayers may misreport earnings or AGI. Some of these cases may not reflect the intent to commit fraud, others clearly do.

EITC rules were changed in 1990 and a 2-page schedule was added to the tax forms because of the widespread perception of compliance problems, but there is little publicly-available evidence that the 1990 changes significantly reduced noncompliance. The IRS did a special study during last year's filing season, examining returns filed electronically during the first two weeks of the filing season, and found that roughly 26 percent of EITC claims were too high. Because of the nature of the sample that was drawn, it is unlikely that this sample was representative of the universe of filers, but the limited available evidence indicates that noncompliance is still a major problem.

The future viability of the EITC depends on the IRS being able to reduce EITC noncompliance. Doing so requires two distinct tasks. First, programs must be put in place to detect accurately and report the degree of noncompliance and its causes. Current policy is being debated in an environment where solid evidence on the magnitude of compliance problems is scanty. I was pleased to see that IRS Commissioner Margaret Richardson testified to the Senate Finance Committee last week that a detailed EITC compliance study is going to be completed in 1995.

The Internal Revenue Service has, perhaps belatedly, taken the second step needed to address noncompliance. This involves giving greater scrutiny to verifiable items on tax returns. The IRS created an uproar this past filing season due to refund delays as they give social security numbers greater scrutiny. Nevertheless, this and matching employee and employer W-2 reports, seem to be the best ways of combatting the noncompliance that jeopardizes the program. As long as the credit is based on items the IRS is, in principle, able to verify, there is nothing inherent in the credit that would lead to unusually high levels of noncompliance. Moreover, other areas of the tax code, for example, Schedule C also have large amounts of noncompliance associated with them. As a matter of sound policy, the costs of reducing noncompliance in every aspect of the tax code should be compared to its benefits, so the IRS uses taxpayer resources in as efficient a way as possible.

Even if the IRS is able to perfectly verify social security numbers and wage and salary income, future compliance problems may arise with self-employment income. Between 1975 and 1990 the subsidy rate of the EITC was roughly the same as the combined employee and employer share of the payroll tax. In this period, as long as the payroll tax and EITC subsidy are about the same, taxpayers will not overstate self-employment income in order to increase their EITC. Doing so would increase the taxpayer's EITC but would obligate the taxpayer to pay social security taxes on the self-employment income, eliminating any advantage to falsely reporting income.

With the sharp increase in the EITC, there are now stronger incentives to manipulate income. It is, of course, not yet clear how people will respond to these incentives, as there is no comparable situation in the tax code. My guess is that over time taxpayers or paid tax preparers will begin to take advantage of the incentive to overstate income in the subsidy range of the credit. The IRS will surely monitor closely the amount of income reported by low-income taxpayers that occurs in forms not subject to information-matching procedures (i.e., income from self-employment). An increase in the proportion of income occurring in these forms will be an early signal that a problem may be

developing.

A solution to the potential problems associated with self-employment income would be to restrict the expanded EITC to income reported on W-2s (and only allow an EITC equivalent to the employer and employee share of payroll taxes for other sources of income), though that would create an inequity between low-income wage earners and self-employed households.

Pending EITC proposals may not improve the tax system or the well-being of EITC recipients

In the past months various legislative proposals have arisen that would alter aspects of the EITC. The proposals include adding selected monetary payments to the income base in determining EITC benefits, repeal of indexation for the EITC, and limiting the EITC based on assets.

A current problem with the EITC is that several unverifiable sources of income are currently included in the EITC income base. These include housing allowances or the rental value of a parsonage for the clergy, excludable employer-provided dependent care benefits, voluntary salary reduction amounts (e.g., deductions to 401(k) plans), and anything else of value (money, goods, or services) received from someone for services performed even if it is not taxable (IRS Publication 596). With perfect compliance the inclusion of these items in the EITC income base may enhance the targeting of the credit, but reporting these income items is essentially voluntary. Given the difficulty of enforcing these provisions, I would support a proposal to restrict EITC eligibility and benefits to verifiable items. Adding new income items to the EITC income base that the IRS cannot verify, such as child support payments, non-taxable pension income, and tax-exempt interest would make the EITC even more difficult to administer, and would be a step in the wrong direction.

An important achievement of tax reforms in the 1980s is that most aspects of the tax system are now indexed to inflation. Unlike prior decades, ordinary taxpayers no longer see increasing tax burdens attributed solely to nominal, but not real, increases in income. It would be a very unfortunate change in policy if EITC indexation were eliminated. Working poor taxpayers would see an erosion of the real value of the EITC caused by the vagaries of inflation. If it is the intention of Congress to reduce the real value of the EITC or increase taxes in other ways, it should be done explicitly, rather than by repealing indexing.

Lastly, Administration and Congressional proposals would deny the EITC to taxpayers with assets (based on dividend, interest, and tax-exempt bond income) above some threshold. This proposal would be relatively straightforward to administer, and consequently could, in an effective manner, enhance the targeting of the EITC. I would not oppose such a proposal, though two things should be kept in mind when debating it. First, it will be relatively easy to manipulate portfolios so as to avoid the asset income thresholds without altering the value of the portfolio. Hence, the asset test will in all likelihood exclude fewer families than expected. Second, it may be counterproductive to implement a very restrictive asset test (such as those with a \$1,000 threshold). While asset tests of any kind enhance targeting in a static sense, they also can make it nearly impossible for recipients to legally accumulate the assets necessary to take a wide range of choices leading to independence – helping a child attend college, acquiring additional training, or moving away from a dangerous neighborhood.⁵

⁵For example, a family receiving food stamps cannot have financial assets exceeding \$2,000 (\$3,000 if the family unit has a member older than 59), and cannot own assets and a car whose combined market value exceeds \$6,500. A family receiving AFDC cannot have more than \$1,000 of financial assets. In a

As with high implicit tax rates on labor earnings, asset tests distort the economic decisions of low-income households and hence reduce the efficiency of antipoverty policy.

Conclusions

Over the past 20 years the EITC has been a favored policy tool for assisting low-income families with children. Between 1975 and 1990 the EITC remained roughly constant in real terms. By 1996 the real value of the EITC will nearly triple from its 1990 level. No other major program directed toward low-income families has grown at a comparable rate in recent years.

The effectiveness of the EITC will depend, in part, on its effect on labor market behavior. Most workers that will receive the credit have incomes that place them in the flat or phaseout range of the credit, where the credit provides an unambiguous incentive for people to work fewer hours. Using recent estimates from the empirical literature on taxes and labor supply, we find that the change in incentives caused by the 1993 expansion of the credit are expected to lead to a reduction in hours of work by those already in the labor market. Our central estimate predicts an overall reduction of roughly 54 million hours a year for families in our sample.

One of the attractions of the EITC is that it provides an unambiguously positive incentive to people not working to get a job. We find, both in descriptive tabulations and empirical models, that the after-tax wage has an economically and statistically positive effect on labor market participation and negative effect on transfer program participation. Thus, when fully phased in, the 1993 EITC expansion will increase labor force participation. Our preferred estimates suggest the magnitude of the participation effect will be large enough to offset the decrease in hours worked by workers.

While economists are predisposed to concentrate on the labor market responses to the EITC, the credit gets mixed reviews on two additional, important, policy dimensions. The participation rate – the fraction of eligible taxpayers that actually receive the credit – is quite high. The credit is reaching its intended beneficiaries. At the same time, many that are not eligible for the credit receive it. With the recent expansion of the EITC, the amount of overpayment could reach billions of dollars annually, an amount that, if it persists, will surely cause the credit to be scaled back, if not repealed altogether. I am hopeful that recent IRS attention to this problem will reduce the error rate and the credit will remain in place. My support for the credit results from the fact that (i) a high fraction of eligible taxpayers receive the credit, (ii) its labor market effects are probably, in aggregate, beneficial, and without a doubt, they are less pernicious than alternative ways of assisting the working poor, (iii) the credit is well-targeted toward poor and near-poor families, and (iv) families receiving the EITC are working, that is, they are "doing the right thing." Given the performance of labor markets for low-skill workers over the last 20 years in the U.S., it sound social policy to try to supplement the earnings of working poor families.

well publicized case, Cecelia Mercado was ordered by the Connecticut Supreme Court to repay \$9.342.75 in AFDC payments because her daughter, without her knowledge, had taken a part-time job and, in a year and a half, had saved almost \$5,000 toward attending college. To become recertified to receive AFDC, the daughter and her brother (who had saved nearly \$1,000) had to spend their saving until the household's assets fell below the \$1,000 asset limit (William Raspberry, Atlanta Journal and Constitution, \$/21/92, p. A10).

Chairman JOHNSON. Thank you, Dr. Scholz.

Professor Forman, we are going to hear your testimony, recognizing that the time is roughly 5 minutes and then we will recess for a few minutes to go and vote and come back.

Professor Forman.

STATEMENT OF JONATHAN BARRY FORMAN, PROFESSOR, COLLEGE OF LAW, UNIVERSITY OF OKLAHOMA, NORMAN, OKLAHOMA

Mr. FORMAN. Thank you, Madam Chairman.

Today the Federal tax system stands at an important crossroads and how this Committee next amends the EITC can change the future of tax policy for years to come. On the one hand, our Federal tax system could require more and more people to file complicated tax returns. On the other hand, we could move in a direction which minimizes the number of people who must even file tax returns.

I believe that the EITC should be restructured in a way that reduces the number of people who need to file tax returns while, at the same time, guaranteeing benefits for low-income workers.

My point is this, because millions of Americans must file tax returns to their earned income credits, there are millions of opportunities for them to make mistakes on their returns or for them to file fraudulent returns.

If it were up to me, I would do three things. First, I would move to a return-free filing system. Second, I would replace a portion of the EITC with an across-the-board \$5,000 per worker Social Security tax exemption. Third, I would replace the rest of the EITC with a \$1,000 per-child tax credit, along the lines of Congressman Petri's proposal or The National Commission on Children's proposal several years ago.

First, we should move to a return-free filing system in which the IRS prepares returns for most wage earners. Using information reports from employers and other income sources, the IRS could prepare tax returns for most 1040-EZ filers, most 1040-A filers and

a few 1040 filers, more than 55 million taxpayers in all.

Those Americans would no longer have to gather information, become familiar with tax laws or prepare and file returns. Nor, would they have to pay private preparers \$20 per return just for return preparation and additional fees for electronic filing and refund anticipation loans. In addition, under a return-free filing system, the burdens on the IRS would be reduced.

Second, Congress should replace a portion of the EITC with a \$5,000 per worker exemption from Social Security taxes. After all, much of the complexity in this area results from collecting Social Security taxes from every worker and then using the EITC to refund those taxes to low-income workers. Would it not be simpler if the Federal tax system did not collect those Social Security taxes in the first place?

With the Social Security tax exemption, at least 10 million tax returns could be eliminated immediately and IRS resources would be freed for other productive work. This is according to the Joint

Committee on Taxation.

Also, unlike, the EITC, which most workers collect around April 15 of the year following their work, a Social Security tax exemption

would result in extra money every paycheck. That would be a powerful work incentive. Unlike the EITC, a Social Security tax exemp-

tion would reach all 100 percent of low-income workers.

Finally, Congress should replace the rest of the EITC with a \$1,000-per-child refundable tax credit, along the lines of the credit proposed by the National Commission of Children in 1991. The credit would be available for all children through the age of 18. It would be refundable and indexed for inflation. Payment of the credit could come in the form of reduced withholding or a tax refund paid annually or perhaps quarterly. Your Committee might start by making the \$500-per-child tax credit in the House-passed tax bill refundable.

Unlike the current EITC, a refundable child tax credit would not create marriage penalties. That is because the credit amount would not depend on marital status or family income. Nor would a refundable child tax credit result in the kind of work disincentives that we see in the phaseout range of the EITC. Because the credit would be available to all families with children, regardless of income, it would not have to be phased out at all.

To summarize, by moving to a return-free filing system, and replacing the EITC with a \$5,000-per-worker exemption and a \$1,000-per-child refundable tax credit, Congress could guarantee benefits to low-income workers and free millions of Americans from

having to file returns.

Before concluding, however, let me mention two other possible alternatives to the current EITC. One alternative would be to combine the credit with other welfare programs, like food stamps and Aid to Families with Dependent Children. After all, having multiple Federal welfare programs has resulted in complexity, inequity, and high administrative costs.

Ideally it would make sense to combine the EITC and the other Federal welfare programs into a single comprehensive program that could be administered by a single agency. As this Committee well knows, both the IRS and the Social Security Administration do a great job of writing checks, so either agency could handle this

assignment.

Or the revenues now used for the EITC could be bundled together with the appropriations for other welfare programs and revenue shared out to the State welfare agencies.

In any event, the administrative savings that would result from combining the EITC with other welfare programs could be passed on to beneficiaries in the form of higher benefits.

The final alternative to the current EITC would be to replace it

with a tax credit for the employers of low-wage workers.

According to standard economic analysis the benefits of an employer tax credit would pass through to low-wage workers in the form of relatively higher wages. Consequently an employer tax credit could end up helping the very same people that we are trying to help with the EITC. Yet, an employer tax credit would be significantly easier to administer than the current EITC if only because there are far fewer employers than low-income workers.

Thank you, again, for this opportunity to testify.

[The prepared statement follows:]

TESTIMONY OF PROFESSOR JONATHAN BARRY FORMAN UNIVERSITY OF OKLAHOMA COLLEGE OF LAW BEFORE THE

SUBCOMMITTEES ON OVERSIGHT AND HUMAN RESOURCES HOUSE COMMITTEE ON WAYS AND MEANS EARNED INCOME TAX CREDIT JUNE 15. 1995

HOW TO REDUCE THE COMPLIANCE BURDEN OF THE EARNED INCOME CREDIT ON LOW-INCOME WORKERS AND ON THE INTERNAL REVENUE SERVICE

Madam Chairman, Mr. Chairman, and Members of the Subcommittees on Oversight and Human Resources:

Thank you for inviting me to testify before you today about the Earned Income Tax Credit.

My name is Jon Forman, and I am a Professor of Law at the University of Oklahoma. Although I am a tax lawyer by trade, I also hold Master's degrees in psychology and economics, and prior to entering full-time teaching, it was my privilege to work in all three branches of the federal government, most recently as Tax Counsel to Senator Daniel Patrick Moynihan (D-N.Y.). For the past ten years, I have been teaching courses about both tax law and welfare law, and I have written dozens of articles about the relationship between the tax and welfare systems./1

The purpose of my testimony today is to suggest ways to reduce the compliance burden of the earned income credit on low-income workers and on the Internal Revenue Service (IRS). Basically, I believe that there are ways to restructure the earned income credit that would guarantee benefits for low-income workers and also free millions of Americans from having to file income tax returns. For example, Congress could replace the current earned income credit with a \$5,000 per worker Social Security tax exemption and a \$1,000 per child refundable tax credit. At the same time, Congress could move the federal tax system toward return-free filing.

1. INTRODUCTION

At the outset, it should be noted that the earned income credit is a whoppingly successful program that has enjoyed broad bipartisan support. Largely because of the earned income credit, millions of low-income American workers pay no federal taxes. And the credit provides important income assistance for millions of low-income working families -- especially single-parent, female-headed households.

Unlike most other welfare programs, however, the earned income credit reaches more than 80 percent of its target population./2 And the earned income credit has lower administrative costs than any other welfare program -- just one percent of program costs, according to the General Accounting Office./3

¹ I am co-chair of the American Bar Association Section of Taxation Project on Simplification for Low Income Taxpayers, and I have performed research on the earned income tax credit under the sponsorship of the American Tax Policy Institute, but the views expressed here are my individual views and do not represent the position of any group.

² George K. Yin, John Karl Scholz, Jonathan B. Forman & Mark Mazur, <u>Improving the Delivery of Benefits to the Working Poor: Proposals to Reform the Earned Income Credit Program</u>, 11 American Journal of Tax Policy 225 (1994).

 $^{^{\}rm 3}$ Testimony of Lynda D. Willis before the Senate Finance Committee (June 8, 1995).

Unfortunately, to claim the credit, low-income workers must file unnecessarily complicated tax returns. Not surprisingly, low-income workers frequently make mistakes in claiming their credits, and some taxpayers claim credits to which they are not entitled. In short, because millions of Americans must file tax returns to claim their earned income credits, there are millions of opportunities for taxpayers to make mistakes or to file fraudulent returns.

Consequently, the federal tax system now stands at an important crossroads, and how Congress next amends the earned income credit can change the direction of federal tax policy for years to come. The choice is this: Should the federal tax system move toward having even more individuals file complicated income tax returns, or should the federal tax system instead move in the opposite direction and reduce the number of individuals who must file returns?

Because of the repeated expansion of the earned income credit, more and more individuals must now file tax returns, if only to collect their earned income credit refunds. On the other hand, technological changes -- like information reporting and electronic filing -- have made it possible for the federal tax system to move away from having so many individuals file complicated tax returns.

I believe that Congress should restructure the earned income credit in a way that would reduce the number of individuals who must file complicated tax returns yet would still guarantee benefits for low-income workers. In particular, Congress should consider replacing the earned income credit with an alternative tax or welfare program for low-income workers. For example, Congress could replace the current earned income credit with a \$5,000 per worker exemption from Social Security taxes and a \$1,000 per child refundable tax credit.

II. THE CURRENT EARNED INCOME CREDIT HELPS LOW-INCOME WORKERS

A. BECAUSE OF THE BARNED INCOME CREDIT, RELATIVELY FEW LOW-INCOME WORKERS OWE ANY FEDERAL INCOME TAXES

According to the Census Bureau, more than 39 million Americans live in poverty./4 The principal federal taxes affecting these low-income individuals are the individual income tax and the Social Security payroll taxes. Because of standard deductions and personal exemptions, relatively few of these low-income individuals pay any income taxes.

On the other hand, because the Social Security tax system has no standard deductions or personal exemptions, many low-income individuals are required to pay regressive Social Security taxes. Fortunately, the earned income credit offsets the Social Security tax liabilities of many low-income workers. Consequently, relatively few low-income workers owe any federal taxes at the end of the year./5

For example, consider the tax treatment of a typical family of four in 1995 — a married couple with two children. Assuming that the couple's income consists entirely of wages or salaries, the couple will owe no federal taxes unless it earns more than \$18,370. Basically, the couple's \$6,550 standard deduction and four \$2,500 personal exemptions together will shelter \$16,550

^{&#}x27;Number of Elderly Poor Drops: 'Statistical Anomaly' Cited for Part of the Drop, The Sunday Oklahoman, Dec. 11, 1994, at A24. The Census Bureau estimated the total U.S. population at 259.2 million and the overall poverty rate at 15.1 percent.

⁵ See Appendix for computations.

from the income tax, and the couple's earned income credit will offset the rest of its income and Social Security tax liability. By way of comparison, the poverty level for a family of four in 1995 is just \$15,150.

Thus, in large part because of the earned income credit, relatively few low-income families with children will owe any federal taxes for 1995. The earned income credit is especially important to single-parent families. For example, in 1993, 63.7 percent of earned income credit beneficiaries were heads of household./6 The earned income credit also helps protect childless workers and couples from regressive Social Security taxes.

B. FILING INDIVIDUAL INCOME TAX RETURNS IS BURDENSOME AND EXPENSIVE

Unfortunately, even though relatively few low-income workers owe federal taxes, most must file income tax returns and fill out Schedule EIC to recover their over-withheld taxes and their refundable earned income credits. For example, for the tax year 1992, almost 24 percent of the 113.6 million individual income tax returns filed showed no income tax liability./7 That's roughly 27 million returns, and many of those were filed by low-income workers. Also, that year more than nine million low-income workers received earned income credit refunds in excess of their income tax liabilities./8

Moreover, millions of Americans need help preparing their income tax returns. For example, more than 56 million taxpayers used paid preparers for their 1992 tax returns./9 That's about half of all individual taxpayers. Even more astonishing, 777,000 taxpayers paid private preparers to help them fill out 1040EZ forms, and more than 5.5 million taxpayers paid preparers to help them fill out 1040A forms.

Furthermore, fully half of earned income credit recipients use paid preparers./10 At \$20 or more per return for preparation -- and additional fees for electronic filing and refund anticipation loans, that amounts to millions of dollars going from low-income workers to private preparers. All in all, filing returns is burdensome and expensive for low-income workers and for the IRS./11

III. SO WHAT CAN BE DONE TO HELP LOW-INCOME WORKERS?

A. SIMPLIFY THE CURRENT TAX SYSTEM FOR LOW-INCOME WORKERS

First, there are a few small changes to the current tax system that could help improve compliance with the earned income credit.

1. Simplify the Current Earned Income Credit

One reform idea would be to modify the 1040 forms so that individuals would no longer have to file a Schedule EIC in order to claim the credit.

Another reform would be to simplify some of the earned income credit eligibility requirements. For example, it would make sense to eliminate the differences between the definition of a "qualifying child" for earned income credit purposes and the definition of "dependent" for purposes of claiming the dependency exemption.

Still another reform would be to simplify the definition of "earned income" that is used to determine the amount of an individual's earned income credit. The current definition of "earned income" includes several items that are excluded from gross income and that are not reported on W-2 or 1099 forms. Most taxpayers eligible for the credit have none of these items, but both taxpayers and the IRS must try to keep track of them. Consequently, one simplification would be to include in "earned income" only those items includable in gross income. Then the credit could be readily computed from information already available on W-2 or 1099 forms and on tax returns.

It might also make sense to limit the earned income credit for self-employed workers to the amount of their self-employment taxes. Under current law, the high level of earned income credit benefits available can actually provide an incentive for low-income individuals to report fictitious amounts of earnings. Such fraud is relatively difficult for wage earners because the IRS can match the employee and employer W-2 forms. Because only a portion of self-employment earnings shows up on 1099 forms, however, it is easy for self-employed workers to overstate their earnings. Consequently, limiting the credit available to self-employed workers may be an appropriate way to curb that abuse (although, admittedly, such a limit would create an inequity between wage earners and self-employed workers).

On the other hand, adding a wealth test to the earned income credit or expanding the credit's definition of adjusted gross income would make the credit even more complicated and so increase the compliance burdens on taxpayers and on the IRS.

2. Let the IRS Prepare Tax Returns for Low-Income Workers

Another reform would be to let the IRS prepare returns for individual taxpayers. Currently, the IRS believes that Office of Management and Budget Circular A-76 prevents it from preparing income tax returns, setting up its own electronic filing network, or designing and distributing computer software that would allow individuals to prepare their returns on their own computers./12

Office of Management and Budget, OMB Circular No. A-76 (Rev.), Performance of Commercial Activities, 48 Federal Register 37,110 (1983). Promulgated by the Reagan Administration, that ruling generally prevents government agencies from "competing" with private-sector businesses.

In particular, it would make sense to let the IRS prepare returns for those low-income workers who claim the earned income credit. Virtually all welfare programs help individuals apply for benefits, and the earned income credit clearly provides a welfare-like benefit. Why not let the IRS prepare returns so that eligible low-income workers can get their earned income credit refunds?

3. Move to a Return-free or a Final Withholding Tax System

Another way to help low-income workers who claim the earned income credit would be to move to either a return-free or a final withholding tax system./13 Under a return-free system, the IRS would prepare tax returns for individual taxpayers based on information reports received from employers and other taxpayer income sources. Most Form 1040EZ and Form 1040A filers and a few Form 1040 filers could elect to have the IRS compute their tax liabilities and prepare their returns -- some 55 million taxpayers in all. Most of these people would no longer have to gather information, become familiar with tax laws, or prepare and file returns. The compliance burdens on the IRS would also be greatly reduced.

Similarly, under a final withholding system, the amount withheld by employers and other income sources is the tax, thus eliminating the need for many taxpayers to file tax returns. Over 30 foreign countries use some form of final withholding, including Great Britain, Japan, Germany, and Argentina. For example, in Great Britain, the income tax is withheld by employers under the British PAYE (Pay As You Earn) final withholding system. When an individual first becomes potentially subject to tax, an initial return must be filed so that the Inland Revenue can determine how much the employer should withhold. Thereafter, individuals with simple incomes and modest earnings are normally required to file a return only about once every five years. In 1991, for example, more than 23 million of the 26 million taxpayers eligible for PAYE did not file tax returns.

Would a final withholding system work in the United States? In its analysis of the issue, the General Accounting Office concluded that most taxpayers who now file 1040EZ returns (about 19 million in 1994) and many of those who now file 1040A returns (about 23 million in 1994) could be served by a final withholding system. Thus, a final withholding system could significantly reduce burdens on both low-income workers and the IRS.

B. REPLACE THE CURRENT EARNED INCOME CREDIT WITH AN ALTERNATIVE MECHANISM TO HELP LOW-INCOME WORKERS

Given the compliance problems with the earned income credit, it is worth considering some alternate ways to distribute benefits to low-income workers. Specifically, eliminating fraud from the earned income credit program may mean replacing it with a floor on Social Security taxes, an employer tax credit, or a direct expenditure program.

1. Replace the Earned Income Credit with a \$5,000 or \$10,000 Social Security Tax Exemption and a \$500 or \$1,000 Per Child Refundable Tax Credit

One alternative would be to replace the earned income credit with alternative tax provisions that could provide similar benefits directly to low-income workers. In that regard, much of

¹³ <u>See generally</u> Internal Revenue Service, Current Feasibility of a Return-Free Tax System (1987); U.S. General Accounting Office, <u>supra</u> note 11.

the complexity of the current system results from imposing Social Security taxes on every dollar of earned income, and then using the earned income credit to offset those taxes for those low-income workers. Wouldn't it be simpler if the federal tax system did not collect Social Security taxes from low-income workers in the first place?

One option would be to add a \$5,000 or \$10,000 exemption to the Social Security tax system./14 Unlike the earned income tax credit, a Social Security tax exemption would reach 100 percent of low-income workers, and it would be less complicated than first collecting Social Security taxes and then using the credit to refund them. Also, unlike the earned income tax credit—which most workers collect around April 15th of the year following their work, a Social Security tax exemption would result in extra money every paycheck. This would be a powerful work incentive./15 Most importantly, neither low-income workers nor the IRS would have to mess with tax returns to get the exemption: Millions of low-income workers would simply no longer need to file tax returns. According to the Joint Committee on Taxation, replacing the earned income credit with a Social Security tax exemption would eliminate over 10 million tax returns annually and free IRS resources for other productive work./16

Of course, much of the benefit of the current earned income credit seems to be geared to providing income assistance to families with children. But it would be simpler to provide that type of family benefit through a refundable child tax credit along the lines of the \$1,000 per child tax credit proposed by the bipartisan National Commission on Children./17 Congress might start by making the \$500 per child tax credit in the Housepassed tax bill refundable./18 A portion of the needed revenue could come from the current earned income credit.

Unlike the earned income credit, a \$500 or \$1,000 refundable child tax credit would not depend upon the marital status of the

[&]quot;See Yin et al, supra note 2, at 280-83. In 1995, workers and their employers must pay Social Security taxes equal to 7.65 percent of a worker's first \$61,200 in wages.

Consequently, a \$5,000 Social Security tax exemption would simply leave \$382.50 a year in the hands of every worker in America and reduce every employer's payroll costs by a similar amount for each employee (\$382.50 = \$5,000 x 7.65 percent).

Security tax exemption would lower the cost of production for employers, thereby increasing their demand for labor. Consequently, a Social Security tax exemption would increase employment opportunities and stimulate the economy -- without driving up the cost of American-made goods.

Joint Committee on Taxation, Present Law Issues Relating to the Earned Income Credit (JCX-24-95) (June 7, 1995).

A New American Agenda for Children and Families 80-88 (1991). The National Commission on Children's proposed credit would be refundable, indexed for inflation, and payment of the credit could take the form of reduced withholding or a tax refund paid annually, or perhaps quarterly. See also Yin et al, supra note 2, at 280-86; Jonathan B. Forman, Reyond President Bush's Child Tax Credit Proposal: Towards a Comprehensive System of Tax Credits to Help Low-income Families with Children, 38 Emory Law Journal 661 (1989).

¹⁸ Contract with America Relief Act of 1995, H.R. 1215, 104th Cong., 1st Sess. § 101 (1995).

parent, nor would it have to be phased out at low levels on income. Consequently, replacing a portion of the earned income credit with a refundable child tax credit could significantly reduce marriage penalties and the work disincentives in the earned income credit's phase-out range.

2. Replace the Earned Income Credit With an Employer Tax Credit

A second alternative would be to replace the current earned income credit with a tax benefit that reaches low-income workers through their employers./19 For example, an employer tax credit could provide tax benefits to the employers of low-wage workers. According to standard economic analysis, these tax benefits would pass through to the low-wage workers in the form of relatively higher wages. Consequently, an employer tax credit would end up helping most of the same low-income workers targeted by the current earned income credit. Yet an employer tax credit would be significantly easier to administer than the current earned income credit, if only because there are far fewer employers than low-income workers.

3. Combine the Earned Income Credit With Other Welfare Programs

A final alternative would be to combine the earned income credit with other welfare programs like food stamps, Aid to Families with Dependent Children (AFDC), and Supplemental Security Income (SSI)./20 The multiplicity of these federal welfare programs has resulted in complexity, inequity, and high administrative costs. Consequently, it might make sense to combine the earned income credit with other federal welfare programs into a single, comprehensive program that could be administered by a single agency. That agency might even turn out to be the IRS, although the Department of Health and Human Services or the Social Security Administration might be more appropriate. Alternatively, the revenues now used for the earned income credit could be bundled together with the appropriations for other welfare programs and revenue-shared out to state welfare agencies. In any event, the administrative savings that would result from combining the earned income credit with other welfare programs could be passed on to beneficiaries in the form of higher benefits.

IV. CONCLUSION

All in all, Congress could restructure the earned income credit in a way that would guarantee benefits for low-income workers and also free millions of Americans from having to file income tax returns. In particular, Congress should consider moving us toward a return-free filing system and replacing the earned income credit with a \$5,000 per worker Social Security tax exemption and a \$1,000 per child refundable tax credit.

APPENDIX

This Appendix explores the impact of income and Social Security taxes on individuals with incomes at or below the U.S. Department of Health and Human Service's poverty income guidelines./21 Basically, this Appendix shows that in large part because of the earned income credit, many (if not most) low-income workers will have no net federal tax liability in 1995.

Table 1 compares the combined income and Social Security tax thresholds (i.e., net federal tax thresholds) of various family units with their poverty income guidelines./22 As more fully explained below, Table 1 shows that married couples with one, two, or three children have net federal tax thresholds that are above their poverty income guidelines. On the other hand, the smaller and larger family units shown have net federal tax thresholds that are somewhat below their poverty income guidelines.

TABLE 1. POVERTY LEVELS AND MET FEDERAL TAX THRESHOLDS AFTER THE EARNED INCOME CREDIT IN 1995, BY FAMILY SIZE [dollars]

Family s	i	ze
----------	---	----

ROW		1	2	3	4	5	6
1.	Poverty levels:	7,470	10,030	12,590	15,150	17,710	20,270
2.	Simple income tax threshold (before earned income credit):	6,400	11,550	14,050	16,550	19,050	21,550
3.	Income tax threshold after earned income credit:	7,357	11,550	19,386	22,360	23,425	24,490
4.	Social Security tax threshold:	0	0	0	0	0	0
5.	Combined income and Social Security tax threshold (i.e., net federal tax threshold):	4,100	4,100	15,547	18,370	19,245	19,350

Sources: U.S. Department of Health & Human Services, Office of the Secretary, Annual Update of the Poverty Income Guidelines, 60 Federal Register 7,772 (1995) and author's computations.

U.S. Department of Health & Human Services, Office of the Secretary, Annual Update of the Poverty Income Guidelines, 60 Federal Register 7,772 (1995). The poverty income guidelines used here are those applicable to all states (except Alaska and Hawaii) and the District of Columbia.

The table reflects assumptions that all family income consists of wages or salaries earned by a single worker, that families of two or more include a married couple (rather than an unmarried head of household with one or more dependents), that all family members are under age 65 and not blind, and that all family units are eligible for the earned income credit (for example, childless workers are between the ages of 25 and 65). Also, only the employee's portion of Social Security taxes is considered.

Consider a family of four consisting of a married couple and two children. Row 1 shows that the couple's poverty income guideline in 1995 is \$15,150. Row 2 shows the simple income tax thresholds for family units of different sizes. These are determined by summing each family unit's standard deduction and its personal exemptions. For 1995, a married couple with two children could file a joint tax return and claim a \$6,550 standard deduction and four \$2,500 personal exemptions./23 Consequently, the couple would not have to pay any income tax until its income exceeded its \$16,550 simple income tax threshold./24

Row 3 of the table shows each family unit's income tax threshold after taking into account the effect of the earned income credit. The earned income credit is a part of the income tax system which can offset a family unit's preliminary income tax liability. Consequently, taking the earned income credit into account raises the income tax threshold for some family units. For example, taking into account the earned income credit, a typical married couple with two children would not actually owe any income tax until its income exceeded \$22,360./25

On the other hand, because the Social Security tax system has no standard deductions or personal exemptions, family units must pay Social Security taxes starting with their first dollar of earned income. Hence, Row 4 shows that zero is the Social Security tax threshold for all family units.

Finally, Row 5 shows the combined income and Social Security tax threshold (i.e., net federal tax threshold) for various family units. Because the earned income credit is refundable, it can offset not only individual income taxes, but also Social Security taxes. Consequently, a family unit will have no net federal tax liability until the sum of its income tax and Social Security tax liabilities exceeds its earned income credit. For example, a typical married couple with two children would not actually have a net federal tax liability until its income exceeded \$18,370./26

For example, for a married couple with two children with income (I) in excess of its \$16,550 simple income tax threshold but less than the \$26,673 level at which its earned income credit is fully phased out, the couple's income tax liability (T) can be determined by the following formula:

```
T = .15 \times (I - $16,550) - ($3,110 - .2022 [I - $11,290]).
```

²⁹ Rev. Proc. 94-72, 1994-50 I.R.B. 14.

 $^{$16.550 \}approx $6.550 + 4 \times $2.500.$

²⁶ Algebraically, each computation involved determining the appropriate equation for computing each family unit's income tax liability after its earned income credit and solving for the income level at which that tax liability is equal to zero.

Setting T equal to zero and solving for I shows that the couple's income tax threshold after the earned income credit is \$22,360.

²⁶ Algebraically, each computation involved determining the appropriate equation for computing each family unit's combined income and Social Security tax liability after its earned income credit and solving for the income level at which that tax liability is equal to zero.

For example, for a married couple with two children with income (I) in excess of its \$16,550 simple income tax threshold but less than the \$26,673 level at which its earned income credit

is fully phased out, the couple's combined income and Social Security tax liability (T) can be determined by the following formula:

 $T = .15 \times (I - \$16,550) + .0765 \times I - (\$3,110 - .2022 [I - \$11,290]).$

Setting T equal to zero and solving for I shows that the couple's combined income and Social Security tax threshold after the earned income credit is \$18,370.

Chairman JOHNSON. Thank you. I thank the panel very much for your really excellent testimony.

We are going to recess for about 7 minutes and rush over and vote and come back.

Thanks.

[Recess.]

Chairman JOHNSON. I am going to reconvene the hearing, although my colleagues have not returned. There is the possibility of a series of votes on the House floor. They may have decided to stay and see how that is going to work out. I returned because I have another engagement that I cannot break at 2:30 and I wanted to have a chance to question the panel.

I am going to go ahead and start with my questions and if others do not arrive, we may have to recess again because I know Members do have a lot of interest in the testimony that this panel has

prepared and brought to us.

At least two of you mentioned that there are other ways to provide the subsidy to low income workers that the EITC offers that are preferable. And I am sure that you heard Under Secretary Samuels testify that he felt that the ultimate delivery systems would have the same problems. That eventually you would have to deal with the same issues through using Social Security deductibility and things like that that they are having to deal with currently to assure that the EITC goes only to those who deserve it in the amounts that they deserve it.

I would like you to comment on that. Those of you who recommended—I know Professor Forman did and I cannot remember who else did.

Mr. FORMAN. I think Mr. Steuerle did.

Let me go ahead and comment. I think there will be problems with any type of benefit that is provided in a targeted fashion. I think there is an advantage of the kinds of proposals I made and also Gene Steuerle has made, for example, for a universal refundable child tax credit of \$1,000 per child. Because it is universal, that is because everybody gets it, it does not have to be targeted. You do not have problems of targeting, problems of getting the benefit to the right people because you assume that anybody with a child is a right person.

Most proposals along this line-

Chairman JOHNSON. My understanding is that you are saying, Professor Forman, that a better alternative is the \$1,000 for everyone with no upper-income limit.

Mr. FORMAN. I would not mind having no upper-income limit. I think the phaseout—

Chairman JOHNSON. I know you would not mind but I can tell you from dealing with the \$500 tax credit, it is very expensive and there is absolutely no chance that we could afford to do that.

Mr. FORMAN. You could keep a phaseout at the upper levels. I think what is important in the context of this hearing is that the phaseout not be in this low-income range where it causes marriage penalties and disincentives that discourage low-income people from working. A phaseout at \$100,000 or more of income might make sense.

Frankly, I do not look to the Federal government to help me support my children. My wife and I, are just taking care of things and if the government gives me personal exemptions that is great, for my kids, and if they did not that would be OK, too, if the rates

were not ridiculously high.

Mr. Steuerle. Congressman Petri also pointed out that you could eliminate the personal exemption at higher income levels so that you solve your distribution problem in part. Part of the reason that people want to phase out the credit is that they think that they want to take this device, by itself, and make it progressive. I think what Professor Forman and I and some others worry about is, when you try to make every single item in the Tax Code progressive, one-by-one-by-one, you end up with 5,000 phaseouts and this very convoluted structure. Rather than give upper income levels money, there are alternative ways to acheive overall progressivity.

One way to do it might be to just, if you give a credit at that level, eliminate the personal exemption. Then you solve your distribution. You do not have to fight the battle, oh, we gave the child credit and we gave away to the rich because you took something back from the rich.

But you also then start dealing with some of the other problems such as reducing the marriage penalties, reducing some of the work disincentives that are of concern to a variety of members on this panel.

Mr. Greenstein. If I could comment for a moment on this, too. I think this is a complicated area. There are a lot of things that would go with it. For example, Professor Forman's idea of replacing part of the EITC with exempting the first \$5,000 of payroll taxes. If one did that, a number of the issues one would have to address include replacing the lost funding from the Social Security Trust Fund. The exemption of \$5,000 of the payroll tax would clearly go well up the income scale so one would want to make sure you want redistributing from tax benefits from working families at \$10,000 a year, we are trying to encourage people to leave welfare for work, to people at \$60,000 or \$80,000 a year, let alone at a higher level.

Similarly there is a political question I guess. In Gene and Professor Forman's suggestion, which I think is an interesting one, if it is politically feasible but the notion of converting the personal exemption into a fully refundable credit, regardless of whether a low-income family has earnings, is not one that seems to enjoy support

on Capitol Hill at this time.

If one conditions, as Congressman Petri did, the refundable credit on earnings then you get back into some of the same questions, as Mr. Samuels says, that the EITC has. The final point I would make, I think of all these proposals perhaps the most interesting one to look at is Congressman Petri's. Even his proposal has the following effects.

It transfers some money now going to working families at \$5,000 to \$15,000 a year, mostly one-parent families, to two-parent families up to \$36,000 a year. He raises the break-even on the EITC.

As a result of that, for single-parent families, at \$5,000 a year if they have one child, for example, under his proposal the incen-

tive to leave welfare for work is less than small. The total package that you get if you leave welfare for work is lessened somewhat.

Those are, among the kinds of questions that one has to grapple

with if you do this restructuring.

Chairman JOHNSON. I would appreciate it if you would take the time to tell us your thoughts on Congressman Petri's proposal. I do not have any reason to believe that the Committee is necessarily interested in going that far but I am very impressed by the degree of the marriage penalty in the tax as it is currently structured.

I think that we have been negligent of those kinds of considerations too long. I think the cost of that to our society is now demonstrably extraordinary. I am interested in looking at Congressman Petri's proposal and would be interested in any followup materials any of you care to share with me on that subject.

[The following was subsequently received:]

COLLEGE OF LAW

Nancy L. Johnson Chairman Oversight Subcommittee House Committee on Ways and Means 1136 Longworth HOB Washington, DC 20515

> Re: Joint hearing of the Subcommittees on Oversight and Human Resources, Committee on Ways and Means, on the Earned Income Tax Credit, June 15, 1995

Dear Chairman Johnson:

Thank you again for inviting me to testify about the earned income credit before the joint hearing of the Subcommittees on Human Resources and Oversight on June 15th. You asked my panel to consider the impact of Congressman Thomas Petri's proposal, particularly with respect to the marriage penalty. Here goes.

Description of Congressman Petri's proposal

As I understand his proposal, Congressman Petri would replace the personal exemption for children with an \$1,100 per child tax credit that would be refundable for those with earned income. Then he would change the earned income credit to a credit of \$1,000 per parent, phasing out for single parents between \$9,000 income and \$19,000 and for couples between \$16,000 and \$36,000. He would also eliminate the current earned income credit for childless workers. Congressman Petri's proposal is intriguing, and it merits serious consideration.

The refundable child tax credit

Unlike the current earned income credit, a refundable child tax credit would not create a marriage penalty. As long as the child tax credit is not phased out, there is no incentive to divorce or not marry. For example, a low-income woman with two children could claim two child tax credits, and if she marries another low-income worker with two children, together the couple could claim four child tax credits.

On the other hand, like the current earned income credit, because eligibility for the Petri child tax credit is based on having at least some earned income, the Petri child tax credit would sometimes result in a marriage bonus. For example, when a zero-earning woman with two children marries a low-earning man without children, they would get a large marriage bonus: before neither could claim a child tax credit (or a parent credit), but

Of course, a phase-out of the credit at high-income levels (e.g., over \$90,000) could result in a marriage penalty for certain high-income taxpayers.

² Under the current earned income credit, a marriage penalty of up to about \$5,000 can occur if a low-income woman with two children marries a low-income man with two children: before each could claim the maximum \$3,110 credit, but together they can claim just one, much smaller credit.

together they could claim two child tax credits (and apparently two parent credits as well).

In passing, I should note that under the universal \$1,000 per child refundable tax credit that I recommended in my testimony, there would be neither marriage penalties nor marriage bonuses. For example, a zero-earning woman with two children would get two refundable \$1,000 credits whether she marries or not.*

The parent credit

At the outset, I must say that there is a certain attraction (perhaps even a certain genius) to the Petri parent credit. I like the idea of rewarding the "parenting" of children rather than simply the "having" of children.

Moreover, the Petri parent credit would reduce marriage penalties for most taxpayers; however, because the parent credit would be phased out, some couples would still face marriage penalties. For example, when a parent with \$9,000 of earnings marries another parent with \$9,000 of earnings, they would face a small marriage penalty of just \$200: before each could each get a \$1,000 parent credit, but together they would get just \$1,800 in parent credits. On the other hand, if a parent with \$9,000 of earnings marries another with \$25,000 or more of earnings, they would face a marriage penalty of at least \$1,000: before the parent earning \$9,000 could get a \$1,000 parent credit, but together the couple would get no parent credits, and the \$9,000 would be taxed at the couple's highest marginal income tax rate. Still, the marriage penalty under the Petri parent credit would typically be much smaller than under the current earned income credit.

^{&#}x27;Under the current earned income credit, there are also large marriage bonuses. For example, a large marriage bonus can occur when a zero-earning woman with two children marries a childless man with \$10,000 of earned income: before neither could claim the earned income credit (and he had both an income and a Social Security tax liability), but together they could claim a \$3,110 earned income credit and they will not owe any income tax.

My uncertainty about whether the couple in the text example could claim two parent credits or just one parent credit results from my not knowing whether or not Congressman Petri would require each parent to have earned income in order to claim a parent credit. From his testimony and the accompanying tables, I inferred that as long as one parent was working, each could claim a parent credit. Hence, the couple in the text example could claim two parent credits and two child credits for a total credit of \$4,200.

^{&#}x27; At the risk of trying to close the gate after the horses have left, I might pay for extending refundable child tax credits to parents without earned income with the money that the House welfare reform bill would revenue-share out to state welfare agencies. We already provide welfare assistance to nonworking mothers now through Aid to Families with Dependent Children (AFDC) and food stamps, and the universal \$1,000 per child refundable tax credit that I favor would simply bypass the state welfare bureaucracies.

 $^{^\}circ$ Their combined earnings puts them at \$18,000; that's \$2,000 into the 10 percent phase-out range for married couples (\$16,000 to \$36,000). Of course, if the phase-out range for a married couple were increased to \$18,000 to \$36,000, there would be no marriage penalty at all for this couple.

Also of note, the Petri parent credit would provide larger benefits to married parents than to single parents with the same number of children. For example, a married couple with two children could get two child tax credits and two parent tax credits -- up to \$4,200 in all. On the other hand, a single parent with two children would get no more than \$3,200 -- two child tax credits but just one parent tax credit.

Rightly or wrongly, the current earned income credit does not make such a distinction: both a married couple with two children and a single parent with two children can claim an earned income credit of up to \$3,110 for 1995. It seems to me that if a distinction is to be drawn between married parents and single parents, my inclination might be to give single parents the larger benefit, for example, to help defray their likely greater employment-related child care expenses. Then again, the married couples have another parent to feed, and that alone might justify a larger benefit.

Replacing the personal exemption for children

If a refundable child tax credit is adopted, it could make sense to repeal the personal exemption for children, as Congressman Petri has suggested. Having both a credit and a personal exemption to account for children would be unnecessarily complicated. Also, the revenues associated with the personal exemption for children could be used to help pay for a larger child tax credit.

Eliminating the earned income credit for childless workers

Social Security taxes are regressive, and the current earned income credit for low-income childless workers tempers that regressivity. In my testimony, I suggested that a \$5,000 per worker exemption from Social Security taxes would be simpler to administer. Nevertheless, the current earned income credit for childless workers is better than nothing, so I would not simply repeal it as Congressman Petri has suggested.

Respectfully submitted,

Jonathan Barry Forman Professor of Law

cc: Representative Thomas Petri

⁶ In that regard, I would be inclined to make the dependent care credit refundable (I.R.C. § 21). Jonathan B. Forman, <u>Using</u> <u>Refundable Tax Credits to Help Low-income Families</u>, 35 Loyola Law Review 117, 130-33 (1989).

Also, poverty is a much greater problem for single parents than for couples, and more than 60 percent of current earned income credit beneficiaries are heads of household -- mostly poor working mothers.

Mr. Greenstein. Could I just make a very quick point that the only way that Congressman Petri's proposal is feasible is if Congress is willing to convert the \$500 children's credit into what he does. The only way his proposal is affordable is if he uses the money in that \$500 child credit, the House has passed, and restruc-

tures it into his proposal, but you cannot do both.

Chairman JOHNSON. I understand that. One of the issues that has developed in the EITC is its cost. When you are putting more than twice the amount of money the Federal Government provides for education for children, college students, and graduate students into an income subsidy you had better be very conscious that you are doing it and very confident that you are doing it for the right reasons.

I think we are doing it for the right reasons. I think this is the right policy and I think the testimony of this panel focusing on the interplay among welfare subsidies, minimum wages, the EITC and

FICA and other payroll taxes was very interesting.

I was not aware of the extent to which States had stopped providing welfare to working people. The interaction of the various policies is extremely important. We give it too little attention. That is what interests me about the Petri proposal. I think we have to focus more on interaction. I welcome any thoughts that you have on that.

There are just two other relatively brief questions that I would like to ask you to comment on and then I will yield to my cochair, Mr. Matsui.

First of all, have any of you done any studies about the equity of the EITC State to State?

Mr. Greenstein. Unlike things like AFDC and Medicaid the EITC has the same rules in every State nationally.

Chairman JOHNSON. Well, the reason-

Mr. Greenstein. Because it is true—I think this may be what you are getting at—that the proportion of tax filers who get the credit is higher in some States than in others. That mainly reflects wage structures of the States. In low-wage States a higher proportion of families get it than in high-wage States.

Chairman JOHNSON. Yes. This question comes from my reviewing the material that I was given for this hearing and the tables that show how many filers there are in each State. It was very interesting to me that the New England States with 5 to 6 percent filers were very high cost of living States, were relatively high-wage States but because of our high cost of living what looks like a high wage is not.

It was interesting to me that Alaska, Connecticut, and Hawaii, the three highest cost of living States, have the lowest filing rate. Some of the much lower cost of living but lower wage States have filing rates of 20 percent and more. And we are down to 5 percent.

You look at California, even California is 15 percent. When I looked at who is in that 5 to 6 percent range it is primarily the New England States and others that have remarkably high costs. The older portions of the country tend to have higher costs for a lot of reasons.

I think we do need to think about that. I just wanted to point that out. If any of you have any reflection on that in the future.

Mr. SCHOLZ. Another factor that enters here is that, in States that have State income taxes people tend to be more likely to file Federal income tax returns. I think you will see fewer people in New Hampshire, for instance, file Federal tax returns than you will in States with State tax returns. Another small factor there.

Chairman JOHNSON. That is interesting since Connecticut just adopted an income tax about a year and a half ago, it would be in-

teresting to see if our filing rate goes up.

Mr. FORMAN. Madam Chairman.

Chairman JOHNSON. Yes.

Mr. Forman. The problem that Connecticut has say, in comparison to my home State of Oklahoma which has lower average incomes, is if you have a fixed phaseout and it is relatively low, then the poorer portion of your population will tend to be above that phaseout. On the other hand, a low wage earner in Oklahoma, somebody in the bottom 20th percentile of income in Oklahoma would get the tax benefit credit.

I would say this is a problem of all Federal programs, the personal exemption of \$2,500 this year is worth a lot more to people in Oklahoma where \$2,500 goes further than it does in Connecti-

cut.

Chairman JOHNSON. That certainly is a problem. When you are looking at this particular population we would like to be as equi-

table as possible.

Mr. GREENSTEIN. I was just going to add, I do not know all the details on the Connecticut income tax, but as I recall the level at which a family begins owing State income tax in Connecticut is much higher than in most other States.

Many people in the EITC range probably are not required to file

State income tax in Connecticut.

Chairman JOHNSON. That is a good point, thank you.

Mr. GREENSTEIN. If, as a result of that, they file neither State nor Federal there might be a lower take up rate there than in States where, for example, you start owing State income tax at \$7,000 or \$8,000.

Chairman JOHNSON. My last question you may not want to comment on but it seems to me that key to eliminating abuse in the EITC system is simply eliminating the system of these loans. I

wondered if any of you would want to comment on that?

We have rarely used that instrument of allowing people to, in a sense, borrow against their return and allow middlemen to basically make a profit by reducing the amount of return a taxpayer gets. Since, the whole purpose of the EITC is to expand the incomes of very low earners, it seems unreasonable to allow loan industry participation that diminishes the benefit that the taxpayers are supposed to enjoy.

Any comment?

Mr. GREENSTEIN. I think that is part of it. I think it is part of a larger issue and the larger issue is in any means-tested program the difference between verifying questionable information before payment and having a pure self-certification approach is, in my view, a very large one. If it is pure self-certification the word gets out on the street, that it is pure self-certification.

Prior to this year, if you look at the history of the EITC, prior to 1990, there was not even a schedule, the IRS did not even get on the return some of the basic information that told you whether the person was eligible or not. This Committee financed, and the Bush Treasury Department reformed the credit in 1990 and the results show that they got the errors down some, and started building this scheduled EITC, not until this year did the IRS use the information on the schedule to check, they just made sure that the numbers added up.

Even a year ago, January 1994, on a number of returns they did not check to see if the SSNs of children were accurate. There was no way to check to see if a child was claimed twice. Even for an older child you could write, you had applied for a number and had not yet gotten it from Social Security, and get the credit. There was the easy availability of loans, as you mentioned. There was little system to pull returns that looked questionable and actually verify the way that food stamps or AFDC does before pay out.

The IRS change this year in the EITC, in my view, after following means-tested programs for over 20 years, the single biggest change I have ever seen in 1 year in a program. Now, they check every Social Security number, they check every child's number to make sure no one is claimed twice. You cannot write applied for, you have to actually have a number. Most of these loans have been eliminated.

One of the things that I think is most important is the January 1994 study, that found about a quarter of the benefits being overclaimed, and from that, they erected error-prone categories. You did not hear that much of it from the Treasury because they are a little reluctant to talk about the study in great detail. They do not want people, quite appropriately, to know the details. If your return falls into that category IRS will pull it and send you a questionnaire that requires you to submit verification of various aspects of the claim before they will make the payment.

In my view, that could have a very large effect. In the late seventies, when the Carter administration and I was running the Food Stamp Program, among other food programs, we found that States that did very little verification had much higher error rates. We and the Inspector General went to those States and among the requirements, under threat of fiscal sanction, that we would put on them often were bring on more caseworkers to meet the following amount of verification of questionable cases. Almost uniformly the

error rates went down significantly. Chairman JOHNSON. Interesting.

Mr. GREENSTEIN. When the IRS says, on the back of the Commissioner's testimony here, I notice they did not talk about it, but in the back of her testimony there is a study and what they found in this new analysis is that if they had been doing all the Social Security screens last year that they were doing this year, the error rate that they found or the overclaim rate in that January 1994 would have been down to 19 percent. That does not include, because they cannot measure it yet, the effect of pulling something like a million questionable returns, is what I gather they are doing from this, and verifying data in them before payout. My belief is that when we get all the results in, we will be significantly below 19 percent.

It is still too high and we need to do more. The kinds of things that they have done this year, particularly checking all those numbers, nobody can be claimed twice, and having error-prone categories where you verify before payout, I think that is extremely important.

Chairman JOHNSON. Thank you. I am going to yield to Bob Matsui, my cochairman on the Oversight Committee.

Mr. MATSUI. Thank you, Chairman Johnson.

I want to ask Dr. Kosters a couple of questions. In your testimony—and I am sorry I was not there for your testimony—but you indicate that the EITC is not an incentive to work or it is a disincentive actually to work. Also, we know that 79 percent of every dollar earned over a threshold actually goes into the pockets of the taxpayer.

Now, do you believe basically that tax incentives or incentives in the Tax Code are not of much value or is it just in this particular

case here?

Dr. Kosters. Well, Congressman Matsui, I believe that the work incentives that are built into the EITC and that are said to encourage work, do not really do as much, on balance, to encourage work as is often said to be the case. For those people who are in the phaseout range—the range where for every additional dollar they earn they need to pay an additional tax in order to reduce the size of the credit payment—all of those people are discouraged for work rather than encouraged.

Moreover, the income cutoff is so high that you are getting up into the income distribution to an area where there are lots of people. This is the thick part of the income distribution so much larger numbers are affected in that range, where work is discouraged, than where work is encouraged. So, on balance, I would say that among working families it seems to me that there is general agreement that work is discouraged for them. If you consider in addition nonworking people who might possibly be encouraged to consider working you might get some additional work on balance. Even then, I would say you are likely to get less total output in the economy.

Mr. MATSUI. What about the fact that these people use every dollar they earn for disposable income, very little of it, maybe none of it goes into savings if you are a family of three or four making under \$30,000 a year. That is a first point.

The second point then is when they do work and they get income from that work they are getting more dollars in their pocket. Does that have an incentive to work to it? I mean particularly if it is 79 cents on the dollar?

I mean how could that be a disincentive to work if you need it, because that then prevents you from going into debt for one thing or having to borrow? Why is that not an incentive to work? It seems pretty common sense to me and I do not understand how you reach that conclusion that it is the opposite?

Dr. Kosters. I think you have put your finger on a puzzling aspect of this issue. You might say, well, if people are going to get extra money, surely they will work more no matter what their in-

come level or the implicit tax they pay.

Mr. MATSUI. Well, I mean if it were 10 cents on the dollar, I would say, OK, maybe there is no incentive to work. If it is 79 cents on the dollar, it seems to me, particularly if you need the money—if you did not need the money, if you are making \$200,000 or \$300,000 a year and you do not need the money, then you may not—but if you need the money it would seem that, boy, that is a pretty good incentive to work.

Dr. KOSTERS. Well, for every extra dollar a person earns in that upper range there is, first of all, the 21-cent implicit tax workers could keep 79 cents, presumably, if they were not also in the 15-percent income tax range, plus perhaps State income taxes. Workers probably would not be able to keep quite that much, at least in the upper part of the income range but, below the EITC cutoff.

Moreover, it seems to me that if you do not believe that people are going to respond to work incentives in the upper part of the income range where they receive EITC payments, it is unlikely that people would be encouraged to work in the lower part of the distribution. Consequently, if these incentives produce no encouragement or discouragement to work, that raises a question about why we would not administer these payments completely through other welfare programs if there are no incentive effects. We would then not need to duplicate an auditing bureaucracy which is already in place to administer other programs. We would then not need to expand compliance efforts by the IRS.

Mr. MATSUI. Are you suggesting that we move this to an appropriation?

Dr. Kosters. Yes. As a matter of fact EITC payments are outlays instead of offsets to tax liabilities.

Mr. MATSUI. And you would support that?

Dr. Kosters. Yes.

Mr. MATSUI. You would support 25 dollars' billion worth of ap-

propriations to these people?

Dr. Kosters. Yes, I have suggested that. I think it would be better to administer payments under this program in a different way than through the tax system. Increasingly, as more complexities are added, the EITC looks more and more like the welfare system and it is very difficult for individuals to self-administer such a system. That is why they go to tax preparers, get loans, and so on.

Mr. MATSUI. Frank, it seems just the opposite to me, but I appreciate your comments and all of you. I know my time is running out and we have a vote. But, Mr. Greenstein, much has been discussed about the 1988 TCMP study. Would you just comment on that and explain whether this is an important issue for us to be concerned

about, the so-called 40-percent rate of error?

Mr. GREENSTEIN. The issues it raised are important but the data from the 1988 TCMP is really not relevant today. It does not describe the current situation. Congress in 1990—looking at data from the 1985 TCMP which is very similar to data from the 1988 TCMP—for several months the staff of this Committee, the Finance Committee, Treasury, and the IRS on a bipartisan basis did a major restructuring of the credit. That major restructuring, GAO subsequently did an analysis of it, and pointed out that they had removed the single major source of error from the EITC.

There were some extremely complicated rules on support tests, and household filing status and dependency status that were hard for taxpayers to understand and that IRS could not enforce and those were removed in the 1990 change.

I think the indication that there has been real change is that the 1988 TCMP found that about 34 percent of the credit dollars

claimed that year were overclaimed.

The January 1994 study of a nonrepresentative sample that probably had an above-average error rate had that figure down to 26 percent and the latest Treasury analysis, IRS analysis which is in the Commissioner's testimony, indicates that the current screens they have in place would have reduced it below 19 percent.

That is what I was referring to when I said we appear to have cut the error rate about in half from what it was at the time of the 1988 TCMP. It is still too high, we have got to do more, but

we appear to have cut it about in half.

Mr. MATSUI. I appreciate that answer. I am going to yield to Mr. Cardin.

Mr. CARDIN. Thank you. We only have a minute or two. First let me say that, to my friend Mr. Matsui and to our panelists here, I think on the next panel we have some people who can speak first-hand as to how the EITC was an incentive to work and I think that is the clear record of that effect. One of those individuals is Rhonda Clark, who happens to be from Baltimore, my district. I am not going to be able to be here during your testimony but I want to welcome you to our Committee.

I also would just like to make one point, if I might, for the record. It is interesting that we have been spending all of our time talking about trying to make sure that the error rates are brought down and we all agree on that and we need to change the system to make sure it works efficiently and that only those who are enti-

tled to benefits, receive the benefits.

But we have not been talking much about a large number of people who are perhaps out there who are entitled to the credit who do not avail themselves of the credit. We really have not talked about one of the things that concerns me, which, is that this is a credit that some people are entitled to who do not even know about it. It could be used even more effectively to get people to work and I am not sure that we have taken full advantage of the credit. It is not to diminish the importance of making sure that we reduce the error rates, particularly the fraud rates as low as possible. We should not lose sight of the fact that this is a very valuable program and we should not be timid about making sure it is available to those people who could benefit from it.

I thank the Chairman for yielding to me, and I yield back.

Mr. STEUERLE. Mr. Cardin, if I could just make one addition. To get to your problem, one of the major things you need to do is get to simplification. That has always been a goal. That is a major way you get the EITC to the people who do not yet file for it.

Mr. FORMAN. Mr. Cardin, if I might come back to my proposal which would be for a \$5,000 across-the-board exemption from Social Security taxes. Right now, basically 80 percent of the people eligible for the EITC are claiming it. The other 20 percent are not.

If you actually just said, well, we are just not going to collect the taxes on the first \$5,000 of wages, then the other 20 percent would not have to pay these taxes and would not have to file the EITC to get the benefit back. We could get some benefit in every worker's hands with an across-the-board exemption.

We have exemptions and standard deductions in the income tax system, but the Social Security tax system is a regressive tax sys-

tem that hits people on the very first dollar of wages.

Mr. CARDIN. Thank you.

Mr. ENGLISH [presiding]. Thank you.

Gentlemen, we appreciate all of the testimony you are offering today and your massive expertise as a group. Just a few questions on my end. Dr. Kosters, you suggest in your testimony that the welfare system is already better able to administer the EITC Program than is the IRS.

My question is, do you believe that welfare agencies are better able to track the earnings and assets of an individual, and if the EITC were administered by welfare agencies, would that not mean that low-income earners, many of whom have never dealt with the welfare systems, would be required to deal with welfare agencies

as well as the tax system?

Dr. Kosters. Well, that is an interesting question. There are some people who are getting the EITC who are not dealing with the welfare system, and if we wanted those people to get payments, and right, if kinds of people in different situations might be mentioned, people who are, say, graduate students who might qualify for the EITC, but who are not on welfare. We want those people to get payments. Then they would have to presumably also get them through the same system.

It seems to me that one possible approach to this, though, would be to say, let's have an EITC that roughly compensates people for the payroll taxes they pay up to a certain level, and people who qualify for that can apply for it in the same way it's administered

now.

People who get larger payments in the \$3,000, \$3,500 range, or something like that, those payments should be part of the payment system administered by the current welfare bureaucracy, as re-

formed. Reform is now under way.

Mr. ENGLISH. Dr. Kosters, I know you are doubtlessly familiar with research by Gary Bertless, which seems to show that welfare mothers who can be expected to stay on the roles for an extended period of time, specifically those with little education, low test scores, and very little job experience, usually can find jobs that pay between \$5.50 and \$6 an hour, around \$12,000 a year, and we have a lot of situations like that in my district.

Bertless finds that most of these mothers fail to raise their wages over a 12-year period. These mothers are going to have to make a

go of it on earnings of around \$12,000 a year.

Given the reality that our countries will have millions of lowskilled mothers rearing children for as far into the future as we can see, do you think that it would be better for the mother, for the children, and for society if these mothers are helped to a tolerable standard of living through the EITC provision? I guess expanding on that, is not this strategy far preferable to allowing these mothers to stay on welfare indefinitely?

Dr. KOSTERS. Well, welfare mothers with low-earning capabilities, and in general, as research by Bertless and others shows, wel-

fare mothers do have relatively low-earnings capabilities.

This situation is not a cheery one, whether or not they get EITC payments. It seems to me that in our welfare system, we need to be prepared to provide support to some people. Some will not be in a position to be able to work, and they need to be provided support, perhaps more support than they are now providing.

For others, though, it seems to me, we could differentially treat them, provide them with less support if they are able to work, but

choose not to.

My sense is that the EITC is not going to make a big difference on that choice, and it seems to me it needs to be somewhat more of an administered choice.

With regard to whether or not people's earnings rise, people with relatively low earnings, that data of course comes from a period during the past 15 years or so, when people with low-earning capabilities had declining relative wages and they did rather poorly.

It's no surprise that that also applies to welfare mothers, or previous welfare mothers, people who were on welfare and later on went to work. Those with lower earnings capabilities got very slow increases, like others who had not been on welfare previously.

Mr. GREENSTEIN. Mr. English, if I could just add a word. I think your question hit a very important nail on the head, or both of your questions. The fact of the matter is, most of the families that get the EITC, I think, are not on welfare, and most of them are not graduate students either. Many of them are people who probably will not go to the welfare office, if that is where you have to go to get the credit.

We can take food stamps as an example. The working poor are eligible for food stamps. The income level goes up to modestly over the poverty line. The data show that only about a third, or 40 percent of working families that are eligible for food stamps, actually receive it.

I also think, you know, we know that many mothers work their

way off welfare and some of them slide back on.

I think the EITC helps prevent some of them from sliding back on. If they have to commute to a rural area in a job, in an old car, and the car breaks down, that EITC, we hear, does things like pay for that \$800 car repair, without which they give up the job and they go back onto welfare.

The final point I would like to make is, last week there was a similar hearing to this one at the Finance Committee on the credit,

and the GAO made a very interesting point.

Their point was that, while the noncompliance rate is higher in the EITC than in programs like AFDC or food stamps, it's coordinated with the tax system, so less than 1-percent of the dollars and the credit go for administration. The AFDC, food stamps, and other like programs use 12 percent of all the dollars in the program for administration and EITC.

I disagree with Marv on this. I think we are much better off assisting these people through the tax system than making them go back into the welfare system to get a wage supplement.

Mr. ENGLISH. Thank you, Mr. Greenstein.

Dr. KOSTERS. I wonder if I could just add to that. With regard to costs of administration, it seems to me it would be appropriate to add into those costs the costs of paying tax preparers and of floating loans, which seems to me to be a real cost under the EITC as it is currently administered.

Mr. GREENSTEIN. Well, that is a reduction in the benefit the family gets, and in the absence of the refund anticipation loans, I think the commercial preparers often charge \$30, \$40, or \$50 bucks,

which is a relatively small proportion of the EITC payment.

The additional payment that, fortunately, is now disappearing, are the additional payments lots of people paid for those loans in the past. If they do not get the loans anymore, the advance loans, then they do not have to make that interest payment for the loan.

Mr. ENGLISH. Thank you, Mr. Greenstein, and I want to thank all of you. I have about 15 more questions, but I am afraid the time does not allow us to pose them, and I appreciate this panel which represents more academic expertise on this subject than I have ever seen assembled, taking the time to come here and offer the benefits of your research.

While I am here, at this moment, alone, I want to say that on behalf of all of the Members of the Ways and Means Committee, we appreciate the contribution that you have made to this debate, and I appreciate your coming out today.

and I appreciate your coming out today.

Thank you very much, and I will empanel the next group of witnesses.

We are going to start with the parents who are currently utiliz-

ing the EITC.

I welcome Joseph Antolin, deputy director of the Illinois Department of Public Aid, in Springfield, Illinois, who is accompanied by Sherry Alvarez of Chicago, Illinois, a parent currently utilizing the EITC.

Also with them is Dr. Lynn Olson, director of the Division of Child Health Research of the American Academy of Pediatrics, and a visiting scholar for the Center for Urban Affairs and Policy Research of Northwestern University in Evanston, Illinois.

Also Rhonda Clark of Baltimore, Maryland, who is currently uti-

lizing the EITC.

I understand one or two of you have to make the train, so what I would like to do is start with Sherry Alvarez.

STATEMENT OF SHERRY ALVAREZ, CHICAGO, ILLINOIS

Ms. ALVAREZ. Good afternoon. Thank you for having me.

I am nervous. I am a former recipient of public aid. I am working now. I have been working for 1 year. The tax credit has helped a lot because I have had some—while I was working, I had a crisis, and without the credit, I might have lost my job, and would have had to go back to public aid.

Having the credit helps, because I had the money there to pre-

vent losing my job.

The crisis was a propertyowner where I used to live, he sold the building but he did not give me any notice. The new landlady came, and she gave me 30 days notice to leave.

We had no savings or anything, so it would have been hard to find somewhere for me and my kids to stay, without having the

credit to back me up.

Mr. ENGLISH. Thank you, we appreciate your testimony, and if you want to amplify on that during the question and answer period, we can do that, too, if you prefer.

Ms. ALVAREZ. Thank you.

Mr. ENGLISH. Thank you so much for taking the time to come here and testify from Illinois.

I would like to recognize now, Rhonda Clark, for your testimony, and we appreciate your being here.

STATEMENT OF RHONDA CLARK, BALTIMORE, MARYLAND

Ms. CLARK. I thank you for the opportunity to speak with the Committee today. My name is Rhonda Clark and I live in Baltimore, Maryland. I am a 26-year-old mother of an 8-year-old girl and a 7-year-old boy. I work full time as a receptionist at the Maryland Committee for Children, and the sole support of my two children.

I am a recipient of the advanced earned income credit, which means I will receive about 60 percent of the re-credit in each paycheck. At the end of the year, I file for the remaining 40 percent, and it is a very simple task to fill out one form with the dependents and sign my signature. It is not a very hard process to go through when filing.

My story is not unique. I am like many others you may know, or you may not know. I dropped out of high school when I became pregnant with my daughter. I received my general equivalent diploma, my GED, but I was an AFDC recipient for 3 years until I

went to Project Independence, which provides job training.

Through Project Independence, which is Maryland's welfare-towork program, I learned skills while I worked for a number of organizations, including the Francis Scott Key Medical Center, in the personnel department, and the Baltimore Public Works Museum, as a tour guide and admissions clerk.

In November 1993, I joined the private sector working full time

at the Maryland Committee for Children.

Although you have never met me, you know many others like me. The receptionist who directs your calls, the mother in the grocery store with two children, or the person you pass each morning on the way to work.

The advanced earned income credit is very important to me and my family. I learned about it through my employer and it was easy to apply.

While it is not an answer to all our problems, such as the need for affordable child care and health care, it has been a big help.

Educating the people about the EITC takes place one person at a time. That is why it is important for all of us to spread the word and tell others about the EITC. There are many more people out there who could be getting the help they need, if only they would simply apply for it.

Applying is easy. To get the advanced earned income credit, all I had to do was list my dependents on an application, sign my name, and give it to my employer. The payroll services processed it.

I have my advance earned income credit deposited into a savings account, so that it does not cross my hands, and it does not make me want to spend it right then.

I think it also is a better way of not getting more trouble for myself, giving false information, the information is there in each paycheck.

I enjoy working and I want to continue to work. The EITC gives me some of the help I need to keep working, to stay independent, and to support my family. It is a help I cannot do without.

Thank you.

Mr. ENGLISH. Thank you.

I think what I am going to do, with Dr. Olson and Mr. Antolin's indulgence, is ask the two of you a couple of questions, and then as you need to leave, give you an opportunity to head out, and then I will get their testimony and ask a few more questions.

We very much appreciate all of you taking the time to participate

here today, and improve our understanding of the EITC.

For Sherry Alvarez, I have a question. Rhonda, you had indicated that you first heard of the EITC through your employer. Sherry, how did you find out about it?

Ms. ALVAREZ. Also through a similar program. It is called Project Chance, in Chicago, and I volunteered for their program, to go back to school, and I needed one credit to get my high school diploma. I went back and I got my high school diploma, and she was very helpful.

She told me about the DAC Program, and although I found work on my own, she was very helpful. I learned about the credit from

Project Chance.

Mr. ANTOLIN. Mr. English, if I may, that is the JOBS Program in Illinois.

Mr. ENGLISH. Very good.

Ms. Clark, in your experience, do mothers in the welfare system understand the EITC?

Ms. CLARK. Not truly. A factor is simply that the government is giving them money. This is what most of the people I spoke with talked about. I have done conferences on the EITC in the past, and what we have found is a lot of people do not know why. They have asked me why, actually, and it is easy enough for me to say it is simple, it gives you the incentive to keep working, to stay.

Instead of making \$15,000 that year, you may make \$17,000. It opens a lot of eyes and makes them want to stay. Instead of sitting home watching Oprah, they can be working and making \$2,000 more that year. It is not clear to a lot, but now, the more we have spread the word the past few years, the clearer it is to people, why

they get the EITC.

Mr. ENGLISH. Ms. Alvarez, has that been your experience, too? Ms. ALVAREZ. I believe so. A lot of people do not understand why

they get the credit. I explain that, EITC helps to keep lower income people who have children working.

I guess that is how I explain it. It is for the lower income people with kids. The government wants to keep them working.

Mr. ENGLISH. For both of you, if you were going to take steps to teach mothers about the EITC, what would you look to do? Would

there be a good way of getting the word out, do you think?

Ms. CLARK. I cannot really say what would be a good way. I know that most people that are on AFDC do not know about the earned income credit. They do not know until, just by chance, they get that little flier, and then it may mean nothing to them. They just throw it away because they do not know what it means, or it does not pertain to me because I do not work. I am just here getting my AFDC check cashed.

I would just explain to them that it is to help you stay out there, because in my own crisis, worrying about this credit stopping, it may mean like Mr. Goldstein spoke earlier, sliding back into the AFDC system and that is something that I really do not want.

The EITC I believe would be just that little bit, for people that I speak with, knowing that child care cost is the biggest issue. Child care, to me, is more of an issue than the food program.

Who is going to watch your children? That is the most important and most dearest to your heart. We just need to let the mothers know that the money is there for those purposes, for the food purposes, for the child care, the health care.

Money for emergencies. AFDC recipients do not have money for emergencies. That is how I take advantage of my EITC, by having it put into a savings account for that and child care purposes.

Now that I do have the EITC, when my child care facility decides to go to the beach or bowling, there is that \$5 or \$10 I can pull from my savings to say that they can go, on things that we would never have been able to, otherwise.

It gives the parents the hope that their children can have what

they have.

Mr. ENGLISH. I appreciate your testimony because you have given us a perspective that just is not often heard in the halls of Congress. What I would like to do is bring in now Dr. Olson and Mr. Antolin, and if any of you have to leave because we are running so late with this hearing, feel free to head out.

I very much appreciate your time. Mr. Antolin, can I bring you in now for your testimony, and we very much appreciate your tak-

ing the time to be here.

STATEMENT OF JOSEPH A. ANTOLIN, DEPUTY DIRECTOR, ILLINOIS DEPARTMENT OF PUBLIC AID, SPRINGFIELD, ILLINOIS

Mr. ANTOLIN. Thank you. This is an important issue to us in Illinois, Mr. Chairman, Members of the Committee. On behalf of Governor Edgar and Director Wright, I thank you for this opportunity.

I am the deputy director for the State Department of Public Aid. That means I am responsible for the AFDC, the food stamps, the employment and training program, child support, and welfare re-

forms.

One of the things that we have been trying to do for the last few years in Illinois is change what motivates client behavior to move them to work. It is very consistent with what Congress wants the States to do, and which we think the States can do well.

We have the 6th largest AFDC population and the 26th highest grants. We are a low-grant State, relative to most of our neighbors, and have, as a result, thought about welfare to work somewhat differential the second of the sec

ferently than many of our neighboring States.

We have established waiver programs that got rid of the twoparent penalty, that have made it much less confusing as to what are the incentives to work. The cornerstone of our programs has established a program called Work Pays, which is a State budgeting method to say to welfare clients, it is worth it to go to work, any time, any place, for any kind of job, for however many hours. They are better off, because they keep \$2out of every \$3 that they earn.

In addition, we have integrated the EITC as part of the marketing of Work Pays to our clients to motivate them to go to work.

EITC, Work Pays, and the other sets of AFDC waivers that we call Fresh Start, have combined to move people from welfare to work, and what we are trying to do in Illinois. We have trained our staff on how the EITC works, and some of the nuances of the rules, and how they qualify, so that they can explain to our clients.

That is the income maintenance staff, not the traditional staff

that talk to clients about work-related activities.

The EITC pamphlets and posters from the IRS are in all our of-

fices, and are available next to the public aid offices.

They are handed out as part of the intake package that individuals get, explaining to them what are some of the programs they can benefit from by working.

Our earned income workers, who deal with clients who have earnings, have IRS tax forms on hand and give them to the clients when they have face to face interaction with them, to urge them

to apply for EITC.

All of the Work Pays pamphlets that we have now reference the EITC and the benefits of EITC as well. All of the public presentations, the scripts involved, talk about EITC as well as Work Pays, as if they are part and parcel of the same welfare to work initiative, which is how we are treating them.

There is an annual written notice, in January, that goes to every AFDC client, with their check, telling them about the EITC and the benefits of going to work, and if they have worked in the past

year, that they should be filing for it.

EITC information is part of the video that is playing in the waiting rooms in many of our offices now, along with Work Pays and paternity establishment. They are the three important themes

You might ask what has been the point of that, and various other intermittent things that we have done—media blitzes about

Work Pays and the EITC.

Nineteen months ago, when we started the Work Pays waiver, about 6.8 percent of the AFDC population were working adults.

That accounts for about 14,000 cases in our State. Last month, we had 28,400 families working while they were still on AFDC.

In addition, during those 19 months, we had 35,000 families cancel assistance because they were working.

Our AFDC rolls are going down, our earned income rolls have doubled, and what we are basically seeing is more and more people moving into the work force. Admittedly, many are moving into low

pay, minimum wage jobs, but that is the market reality.

Why we think EITC is so important is exactly that market reality. The jobs that are being created in Illinois often tend to be entry level, minimum wage, or a little bit more than minimum wage, less than full-time jobs, often without benefits.

Work Pays and EITC make it worthwhile for individuals to leave welfare or have a reduced welfare benefit, and go into the work

force.

What Ms. Alvarez did not testify to, if I could add, is that when she started working, there was a modest AFDC supplement. She got a pay raise due to the quality of her work at the insurance company employing her. As a result, she lost AFDC eligibility. She has gotten a subsequent pay raise. EITC has helped smooth through at least two crises that we are aware of.

One, to which she referred, was the eviction where the EITC funding came through in terms of a security deposit and moving

expenses, which she otherwise would not have had.

Let me assure you, before EITC and Work Pays, she would have been back on welfare. The second is that she is being asked by her employer to do some traveling, there is money set aside with this year's EITC refund for a car which she plans to purchase. She could not have done that before, and she could not have done it at her salary.

So EITC Is really making it possible for her to keep working and

expand her responsibilities, and do better.

[The prepared statement and attachments follow:]

STATE OF ILLINOIS DEPARTMENT OF PUBLIC AID

Joseph A. Antolin, Deputy Director

EARNED INCOME TAX CREDIT ADVISORY HEARING

June 15, 1995

Good morning, Chairman Johnson, Chairman Shaw, and members of the Subcommittees on Oversight and Kuman Resources. I am Joseph Antolin, Deputy Director of the Illinois Department of Public Aid. I am responsible for Field Operations, Child Support Enforcement, welfare employment and training programs, and welfare reform demonstrations in Illinois. On behalf of Governor Jim Edgar, Director Robert Wright, and the State of Illinois, I thank you for this opportunity to discuss the Barned Income Tax Credit (EITC) and its integral role in our efforts to move AFDC recipients into the labor force and off welfare.

Illinois is a large, diverse state with the sixth largest AFDC caseload in the nation. Our state has also been a leader in welfare reform by changing the incentives in the system to motivate different behavior. We have integrated EITC into our reforms and our experience. The current EITC program establishes, when used in conjuction with reforms, a powerful financial incentive for clients to work instead of just being dependent on welfare.

1993 FRESH START WELFARE REPORM INITIATIVES

The federal AFDC rules governing work and eligibility are complex and confusing to both clients and staff. They severely limit financial incentives to work, since either after 4 months or twelve months, the AFDC grant is essentially reduced a dollar for every dollar earned. As a result, after a working person's social security and taxes were deducted from income and Medicaid eligibility ended, a working family member was often worse off financially than a person dependent on welfare. To turn these disencentives around, Illinois has implemented a set of federal waivers, policy changes, and a statewide welfare to work marketing program.

In November, 1993, Governor Edgar implemented a multi-faceted federal welfare reform demonstration called Fresh Start. Fresh Start includes statewide waivers to support the family stability and employment potential of two-parent households, and encourage recipients to accept seasonal or temporary jobs; and smaller demonstrations to move homeless families into work, provide job training to at-risk teens before they have a child, and to train unemployed non-custodial fathers so that they could support their children.

However, the main component of Fresh Start, and the centerpiece of Illinois welfare reform is a program we implemented statewide and call Work Pays. The major goal of Work Pays is to give AFDC clients an earned income budgeting system that provides positive, real financial incentives to go to work. Work Pays replaced federal regulations for budgeting earned income (commonly referred to as the "\$30 and one-third disregard"). Work Pays sends a simple message to parents on AFDC that they should be working because it will always be in their best financial interest to do so. Under Work Pays, for every \$3 earned, the AFDC cash assistance grant is reduced by \$1. These grant reductions and the corresponding reductions in the family's food stamps continue until the family has worked their way off welfare.

At the same time Illinois was implementing Work Pays, the federal government was enhancing the value of BITC for working families. Only by going to work could a welfare family obtain the credit. Work Pays and BITC, thus, combined into a powerful incentive for AFDC clients to enter the labor force.

Mork Pays and the BITC have been the catalysts for a fundamental change in the welfare culture in Illinois. Public Ald offices no longer simply determine payment levels and authorize the distribution of assistance checks to "eligible" cases. More than ever before, the emphasis of the caseworker and the Illinois welfare system is to help parents find their way off welfare through work. At every client redetermination and interview, casevokers review the benefits of Work Pays and the BITC. Bach local public aid office now establishes an annual target to increase the level of clients who are employed in that county.

As I will explain in detail, Work Pays and the EITC are the cornerstones of an aggressive effort to sell the idea of employment to both long and short-term welfare clients.

HOW ILLINOIS HAS USED EITC TO PROMOTE EMPLOYMENT AND WELFARE REFORM

EITC is an ongoing, essential part of Illinois' intensive efforts to motivate and move large numbers of AFDC clients into the work force. To illustrate:

In FY'95, Illinois contracted with a not-for-profit organization in Chicago, the Center for Law and Human Services, to train our staff in the BITC and how to promote it to clients. Staff now tell job seekers how the BITC can turn a \$5 an hour job into one worth \$6 an hour.

EITC pamphlets and posters were obtained from the IRS and are readily available to all clients in each of the 142 Department of Public Aid offices in the State. In addition, our earned income budgeting caseworkers have IRS tax forms on hand and encourage clients to file their taxes.

A description of the benefits of the EITC and its role in moving people from welfare to work in conjunction with Work Pays and Fresh Start policies is the focus of our public presentations on Illinois welfare reform to clients, community organizations, and the general public.

The EITC is addressed in detail at all client orientations of the Illinois JOBS Program. In our job readiness sessions with clients, the EITC is discussed as a major incentive for recipients of public assistance to seek, obtain, and retain jobs.

An annual written notice on the benefits of EITC is distributed to all AFDC cases, usually in January. We explicitly emphasize how this program makes work a better option than just welfare.

The EITC has also been a main component in our Work Pays and other welfare reform marketing efforts. Some examples include:

The positive effects of the EITC on an AFDC family who goes to work is a major part of our client Work Pays brochure. Over 150,000 have been distributed since November of 1993.

The BITC is an integral part of our Work Pays video, which is shown on a continual basis in many Department waiting rooms.

RITC calculations are highlighted in our agency Work Pays handout sheets. These give clients tangible examples of how Work Pays and the BITC will really impact their income.

In 1994, the Department placed "Letters to the Editor" from local Department administrators in newspapers throughout the state to explain the thrust of Work Pays and the EITC and the renewed commitment to move people into the work force.

In Spring 1995, the Department hosted two major Work Pays Job Fairs in the City of Chicago. Nearly 4,000 clients volunteered to learn about work opportunities, meet employers, and most importantly, discover how getting a job could benefit their families financially. The Work Pays income disregard, when combined with the additional benefits of EITC, brought home to clients exactly how much their total annual incomes can increase dramatically when they take a job, even a part-time minimum wage job.

What have been the results of this welfare to work effort?

In October, 1993, only 14,144 or 6.8% of the employable AFDC cases in Illinois were reporting earnings from employment. By May, 1995, 28,413 or 13.7% of AFDC cases that include an adult were working. This represents an increase of over 100% in the first 19 months of a 48 month waiver.

In addition, over 35,419 clients have cancelled assistance due to earnings over the same period and Illinois' AFDC caseload has begun to get smaller. I have attached a chart which reflects this tremendous growth in employment. I'd also like to share a map of Illinois which portrays counties which had 20% of the AFDC clients in the workforce prior to Work Pays and to marketing RITC, and contrast with a map of the counties which have at least 20% of the AFDC caseload employed today. These results have exceeded our expectations, but confirm the power of economic incentives in moving people from welfare to work.

We know from client surveys and input from community organizations that the focused marketing of Fresh Start, Work Pays, and EITC have played a major role in this movement to work. Without the availability of the EITC, especially for low wage jobs, these results would not have been achieved as quickly.

NEW EFFORTS AT WELFARE REPORM IN ILLINOIS

To allow us to assist even more individuals to move off welfare, Illinois has embarked on an ambitious plan to further reform welfare in our state. These new initiatives are designed to build on the incentives to work created by the EITC, Work Pays, and Fresh Start, and to strengthen our active efforts to move people into employment and off of public assistance. While we are currently seeking federal waivers to implement some parts of the plan, the basic design put forward by Governor Edgar has four large components:

First, teen mothers, 18 years old and under, must return or stay in school and complete their high school education or obtain a GED to receive AFDC. They will be better equipped to get a job and avoid the risk of long-term welfare dependency. This is known as Illinois' Teen Parent Initiative and is currently in operation in Illinois. Along with case management and supportive services designed to assist these young mothers, parenting classes are mandatory. The Department contracted with 44 community-based organizations statewide to provide case management to over 7,000 teen parents.

Second, parents whose youngest child is 13 or over will be placed in the "Targeted Work Initiative", which has a two year time limit for receipt of APDC without earned income. Many persons in this group are long-term welfare recipients. The program is designed to move clients into any employment, but it is likely it will be in part-time, minimum wage jobs. The BITC will be a key factor in these clients staying with the job as they transition off welfare.

Third, job ready AFDC applicants will be required to participate in job readiness sessions and intensive job search. Seeking employment will be a full-time activity for this group in their initial experience with the welfare system for the first six months.

Fourth, the promotion of Work Pays and the EITC will be closely linked to four aggressive and innovative child support collection initiatives. AFDC recipients will be educated as to how the combined benefits of employment, Work Pays, the EITC, and child support payments, is the best approach to escape poverty.

Illinois has chosen to pursue these reforms even before a block grant is reality, in part, in reliance on the availability of the EITC to make any employment provide financial gain for the family.

RITC AND WELFARE REPORM IN ILLINOIS

The reform initiatives I have described involve nearly 100,000 current and future welfare recipients through FY'96. Due to resource reality and to help clients be responsible for their own futures, Illinois will continue to focus on motivating clients to be their own job developers. A big part of this is first convincing them that, indeed, work does pay. They must recognize that even at entry-level or part-time wages where most welfare clients do start working, it makes financial sense immediately to get and keep a job. When job seekers on public aid understand the financial incentives to be gained, they become much more motivated. Employers with entry-level positions are looking for persons with motivation, and the EITC often provides the "carrot" that makes the difference.

From a policy perspective, the beauty of the EITC is that you have to work to get it. It is not just another welfare "entitlement" that simply pays individuals for doing nothing. As we make the receipt of assistance benefits dependent upon the client's willingness to work, we must ensure and constantly reinforce that they will always be financially better off to do so.

Also, a point that should not be lost in the debate over the EITC is its role in supporting employers. An employer is not expected to be a social service agency. An employer wants a dedicated, enthusiastic employee. No employer wants high turnover at his company, even in entry level positions.

The current EITC program reflects the economic realities of the 1990's. Many of the jobs being created during the current economic expansion are entry level opportunities in service or retail areas. Many offer less than full time hours. However, any job is better than no job. The EITC allows individuals to take jobs that are available, but that they may have previously avoided due to low pay or lack of benefits. Since the economy is creating these jobs, the financial incentives must be in place to expect those on welfare to work and to support their families.

The BITC and initiatives like Work Pays in Illinois help to supplement the low wages necessary in many entry-level jobs. This allows a person, new to the workforce, to meet the day-to-day or unexpected financial needs of their family. At the same time, they can continue to be a valued, ambitious employee. As a person gains experience on the job, wages will usually increase, or they may move to a better job. The experience gained and the need for outside financial supports will progressively lessen and will ultimately disappear for that employee in many, if not most, cases.

HOW EITC HELPED A WELFARE MOTHER TO SELF SUFFICIENCY

Congress often uses tax incentives to encourage certain desirable economic or social activity, and is willing to forego the revenue lost to acheive positive results. The home mortgage interest deduction encourages home ownership because when people own their own homes, the strength and stability of the nation is enhanced. People have a real economic and social stake in the society in which they live. Even more than home ownership, the idea that the able-bodied should work and support themselves is one of the fundamental values that we all hold dear. The main purpose of the EITC is to strongly support that value.

with me today is Ms. Sherry Alvarez who illustrates how the BITC has served its purpose. Hers is a successful testament to how positive public policy can help a family leave the public aid roles and become self-sufficient. She will tell you her own story, but I would like to review the principle facts here.

Ms. Alvarez is a mother of two who received AFDC for approximately five years before her income from employment was sufficient to cancel her public assistance case. During that time, she volunteered for the JOBS program and participated in a Community Work Experience placement at IDPA headquarters in Chicago. Subsequent employment at an insurance company has allowed her to successfully leave the AFDC roles.

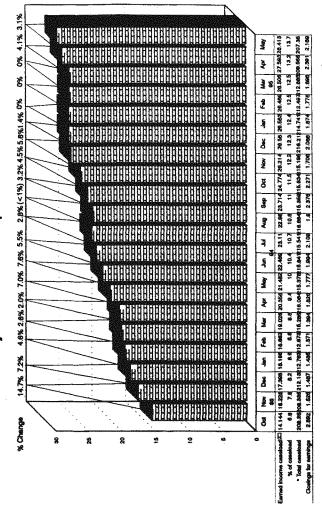

The BITC was a significant factor when a housing crisis arose for the Alvarez family. They were able to provide a security deposit and the first month's rent with funds from the BITC when they were forced to relocate with little notice. Without the BITC, the family would not have had the resources to relocate while Ms. Alvarez continued working. Moreover, if she would have had to interrupt work, she very likely would have returned to the assistance roles.

CONCLUSION

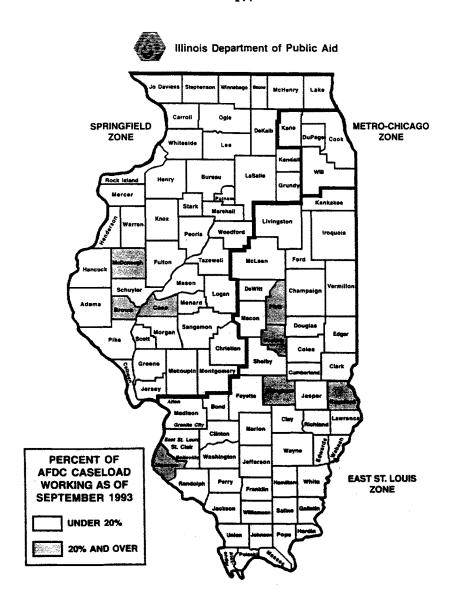

I hope my testimony has adequately explained the critical role EITC plays in the efforts of tens of thousands in Illinois alone who are trying to work to create a better life for their families and to become taxpayers. As you consider making refinements in the EITC, please remember its very important role in getting people off of welfare who are hardworking, but happen to earn low wages.

In sum, welfare reform requires state flexibility to design the programs and to use the tools to make work a real alternative to welfare dependency. We have forged ahead in welfare reform in Illinois through the foundation piece, Work Pays, with the EITC as an integral part of that effort. We have made great strides in Illinois and anticipate you will help us continue moving forward on this path even as you refine EITC. Thank you again for the opportunity to address this Subcommittee.

All numbers in thousandths except "% of caseload" * Excludes child only cases & pregnant women only cases.

Illinois Department of Public Aid

Mr. ENGLISH. Well, that is outstanding, and what I would like to do at this point is bring Dr. Olson, who has been very patient, in for her testimony, and we look forward to her contribution.

STATEMENT OF LYNN M. OLSON, PH.D., SENIOR RESEARCHER, DEPARTMENT OF RESEARCH, AMERICAN ACADEMY OF PEDIATRICS; AND VISITING SCHOLAR, CENTER FOR URBAN AFFAIRS AND POLICY RESEARCH, NORTHWESTERN UNIVERSITY, EVANSTON, ILLINOIS

Dr. OLSON. Thank you. I am happy to have the opportunity to talk with you about some of the research I have done on the EITC. My intent today is to use that research to talk with you about what the EITC looks like from the street level perspective of women, particularly in the welfare to work group.

I will address three questions. First, what does the monetary benefit of the credit mean for mothers moving between welfare and work? Second, what do these mothers know about the credit? And

third, how do they go about obtaining it?

I will suggest the following answers are true for many, if not most, of the families in this category. First, the extra funds they receive from the credit are vital to them. Second, the level of misunderstanding about the EITC is very high, and third, these workers are unlikely to have the knowledge or confidence to do their own taxes.

I draw these conclusions from indepth interviews with 30 women across three welfare-to-work programs in Chicago in 1993. I want to point out that these interviews were done before the kinds of things Illinois has recently been doing, that Mr. Antolin talked about.

Clearly, the women greatly valued their tax refunds, which often went to pay pressing bills. "It saved me," said a mother, facing eviction. Others made special purchases they could otherwise never afford, like the downpayment on a used car, purchasing clothing, or furniture for their children.

"I just look around the house and I see what I worked for. I

worked hard, and it felt good."

A few of the more experienced workers were able to make a connection that the credit is one of the benefits they had, now that they were working.

"The earned income automatically affects you in a positive way if you are working. All these incentives, ones with public aid do not

have anything."

However, I found that most could not make this kind of explicit

link between the credit and their own work efforts.

Some people had never heard of the EITC. More commonly, people had heard about it, but, really, they knew little more than that, and what they knew was frequently mistaken. For example, some were not planning to file because they thought they made too little money to do so. Or, because they did not file in the past, they thought they would be in trouble now.

Others believed that the EITC was the same thing as the tax deduction for dependents, or the child care credit, or the credit for being head of household. Another woman believed that this would affect her food stamp benefits negatively. No one we spoke with

had heard of the advanced payment option at that time, and when we explained it to them, they were rather skeptical about it.

I would also point out that there was widespread misunderstanding about the refundable nature of the credit. They did not understand that they were in fact getting additional money from the government, as illustrated by this particular woman, who actually earned so little money that she would not have been paying any Federal taxes.

"Whatever you are supposed to get back, they are still taking out taxes." You get money back, but they have already taken out taxes.

You would hear a lot of, "Well, I am getting my money back." And relatedly, most did not have, really, any idea if working more, or less, would increase or decrease the amount of credit that they were getting.

In summary, it often seemed that people perceived this refund more as an unexplained, very welcome windfall, rather than something that was clearly connected with wages they had earned.

Finally, how do welfare mothers actually go about obtaining their EITC? I think the answer reflects things we have heard today—that many are unlikely to have the confidence or knowledge to actually file their own taxes. Only 4 of the 30 people we spoke with had ever done so, and those tended to be in the past when they could use the EZ form.

A few had vague knowledge of some services like the Vita Tax Clinics, but actually, none of the people had ever used them. In contrast, everybody very clearly knew about commercial tax preparers, where they had gone and paid, at that time, between \$65 and \$100 to have their taxes done, and these frequently included the refund anticipation loans. I think that the dependence on commercial preparers might also reinforce ignorance about the EITC. Clients will tend to hand over their W-2s and expect the agency to do the job for them. "I just let them fill it out and send it back, and whatever comes, if I have got something coming back, it is OK with me."

And in fact a lot of people did not know whether or not the EITC had been claimed for them. We heard a few examples, where clearly, it suggested that some real errors had been made by the preparer.

I would note that since these data were collected, new IRS policies to reduce fraud should also reduce, of course, the use of electronic filing and the refund anticipation loans.

However, I think we can still expect a group that is going to be dependent on commercial preparers in one way or another. That is not going to change.

In summary, as you consider ways to improve the EITC, I would

suggest a few lessons from street level experience.

First of all, the problems of error and fraud in the EITC are apparent and those things do need to be addressed. It is quite unlikely that the women I spoke about today are the people who are the architects of fraud. They clearly would not have the information to be doing that.

Antifraud measures should not create greater barriers for those who are legitimately eligible for the benefits, or make them more dependent on commercial tax preparers.

Second, I would urge that much more attention be given to the

practical realities of how the EITC is implemented.

One of the reasons for the popularity of the EITC has been its very low administrative cost. I would argue, though, that it is unrealistic to think that you can efficiently administer a program that large, to that many people, without some real costs.

The EITC is a very valuable program for these families, and I believe there are real opportunities to improve it. The kinds of things I would suggest would very much dovetail with the things

that Mr. Antolin said.

With that, I will conclude, and thank you for the opportunity. [The prepared statement follows:]

STATEMENT OF LYNN M. OLSON, PH.D. DIRECTOR, DIVISION OF CHILD HEALTH RESEARCH, AMERICAN ACADEMY OF PEDIATRICS, AND VISITING SCHOLAR, CENTER FOR URBAN AFFAIRS AND POLICY RESEARCH, NORTHWESTERN UNIVERSITY, EVANSTON, ILLINOIS

Chairmen, subcommittee members, I am pleased to speak to you about the research I have conducted on the Earned Income Tax Credit (EITC). I am Lynn Olson, a sociologist and a visiting scholar at the Center for Urban Affairs and Policy Research, Northwestern University. I am a senior researcher in the Department of Research, American Academy of Pediatrics. The Academy is very interested in welfare reform and its impact on children, but I speak here today on my own behalf.

My intent today is to suggest what the EITC looks like from the street-level perspective of women in the welfare-to-work transition. This is the group, I presume, you most hope will be helped by the EITC, a refundable tax credit for low-income families. I will address three questions:

- What does the monetary benefit of the EITC mean to mothers moving between welfare and work?
- · What do these mothers know about the EITC?
- · How do they go about obtaining the EITC?

I will suggest the following answers are true for many, if not most, families in the welfare-to-work group: • The extra funds they receive through the EITC are vital. • The level of misunderstanding about the EITC is very high. • These workers are unlikely to have the knowledge or confidence to do their own taxes; they are often dependent on commercial agencies where they pay high fees.

I base these observations, broadly, on several years of experience as a researcher with Project Match, a welfare-to-work demonstration in the inner-city of Chicago. Specifically, these conclusions are drawn from in-depth interviews in 1993 with 30 women in three welfare-to-work programs across the Chicago area. I have also had the opportunity to speak with people around the country involved with the EITC, and their experiences reinforce these conclusions.

Value of the EITC to Very Low-Income Families

The women interviewed in this study had average earnings of only \$7800, which put most of them in the phase-in category where the EITC should certainly operate as a work incentive. Clearly the women greatly valued the tax refunds they received. They reported very quickly using their funds, often to pay pressing bills, as in the case of this mother who was facing the threat of eviction:

"I needed that too. All that went to my rent because I was so backed up paying my rent....It saved me twice. I think this year it's going to do the same thing."

Thus, for many families their tax refund was an essential means of paving over a financial crisis and taking care of bare necessities. Others said they used the funds to make special purchases like a down payment on a used car, new clothing for their children, or furniture:

"I just look around the house and I see different things that I bought....I was able to look at what I had worked for, because I work hard....Last summer – sometimes I wouldn't get off until 11:30 at night and I had to be right back at six that next morning. So I worked hard and I felt good and got that money back."

A few of the women with more knowledge and work experience identified the EITC as one of the benefits they received now that they were working and not on welfare:

"The earned income automatically affects you in a positive way if you're working. If you're on public aid you can't even file it....So I'm getting like \$700 back...So anything I have – if I needed a car, boom, there it is. If my daughter needed clothes that I couldn't handle before, boom, there it is. All these incentives. Ones with public aid don't have anything."

Misinformation About the EITC

However, most of those we spoke with could not make such an explicit link between the EITC and their work efforts. Ideally, for a program to be an incentive people will understand how it works and will know what they are receiving. It appears these optimal conditions are often not met. A handful of women – those who had been in the work force for several years – were quite knowledgeable about the tax system and the EITC. Yet such cases were clearly the exception.

The workers interviewed valued their tax refunds, but that did not necessarily mean they understood how EITC benefits are determined or even that such a program existed. Before we described it to them, some of the women said they had never heard of the EITC. More commonly, respondents said they had "heard of" the credit, but knew little more than that:

"I didn't really know about the earned income—not really. I didn't know it's as much as it is. There's a lot of people that don't know that."

These workers were frequently confused or misinformed about EITC regulations and benefits

"I just heard that if you receive AFDC you might be eligible for it."

"They sent me a thing about how much money! got from unemployment, and they had that (information about the EITC) in there. They had the form, and I read it. It sounded good. But I didn't know how to get it, so it was like, forget it!"

"You can get back up to \$2500, but I got like \$1018 back. I don't know if it was how much I made or actually how they go about doing it."

Interviewees were misinformed about eligibility for the EITC. For some a myth was that they were not eligible and were not planning to file because they made too little money. Another problem was confusion among types of tax credits. For example, some thought the EITC is the same as the tax deduction for dependents or the credit for child care payments or being "head of household." There were other fears about filling. One woman thought she would be in trouble because she had not filed last year. Another was mistakenly concerned it would affect her food stamp allotment.

It was not surprising that no one we spoke with was familiar with the advance payment option. When we explained it to them, most of these workers were skeptica about using this choice. Some said they preferred the forced "savings" of getting a lump sum at the end of the year. Others were fearful that the calculations would not work out correctly and that they would owe the government money at the end of the year, money they would not have.

We explicitly asked several of the women where they thought the EITC refund money came from or what determined the amount they would receive. Many were uncertain, as illustrated by the comments of these two women, each of whom earned so little that they owed no federal income tax:

"Well, some of it has to do with the money they took out and then they gave me so much for my dependent, my son. That's where it came from."

"Whatever you're supposed to get back, they're still taking out taxes. You get money back but they're still taking out a big chunk. They've already took out taxes."

Thus, many did not know that the EITC is in addition to the money they had withheld in federal taxes. In their view they were just getting back the money that had already been taken from their checks. Relatedly, most did not know if working more or less would increase or decrease the amount of credit they received. In sum, I found most women interviewed perceived their tax refund more as an unexplained, but welcome "windfall," rather than as wages they had earned.

Dependence on Commercial Agencies to Obtain the EITC.

How do welfare mothers actually obtain their EITC benefits? Who files their tax returns? My observations indicate many are unlikely to have the confidence or knowledge to do their own taxes. For example, one-third of the women interviewed did not know that April 15th is the deadline to file taxes. Only 4 of the 30 women interviewed had ever completed their own tax forms.

"I don't know about this tax and stuff. She was trying to show me one time so I'd do it myself and I never could figure it out."

A few had vague knowledge of community agencies that might assist in preparing taxes or Volunteer Income Tax Assistance (VITA) clinics staffed by IRS volunteers, but none had ever used these services. In contrast, everyone knew of commercial tax preparers. Most had used such agencies to file their taxes, paying fees between \$65 and \$100 to have their 1040 forms completed, to file electronically, and/or to receive a refund anticipation loan (essentially an extremely high interest, short-term loan so that they could have the use of their tax refund within a few days).

These commercial fees often ate up a substantial portion of the worker's return. In the most egregious case one woman paid \$70 and only received a check for \$30. Many tax agencies appear to target the market of EITC-eligible filers. During tax season storefront offices spring up in low-income neighborhoods. Numerous ads appear on the sides of buses and park benches, enticing people to "Get your refund now!" Television ads offer both fear tactics and enticements. One ad, which aired at the time of our interviews, asking "Who does your taxes?" showed several people expressing fears that if they did their own taxes they might make mistakes. Included was an older African American man who says, "If I did my own taxes I would go to jail because I don't know what I'm doing!" Other pitches were reminiscent of lottery advertising, with images of people lounging in sunny vacation spots.

Clearly the monetary loss is one problem when low-income workers rely on commercial firms to receive their EITC. But I believe there are other reasons to be concerned about this situation. The system reinforces ignorance about the EITC benefit. Clients rely on the agency to do the job right, and apparently receive little consumer information about how their tax refunds are calculated:

"You give them your forms...They fill it out and (you) see what money you get back."

"I was wondering how that works. I never did know that. I just let them fill it out and send it back and whatever comes, if I've got some coming back, it's okay with me."

Many, for instance, did not know whether or not the agency had filed the EITC for them. (During our interviews, copies of interviewees' tax forms were not available, so it was not possible to determine precisely what was or was not done.) From the refund amounts reported it seemed likely that many had been given the credit, even though they had not been told or did not understand what had been done. But a few of the stories we heard suggested the agencies on which low-income workers heavily rely do not always do the job right. Some might not get the full refund to which they are entitled because of the inadequacies of commercial preparers. One of the more knowledgeable respondents explained:

"If you don't already know it they won't tell you anything. They just fill it out. They won't tell you anything. You have to ask them the questions."

Another woman described a similar experience where the preparer was not going to calculate the EITC into her return:

"There's a lot of questions she should have asked and she didn't. I asked her what about the earned income. She didn't mention it. I asked her about the head of household. She didn't mention it either....When she got through with them I was only getting \$700-something and it totally was wrong after she did it. I explained to her why it was wrong and what she did not do."

Once the EITC and head of household credits were correctly computed the woman received a refund of \$1900. Ironically this savvy filer had gone to the agency because she did not trust her own calculations; she wanted to be safe and get a second opinion.

I would note that since these data were collected, actions in 1995 by the Internal Revenue Service (IRS) to hold and check returns where the EITC is claimed should reduce EITC-filers' use of electronic filing and refund anticipation loans. While these new IRS procedures mean EITC filers must wait much longer to receive their refunds I presume they will reduce fraud and errors. The full impact of these changes from the EITC filer's perspective is unknown, but we can assume many will continue to be reliant on commercial agents to prepare their taxes.

Summary and Policy Implications

I believe the EITC is a very valuable program. It supports the hard-fought efforts of low-income working parents to get and stay off welfare and helps them to adequately care for their children. As indicated by your hearing today, there are problems with the system that need to be fixed. I think there is a great opportunity to take action to make certain the EITC reaches those who are eligible and that it is an incentive for families trying to leave welfare.

As you consider these changes let me suggest a few lessons to use from street level experience: First, the problems of errors and fraud in the EITC have received a good deal of attention lately. These issues must be addressed. Given their lack of knowledge about tax rules and procedures, it is quite unlikely the women I spoke about today are among the architects of fraud schemes. While some people who are not eligible receive EITC benefits, there are others who <u>are</u> eligible who do <u>not</u> receive them. Anti-fraud measures should not create greater barriers for those legitimately eligible for EITC benefits. Changes that make filing for the EITC more complicated will increase many workers' dependence on commercial tax preparers.

Second, I would urge that much more attention be given to the practical realities of how the EITC is implemented. It is particularly important to reach the lowest income EITC-eligible families who are likely to be new to the workforce, in the welfare-to-work transition, or on welfare preparing for employment. The promise of very low administrative costs has been one reason for the political popularity of the EITC. But it is unrealistic to think that a program this large – \$15 billion to more than 15 million families in tax year 1993 – can be administered without real cost. Currently low-income workers pay much of that cost in fees to tax preparers. Given the complexity of filing requirements, the EITC in actuality cannot be thought of as self-administered for most. It is not possible for the IRS to function as a social service agency to assist all EITC filers; effective implementation of the EITC will require broad-based efforts by many actors, ideally involving local groups most frequently in direct contact with low-income families.

I believe there are a number of steps that can be taken to enhance the value and efficiency of the EITC; let me suggest a few:

- <u>Develop relevant educational messages and material</u>. The EITC rules and benefits should be presented in clear, concrete terms, for example: "Because of the EITC you wages are now equivalent to \$x\$ per hour." The basic structure of the EITC needs to be better explained and promoted, for example the message that it is a *refundable* credit where you might be receiving far more than any federal taxes deducted from your check.
- Focus education about the EITC throughout the year. Private groups and the IRS
 have done a good job of education and outreach campaigns during the tax filing
 season to urge people to file for the EITC. But if the interest is educating tax payers
 about the EITC, reducing inaccurate claims, and promoting the benefit as a work
 incentive, education needs to be a year-round commitment.
- Integrate EITC education and assistance into work programs. One essential way to reach people year round is in programs where low-wage workers are likely to be

found, e.g., local welfare-to-work programs, Job Training Partnership Act (JTPA) programs, family support programs, and community colleges. Welfare-to-work programs could integrate into their services practical budget planning and clear information on how working will effect various benefits, including how the EITC will affect their paychecks.

• Enhance awareness of the advance payment option. Receiving the EITC through advance payments may provide a greater work incentive because workers will receive a portion of their benefits on a more "real time" basis. If they do not use this option, by 1996 low-income families could receive as much as one quarter of their annual income in a single payment with their tax refund.

Chairmen, that concludes my prepared statement. Thank you for the opportunity to present these ideas. I will be happy to answer any questions you or other members may have.

Mr. ENGLISH. Well, I am delighted that you have given us the benefit of your insights, and I find that we are probably going to have to conclude this hearing shortly.

I have a number of questions for both of you and I guess I would

like to encapsulize them with this.

What should Congress prioritize in making the EITC more accessible to mothers operating on the poverty line, item one?

Item two, what can Congress do to make the program more useful to State welfare departments?

I will start with you, Mr. Antolin.

Mr. ANTOLIN. In terms of reaching more parents, I have to be-

lieve more outreach through employers is still a viable place.

We recently had an experience where we had placed someone in Motorola, not a small company, where the client sought the advance payment of EITC, and the Motorola personnel office had never heard of it, did not know how to do it, and did not believe it was possible.

It took some work with them, with our local IRS staff, to get

them to process it.

That is a problem when you have major employers who react that way, and imagine what it is when you are talking about smaller employers.

There I think is a big part of the marketing that is still needed. As far as with welfare, there are some States that want to do it

as part and parcel of the welfare system.

We think in our State it makes a lot more sense to get individuals moving to work, to get used to filing the tax forms, being part of the mainstream system, the one that you and I——

Mr. ENGLISH. So, you would keep it separate?

Mr. ANTOLIN. Yes. We think there is a huge value in that and would not want to have it added. On the other hand, we like being able to implement it as part of the marketing of welfare to work.

Mr. ENGLISH. Dr. Olson, you have already offered some prescrip-

tions. Do you have anything to add?

Dr. OLSON. There are a lot of specifics that I could talk about, but I think, in general, clearly, there needs to be more education and outreach, and it is not simply done because it really has to be done on a local level.

As Ms. Clark said, it really is about one to one. When it really comes down to it, there is someone there, sitting with their W-2s

and a tax form, and that has to be done somehow.

So it is clearly not going to be easy. It needs to go through the type of places where low-income workers are to be found. The welfare programs are a very important place. Other places are certain categories of employers, community colleges, and Job Training Partnership Act Programs.

Those are the places we need to target. To date, a lot of the education and outreach around the EITC has focused on tax filing, and that has been very effective in many ways. That does not really address the problem of getting people to understand what the credit is, how it really is working, and that is an advantage to them.

Mr. ENGLISH. Thank you.

I want to thank both of you for the substantial contribution you have made to educating this panel on the practical effects of EITC, where the program ought to go, what we ought to be doing with the provision.

This will be one of the most important things that we address during this Congress and you have made a very substantial contribution to this debate and we want to thank you very much, and with that, I would like to adjourn this hearing.

[Whereupon, at 3:05 p.m., the hearing was adjourned, subject to the call of the Chair.]

[Submissions for the record follow:]

The Honorable E. Clay Shaw, Jr., Chairman Subcommittee on Human Resources House Ways and Means Committee B-317 Rayburn House Office Building Washington, DC 20515

Dear Chairman Shaw:

The American Hotel & Motel Association (AH&MA), a federation of state and local lodging associations, represents this nation's lodging industry. Over 45,000 lodging properties with more than 3.3 million rooms and over 1.5 million employees operate in the United States. Our industry's annual sales exceed \$60 billion and our total payroll exceeds \$20 billion. AH&MA's membership ranges from small independent properties to the largest convention hotels. Our membership includes all major resorts and hotel chains.

We offer these comments for inclusion in the record of the June 15, 1995 joint hearing on the Earned Income Tax Credit (EITC) held by your Subcommittee and the Subcommittee on Oversight chaired by Congresswoman Nancy L. Johnson. We believe the EITC has been a valuable tool, targeted to low-wage workers to provide a supplement as they learn, train, and begin their climb up the economic ladder. We believe it is essential to retain the ability of the EITC to meet these goals.

As opposed to an increase in the minimum wage, which is spread broadly across workers whether or not they may need the increase, the EITC specifically helps workers whose earning level and family status warrant support. It contains none of the dampening effects on jobs and job creation which often accompanies an increase in the minimum wage. Additionally, it does not arbitrarily raise the cost of labor to business. The reality today is that in many parts of the county the minimum wage is below the market wages for entry-level employees. In those areas the damage of a minimum wage increase is measured primarily by the ripple effect on wages higher than minimum. Inevitably it distorts the labor market even when minimum wage per se is not an issue. Job creation can be slowed even in those markets. In those parts of the country where the minimum wage accurately reflects the market price for entry level labor, the distortion is more severe. By comparison, the EITC looks not to the market, but instead to the worker and helps only those who truly need help.

Our industry has long supported the EITC and the efforts of Congress to enhance the availability and effectiveness of this program. The EITC addresses several important issues. It strengthens incentives for low-income families to work by supplementing earnings. Work is made more attractive to these families than welfare, and the value of work itself is promoted. As our nation seeks to address the overall problem of welfare, the EITC is one element in that debate. It is important that Congress not weaken the EITC.

As your subcommittees consider the problems that exist with EITC, you are aware of action taken in the Senate to roll back recent changes to the credit. We urge your subcommittees to weigh carefully the best way to eliminate problems and inefficiencies, even fraud to the extent it may exist in the program, and not jump immediately to budget reductions. Eliminating indexing, for example, will increase the tax burden of the working poor and signal a change in the direction of U.S. tax policy. More fundamentally, the message of the value of working and the rewards that come from it will be undermined if harsh restrictions and restructuring happen to the EITC program. We urge you to remember that the EITC is perhaps the most efficient way to provide a targeted, needed supplement to wages.

We commend the efforts of both subcommittees to examine this valuable program. Further, we applaud your commitment to retaining all that is right with this program while considering technical modifications to improve its ability to do what it was designed to: help low-wage earners supporting families learn the value and dignity of work and be encouraged to continue their efforts to enhance their employment potential.

Sincerely,

Jones E. Softige

James E. Gaffigan Vice President, Governmental Affairs

WRITTEN STATEMENT OF THE AMERICAN INSTITUTE OF CERTIFIED PUBLIC ACCOUNTANTS

INTRODUCTION

The AICPA is the national professional organization of CPAs, with more than 320,000 members. Many of our members are tax practitioners who, collectively, prepare income tax returns for millions of Americans.

The AICPA urges that simplification of the tax system be made a legislative priority. In particular, the EITC is an area in critical need of simplification.

We strongly urge the Committee and Congress to re-write the EITC rules to be understandable and usable by the taxpayers that this provision is intended to benefit - low-income wage earners. This group of taxpayers generally lacks the ability to deal with complex tax laws and is unable to pay for tax preparation assistance. The AICPA welcomes proposed changes to make the credit more effective and offers several suggestions.

BACKGROUND ON THE EITC

The refundable EITC was enacted in 1975 with the policy goals of providing relief to low-income families from the regressive effect of social security taxes, and improving work incentives among this group. According to the IRS, EITC rules affect almost 15 million individual taxpayers.

Over the last few years, the number one individual tax return error discovered by the IRS during return processing has been the EITC, including the failure of eligible taxpayers to claim the EITC, and the use of the wrong income figures when computing the EITC. The frequent changes made over the past twenty years contribute greatly to the credit's high error and noncompliance rates.

In fact, the credit has been changed 10 times (1976, 1977, 1978,1979, 1984,1986, 1988,1990, 1993 and 1994). The credit now is a nightmare of eligibility tests, requiring a maze of worksheets. Computation of the credit currently requires the taxpayer to consider:

- 9 eligibility requirements;
- the number of qualifying children taking into account relationship, residency, and age tests;
- the taxpayer's earned income -- taxable and non-taxable;
- the taxpayer's AGI;
- threshold amounts;
- phase out rates; and
- varying credit rates.

As part of H.R. 831, the House passed last week and the Senate is currently considering a new factor in determining eligibility - the amount of interest and dividends, tax-exempt interest, and net rental and royalty income received by a taxpayer, even if total income is low enough to otherwise warrant eligibility for the EITC.

To claim the credit, the taxpayer may need to complete:

- a checklist (containing 8 complicated questions),
- a worksheet (which has 9 steps).
- another worksheet (if there is self-employment income),
- a schedule with 6 lines and 2 columns (if qualifying children are claimed), and
 - usually, the normal Form 1040 (rather than Form 1040EZ).

For guidance, the taxpayer may refer to 7 pages of instructions (and 39 pages of IRS Publication 596). The credit is determined by multiplying the relevant credit rate by the taxpayer's earned income up to an earned income threshold. The credit is reduced by a phaseout rate multiplied by the amount of earned income (or AGI, if less) in excess of the phaseout threshold.

While Congress and the IRS may expect that the AICPA and its members can comprehend the many pages of instructions and worksheets, it is unreasonable to expect those individuals entitled to the credit (who will almost certainly NOT be expert in tax matters) to deal with this complexity. Even our members, who tend to calculate the credit for taxpayers as part of their volunteer work, find this area to be extremely challenging. In fact, we have found that the EITC process can be a lot more demanding than completing the Schedule A -- Itemized Deductions, which many of our members complete on a regular basis for their clients.

Our analysis suggests that most of the EITC complexity arises from the definitional distinctions in this area. While each departure from definitions used elsewhere in the Code can be understood in a context of accomplishing a specific legislative purpose, the sum of all the definitional variances causes this Code section to be unmanageable by taxpayers and even the IRS. We recognize that many of the additions and restrictions to the credit over the years were for laudable purposes. However, the rules are so complex that the group of taxpayers to be benefited find them incomprehensible and are not effectively able to claim the credit to which they are entitled.

SPECIFIC LEGISLATIVE RECOMMENDATIONS

Simplify definitions and the calculation.

The current rules for the EITC, as previously noted, provide different rules depending upon the number of qualifying children the taxpayer claims. The many rates, thresholds, limitations, and classifications regarding this credit are confusing. For the 1994 tax year, the parameters are as follows:

	1 Child	2 or more Children	No Children
Credit rate (%)	26.30	30.00	7.65
Phaseout rate (%)	15.98	17.68	7.65
Earned income threshold	\$7,750	\$8,425	\$4,000
Phaseout threshold	\$11,000	\$11,000	\$5,000
Phaseout limit	\$23,755	\$25,296	\$9,000
Maximum credit	\$2,038	\$2,528	\$306

RECOMMENDATION: Congress should simplify the definitions and the calculation of the credit. Specifically, as detailed below, we suggest the definitions of qualifying child and earned income be modified. The many rates, thresholds, limitations, and classifications regarding this credit should be referenced to other similar thresholds and classifications throughout the Code. These changes, and the changes listed below, would reduce the number of pages needed for the worksheets, Schedule EIC, EIC Table, and instructions. (See Appendix for specific administrative proposals that we intend to pursue with the IRS to simplify the definitions and calculation.)

Define "earned income" as taxable wages (Form 1040, line 7) and self-employment income (Form 1040, line 12).

The current EITC definition of "earned income" needs to be simplified. Currently, to calculate the credit, the taxpayer must take into account all earned income, including amounts not otherwise reported on the tax return or not taxed. This is one area where numerous errors are made. As GAO states in its September 1993 report GAO/GGD-93-145, Tax Policy: Earned Income Tax Credit: Design and Administration Could Be Improved, "determining the amount of income that should be included in calculating the credit poses a problem for taxpayers and IRS."

Currently, potentially eligible recipients must take into account:

- Taxable earned income (wages, salaries, and tips; union strike benefits; long-term disability benefits received prior to minimum retirement age; and net earnings from self-employment), PLUS
- Nontaxable earned income (defined in the instructions as: contributions to a 401(k) plan and military housing and subsistence, excludable dependent care benefits, pay earned in a combat zone, the value of meals or lodging provided by an employer for the convenience of the employer, housing allowance or rental value of a parsonage for clergy, voluntary salary reductions such as under a cafeteria plan, and "anything of value that is not taxable which you received from your employer for your work").

Furthermore, because taxable scholarships and fellowship grants are reported on Form 1040 line 7, taxpayers are instructed to subtract taxable scholarships or fellowship grants not reported on the Form W-2. This one exception complicates the calculation and is not verifiable, as it is not on the Form W-2.

In addition, as discussed in our administrative recommendations in the Appendix, the earned income calculation does NOT include various other forms of income not on line 7 of the Form 1040 (i.e., welfare benefits, workers' compensation benefits, alimony, child support, unemployment compensation, social security and railroad retirement benefits, pension and annuities, interest and dividends, and variable housing allowances for the military). The exclusion of these items is mentioned in IRS Publication 596, but is not mentioned in the worksheet or instructions. Since these items are taxable, but are not wage income (line 7 of the Form 1040), taxpayers may inadvertently include these items as "earned income".

Currently, the calculation of "earned income" involves a detailed knowledge of tax terminology, such as: "excludable", "taxable", "for the convenience of the employer", and "voluntary salary reductions". The definition of taxable income includes many items not commonly thought of as earnings. In addition, the definition of "nontaxable earnings" is unique to the EITC and is defined in different ways in the instructions and IRS Publication 596 (as addressed in our administrative recommendations in the Appendix). Most people think that "earned income" is wages. Omissions are likely to happen when uncommon terms are used to cover many items that normally are not treated as earnings.

RECOMMENDATION: Congress should define earned income as wages appearing on line 1 of Form 1040, plus self-employment income from line 12 of the Form 1040.

Earned income should only include taxable income, as the statute originally provided when it was created in 1975. As GAO points out, much of "this (nontaxable) income is not reported to recipients or to IRS," and IRS has no way right now of verifying the nontaxable amounts. GAO states, "we do not see a need to provide space on the tax return for nontaxable earned income since less than 3 percent of eligible taxpayers claim (report) this type of income." Therefore, nontaxable income should be removed from the EITC definition

of "earned income" to make the process simpler for the majority of taxpayers who need to complete this worksheet.

We also believe that there should be no exceptions to this taxable earned income definition. If Congress wants to treat taxable scholarships and fellowships different from taxable wages, taxable scholarships and wages should not be reported on line 7 of the Form 1040. Alternatively, if taxable scholarships are to be treated as taxable wages (line 7 of Form 1040), the current EITC subtraction for scholarships and fellowship grants should not be allowed.

Modify the "qualifying child" rules.

According to a GAO analysis, most EITC errors have been linked to issues involving filing status and qualifying children. The qualifying child test is complex. Taxpayers are confused by the "qualifying child" definition and the different definition for a dependent. The definition of "eligible child" complicates the EITC instructions for determining eligibility. The IRS attempts to communicate that a "qualifying child" usually does not have to be a dependent. However, there are a few exceptions that confuse taxpayers. For example, if one divorced parent has custody of the child, but the other parent claims the child as a dependent, the parent with custody can claim the child as a "qualifying child" for the EITC, but can not claim the child as a dependent. Also, if a child is married, the child must be a dependent (i.e., over half of the child's support is provided by the taxpayer) to claim the child as a "qualifying child" for the EITC. This married child exception confuses taxpayers.

Additionally, the different EITC treatment for different taxpayers — depending on the number of children — seems unnecessarily complex, especially for the minor additional benefit derived. The maximum additional credit for more than one child is only \$490. The minor additional benefit is illustrated by an eligible taxpayer with \$4,000 of earned income receiving a credit for one child of \$1,059, while for two or more children, the taxpayer's credit is \$1,208, a difference of only \$149. What is this differential meant to reflect? Clearly, the difference cannot be cost. In addition, there is no EITC difference between taxpayers with two children and taxpayers with three or more children.

Also, taxpayers with and without children are treated differently with regard to their eligibility for the advance ETTC. The advance EITC is available only to taxpayers with qualifying children. There does not appear to be any reason for this difference. The EITC should focus on one goal — earned income.

RECOMMENDATION: The rules throughout the Code, and especially in this area, could be simplified if just one definition was used consistently. Congress should eliminate the distinction between "qualifying child" and "dependent child". Section 32(c)(1)(A)(I), which currently allows the EITC to certain tempayers with non-dependent children, should be changed. If the term "eligible children" is restricted to dependent children, section 32(c)(1)(A)(I) could be cross referenced to section 151.

This definition would provide an easy reference to information already on the Form 1040, line 6, and would eliminate the need for the additional information currently required on the Schedule ElC. We also suggest that the married dependent child test, which is rarely applied, be removed.

Alternatively, if Congress deems that the "qualifying child" is a better definition than "dependent child", then the "qualifying child" test should be used for the dependency exemption as well. Either way, there should be just one definition of child in the Code.

RECOMMENDATION: The spread in the amount of credit for one child and two children should be made more significant than under the current EIC Table. The difference between one and two children in the current table is so small that it could not possibly reflect a cost differential and it is too incomprehensible for it to be a motivating factor in individual conduct.

RECOMMENDATION: Even greater simplification would result if there was no EITC differential based on the number of children. The current three classes of EITC recipients and three considerations at each point in the process are cumbersome. If just one class of EITC recipient existed, the "qualifying child" versus dependent child confusion would be eliminated, making the credit process much easier. In addition, if this recommendation is adopted, all EITC recipients would be able to claim the advance EITC.

As stated previously, an objective of the credit is to remove the regressivity of the social security tax for lower-income individuals. This objective applies to all lower income taxpayers, regardless of the number of children in the home. Thus, eliminating the incremental amount of the credit based on the number of children would not detract from the stated objectives of this provision. The calculation and the EIC Table would be simplified, and the additional information on age and social security numbers of children (currently required on a separate Schedule EIC) would not be needed for the EITC.

RECOMMENDATION: Congress should coordinate all of the Code's tax provisions related to children. These child-based tax provisions include: the incremental child EITC, the child tax credit, the dependency exemption deduction, and the proposed family tax credit in H.R. 1215. All of these child tax benefits should be provided through one mechanism—the dependency exemption. The dependency exemption takes into account the total number of children in the household, versus the EITC, which only accounts for up to two children in a household.

However, since the current dependency exemption is a deduction rather than a credit, the result is regressive (that is, the higher the tax bracket, the greater the tax benefit) at the income levels that the EITC can be claimed. Therefore, if the dependency exemption is to take part of the place of the EITC, one point Congress might consider would be replacing the dependency exemption with a refundable credit, not a deduction. The credit could be refundable and set at a fixed dollar amount per dependent child. This credit could be available in advance from the taxpayer's employer, as is the advance EITC. The per child credit amount could be a round number that is easy to multiply.

The proposed child credit could be phased-out above some threshold AGI that is simple and consistent with other phase-out rules. We suggest that the phase-outs for itemized deductions, personal exemptions, and this proposed child credit all start at the same threshold and that threshold should be a number that is easy to apply — e.g., \$100,000 of AGI. The phase-out mechanism for all tax provisions in the Code should be the same.

4. Combine and expand the denial provisions.

IRS and GAO have stated that many people receiving the credit are not considered "low-income" individuals. As these individuals are identified, greater restrictions are placed on eligibility for the credit, and the computation is made more complex for all EITC recipients. As mentioned earlier, Congress recently agreed to deny the credit to individuals with interest and dividends, tax-exempt interest, and net rental and royalty income in excess of \$2,350. Additionally, the credit currently is not available if the taxpayer: excludes from gross income any income earned in foreign countries, or claims a tax benefit for foreign housing amounts. An individual who owes alternative minimum tax (Form 1040, line 48) is allowed a credit, but the EITC is reduced by any alternative minimum tax. The taxpayer's AGI is used as a limitation for the credit and greatly complicates the computation for most taxpayers.

RECOMMENDATION: We support Congress limiting the credit to those taxpayers originally intended to benefit from the EITC. However, we suggest that this limitation only occur through the denial rules, not the computational rules. We recommend that all the denial provisions be included in one place. The eligibility/denial rules should include the current denial for taxpayers with foreign earned income. We suggest adding to the denial rule all taxpayers subject to AMT. This would delete the computational exception for AMT taxpayers.

Congress also should include in the denial provision taxpayers with AGI that exceeds earned income by \$2,350 or more. H.R. 831's denial for taxpayers with \$2,350 of interest or dividends should be replaced (and essentially combined) with this denial for taxpayers with AGI that exceeds earned income by \$2,350 or more. This exclusion based on AGI would deny the credit to taxpayers with all forms of unearned income (i.e., capital gains, income from partnerships and S corporations, etc.), not just taxpayers with interest and dividends of \$2,350 or more. As the H.R. 831 proposed EITC restriction stands now, these "wealthy" individuals affected by the legislation (i.e., with this type and amount of non-earned income) could charge their investments to earn partnership investment income, capital gains, or pay off their home mortgage and still claim an EITC. If H.R. 831 is enacted as currently drafted, when additional abuses occur. Congress will have to add more restrictions to the EITC statute. However, if our proposed broader AGI denial is used, fewer, or no, additional limitations will be needed. This denial of credit for individuals with higher incomes seems to be the intent of the unearned income restrictions.

An important result of moving the AGI calculation restriction to the eligibility rules is that the calculation would be much simpler. The calculation would no longer require a worksheet.

Specifically, in order to implement this change, we suggest that section 32(h), which currently requires a reduction of the EITC for taxpayers subject to the alternative minimum tax, be modified. On the basis of simplicity, this provision should be combined with section 32(c)(1)(D), denying the EITC to anyone claiming a foreign earned income exclusion. Section 32(c)(1)(D) should also include taxpayers with AGI that exceeds earned income by \$2,350. Section 32(a)(2) should also be modified to remove AGI from the computation. All the restrictions based on income should be contained in one paragraph or subsection, rather than throughout this Code provision.

5. Modify the EIC Table or provide a percentage rate instead of the table.

Although the IRS EIC Table takes into account all the phaseouts, the table can still be a mystery to many taxpayers. Many taxpayers are confused between the EIC Table and the Tax Table.

RECOMMENDATION: Section 32(f) currently requires that the EIC Table have income brackets not greater than \$50 each. Form 1040 instructions currently include two pages of the EIC Table with \$50 brackets, resulting in earned income credit intervals of \$3-\$8. Congress should amend section 32(f) to allow wider brackets which result in greater than \$3 earned income credit intervals. This will reduce the EIC Table to half a page and will minimize the overwhelming nature of the table, and, hopefully, facilitate ease of use.

RECOMMENDATION: We suggest an even bolder alternative — eliminate the EIC Table completely, and instead provide a credit equal to a certain percent (i.e., 10 percent) of earned income. This option could be modified to provide for a few percentage levels (i.e., 30% if earning less than \$8,000, 25% if earning between \$8,000 and \$16,000, and 20% if earning between \$16,000 and \$24,000). This would approximate the average credit currently allowed — \$900 if earning \$3,000 (with 2 qualifying children), \$2,500 if earning \$10,000 (with 2 qualifying children), and \$2,000 if earning \$20,000 (with 2 qualifying children), and sould be much easier to calculate. This would be much simpler and would save space in the instruction booklets and ease much of the confusion. The rates could be written directly onto the EITC line of the Form 1040. This, combined with a changes in the "earned income" definition and AGI limitation, should make the worksheets, checklists, and tables a thing of the past.

OTHER REFORMS TO THE SYSTEM

Lastly, in reviewing comprehensive reform of benefits and tax reform, in general, Congress should consider the problems and complexities for low-earning Americans illustrated above. Some of the reforms listed below have been suggested as a potential solution to the EITC problems.

Use the EITC to eliminate the regressivity of the social security tax, by setting the refundable credit at the current social security tax rate (7.65 percent). The FICA tax regressivity results because the first dollar earned is taxed for FICA purposes, while (for 1994) income generally up to: \$11,250 - married filing jointly, \$8,050 - head of household, \$6,250 - single, and \$2,450 - married filing separately is exempt from the progressive income tax. This option

- would permit all taxpayers with "earned income" to claim this credit regardless of their age, filing status or dependency status.
- Limit the EITC benefit to no more than 15.3 percent (the current self-employment rate) of any self employment income reported. This would address the fraud and overreporting problems involved with self-employment income.
- Exempt the first \$\times \text{ of taxable earned income from the employee's share of social security tax and from \$\times \text{ of the self-employment tax.}\$ (This tax could be administered by adjusting social security withholding and by amending Schedule SE). Exempting low-income individuals from FICA (social security and Medicare) taxes would directly address (with no paperwork) what the EITC was intended to do -- mitigate the regressivity of the FICA taxes.

CONCLUSION

In conclusion, we have identified quite a few areas that need simplification and proposed various means to achieve it. We support measures to eliminate the current EITC problems so that those who legally qualify for the EITC receive it and can claim the benefits in a simplified and easy process.

APPENDIX - Suggested Administrative (IRS) Changes to the EITC Claiming Process

- EITC Line of Form 1040 Should be in the Credits Section of the Form. Even if the
 taxpayer is not allowed to claim the credit, the taxpayer must go through many procedures
 to find out if he/she is ineligible, and then write "NO" on line 56. Line 56 is not even in the
 section of the Form 1040 dealing with credits; it is in the section of the Form 1040 dealing
 with payments. The current placement of the EITC line on the tax return could be confusing
 to taxpayers (although it is in bold). Therefore, we suggest the EITC line be moved to the
 credit section of the Form 1040.
- 2. The IRS Calculation Option Should be Presented at the Beginning of the Checklist and Instructions. IRS currently offers to calculate the EITC for taxpayers, but it mentions the option rather late in the process and requires the taxpayer to supply additional information on a separate schedule. The IRS calculation option is mentioned on the last line of the checklist, which reads "If you want the IRS to figure it for you, enter 'EIC'" on the appropriate line on the appropriate type of Form 1040. IRS should encourage more taxpayers to use this option and should consider mentioning this option at the top of the checklist and instructions.
- 3. All Information Required for the Credit Should be on the Form 1040 —Schedule EIC and the Dependency Exemption Information Should be Combined on the Form 1040. The Form 1040 should provide sufficient information for the IRS to determine if a taxpayer legitimately qualifies for the EITC. The IRS should inform legitimate eligible taxpayers of the correct credit amount. The taxpayer should not have to take the currently required additional steps of reading the instructions and completing the checklist, worksheet, and Schedule EIC.

We agree with GAO's Sept. 1993 report, Tax Policy: Earned Income Tax Credit: Design and Administration Could Be Improved, that stated, "most of the necessary information could be included on the tax return itself. With minor modifications to the dependency and filing status sections of the Form 1040 or 1040A, all the requisite information (the already required child's name, social security number, relationship to taxpayer, and number of months lived with taxpayer, as well as the age and student/disability status of the child) would be available to determine whether a child qualified... We believe taxpayer simplification can be better achieved by the elimination of the separate EIC Schedule, the separate two-page schedule is an additional obstacle for very low-income tax filers." We, therefore, support elimination of the current separate Schedule EIC that merely covers repetitive information, and suggest the necessary information be combined into the existing Form 1040 exemption section, as shown on page 64 of the GAO report. This issue would disappear if a legislative change is made (as we proposed) so that the distinction in number of children is pursued through the dependency exemption.

We also suggest an even easier modification to the Form 1040. The only additional pieces of information (not currently required on the Form 1040) that are requested on the Schedule EIC are: (1) if the child was older than 18 - whether the child was a student under age 24 or permanently/totally disabled, and (2) the child's year of birth. The year of birth could easily take the place of column 2 on line 6c, where IRS currently asks the taxpayer to check if the child is under age 1. Information in (1) could also be included and coded on line 6c (i.e.,

next to the age, put an S if a student and/or D if disabled). If the legislative change we proposed concerning the definition of "eligible child" and dependent is not made, the taxpayer also could put an "E" on line 6c to indicate that the child is an "eligible child" for the EITC. Form 1040 would then include all the information currently requested on the Schedule EIC.

- 4. All Responses on the Checklist Should Consistently Direct the Taxpayer. The current locations and responses to question number 5 on the checklist are confusing to taxpayers and should be switched. Checklist question number 5 should be worded in such a way that a YES response is positive and a NO response results in the taxpayer not qualifying for the credit (similar to all the other seven questions on the checklist). Accordingly, the YES and NO box locations to question number 5 should be switched too.
- 5. The Worksheet Should be Incorporated in the Schedule EIC. If the credit remains as complex as it is right now, instead of a worksheet calculation, the EITC should be calculated on an IRS designed schedule which is attached to the tax return. The Schedule EIC could be modified for this purpose to include the actual computations rather than mere taxpayer identification information. The IRS also could better monitor the credit amounts and if fraud or abuse is involved. It does not make sense for the taxpayer to first complete a checklist, then be directed to the worksheet, then complete the informational Schedule EIC, and then enter the credit from the worksheet onto the tax return. The IRS never sees the worksheet and, therefore, cannot see where the taxpayer made a mistake in the calculation and if it was intentional or not.
- 6. The Description of Items Subtracted from "Earned Income" Should be Stated Similarly in All IRS Publications. All IRS publications should clearly state the same definition and explanation of earned income. Specifically, IRS Publication 596 currently includes a detailed list of items to subtract from earned income, while the worksheet and instructions do not contain this list. The worksheet and instructions should include this list. Taxpayers may inadvertently include these items as "earned income". Specifically, according to Publication 596, the various forms of income that are not included in the earned income calculation (and are not subtracted on the worksheet) are not included in line 7 of the Form 1040 (i.e., welfare benefits, workers' compensation benefits, alimony, child support, unemployment compensation, social security and railroad retirement benefits, pension and annuities, interest and dividends, and variable housing allowances for the military). Our legislative recommendation to define "earned income" as taxable wages (line 7 of the Form 1040) and self-employment income (line 12 of Form 1040) would greatly simplify this problem.
- 7. The Taxpaver Should be Directed to the EIC Table Only Once. Rather than sending the taxpayer to the EIC Table twice (once for earned income and another time for AGI), the worksheet should direct the taxpayer to enter the smaller of the net earned income or the taxpayer's AGI, and then look up that smaller number in the table. The repetitive reference procedure is not necessary if the AGI is less than the beginning of the phase-out threshold. However, if that is the case, the taxpayer should be told to stop once the first credit amount is found in the table, before entering AGI and completing the rest of the worksheet meaninglessly.

Statement of Maria Gomez Commissioner, Department of Ruman Services State of Minnesota

Mr. Chairman, Members of the Committee, thank you for the opportunity to submit testimony for the record on behalf of Governor Arne H. Carlson and the Minnesota Department of Human Services in support of the monthly distribution of the Earned Income Tax Credit.

Minnesota is a state that values work, responsibility, strong families and communities. In our industries and businesses we are a people who work hard, are motivated to achieve, and to innovate. Since 1990, over 100,000 private sector jobs have been created in Minnesota, testimony to the working spirit of our state.

One of the key components of the Minnesota Family Investment Program (MFIP) is to make work pay -- a family should always be better off working than being on welfare. And, even when the economy is good, many of the jobs do not pay enough to support a family. The problem is exacerbated when a family has only one wage-earner. These facts make it very difficult for many people to get off welfare and stay off. They also put many low income persons at risk of needing welfare at some time. In Minnesota, we want to support people in their efforts to become self-sufficient through working -- in other words, to make work pay.

One way of doing this is to make available to low income people the tax credits they have earned in a monthly, rather than a yearly basis. By thus increasing their monthly income, people will be able to avoid welfare altogether or to work their way off of welfare.

In Minnesota, we have begun to put a system in place to make these monthly payments. Beginning January 1, 1996, the TaxCredit Express program will package several state tax credits together into a monthly payment for low income people. We believe that this will be a significant step. It would be greatly enhanced, however, if the federal Earned Income Tax Credit (EITC) could be paid monthly as well. For example, a single parent with two children working full time at an hourly wage of \$5.60 per hour, child care costs of \$350.00 per month, and rent costs of \$400.00 would be able to leave Minnesota's welfare rolls because she would be receiving an additional \$2.87 per hour in monthly credits.

Although employers can pay the credit periodically through their payroll systems, very few do. We will use Minnesota's Department of Revenue to make the payments.

We have consulted with the key federal agencies, and they have advised us that a federal statutory change is needed before we can include the federal credit in TaxCredit Express. The Department of Human Services has consulted with Jimmy L. Smith, National Director of Submission Processing, Leslie B. Samuels, Assistant Secretary of Tax Policy, of the Department of the Treasury, and from David T. Ellwood, Assistant Secretary for Planning and Evaluation in the Department of Health and Human Services, regarding federal barriers to implementing our program. (Their official responses are available upon request.)

Here is how Minnesota's program will work in the first year. Approximately 30,000 wage-earning Aid to Families with Dependent Children (AFDC) recipients who are working would be eligible to apply for the monthly payment of the tax credits. Fifty percent (50%) of the tax for which they are eligible will be paid monthly. We estimate that, collectively, they will be paid \$10.4 million in monthly payments of state tax credits (Minnesota Working Family Income Tax Credit, Minnesota Child and Dependent Care Income Tax Credit, and the Minnesota Property Tax Refund for Renters. They will receive the remainder to which they are entitled after filing their tax return. The computer system that implements AFDC and other programs statewide will provide employment, income, and other verification, with both monthly audits and annual reconciliation. Incorrectly estimated pre-payments will be subject to collection. We plan to expand the program in future years to other low-income persons, using the information and experience of the first year to refine the program. Additionally, although the basic structure would require some alteration, this feature could be easily incorporated into any welfare system the state would develop in response to the changes currently under consideration.

As you can see, Minnesota is uniquely prepared to incorporate the Earned Income Tax Credit into its TaxCredit Express program. This program, especially with the addition of the EITC, will make the difference between welfare dependency and self-sufficiency for thousands of Minnesotans. I urge you to support federal legislation that would enable this program to make work pay.

STATEMENT OF REPRESENTATIVE JIM RAMSTAD WAYS AND MEANS OVERSIGHT AND HUMAN RESOURCES SUBCOMMITTEES JOINT HEARING ON THE EARNED INCOME TAX CREDIT June 15, 1995

I would like to thank both of our distinguished chairs for holding this joint hearing to discuss issues related to possible reform of the Earned Income Tax Credit (EITC).

The EITC, when properly utilized and targeted, can play a role in helping low-income taxpayers get off and stay off welfare.

In this context, I call the Committee's attention to the efforts of the State of Minnesota, which recently passed bold welfare reform legislation to help get families back to work.

The state plan, called the "Taxcredit Express Program," will provide lower-income people with monthly payments of federal and state income and property tax relief. Monthly payments will help families and workers meet their monthly expenses, allowing workers to support their families and avoid welfare or feasibly work their way out of welfare and into financial independence.

I strongly urge members to give their attention to testimony submitted by the State of Minnesota explaining the need for flexibility to enact their progressive approach to helping Minnesota's working families.

Again, I thank the chairs for calling this hearing and all the witnesses for being here today. I look forward to their testimony on the EITC.

IMPACT OF THE BARNED INCOME TAX CREDIT ON GUAM

Statement of Congressman Robert A. Underwood June 15, 1995

Mr. Chairman: Thank you for conducting this important hearing to review the Earned Income Tax Credit (EITC) program. Since the program was established in 1975, it has provided tax credits or direct payments to low income families with children. The EITC provides an incentive for work and is an important bridge between welfare and work. For many working families across the nation, this program has been beneficial in moving people away from dependency and into jobs.

However, I would like to point out how the EITC program affects Guam.

According to the Congressional Research Service of the Library of Congress, about 30 percent of working families with children are eligible for the EITC. When one looks at the demographics in Guam, there are more individuals in the lower rungs of the economic bell curve compared to the nation as a whole. Therefore, the percentage of working families in Guam who are eligible for EITC is double that of the U.S. mainland -- 60 percent. In fact, numerous taxpayers in Guam are taking advantage of the earned income tax credit.

Guam currently uses a mirror image of the Internal Revenue Code as its statutory basis for enforcing tax laws. Unless otherwise exempted, Guam is responsible for implementing tax laws passed by the United States Congress.

The enactment of the EITC is a federal policy which creates a burden on Guam's treasury. This is a federal mandate with no assistance to the local government. For example, during the last four available tax years reported by the Government of Guam's Department of Revenue and Taxation, about \$23 million of general revenue funds were paid for EITC obligations. Yet, no EITC funds were directly appropriated by the federal government to offset this tax burden.

This negative impact of federal policy is similar to the compact impact aid as it applies to Guam. The United States Government signed a compact of free association with certain Pacific island nations over a decade ago. One result of this agreement is that the citizens of these freely-associated states can reside in Guam and become eligible for many social services including welfare payments. Although the federal government was responsible for reimbursing the Government of Guam for about \$50 million in compact-related expenses, less than \$5 million has been appropriated to Guam for compact impact aid. This means that the local government assumes the burden of compliance with compact impact, with little help from the federal government.

The application of the EITC in Guam is currently under review. Congress, in passing the 1986 Tax Reform Act, gave Guam permission to enact its own tax code. We have established the Guam Tax Reform Commission to determine how we will delink from the Internal

Revenue Code. The EITC and its applicability to Guam is one of the issues currently before the Commission. I am hopeful that we will continue to make progress in resolving this and other related tax issues.

Meanwhile, I urge the committee to assess the impact of the EITC on many state and local jurisdictions and to correct the inequities where they exist. We, on Guam, can fulfill our obligation to help working families if the federal government will meet its responsibility to fund this mandate.

Again, I thank you for holding this hearing and request that my statement be made a part of the official hearing record.

United States House of Representatives
Committee on Ways and Means
Subcommittees on Oversight and Human Resources
Hearing on the Earned Income Tax Credit
Washington, D.C.
June 15, 1995

Statement of:

GEORGE K. YIN PROFESSOR OF LAW UNIVERSITY OF VIRGINIA SCHOOL OF LAW

Madame and Mr. Chairmen and Members of the Subcommittees:

In this statement, I explain how the EITC program can be reformed to accomplish its objectives more effectively and efficiently. I am a consultant to the Treasury Department's Task Force on Tax Refund Fraud, and have performed research on the EITC under the sponsorship of the American Tax Policy Institute, a nonpartisan organization interested in promoting sound tax policy, but I submit this statement in my individual capacity and not as representative of any group.

A. Objectives and growth of the program; the continuing problem of noncompliance.

The EITC program provides cash assistance to low-income working families by means of a refundable income tax credit. The program is intended to rebate the payroll taxes of such families and to provide them with greater income security and a work incentive, all very laudable goals. As a result, since its inception, the program has benefited from broad, bipartisan support and,

particularly over the last ten years, it has grown tremendously fast. The following table compares the growth in total federal expenditures for the major means-tested income-support programs between 1986 and 1996:

GROWTH IN FEDERAL EXPENDITURES FOR MEANS-TESTED INCOME-SUPPORT PROGRAMS, 1986-96

Total Federal Expenditures and Growth Rates

Program	1986 spending	1993 spending	1986-93 increase	1996 spending (proj.)	1986-96 increase (proj.)
EITC	2.0	13.2	560%	25.1	1155%
SSI	9.5	20.3	114%	27.0	184%
food stamps	12.5	24.8	98%	n/a	n/a
AFDC	9.2	13.8	50%	14.8	61 %

Source: U.S. House Comm. on Ways & Means, Overview of Entitlement Programs: 1994 Green Book: Background Material and Data on Programs within the Jurisdiction of the Committee on Ways and Means (Comm. Print 1994) at 262 (Table 6-25), 389 (Table 10-21), 704 (Table 16-13), 782 (Table 18-11). All spending figures are in billions of nominal dollars.

The table indicates that since 1986, the EITC program has grown far faster than all of the other major means-tested income-support programs, with the nominal growth in the EITC program between 1986 and 1996 projected to be over 1000 percent. According to these figures, by 1996, federal spending for the EITC program will be over one and one-half times as much as the federal share of the AFDC program.

Unfortunately, the strong support for the program and its rapid growth have not been accompanied by close scrutiny of its basic design and operation, with predictable consequences. There is not yet any reliable data on

noncompliance rates following the major changes to the program enacted in 1993 and first effective in 1994 and subsequent years. But in a study of EITC-related returns filed for tax year 1993 -- when the EITC program was considerably smaller than its projected 1996 levels -- the IRS found an excessive EITC claim rate of about 26 percent (by dollars excessively claimed) and 38 percent (by number of excessive claims), and an underclaim rate of about 1 percent (by dollars) and 6 percent (by claims). If the rate of underclaims represents a very rough indication of the level of inadvertent taxpayer error, these figures suggest an extraordinarily high intentional error rate, in the range of 25 percent of dollars claimed and 32 percent of total claims. Although the 1993 tax year study only involved a small sample of tax returns claiming the EITC and filed electronically during two weeks in January, 1994, the results are consistent with those of earlier IRS studies conducted in 1982, 1985, and 1988. In short, the program has grown very large very quickly, probably too quickly for any agency to administer effectively.

¹See Hearing Before the Senate Committee on Finance on the Earned Income Tax Credit Program, 104th Cong., 1st Sess. (1995) (statement of Margaret Milner Richardson, Commissioner of Internal Revenue) [hereinafter Richardson Finance Committee statement] at Appendix, p.5.

²In its preliminary analysis of the same returns involved in the study, the IRS estimated the intentional error rate to be 12 percent of dollars claimed and 13 percent of total claims, still remarkably high figures. See U.S. Gen'l Acctg. Ofc., Earned Income Credit: Targeting to the Working Poor, GAO/GGD-95-122BR (March 1995), p.15. These estimates were largely based upon the subjective assessment of the reviewing IRS agent as to the reason for the error, see Richardson Finance Committee statement, note 1, at Appendix, p.3, and were not updated in Commissioner Richardson's latest testimony.

IRS Commissioner Richardson has expressed some optimism that studies conducted earlier this year of the 1994 tax year will reflect a declining EITC error rate.³ But whatever the latest statistic, design features of the present program virtually guarantee continuing administrative difficulties in the future. Those features include --

- a sizable cash benefit potentially available to any taxpayer willing to file a claim and to certify himself or herself as eligible;
- administration of the program by an agency, the IRS, whose mission
 has not traditionally included the delivery of welfare-type benefits;
- the existence of tax laws and administrative procedures designed to
 prevent understatements of income, not overstatements;
- a complex but largely unsupervised claims process involving claimants with relatively low levels of education;
- eligibility rules based in part upon complicated family composition and responsibility issues; and
 - constantly changing eligibility standards.

In the following sections, I describe how major reform of the program holds out the possibility of accomplishing its objectives more effectively and with less government waste.

³See Hearings Before the Senate Committee on Governmental Affairs on the Administration, Design, and Effectiveness of the Earned Income Tax Credit, 104th Cong., 1st Sess. (1995) (statement of Margaret Milner Richardson, Commissioner of Internal Revenue), at 13-14.

B. Providing some portion of the EITC benefit as a direct government expenditure.

Most analysts believe that although the tax system promotes higher participation in a welfare-type program like the EITC, the potential for noncompliance is also greater. In other words, the tax system transfers benefits pretty effectively, both to those entitled to the benefit and, unfortunately, to those not so entitled. Indeed, in some research I recently completed with several others, we tentatively arrived at exactly that conclusion. Compared to programs like AFDC and food stamps, we found that the EITC program has a higher participation rate but also a higher noncompliance rate. Thus, if Congress is willing to sacrifice some participation in exchange for improved compliance, it ought to reconsider whether the tax system is the appropriate vehicle to deliver the welfare element of the EITC benefit.

I realize that providing even some part of the EITC benefit as a direct government expenditure rather than through the tax system is contrary to much academic thinking and would have its drawbacks. After all, the tax system is thought to promote participation, eliminate the stigmatizing effect on program beneficiaries, and provide benefits with lower administrative costs than a direct

⁴We found the EITC participation rate in 1990 to be between 75 and 86 percent, or more than recent participation estimates of between 62 and 72 percent for AFDC and between 54 and 66 percent for food stamps. But an EITC ineligibility rate of around 32 percent was considerably higher than excessive claim rates of six percent for AFDC and 7.3 percent for food stamps in FY 1990. See George K. Yin, John Karl Scholz, Jonathan B. Forman, and Mark J. Mazur, Improving the Delivery of Benefits to the Working Poor: Proposals to Reform the Earned income Tax Credit Program, 11 Amer. J. Tax Policy 225, 244, 252-53 (1994).

expenditure program.⁵ But the disadvantages of delivering the welfare element of the EITC through the tax system are also increasingly evident. Aside from compliance considerations, here are some additional reasons to favor delivery through an expenditure program:

1. Consolidation of budget responsibility. -- Under current law, budget responsibility over welfare-type programs is dispersed -- the EITC, for example, is provided through the federal tax system whereas welfare benefits are provided as direct federal and state expenditures. The dispersal of responsibility may promote a wasteful use of government resources. For example, at a recent Senate hearing, a witness testified that welfare caseworkers may actually encourage welfare recipients to file exaggerated EITC claims in order to maximize the amount of EITC benefit available to them.⁶ Quite clearly, there would be no incentive for that particular form of noncompliance if budget responsibility over the EITC program were consolidated with that of other welfare programs.

More generally, Congress is presently considering the conversion of

⁵See Hearing Before the Senate Committee on Finance on the Earned Income Tax Credit Program, 104th Cong., 1st Sess. (1995) (statement of Lynda D. Willis, Assoc. Dir., Tax Policy and Admin. Issues, Gen'l Gov't Div., U.S. Gen'l Acctg. Ofc.) [hereinafter Willis statement] at 7-8 (administrative costs of direct expenditure programs much higher than those of tax system). But the deadweight loss from noncompliance should also be considered in comparing the administrative costs of the two types of programs. Further, as discussed later in the text, the *duplication* of costs would seem, in any event, to be wasteful.

⁶See Hearings Before the Senate Committee on Governmental Affairs on the Administration, Design, and Effectiveness of the Earned Income Tax Credit, 104th Cong., 1st Sess. (1995) (statement of Donald R. Huston).

various entitlement programs benefiting low-income households into block grant programs to be administered by the states. In that consolidation effort, Congress ought not to overlook the EITC program. As currently designed, the EITC program is an open-ended entitlement program administered by the federal government. Claimants meeting the conditions of the tax statute and, indeed, far too many who don't meet those conditions, are "entitled" to the EITC cash benefit. It may well be that Congress wants to confer "preferred" status on the EITC program and maintain its entitlement nature. But that judgment should be made affirmatively, and not by default due to the fact that the program is part of the tax system. If integrated with the welfare system, the EITC program could be a valuable source of funds to finance work initiatives to be administered by the states.

2. Elimination of duplicate government bureaucracies. -- Perhaps the most important group of EITC recipients are those who are still receiving some amount of welfare benefits. They are likely to be very poor, yet may be trying to work themselves off of welfare. Unfortunately, such families must encounter two bureacracies, the IRS and the welfare system, to receive the benefits to which they are entitled. Indeed, because of the EITC program, the IRS is gradually duplicating the large and well-developed bureaucracy already in existence in the welfare system to deal with questions of eligibility. Integration of some portion of the EITC program with the welfare system would eliminate this wasteful duplication of tasks.

To illustrate the problem, consider the rough "wealth test" recently enacted by Congress as a condition for EITC eligibility. As the subcommittees know, welfare programs have long contained far more precise (and restrictive) wealth and asset limitations for welfare eligibility. It would be much more efficient for a single bureaucracy to administer appropriate wealth and asset restrictions for both types of benefits under a single set of rules.

In fact, if it is not soon consolidated with welfare programs, I predict the EITC program will shortly require more refinements requiring the use of further IRS resources. For example, some of my law students this past year, some with responsibility for young children and some without, discovered that working for six to eight weeks during the summer at Wall Street law firms made them newly eligible for the EITC benefit. This is a surprising result given the high rate of compensation for their work, the \$80,000 per year or more some of them will earn right after graduation, the support provided to some of them by relatives and friends while in school, and the *potential* of such support available to some of them from their wealthy families. Yet because EITC eligibility relies upon the income of the tax filing unit, which does not include household or parental resources and income (other than income of a spouse), and considers only current

⁷See the Self-Employed Health Insurance Act of 1995, P.L. 104-7, § 4 (1995) (denying the EITC to taxpayers whose combined taxable and tax-exempt interest, dividends, and positive non-business rents and royalties for the taxable year exceed \$2,350).

^{*}For example, AFDC recipients generally may not have more than \$1,000 in resources, not including the value of their home and certain other basic maintenance items. See 42 U.S.C. § 602(a)(7)(B) (1994); 45 C.F.R. § 233.20(a)(3)(i)(B) (1993).

levels of annual income, my students are eligible for the benefit. In contrast, most welfare programs at least consider the income and resources of other persons in the same household as the recipient in determining eligibility, make eligibility decisions based upon monthly information, and bar certain full-time students from receiving benefits altogether.

Let me make plain to the subcommittees that I am *not* urging enactment of a new, "anti-law student" condition to EITC eligibility although that may be the unintended consequence of my testimony. I am simply using the example as an illustration of the type of refinements to the EITC program that may be necessary if Congress really wants to target that benefit for the truly deserving. Why require the IRS to enforce all of those rules when they already exist and are being implemented by comparable spending programs?

3. Improving the effectiveness of work incentives. — A final factor concerns the effectiveness of the EITC as a work incentive, and here, let me relate to the subcommittees a recent experience I had observing a low-income taxpayer being provided tax return assistance by a VITA volunteer. At the outset, the taxpayer expressed concern that because she had had only a small amount of taxes withheld during the year, she might owe some money to the IRS. After examining her situation, the VITA volunteer proceeded to inform her that she was entitled to about a \$2,000 refund from the IRS. Members of the subcommittees, I wish I were capable of describing for you the look on that woman's face.

Now that was obviously a very pleasant piece of information for the volunteer to convey and the taxpayer to receive. But I kept thinking about the work incentive effect of the \$2,000. Did the money have any effect on her decision to work, or to continue and increase her work effort? Or was it perceived simply as a return of overwithheld taxes, a product of the VITA volunteer's ingenuity, or as former CBO director Robert Reischauer once commented, a windfall like a winning lottery ticket, all of which might, in fact, induce less work in the future? In short, because the EITC benefit is delivered through the tax system, which is a mystery to most Americans, because well over half of EITC recipients obtain some type of assistance in filing their tax return, and because virtually all recipients obtain the benefit as a lump sum rather than periodically in their paychecks, it is not at all clear what the recipients comprehend when they receive their EITC check, with resulting uncertainty as to the labor supply effect of the credit. If the benefit were provided as a direct expenditure, the critical link between work and reward could be made more clear.

C. Redesigning the EITC program within the tax system.

Assuming the EITC benefit will continue to be provided through the tax system, what other design changes might eliminate waste and improve its

⁹See Steven Mufson, Clinton's Social Safety Net: A Bigger Tax Credit, Washington Post, Mar. 6, 1993, p. A1.

¹⁰See U.S. Jt. Comm. on Tax'n, Present Law and Issues Relating to the Earned Income Tax Credit (JCX-24-95), June 7, 1995, at 11.

effectiveness? Here are two ideas. First, Congress could replace much of the program with an exemption from the payment of payroll taxes on the first \$5,000 or \$10,000 of wages.¹¹ The exemption might apply to the employee or the employer's portion of those taxes, or both. As the subcommittees know, the EITC originated in part as an effort to rebate to low-income workers the payroll taxes collected from them. Instead of collecting such taxes and then trying to return those amounts to workers in the form of the EITC, it would make much more sense simply to refrain from collecting the payroll taxes in the first place.

The beauty of this idea is that an exemption could be easily administered by employers through an adjustment to the payroll tax withholding tables. Taxpayers would not need to file returns to get the benefit -- the ultimate simplification for them -- so participation levels would be high. Further, the link between work and reward would be more evident because the benefit would arise in each paycheck rather than as a lump sum at the end of the year. Finally, compliance could be expected to be very high because there would be no net cash benefit being transferred by the government back to taxpayers. Hence, the incentive to commit fraud to obtain the benefit would not be nearly as strong as under the current program.

To be sure, many in Congress might be fearful of tampering with the Social Security system. They might object to a proposal that decouples the link

¹¹See George K. Yin & Jonathan B. Forman, Redesigning the Earned Income Tax Credit Program to Provide More Effective Assistance for the Working Poor, 59 Tax Notes 951 (1993).

between Social Security taxes and benefits. The reality, however, is that for low-income workers, the EITC program has *already* decoupled the link between taxes and benefits. Such workers ostensibly pay Social Security taxes, and thereby become entitled to Social Security benefits, even though the EITC payment completely reimburses them for their Social Security contributions. They, in effect, pay *no* Social Security taxes yet are entitled to receive Social Security benefits. My proposal is simply to accomplish the exact same result but in a direct fashion, by not collecting the Social Security taxes in the first instance.

Another reform idea is to provide some of the EITC benefit to low-income workers through their employers.¹² For example, a tax credit could be awarded to the employer of certain qualifying workers. The theory is that the same general transaction -- the hiring and compensation of a qualifying worker -- can be subsidized by providing a direct benefit to *either* the employer *or* the worker in the transaction if the benefit is capitalized in the compensation arrangement.

Once again, the advantage of this idea would be to simplify administration of the program. It would be easier to administer because of the far fewer numbers of employers than workers. Further, employers are more used to dealing with the IRS than are low-income workers so that at least noncompliance due to unintentional errors should be reduced. Finally, the greater dollar amounts involved per-employer rather than per-worker would make IRS enforcement efforts more cost-effective. In a sense, this idea would convert part of the EITC

¹²See Yin et al., note 4, at 286-94.

program into a mini-block grant program to be administered by the business community rather than by the federal government.

True, the experience with a similar employer tax credit, the targeted jobs tax credit (TJTC), has not been very positive. But a number of features unique to the TJTC program -- its start and stop history, the limited duration of the subsidy to a portion of first year wages, the highly targeted nature of the subsidy directed towards individuals like ex-convicts who are undoubtedly the subject of negative stereotyping, to name a few -- may help to explain that program's ineffectiveness. In contrast, a broadly applicable, employer-based subsidy program which is permanent has the potential for avoiding many of the TJTC's pitfalls.

D. Disentangling the EITC program.

Perhaps the optimal reform would be to disentangle the various components of the EITC program and to divide the program into its natural pieces. For example, a small part of the EITC benefit would fit comfortably within the tax system because it reduces income taxes otherwise due. Another part, intended to offset the taxpayer's payroll tax liability, could be provided more efficiently by means of a payroll tax exemption. Still another part, intended to provide additional income support for very poor workers who also receive welfare benefits, might be delivered through the welfare system. Finally, the portion of the benefit designed to subsidize children could be incorporated into

a per-child tax credit or an expanded dependency exemption.

E. Smaller changes to the design of the existing program.

Finally, let me offer the subcommittees four additional suggestions to improve compliance without a major redesign of the EITC program.

1. Probably the single best step Congress can take to curb noncompliance without a major change is to restrain the growth of the program and the amount of benefit provided. Under current law, the size of the benefit available from the program no longer bears any relationship to taxes owed by the person making the claim. Accordingly, given our self-assessment tax system, it is just too easy to file a fraudulent claim that is virtually undetectable by the IRS.

For example, by 1996, an individual with two or more qualifying children who reports \$8,000 in self-employment income would be entitled to an EITC benefit of 40 percent of that amount, or \$3,200. If that amount were reported, the individual would owe a self-employment tax of about \$1,200, but no income taxes. By reporting that income, therefore, the individual would receive a net cash benefit from the government of about \$2,000 (\$3,200 - \$1,200) plus Social Security retirement credit. There is therefore a strong incentive in certain cases to falsify the existence of income. ¹³

Could the IRS easily establish that the individual in fact earned less than

¹³See C. Eugene Steuerle, Two Problems with the New Earned Income Tax Credit, 48 Tax Notes 1691 (1990); C. Eugene Steuerle, The "Superterranean Economy," 51 Tax Notes 647 (1991); C. Eugene Steuerle, The IRS Cannot Control the New Superterranean Economy, 59 Tax Notes 1839 (1993).

the amount of income reported? No. The tax laws and administrative procedures are generally designed to ferret out income *under*statement cases, not the reverse situation of possible *over*statements of income. Information filing, for example, permits the IRS to verify that taxpayers do not omit items of income on their tax returns. But if taxpayers voluntarily report *more* income than their paper trail might suggest, there is little the IRS can do to detect an error in the absence of a full-scale audit.¹⁴

2. A second suggestion is to change the program so that the size of the EITC benefit is determined based on income amounts that can be easily verified by the IRS. For example, the benefit could be calculated, as under current law, as a percentage of earned income, but only earnings reported on a W-2 form would qualify. Further, the EITC award to a taxpayer might be delayed until the IRS receives a matching and verified copy of the W-2 from the employer. This rule would preclude a taxpayer from getting any EITC based on

¹⁴The concern about the potential overreporting of income may be more than just theoretical. In its final report of the 1993 tax year study, the IRS discovered an interesting "bubble": compared to all EITC claimants for the year, a higher percentage of those sampled (early electronic filers claiming the EITC) reported AGI in the \$10,000 to \$15,000 range. See Richardson Finance Committee statement, note 1, at Appendix, p.7. For 1993, the maximum credit was available to taxpayers with income between roughly \$8,000 and \$12,000. Thus, if one assumes that early electronic filers are more likely to be noncompliant than the general filing population, the bubble may reflect an effort by taxpayers to report income levels producing the maximum EITC benefit.

The IRS report also indicated that compared to all EITC claimants, a much smaller percentage of those sampled reported having any schedule C business income. Id. This statistic may simply evidence the inability of taxpayers with schedule C income to file returns very early in the filing season. From a noncompliance standpoint, it suggests that if the taxpayers sampled erroneously reported income in the maximum credit range, they may have utilized falsified W-2 forms to accomplish their objective.

self-employment income and various other forms of earned income, all items difficult for the IRS to verify, as well as earnings listed on a fabricated employee or employer W-2 form. This change would also simplify the process of claiming the credit for all taxpayers.

According to the GAO, the IRS does not currently have the computer capability to match employer-provided wage information with taxpayer-provided information prior to the normal processing of the taxpayer's return. Thus, this suggestion would result in some delay in the portion of a taxpayer's refund relating to the EITC. Delaying EITC payments is clearly undesirable, and every effort should be made to accelerate the IRS's matching capability. It should be borne in mind, however, that some part of the EITC population voluntarily chooses to delay their receipt of the benefit by electing not to obtain the credit through the advance payment option. Thus, a brief delay in benefit payments may not be as objectionable as first appears.

3. A third suggestion is to require as a condition of receiving the EITC that a taxpayer reside with a qualifying child for substantially all of the taxable year rather than for just more than half of the year. Under current law, the qualifying child requirement is the source of much confusion and potential

¹⁵See Willis statement, note 5, at 20.

¹⁶According to the GAO, despite many steps recently taken by the IRS to publicize and encourage the availability of the advance payment option, as of May 26, 1995, only about one percent of EITC recipients had reported using the option for tax year 1994. See Willis statement, note 5, at 19. No doubt, some significant percentage of those not using the option still are not aware of it, but its lack of use must also reflect some degree of taxpayer preference.

fraud. More than one taxpayer, or the wrong taxpayer, may try to claim a particular child, and some taxpayers even claim fictitious children. This change would do nothing to curb the claiming of fictitious children, but it would provide a more easily verifiable test, and would clear up some of the confusion arising in situations where a child lives in several different homes in the course of a year. Unless a child resided with the taxpayer for substantially all of the taxable year, no credit would be available to the taxpayer.

4. Finally, Congress ought to consider barring the claiming of the EITC on electronically filed tax returns. Just as a burglar is going to burglarize the most vulnerable house on the street, those of a criminal mind are constantly casing the soft spots in our federal tax and transfer system. Surely one of the most vulnerable points is the receipt of EITC money through an electronically filed return. The speed with which a fraudulent claim may be processed and awarded makes that transaction a particularly appealing one to criminals.

To be sure, the IRS has taken important steps during this filing season to curb fraud effected through electronic filing, and Congress should probably await an evaluation of the IRS's latest efforts before barring electronic EITC claims altogether. But there is no strong policy reason to expedite EITC claims, particularly if doing so makes the system more susceptible to fraud.

I recognize that the IRS, tax preparation services, and certain financial institutions may all object to a complete bar of electronically filed EITC claims. The short answer to those in the private sector is that they are not the intended

beneficiaries of the EITC program or of electronic filing. If their incidental benefits are limited by this change, so be it. As to the IRS, I think the burden is on them to establish sufficient control over the problem to justify the continued availability of electronic filing in this area.

COAL INDUSTRY RETIREE HEALTH BENEFIT ACT OF 1992

THURSDAY, JUNE 22, 1995

HOUSE OF REPRESENTATIVES,
COMMITTEE ON WAYS AND MEANS,
SUBCOMMITTEE ON OVERSIGHT,
Washington, DC.

The Subcommittee met, pursuant to call, at 10 a.m., in room 1100, Longworth House Office Building, Hon. Nancy L. Johnson (Chairman of the Subcommittee) presiding.
[The advisory announcing the hearing follows:]

ADVISORY

FROM THE COMMITTEE ON WAYS AND MEANS

SUBCOMMITTEE ON OVERSIGHT

FOR IMMEDIATE RELEASE June 7, 1995 No. OV-9

Johnson Announces Oversight Hearing on

CONTACT: (202) 225-7601

Congresswoman Nancy L. Johnson (R-CT), Chairman of the Subcommittee on Oversight of the Committee on Ways and Means, today announced that the Subcommittee will hold a hearing to examine the operation of the Coal Industry Retiree Health Benefit Act of 1992. This legislation, which was enacted as part of the Energy Policy Act of 1992, related to funding the health benefits of retired coal miners. The hearing will take place on Thursday, June 22, 1995, in the main Committee hearing room, 1100 Longworth House Office Building, beginning at 10:00 a.m.

Coal Industry Retiree Health Benefit Act of 1992

This hearing will feature invited witnesses only. In view of the limited time available to hear witnesses, the Subcommittee will not be able to accommodate requests to testify other than from those who are invited. Those persons and organizations not scheduled for an oral appearance are welcome to submit written statements for the record of the hearing.

BACKGROUND:

The Coal Industry Retiree Health Benefit Act, which was enacted as part of the Energy Policy Act of 1992, established rules for the financing and provision of health benefits to retired mine workers who were members of the United Mine Workers of America (UMWA) and their families.

Prior to the Act, the UMWA and the Bituminous Coal Operators Association entered into a series of collectively bargained agreements to provide members of the UMWA with health and disability benefits. The trusts established to provide these benefits encountered financial difficulties. Of particular concern was the financing of benefits for so-called "orphan retirees" and related beneficiaries whose former employers were no longer in business or were no longer signatories to the collective bargaining agreement (the so-called "reachback companies").

To provide a more stable financing mechanism for coal miners' health and disability benefits, the Act created two new health benefit funds, established eligibility criteria, provided for the assignment of individual beneficiaries to specific companies that will be held responsible for paying premiums on their behalf, and created financing mechanisms. Under the Act, a company is charged an insurance premium based on the number of beneficiaries assigned to the company in its role as the retiree's "last signatory employer." Companies responsible for paying the designated premiums include any company that signed any National Bituminous Coal Wage Agreement since 1950 or any related company as defined under the Act. To cover costs associated with beneficiaries who cannot be assigned, for the first three years after enactment, up to \$70 million per year is transferred into the Combined Fund from the surplus in the UMWA 1950 Pension Fund. In addition, interest earnings of the Abandoned Mine Reclamation Fund are transferred into the Fund annually beginning on October 1, 1995. Costs for unassigned beneficiaries in excess of the transfers are allocated to the signatory and reachback companies in proportion to their share of assigned beneficiaries.

The retiree health benefits provisions originated in the Senate; there were no comparable provisions in the House bill. The provisions became effective October I. 1993.

FOCUS OF THE HEARING:

The hearing will examine: (1) the general effectiveness of the 1992 provisions; (2) the current and future financial status of the Combined Fund; (3) the impact of premiums on small producers and reachback companies; (4) the methods and procedures for collecting premiums and penalties; and (5) the commitment of Social Security Administration resources to calculating premiums, assigning beneficiaries to operators and considering appeals.

"The coal miner retiree health provisions of the 1992 Energy Act addressed a terribly complicated and contentious matter without any input from the House of Representatives," noted Chairman Johnson. "As part of the Ways and Means Committee's ongoing oversight responsibilities, it's time to take a look at whether these provisions are working as they were intended."

DETAILS FOR SUBMISSION OF WRITTEN COMMENTS:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement, with their address and date of hearing noted, by the close of business Friday, July 7, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each enterence presented for pensing to the Committees by a witness, any writess attenuent or exhibit substituted for the printed record or any writtee communits in response to a request for writine communit mante confirms to the graduations intend below. Any statement or exhibit not in compliance with these graduations will not be printed, but will be maintained in the Committee Size for review and nos by the

- All statements and any necesspanying exhibits for printing must be typed to single space on legal-size paper and may not exceed a total of 10 pages including attachments.
- Copies of whole decements submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraghraped. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.
- A winness appearing at a public booring, or relumining a statement for the record of a public bearing, or redunining written comments in response to a published reposes for comments by the Committee, must include on his statement or redunining at life of all clients, persons, or organizations on whose bolaid the witness appears.
- 4. A supplemental short most accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a napical settless or amounts of the numerous and recompanyisations in the full statement. This negationness flowled will not be included in the principle record.

The above restrictions and finitedness apply only to material being ordented for printing. Statements and exhibits or outplementary material submitted solely for distribution to the Hembers, the press and the public during the ocurse of a public bearing may be estimated in other forms.

Note: All Committee advisories and news releases are now available over the Internet at 'GOPHER.HOUSE.GOV' under 'HOUSE COMMITTEE INFORMATION'.

Chairman JOHNSON. I would like to call the hearing to order.

My Ranking Member will be along soon, but I must excuse myself briefly shortly to testify on the Superfund issue before another Committee, so I would like to start this morning promptly and make a few comments. Then, I will yield the chair to my colleague, Mr. Hancock.

Someone once said that an elephant is a mouse built to government specifications, and it might be said that this morning we are here to examine such a mouse. The Coal Industry Retiree Health Benefits Act of 1992 addressed a legitimate concern about the solvency of the UMWA, United Mine Workers of America, 1950 and 1974 health benefit funds and the ability of those funds to provide benefits for retired coal industry workers and their eligible dependents.

It is less clear whether Federal Government intervention on the order provided under the coal act was an appropriate response. You will recall that it did not get the usual legislative consideration.

I have been trying to think of another instance in which private sector retiree benefits have been negotiated under a collective bargaining agreement, with responsibility for calculating premiums, assigning beneficiaries to specific employers, and considering

appeals delegated to the SSA.

I have also been trying to think of another instance in which private sector retiree benefits, negotiated under a collective bargaining agreement, are financed by premiums that are subject to enforcement by the Treasury. I am deeply troubled by the thought that as other employers have difficulty in funding retiree health benefits in the future, public policymakers might turn to the 1992 statute as a model.

Like the story of the "Blind Men and the Elephant," each interest comes to this issue with its own interpretation of reality and, in

many cases, even with its own facts.

We have been told that the 1992 statute is the only way to provide fairness to the BCOA, Bituminous Coal Operators' Association, Inc., companies. We have been told that we should provide relief only to the super-reach-back companies, that there should be a carve-out for small companies or hardship cases, and that such a carve-out overlooks inequities faced by larger, profitable companies.

We have also been told that the Combined Benefit Fund is in surplus and is likely to remain so, that the surplus is an anomaly

that will soon disappear.

I am not so naive as to believe that we will resolve all of these disagreements today, but it is time to take a look at how the statute is functioning and to establish a factual foundation for considering whether revisions are needed.

It is our intent that every point of view will be heard today. That

will take some time.

Welcome. The opening witnesses are at the table.

Mr. Thornton, the Deputy Tax Legislative Counsel for the Department of Treasury, we will start with you, and my apologies for having to be gone.

Before you proceed, there are other Members of the panel who

would like to make a statement.

Mr. Hancock.

Mr. HANCOCK [presiding]. Thank you, Madam Chairman.

We will go through this quickly. We have a vote on.

I commend you for holding this hearing today. It is about time we got to the bottom of some of the issues surrounding the coal act of 1992 and the retroactive tax which has been imposed on companies that have been out of the bituminous coal business for decades.

I will say at the outset, I have no constituent interest in this issue. I just believe that the coal act sets a bad precedent and

represents bad policy judgment by the Congress.

Perhaps if Congress had properly considered the legislation, reason would have prevailed. Instead, the coal act was added to the Energy Policy Act in conference without prior consideration by the Ways and Means or Finance Committees. Had this issue been properly considered, I am sure that many Members of Congress would have had major concerns over the precedent set by this Act.

I was among only 60 Members of the House who voted against the energy act. Now as I look back at it, that may have been the

best "No" vote I ever cast.

Make no mistake about it, the coal act is nothing more than a Congressional bailout of a union benefit plan orchestrated by the Mine Workers Union and those companies which remain in the bituminous coal business. By imposing this tax, which is paid into a private health care plan, Congress has become the ultimate and final arbiter in what was an ongoing collective bargaining process.

Let me remind everyone how we got into this situation. The union and the BCOA, which is comprised of a dozen or so large companies which still mine bituminous coal, got together and formed a coalition 4 years ago to pursue alternative means, including legislation, of solving a health care problem they claimed they could not resolve through normal collective bargaining channels. The BCOA companies pumped almost \$3 million into the Coalition and the union contributed about \$100,000, but also devoted considerable manpower, material and other resources to the effort.

Let me read just one paragraph from a memorandum the Legislative Director sent to the president of the union in April

1991.

Creating the atmosphere of crisis is obviously important to our strategy. Getting Congress to act is always difficult in the absence of a pressing need. We are treading a fine line in creating a crisis among the pensioners that can be controlled by us. Using the threat of a strike will be necessary to galvanize interest, but the reality of a strike or a cutoff of benefits creates their own set of problems.

So, the Coalition pushed legislation that used a pension fund surplus, a transfer from the Abandoned Mine Lands Reclamation Fund and reached back to 1950 to impose retroactive taxes on almost 700 businesses.

Was there truly a crisis?

When you look at the status of the health benefit fund today, you see a totally different picture. Not only has every health benefit claim been paid in full and no retiree or dependent been denied a claim due to lack of funds, the UMWA Combined Benefit Fund holds an enormous surplus.

If there was ever any real crisis at all, it was caused by the BCOA's 1988 change in the way health benefit contributions to the

1950 fund were calculated. By changing their funding calculation from a "per-ton" to a "per-hour" contribution method, the BCOA drastically reduced the amount of money they were paying for retiree health benefits. Because tonnage production remained constant and hourly productivity increased, this change saved BCOA

companies enormous sums.

Of course, by spreading the cost of these health benefits around to reach-back companies under the coal act, the BCOA companies saved even more. By their own admission, these businesses figure to save \$125 million per year between 1993 and 2043. As we listen today to witnesses who say that any change in the coal act will jeopardize a delicate compromise, I hope you question whose interest is served in maintaining the status quo.

Not only have the reach-back companies had to foot the bill for this Act, vast taxpayer resources are being expended to implement it. To start with, the taxpayers gave the Social Security Administration \$10 million to assign retirees to the reach-back companies. That money is long gone, but the cash register is still running at

SSA.

It is troubling to imagine how much taxpayer money the Departments of Health and Human Services, Labor, Treasury, Justice and others have spent to interject the Federal Government into a private insurance program. In addition to these costs, the Treasury has lost millions in revenue because the money sent to the union for these health care premiums became fully deductible under the act.

John Myers and I have introduced legislation to correct this mess without jeopardizing any benefits enjoyed by those covered by the fund. Twenty Members of the Ways and Means Committee and the Majority Leader in the House have signed on as original

cosponsors.

Clearly, some changes will occur in this Act. I consider our bill a compromise between the status quo and outright repeal of the coal act. However, I want to make it clear that I will consider any option that permanently eliminates the onerous retroactive tax that has been placed on the backs of reach-back companies. Since I am Acting Chairman right now, I do not guess I need to thank the chairman. But we are looking forward to the testimony and we are going to recess now to go vote and we will be right back.

Thank you.
[Recess.]

Mr. HERGER [presiding]. We will reconvene the Subcommittee on

Oversight, Committee on Ways and Means.

If our first witness on our panel, Michael Thornton, Deputy Tax Legislative Counsel for the U.S. Department of Treasury will proceed, please.

STATEMENT OF MICHAEL B. THORNTON, DEPUTY TAX LEGISLATIVE COUNSEL, U.S. DEPARTMENT OF TREASURY

Mr. THORNTON. Thank you.

Mr. Chairman and distinguished Members of the Subcommittee, I am pleased this morning to present the views of the Treasury Department regarding the Coal Industry Retiree Health Benefit

Act of 1992, which I will refer to as the coal act.

The coal act was enacted as part of the Energy Policy Act of 1992. Its goal was to ensure adequate funding of health benefits for retired miners and their families. In 1993, this administration testified before the Committee on Ways and Means in strong support of the goals of this Act. We continue to strongly support those goals.

The Subcommittee has asked us to address several specific issues regarding the coal act: Its general effectiveness, its impact on certain companies, and the procedures for collecting premiums and

penalties.

The coal act appears to have been effective in ensuring that benefits that were promised to retired union miners and their families

continue to be paid without interruption.

We understand that currently the combined fund is in sound financial condition, although its future financial status is unclear. According to recent analysis by the GAO, the combined fund reported a surplus of about \$115 million as of September 30, 1994. However, GAO has stated that future annual surpluses may not occur and annual deficits may erode the current surplus over time. Given this uncertain financial outlook, the administration would be troubled by any modifications to the coal act that would diminish the fund's security.

Finally, the coal act appears to have been effective in ensuring collection of the required premiums, with about 91 percent of the assessed premiums having been collected by the combined fund.

It is difficult if not impossible to isolate the effects of the coal act on the coal industry as a whole or on certain categories of companies within the coal industry. Factors independent of the coal act have reduced the number of mines and mining companies. These factors include major changes in the coal industry, such as a shift to western coal and declining real coal prices. We are aware that concerns have been expressed the coal act may have contributed to financial hardship for certain small companies. However, the administration is concerned that legislative proposals that would provide relief based solely on size or reach-back status could benefit some companies that are not actually experiencing hardship, weaken the combined fund and threaten the health benefits of the retirees and their families.

Responsibilities for administering the combined fund are divided among three entities: the combined fund itself, which is a private nongovernmental multi-employer benefit plan, the SSA, and IRS.

The trustees of the combined fund are responsible for collecting the premiums based on information supplied to them by the SSA. The trustees are restricted by fiduciary duty to the fund from waiving collection of premiums. However, to maximize the fund's return, the trustees may take collection and litigation risk into account in resolving delinquent accounts.

The IRS is not responsible for collecting the premiums, but is responsible for assessing any penalties for noncompliance. The penalty for failure to pay a required premium is \$100 per day per beneficiary. Under current law, IRS is limited in its ability to waive the penalty. The situation has not yet created problems because the IRS so far has not assessed the penalty. In its testimony this morning, the IRS will address this matter in detail.

We are concerned that the \$100 per-day penalty may be excessive. The first month's penalty alone would exceed the annual premium. As a general policy matter, this level of penalty raises questions in light of the relative level of premiums to which the penalty applies. A revised penalty structure might in certain circumstances provide a better enforcement tool.

If the current penalty structure is retained, it may be desirable to consider limiting the penalty or granting the IRS additional

discretion to waive or reduce the penalty in certain cases.

We are willing to work with the Subcommittee to address this and other concerns in a manner that preserves the security of the fund and guarantees that health benefits for retired miners and their families will not be interrupted.

This concludes my prepared remarks. I will be happy to answer any questions. [The prepared statement follows]:

STATEMENT OF MICHAEL B. THORNTON DEPUTY TAX LEGISLATIVE COUNSEL (TAX LEGISLATION) DEPARTMENT OF THE TREASURY BEFORE THE

SUBCOMMITTEE ON OVERSIGHT COMMITTEE ON WAYS AND MEANS UNITED STATES HOUSE OF REPRESENTATIVES

Madame Chair and distinguished Members of the Subcommittee:

I am pleased to present the views of the Treasury Department on the Coal Industry Retiree Health Benefit Act of 1992 ("the Coal Act"), which was enacted as part of the Energy Policy Act of 1992, P.L. 102-486. In the letter of invitation, Chairman Johnson has requested that our testimony address: (1) the general effectiveness of the 1992 provisions; (2) the impact of premiums on small and reachback companies; (3) the methods and procedures for collecting premiums and penalties; and (4) whether Treasury has perceived a need to exercise discretion in enforcing premium collection because of the potential impact on some operators.

In testifying before the Committee on Ways and Means in September 1993, the Administration expressed its strong support for the goal under the Coal Act of ensuring adequate funding of retired miners' health benefits. We continue to strongly support this goal.

Background

The Coal Act requires that former employers of retired coal miners finance, in part, the health benefits that previously were negotiated for those miners and their families by the United Mine Workers of America ("UMWA"). Prior to the Coal Act, these benefits were provided for retired miners and their families either by the miner's individual employer or through one of two multiemployer funds -- the 1950 UMWA Health Benefit Fund (the "1950 Fund") or the 1974 UMWA Health Benefit Fund (the "1974 Fund"). Contributions to both Funds were required of signatories to the national wage agreements negotiated between the UMWA and the Bituminous Coal Operators Association, Inc. ("BCOA").
Employers that were not signatories to the national wage agreement also contributed to the Funds under separate wage agreements negotiated with the UMWA.

The 1950 Fund covered miners who had retired as of December 31, 1975, and their beneficiaries. Miners who retired after 1975 generally received health benefits under the single plan of their former employer. However, if the employer went out of business or left the coal industry, the employer's retirees and their beneficiaries were covered by the 1974 Fund. As a result, all of the retirees and their beneficiaries covered under the 1974 Fund were "orphans" for whom no contributions were being made by their former employers. About half of the retirees and their beneficiaries in the 1950 Fund were orphans.

Beginning in the late 1980's, the Funds began to experience serious financial difficulties. As of March 31, 1992, the combined deficit of the Funds reached \$140 million and was projected to grow dramatically if no changes were made. The deficit was precipitated by a number of factors, including medical inflation and the trustees' inability to impose certain kinds of containment mechanisms under the Funds. Moreover, the contribution base of the Funds was eroding. In the early 1980's, for example, approximately 2,000 employers contributed to the Funds. That number had fallen to about 300 in 1992.

In March 1990, as part of a compromise that helped settle the Pittston Coal Company strike, then-Secretary of Labor Elizabeth Dole announced the establishment of a special national Coal Commission to study the Funds. In its report, published in November 1990, the Coal Commission agreed that the problems of the Funds could not be solved through private bargaining alone. The Coal Commission recommended establishing a statutory obligation to contribute to the Funds. Although the Coal Commission was divided as to how this obligation should be implemented, there was general agreement that it should cover all then-current signatory employers (companies that had signed the 1988 collective bargaining agreement), as well as certain other signatory employers.

In response to the Coal Commission Report and growing concerns about the continued viability of the Funds and the security of retirees' benefits, Congress passed the Coal Act as part of the Energy Policy Act of 1992.

The Coal Act created two new benefit funds: (1) the UMWA Combined Benefit Fund (the "Combined Fund"), which services beneficiaries receiving health benefits from the 1950 and 1974 Funds as of July 20, 1992; and (2) the UMWA 1992 Benefit Plan (the "1992 Plan"), which services certain employees who retired between July 20, 1992, and September 30, 1994, and whose last signatory employer is not providing them with benefits.

Employees retiring after September 30, 1994, are not covered under the provisions of the Coal Act, but are dependent on the provisions of future bargaining agreements.

Under the Coal Act, any employer that signed a wage agreement with the UMWA since 1950 and has retirees who benefit under the Funds could be obligated to pay premiums for the health benefits of those retirees and their beneficiaries. In addition, employers are obligated to finance the health benefits of "orphans" in the Combined Fund whose former employers are no longer in business. Each employer's share of orphans is proportional to the number of the employer's retirees who receive health benefits under the Combined Fund. Generally, the allocation method assures that costs are shared by all employers that signed UMWA wage agreements providing for retiree health benefits.

In order to reduce premiums associated with orphan beneficiaries who could not be assigned to a particular employer, the Coal Act authorized three annual transfers of \$70 million each from the excess assets of the UMWA 1950 pension plan. Beginning October 1, 1995, annual transfers of up to \$70 million will come from the interest earnings of the Abandoned Mine Land Reclamation Fund ("AML fund") to cover the costs of orphans. The AML fund is financed by fees assessed on all coal mining companies.

Because beneficiaries were not yet assigned to signatory operators during the first plan year of the Combined Fund, 3 transition rules provided for the 1988 signatories to make contributions to the Combined Fund to finance benefits and administration costs that were not covered by the \$70 million transferred from the 1950 Pension Fund. The 1988 signatories receive a credit for these initial contributions against

To the extent that interest earned on the AML fund falls short of \$70 million in any year, the difference is made up out of the interest accumulated during the FY 1993-95 period (about \$122 million). In FY 1996, interest earnings on the AML fund are expected to be about \$57 million.

The Abandoned Mine Reclamation Fees are levied at the lesser of (a) 35 cents per ton for surface-mined coal and 15 cents per ton for underground-mined coal, or (b) 10 percent of the value of the coal at the mine. For lignite, the rate is the lesser of 10 cents per ton, or 2 percent of the value of the coal at the mine.

The first plan year was a short one, running from February 1, 1993, to September 30, 1993.

subsequent premiums. The 1988 signatories also were required to make transition payments to cover the combined net deficits held by the merged 1950 and 1974 Benefit Plans.

Under the Coal Act, responsibilities for administering the Combined Fund are divided among three separate entities, as described below:

- (i) The Social Security Administration (SSA) -- The SSA is responsible for assigning each coal industry retiree receiving benefits to a former employer or related party. The SSA also calculates the annual per-beneficiary premium charged to each former employer. Following the assignment of beneficiaries to employers, the SSA is responsible for informing the former employer and the trustees of the Combined Fund of the assignments. Finally, the SSA is responsible for reviewing appeals raised by employers regarding the assignments of retirees, and reassigning the retirees when appropriate.
- (ii) Trustees of the Combined Fund -- As established by the Coal Act under section 9702 of the Internal Revenue Code, the Combined Fund is a private multi-employer plan. The Coal Act provided for a Board of Trustees' who were required, among other duties, to establish the Combined Fund, to determine benefits to be paid from the Combined Fund, to establish and maintain accounts of the premiums that are required to be paid to the Combined Fund, to collect the premiums, and to provide information to the SSA, as necessary for carrying out the SSA's duties under the Coal Act.
- (iii) Department of the Treasury -- Section 9707 of the Internal Revenue Code imposes a penalty upon an assigned operator for failure to pay a required premium. The statute treats the penalty as an internal revenue tax, and thus the IRS, as part of its general tax administration duties, is responsible for collecting the penalty.

Discussion

1. The Effectiveness of the 1992 Provisions

The principal goal of the 1992 provisions was to ensure that benefits promised to retired union miners and their families continue to be paid without interruption. The 1992 provisions appear to have been effective in achieving this goal.

The Combined Fund appears to be in sound financial condition currently, although its future financial status is unclear. According to recent GAO analysis, the Combined Fund reported a surplus of \$114.8 million as of September 30, 1994, but future annual surpluses may not occur, and annual deficits may erode the current surplus over time. Given this uncertain financial outlook, the Administration would be troubled by any modifications to the Coal Act that would diminish the security of the Fund.

⁴ The provisions for the 1992 Fund were not developed in as much detail. Responsibility was given to the settlors (the UMWA and BCOA) to work out many of the specific provisions.

³ The Coal Act provides that the Combined Fund is a plan described in section 302(c)(5) of the Labor Management Relations Act of 1947 (LMRA), an employee welfare benefit plan within the meaning of section 3(1) of the Employee Retirement Income Security Act of 1974 (ERISA), and a mulitemployer plan within the meaning of section 3(37) of ERISA. Both LMRA and ERISA are administered by agencies in the U.S. Department of Labor.

Section 9702(b) of the Internal Revenue Code provides for the appointment of a board of seven trustees. One trustee is designated by the BCOA to represent employers in the coal mining industry; one trustee is designated by the three reachback companies with the greatest number of eligible employees; and two trustees are designated by the UMWA. These four trustees select the other three.

It appears that the Coal Act also has been effective in ensuring collection of the required premiums. According to representatives of the Combined Fund, approximately 91 percent of the assessed premiums have been paid.

While it appears that the Coal Act has been effective to date, we are aware that concerns about its operation and effectiveness persist. We would be happy to work with the Subcommittee to address such concerns in a manner that will not compromise the security of the funds or otherwise risk interrupting health benefits for retired miners and their beneficiaries.

2. Impact of the Premiums

It is difficult, if not impossible, to isolate the effects of the Coal Act on the coal industry as a whole or on certain categories of companies within the coal industry. The health of the coal-mining industry primarily reflects dynamic factors that are largely independent of the impact of the premiums -- factors such as productivity improvements, price changes and structural shifts.

The coal industry has seen substantial growth in consumption and productivity in recent years. This growth has been accompanied by a shift to western coal, largely due to the higher productivity of long-wall mining and western coal's lower sulphur content. Lower-cost western coal and improved productivity have resulted in declining real coal prices since the mid-1970's.

Technological improvements in mining operations and a shift away from underground mining in the East to less labor-intensive surface mining in the West allowed labor productivity to increase much more rapidly than for most other U.S. industries. Over the period from 1980 to 1992, output per hour of work in coal mining increased at an average rate of 6.65 percent, whereas output per hour of work in all forms of nonfarm business increased at an average annual rate of 1.16 percent. The number of production workers in coal mining fell from 204,000 in 1980 to 101,000 in 1992, while production increased from 830 million tons in 1980 to 998 million tons in 1992. These changes also involved a reduction in the number of operating mines and mining companies. Improvement in mining productivity has placed financial pressure on eastern mines that have not managed sufficient productivity increases.

We are aware that concerns have been expressed that provisions of the Coal Act may have contributed to financial hardship for certain small companies. Legislative proposals have been introduced to provide relief under the Coal Act. The Administration would be concerned, however, about proposals that provide relief without reference to specific financial hardship. These types of proposals could unnecessarily exacerbate the burden of financing retirement health benefits, by imposing an even greater burden on other companies that are not eligible for the relief, but that might be in worse financial condition. In particular, any relief provisions based solely on a company's size or status as a reachback company, which does not necessarily reflect its financial condition, could weaken the Combined Fund and threaten the benefits of the retirees and their families.

According to representatives of the Combined Fund, its collection program is designed to resolve all the delinquencies, either through collection or uncollectibility determinations, after weighing the time and expense involved in the investigations and the likelihood of successful recovery.

3. Methods and Procedures for Collecting Premiums and Penalties

As noted above, premiums under the Coal Act are assessed and collected through the efforts of the trustees of the Combined Fund, based on assignments made by the Social Security Administration. In addition, the Coal Act imposes a penalty for delinquent premium payments. Pursuant to the Coal Act, this penalty is treated in the same manner as an internal revenue tax. Consequently, the Internal Revenue Service, as part of its general authority to assess and collect taxes and penalties, has jurisdiction over the collection of the penalty.

Because operators have the ability to appeal the assignment by the SSA, reliable information regarding liability for premiums currently is not immediately available following the annual billing. In addition, assessment of the penalty prior to collection action with respect to the premiums by the Combined Fund would reduce funds available for providing benefits to retired miners and their families. Moreover, in some cases the resources required for collecting the penalties may exceed the reasonable expectations of collection, given the financial condition of an operator.

Because it would be premature to attempt to assess penalties before the completion of collection efforts by the Combined Fund, the IRS has not assessed penalties to date. However, representatives of the IRS have met with the Combined Fund regarding the coordination of their collection efforts with the implementation of the penalty. In its testimony this morning, the IRS will address these matters in detail.

4. Exercise of Discretion in Enforcing Premium and Penalty Collection

The trustees of the Combined Fund are responsible for collecting premiums, and they are restricted by their fiduciary duty to the fund from waiving collection of premiums. To maximize the return to the fund, it appears that the trustees could take collection and litigation risks into consideration, as well as the fact that any penalties collected by the IRS would be paid to the government rather than to the Combined Fund.

The IRS is responsible for assessing any penalties for noncompliance. The Coal Act provides for two types of penalties for failure to make required contributions:

(i) Penalty for Delinquent Contributions of Transition-Year Payments. As described above, the Coal Act required 1988 signatory employers to make initial contributions for the Combined Fund's first short year (February 1, 1993, to September 30, 1993). Under section 9704(i)(1)(C) of the Internal Revenue Code, the penalty for failure to make these initial contributions is nondeductibility of contributions to the Combined Fund, until such time as the failure is corrected. No discretion is provided to waive this penalty, nor would any such discretion appear necessary or appropriate, since the penalty terminates once the taxpayer makes the required contribution.

Under section 9706(f)(5) of the Internal Revenue Code, an assigned operator is required to pay premiums pending review by the SSA. If the retirees are reassigned, the operator is allowed a credit against premiums for other retirees.

Penalties for nonpayment of premiums are paid to the government rather than the Combined Fund.

(ii) Penalty for Delinquent Premium Payments. The penalty for failure to pay a required premium is \$100 per day per beneficiary, for the period commencing on the due date for the required premium or installment, and ending on the date of payment of the premium or installment. The penalty is not imposed if it is established to the satisfaction of the Secretary of the Treasury that none of the persons responsible for the failure knew, or exercising due diligence, would have known that the failure existed. In addition, the penalty is not imposed if the failure was due to reasonable cause and not to willful neglect and the failure is corrected within 30 days after any of the persons responsible for the failure knew or should have known that the failure existed. Moreover, if the failure is due to reasonable cause and not to willful neglect, the Secretary of the Treasury has authority to waive all or part of the penalty to the extent that he determines that payment of the penalty would be excessive relative to the failure involved.

Under these provisions, the Treasury Department is limited in its ability to waive the penalty for delinquent premiums. In particular, this standard for relief generally does not allow for the waiver of penalties for nonpayment based solely on the financial hardship of the taxpayer.

Because, as noted above, the IRS has not yet attempted to assess the penalty for delinquent premiums, the IRS's limited ability to waive the penalty has not yet created problems.

Nonetheless, we are concerned that the \$100 per-day, perbeneficiary penalty for delinquent premiums may be excessive. The first month's penalty alone (from \$2800 to \$3100) would exceed the annual premium (about \$2350 for FY 1995).

As a general policy matter, this level of penalty raises questions in light of the relative level of premiums to which the penalty applies. Moreover, collection of the penalty may act at cross purposes to the goals of the Coal Act. Enforcing the penalty could adversely affect certain taxpayers' financial conditions, which in turn could jeopardize the payment of future premiums and result in reduced contributions to the Combined Fund, contrary to the goals of the Coal Act.

For these reasons, a revised penalty structure may, in certain instances, provide a better enforcement tool. In this regard, if the current penalty structure is retained, it may be desirable to consider granting additional discretion to the Secretary of the Treasury to waive or reduce the penalty for delinquent premiums in certain cases. In addition, we would be willing to work with the Congress to explore means of restructuring the penalty provision to limit the aggregate penalty while still providing an adequate incentive for prompt payment of premiums.

Conclusion

The Administration believes that the Coal Act has been effective in achieving its goal of ensuring uninterrupted health benefits for retired union miners. We continue to believe that the Coal Act was a reasonable solution to a difficult problem.

With respect to the enforcement provisions, we recognize that under current law the penalty for delinquent premiums may, in certain circumstances, become excessive relative to the required premium. We are willing to work with the Congress to address this and other concerns in a manner that would preserve the security of the Fund and the uninterrupted provision of health benefits to retired miners and their families.

The IRS has general authority to compromise a full tax liability, including interest and penalties, through an offer in compromise, where it is determined that the tax is uncollectible and the offer in compromise is in the best interests of both the taxpayer and the government.

Mr. HERGER. Thank you, Mr. Thornton. Phil Brand, Chief Compliance Officer, IRS.

STATEMENT OF PHIL BRAND, CHIEF COMPLIANCE OFFICER. INTERNAL REVENUE SERVICE

Mr. Brand. Mr. Chairman and distinguished Members of the Subcommittee, I appreciate the opportunity to appear before the Subcommittee today to discuss IRS' participation in administration of the Coal Industry Retiree Health Benefit Act of 1992.

The coal act was enacted as part of the Energy Policy Act of 1992, and it establishes a method for funding health and death benefits for retired coal miners, their spouses and dependents. The act establishes a scheme for funding benefits by assigning retirees to operators and requiring premium payments based on the number of retirees assigned. The SSA is responsible for assigning retirees to operators and calculation of the per beneficiary premium. Trustees of the combined fund are responsible for assessing and collecting the premiums. IRS' role is to impose sanctions for failure to make required payments to the fund.

Payments required of operators during the transitional year, February 1, to September 30, 1993, are called contributions. Payments required after the transitional year are called premiums. The act imposes one sanction if a required contribution is not

made, and another if a required premium is not paid.

Penalties are one important tool in administering the tax law. IRS' policy with respect to penalty administration is that penalties should be used to encourage voluntary compliance. Even though other results such as raising revenue or reimbursements of the cost of enforcement may also arise when penalties are assessed, the IRS will design and administer penalty programs solely on the basis of whether they do the best possible job of encouraging compliant behavior.

Since the IRS is not involved in determining and/or collecting the required payments, our responsibility then is to administer the sanctions in a manner that will foster voluntary compliance with the act. Based on information obtained from representatives of the combined fund, it is our understanding that compliance with the act is very high. We believe that approximately 91 percent of the assessed premiums are collected. Furthermore, of the amounts that have not been collected, almost half is either subject to of escrow agreements with operators contesting the constitutionality of the act, or is attributable to operators known to be the subject of bankruptcy proceedings. The remaining uncollected premiums are spread among small or insolvent or defunct operators who have been determined not to be collectible by the combined fund.

Operators who fail to make the required contributions during the transitional year are not allowed a deduction for all such contributions, or other contributions allowable under section 404(c) of the IRS Code on their income tax return until the delinquency is corrected; operators who fail to pay premiums timely are subject to a penalty of \$100 per day per beneficiary for each day after the due date until the premium is paid.

IRS then is responsible for ensuring that the deduction is not allowed for delinquent contribution payments. In addition, we are responsible for assessing and collecting the penalty for delinquent

premium payments.

Since the IRS is not involved in determining and collecting the required payments, sanctions can only be imposed when we are aware of whose is delinquent, the amount of the delinquency and the type of payment that is delinquent, a contribution or a premium.

To impose the deduction disallowance sanction, the IRS needs the following information; the identity of the delinquent operators, the amount of the required contribution, and the time when the

required contribution is paid in full.

Based on discussions with the combined fund, as to the potential liability of operators being reversed by appeal to the SSA, we have determined that the most efficient use of our enforcement resources is to obtain the needed information on delinquent contributions

through referrals from the combined fund.

In August 1993, the trustees of the combined fund sent the IRS a list of delinquent operators and requested IRS to enforce the deduction disallowance sanction. However, after consultation with IRS counsel, we determined that enforcement was premature since few if any of the operators would have filed their tax returns covering any part of the transactional planned year. Thus, action was delayed until the actual filing of the tax returns.

These returns are now due and presumably have been filed. Since we are now selecting business returns for 1993 for audit, we will use a requested update of the August 1993 list to inspect the tax returns and determine if a examination is warranted for the

contribution deduction.

When the premium payment is delinquent, the IRS needs the following information to enforce the penalty sanctions: The identity of the delinquent operators; the number of beneficiaries associated with the delinquent premium; the number of days the premium is delinquent for each beneficiary; and the time when the required

premium is paid in full.

As mentioned earlier in my testimony, information from the combined fund indicates that 91 percent of the assessed premiums have been paid. The fund has also indicated that proofs of claim, settlement negotiation suits and other actions are pending for 95 percent of the uncollected premiums. Taking into consideration the high level of compliance and that actions are under way to collect 95 percent of the uncollected premiums, the IRS has decided the most judicious use of our enforcement resources would be to focus on those operators referred to us by the combined fund. We are working closely with the fund. To date no referrals have been received, and thus no penalties have been assessed.

In conclusion, our policy is that penalties should be used to foster voluntary compliance. It would not benefit the fund, the beneficiaries, or the IRS to indiscriminately assess penalties against

companies that are financially unable to pay the premiums.

This concludes my prepared remarks.

I would be happy to answer any questions you or other Subcommittee Members may have.

[The prepared statement follows:]

STATEMENT OF PHIL BRAND CHIEF COMPLIANCE OFFICER BEFORE

SUBCOMMITTEE ON OVERSIGHT HOUSE COMMITTEE ON WAYS AND MEANS

JUNE 22, 1995

Madame Chairman and Distinguished Members of the Subcommittee:

I appreciate the opportunity to appear before this Subcommittee today to discuss IRS' participation in the administration of the Coal Industry Retiree Health Benefit Act of 1992 (Coal Act).

Background

The Coal Act was enacted as part of the Energy Policy Act of 1992. The Coal Act establishes a method for funding health and death benefits for retired coal miners and their spouses and dependents. Three organizations have responsibilities for administering the provisions of this Act — Social Security Administration, trustees of the Combined Fund, and the IRS.

The Act established a scheme for funding benefits by assigning retirees to operators and requiring premium payments based on the number of retirees assigned. The Social Security Administration is responsible for assigning retirees to operators and calculation of the per-beneficiary premium. Trustees of the Combined Fund are responsible for assessing and collecting the premiums. IRS' sole responsibility is to impose sanctions for failure to make required payments to the

Payments required of the operators during the transitional year (February 1, 1993 to September 30, 1993) are called contributions. Payments required after the transitional year are called premiums. The Act imposes one sanction if a required contribution is not made, and another if a required premium is not made. IRS Responsibilities

Penalties are one important tool in administering the tax law. IRS' policy with respect to penalty administration is that penalties should be used to encourage voluntary compliance. Even though other results, such as raising revenue, punishment, or reimbursement of the costs of enforcement may also arise when penalties are assessed, the IRS will design and administer penalty programs solely on the basis of whether they do the best possible job of encouraging compliant behavior.

Since the IRS is not involved in determining and/or collecting the required payments, our responsibility is to administer the sanctions in a manner that will foster voluntary compliance with the Act. Based on information obtained from representatives of the Combined Fund, it is our understanding that compliance with the Act is very high. We have been informed that approximately 91% of the assessed premiums are collected. Furthermore, of the amounts that have not been collected, almost half is either the subject of escrow agreements with operators contesting the constitutionality of the Act or is attributable to operators known to be the subject of bankruptcy proceedings. The remaining uncollected premiums are spread among small insolvent or defunct operators and have been determined to be not collectible by the Combined Fund.

Sanctions

Operators who fail to make required contributions during the transitional plan year are not allowed a deduction for all such contributions (or other deductions allowable under section 404(c) of the Internal Revenue Code) on their income tax return until the delinquency is corrected. Operators who fail to pay premiums timely are subject to a penalty of \$100 per day per beneficiary for each day after the due date until the premium is paid.

IRS, then, is responsible for ensuring that the deduction is not allowed for delinquent contribution payments until the delinquency is collected. In addition, IRS is responsible for assessing and collecting the penalty for delinquent premium payments.

Since the IRS is not involved in determining and collecting the required payments, sanctions can only be imposed when we are aware of who is delinquent, the amount of the delinquency, and the type of payment that is delinquent — a contribution or a premium.

Delinquent Contributions

To impose the deduction disallowance sanction, the IRS needs the following information:

- the identity of the delinquent operators.
- the amount of the required contribution, and
- the time when the required contribution is paid in full.

Based on discussions with representatives from the Combined Fund [as to the potential liability of operators being reversed by appeal to the Social Security Administration], we have determined that the most efficient use of our enforcement resources would be to obtain the needed information on delinquent contributions through referrals from the Combined Fund.

In August 1993, the trustees of the Combined Fund sent the IRS a list of delinquent operators and requested that IRS enforce the deduction disallowance sanction. However, after consultation with IRS Counsel, we determined that enforcement was premature since few if any of the operators would have filed their tax returns covering any part of the transitional plan year. Thus, action was delayed until the actual filing of the tax returns.

These returns are now due and presumably have been filed. Since we are now selecting business returns filed for tax year 1993 for audit, we will use a requested update of the August 1993 list of delinquent contributors to inspect the tax returns and determine if an examination is warranted for the contribution deduction. Delinquent Premiums

When the premium payment is delinquent, the IRS needs the following information to enforce the penalty sanctions of the Act.

- the identity of the delinquent operators.
- the number of beneficiaries associated with the delinquent premium,
- the number of days that the premium is delinquent for each beneficiary,
- the time when the required premium is paid in full.

As I mentioned earlier in my testimony, information from the Combined Fund indicates that 91% of the assessed premiums have been paid. The Fund has also indicated that proofs of claim, settlement negotiations, suits or other actions are pending for 95% of the uncollected premiums. Taking into consideration the high level of compliance — 91% — and that actions are underway to collect 95% of the uncollected premiums, the IRS has decided that the most judicious use of our enforcement resources would be to focus on those operators referred to us by the Combined Fund for delin quent premiums. Thus, we are working closely with the Fund to obtain this information on a systematic basis when they have determined willful nonpayment. To date, no referrals have been received from the Fund; thus, no penalties have been assessed.

Conclusion

In conclusion, our policy is that penalties should be used to foster voluntary compliance. It would not benefit the Fund, the beneficiaries, or the IRS to indiscriminately assess penalties against companies that are financially unable to pay the premiums. In these situations, a large penalty assessment would not result in collections to the Fund, but rather cessation of business operations and/or bankruptcy of the company. In these situations, a penalty does not encourage voluntary compliance with making the required payments under the Act.

Representatives of the Combined Fund are cooperating with the IRS to ensure that we do not indiscriminately and prematurely impose the sanctions under the Coal Act. We are, of course, ready to exercise both sanctions when entities flagrantly disregard the law.

Madame Chairman, this concludes my prepared remarks. I would be happy to answer any questions you or other Subcommittee members may have.

Mr. HERGER. Thank you.

Next is Dr. Lawrence H. Thompson, Ph.D., Principal Deputy Commissioner, the Social Security Administration. You are accompanied by Marilyn O'Connell, your Deputy Associate Commissioner.

STATEMENT OF LAWRENCE H. THOMPSON, PH.D., PRINCIPAL DEPUTY COMMISSIONER, SOCIAL SECURITY ADMINISTRATION; ACCOMPANIED BY MARILYN G. O'CONNELL, DEPUTY ASSOCIATE COMMISSIONER FOR PROGRAM BENEFITS POLICY

Mr. THOMPSON. Thank you, sir.

I am here to discuss SSA's role in administering this program. I am accompanied by Marilyn O'Connell, who has been directing implementation of our coal act responsibilities.

I will begin by briefly reviewing our responsibilities and then I will discuss our progress in carrying out these responsibilities.

The SSA was assigned three responsibilities under the coal act; first, to calculate the amount of the health benefit premium for each beneficiary; second, to assign each miner to a coal operator who will be responsible for the health benefit premiums for that miner and any beneficiary eligible because of the relationship to that miner, and to notify the operator of that assignment; third, to decide requests by the coal operators for review of the assignments.

SSA has calculated the premiums and notified the trustees of the combined fund of the premiums for each year since the law was enacted. We have also completed the process of making the initial assignments. As was required by law we completed that by October 1993.

The third of these responsibilities under the coal act, which has turned out to be very complex and time consuming, is the responsibility for reviewing the assignments when requested. The law provides that an assigned operator may, within 30 days of receipt of the assignment notice, request detailed information from us as to the work history of the miner and the basis for an assignment. The assigned operator then has 30 additional days, after receiving that information, to request a review of the assignment.

After the initial assignment notices were sent out, operators requested from us over 40,000 earnings records, as well as the basis on which the assignments were made for these 40,000 miners. Retrieving these records was a labor-intensive operation. The earnings information that we have since 1978 is available electronically, but earlier earnings information is maintained on microfilm and

requires manual searches.

We completed mailing out all of the requests for earnings records by February 1994. After the earnings records were sent to the assigned operators, the operators had 30 days to request a review. We received requests for review from 471 coal operators concerning the assignments of approximately 24,500 miners. The review requests were based on a wide range of allegations; for example, operators disputed that they were ever in the coal business, ever were a signatory to an agreement or that they should be considered a related company.

Because of the variety of the reasons the operators alleged for contesting assignments, we developed a two-stage process. First, we did a determination to see whether a company was in fact a coal operator eligible for assignment of miners. Those companies which were found not to be eligible for assignment were relieved of responsibility for any miners.

Having worked our way through most of the operators, we then went to the second stage, to review the earnings records of all the miners for whom there is a request for review, to determine whether the assignments should be adjusted, and, where adjustments were made, to determine who were the companies that seemed to be eligible for assignment.

The review process has been long and involved because of the difficulties encountered in attempting to secure documentation and in evaluating evidence submitted by the companies. In addition, some operators requested and were granted extra time, as much as 240 days to submit evidence. Much of the evidence submitted was old, incomplete and difficult to interpret. In addition, it was necessary to contact various organizations and agencies to determine the status and relationships of numerous companies.

We have now made decisions on 8,500 of the 24,500 cases included in the review requests. We have informed the requesters whether their appeal is allowed or denied. We will be sending out the new assignment notices by the end of the month.

We expect to have all of this first round of appeals finished by the end of September. Of course, the employers to whom these 24,500 cases were reassigned can appeal the reassignment, starting a new round of reviews and appeals.

By law, SSA cannot use trust fund moneys for work related to this program. Thus, SSA requested and Congress provided a supplemental appropriation of \$10 million for fiscal year 1993. Congress also approved a change in our administrative expense account language which permits us to use administrative funds to carry out the coal act and then be reimbursed subsequently.

To date, we have used essentially all the \$10 million of the initial appropriation. How much more we will need depends on how many appeals we get of the reassignments that we are now making. If we receive requests for reviews of subsequent assignments at a rate comparable to the rate that we have received for initial assignments, the additional cost could be as much as \$10 million.

In conclusion, we have been given a difficult and complex task. We have carried out our responsibilities of calculating the premiums and the initial assignment to the mine operators in the timeframe contemplated by the statute, but we are now in the midst of a complex process of working through the appeals and adjusting the status of the assigned miners when companies bring to our attention new facts about their corporate relationships.

I will be happy to answer any questions you have.

Thank you.

[The prepared statement follows:]

STATEMENT OF LAWRENCE H. THOMPSON PRINCIPAL DEPUTY COMMISSIONER OF SOCIAL SECURITY

Madame Chairman and Members of the Subcommittee:

I am pleased to be here today to discuss the role of the Social Security Administration (SSA) under the Coal Industry Retiree Health Benefit Act of 1992 (Coal Act). Let me begin by briefly reviewing the requirements of the law and the responsibilities which were assigned to SSA. Then, I will discuss SSA's progress in carrying out these responsibilities.

Requirements of the Law

The Coal Act merged the 1950 and 1974 benefit plans of the United Mine Workers of America (UMWA) into a new "Combined Fund," administered by a board of trustees as a private tax-exempt employee benefit plan. This new Fund is designed to provide lifetime health benefits (and death benefits) for beneficiaries—of the old plans—retired miners and their dependents or survivors. Benefits are financed from funds transferred from UMWA pension plans, premiums paid by coal operators, and transfers of amounts from the Abandoned Mine Land Reclamation fund.

Under the law, coal operators pay premiums for all beneficiaries who are determined to be their responsibility. The premiums are established by formulas in the law. The law provides for them to pay a pro rata share of the premium cost for beneficiaries for whom no assignment of responsibility can be made (unassigned beneficiaries). However, because the Fund had adequate financing for the two years ending September 30, 1995, the coal operators did not have to pay premiums for unassigned beneficiaries for those years. With the plan year beginning October 1, 1995, these premiums will be transferred to the Fund by the Department of the Interior out of the Surface Mining Control and Reclamation Trust Fund.

SSA Responsibilities

SSA was assigned three responsibilities under the Coal Act:

- To calculate the amount of the health benefit premium for each beneficiary;
- o To assign each miner to a coal operator who will be responsible for the health (and death) benefit premiums for that miner and any beneficiaries eligible because of their relationship to the miner, and notify the operator of that assignment; and
- To decide requests by the coal operators for review of assignments.

Let me now briefly discuss each of these responsibilities.

Calculating the Premium

The law states that the health benefit premium amount is to be based on the average dollar amount of health benefits paid per person under the old plans for the plan year beginning July 1, 1991, updated to take account of the increase in the medical component of the Consumer Price Index (CPI). The law requires us to calculate the premium for each plan year beginning on or after February 1, 1993. The first plan year began on February 1, 1993, because that is the date the old plans were merged to create the Combined Fund. By law, subsequent plan years began on October 1, 1993, and each succeeding October 1.

The Coal Act requires that the premium calculation be based on the following information: (1) the aggregate amount of payments from both the 1950 UMMA Benefit Plan and the 1974 UMWA Benefit Plan for health benefits (less reimbursements but including administrative costs) for the plan year beginning July 1, 1991, for all individuals covered under the plans for

that plan year, and (2) the number of such individuals covered under the plans for that plan year. The aggregate cost divided by the number of individuals, increased by the percentage increase in the medical component of the CPI from 1992 to the year in which the plan year begins, produces the premium per individual.

SSA has calculated the premiums and timely notified the Trustees of the Combined Fund of the premiums for each year since the law was enacted.

Assignment Procedures

Our second task involved assigning responsibility for each miner to the appropriate coal operators. The Coal Act specifies the criteria we were to use.

The Combined Fund identified approximately 80,000 miners-both living and deceased--who were covered by the Act. The Bituminous Coal Operators Association provided us a list of approximately 15,000 of these miners for whom certain large coal operators voluntarily acknowledged premium responsibility. For these miners, and their dependents or survivors, we simply sent a confirming notice of assignment to the coal operators and to the Combined Fund.

The remaining 65,000 miners had to be assigned to a coal operator following the criteria set forth in the law. In general, there are three factors that are considered in determining to which coal operator a miner is assigned--length of a miner's employment with a coal operator who was a signatory to a UMWA wage agreement (also called a signatory operator), recency of that employment, and the date the wage agreement was aigned by the operator and the UMWA.

More specifically, the law states that a miner must be assigned to a coal operator according to the following order of priority:

- To the last active signatory operator (as defined previously) for whom the miner worked at least 2 years under a UMWA agreement (or if an inactive signatory, to its related company, if any) provided that the operator is also a 1978 signatory.
- To the last active signatory operator for whom the miner worked under a UMWA agreement (or if an inactive signatory, to an active related company, if any) provided the operator is also a 1978 signatory.
- To the active signatory operator of any agreement for whom the miner worked the longest under a UMWA agreement (or if an inactive signatory, to an active related company) in the period prior to 1978.
- o If no assignment can be made under the above criteria, the miner is treated as "unassigned." This means that, because responsibility for the premium cannot be assigned to a particular signatory operator, the miner is assigned to a pool, for which each assigned operator pays a pro rata share of the premiums.

Before we could even begin the assignment process, we had to develop lists of assignable coal operators. These lists were developed by SSA using information which was provided to us by the Bituminous Coal Operators Association and the UMWA, SSA employer records, information provided by operators in court suits and testimony in those suits, and other available sources of information on the coal mining industry, such as the Keystone Manual. It was very difficult to develop an accurate list of

coal operators because most sources of information on companies did not include the employer identification number which SSA records use to differentiate companies with similar (often identical) names. We used as much information as was available, such as similar addresses, but still had many companies erroneously included in the information provided by the UMWA. In fact, we continue to update the lists throughout the assignment process and the review process as we learn more about the companies.

In order to make an assignment using the criteria I described above, we must perform two separate operations: searching Social Security earnings records to reconstruct a miner's individual employment history; and matching that history against the lists of signatory coal operators and related companies who meet the above criteria and are still in business.

Once we have searched our earnings records to establish the miner's work history, we then use the criteria in the law to determine which coal operator is liable for the miner's health benefit premiums by matching the employment history with the lists of signatory operators.

We also use the information we obtained to identify any company which is "related" to a signatory company which is no longer in business. Under the Coal Act, the "related" company of a coal operator no longer in business may also be assigned responsibility for the miner's premium. Companies are related if they were:

- Members of a controlled group of corporations;
- A trade or business under common control with a signatory operator;
- Members with the signatory operator in a partnership or joint venture in the coal industry which employed eligible miners (but not a limited partner); or
- o A successor in interest to a related company.

If a signatory operator is no longer in business, we must determine whether there is a company which, as of July 20, 1992, or, if earlier, as of the time immediately before the operator ceased to be in business, was "related" to the signatory operator. If so, and if the related company is still in business, it becomes responsible for the beneficiary's premiums. In general, we based our determinations regarding related companies on the industry sources I mentioned previously.

SSA completed the process of making the initial assignment decisions by October 1, 1993, as required by law.

Review of the Assignment Decisions

SSA's third responsibility under the Coal Act, which has turned out to be very complex and time consuming, was to review each of the assignments, if requested by a coal operator. The law provides that an assigned operator may, within 30 days of receipt of the assignment notice, request detailed information from us as to the work history of the miner and the basis for the assignment. The assigned operator then has 30 days from receipt of that additional information to request review of the assignment. The statute requires the operator to provide evidence constituting a prima facie case of error in order to have the assignment reviewed.

After the initial assignment notices were sent to the assigned operators, operators requested over 40,000 earnings records, as well as the basis on which the assignments were made. In order to provide this information, SSA had to reconstruct some of the earnings records (which averaged eight pages per record) and provide copies of all of the earnings records with the justification for which each assignment was made to the operators.

Retrieving these records was a labor-intensive operation. Each earnings record contains a history of the miner's wages and the names and addresses of employers. While earnings information is electronically available beginning with wages reported for 1978, earlier earnings information is maintained on microfilm and requires a manual search. SSA completed the mailing of the earnings records by February 1994.

After the earnings records were sent to the assigned operators, the operators had 30 days to request a review of the assignment. SA received requests for review from 471 coal operators concerning assignments for 24,541 miners. The review requests were based on a wide range of allegations, for example, the company disputed that it was ever in the coal business, was a signatory to an agreement, or should be considered a related company.

Because of the variety of the reasons the operators alleged for contesting assignments, SSA developed a two-stage review process:

- o For those appeals in which the company alleged that it should not be assigned any miners because it was not a signatory to a UMMA wage agreement or is not in business, or due to a similar reason involving the status of the company, we did a first stage determination in one location to determine whether that company is in fact a coal operator eligible for assignment of miners. Those companies which were found not to be eligible for assignment were relieved of responsibility for all miners.
- o The second stage involves reviewing the earning records of all miners for whom there is an appeal from the original assignment. Those miners who were assigned to companies which were relieved of all assignments are reassigned to another company or to the unassigned pool. All others are either affirmed, reassigned, or included in requests for review which are denied because the operator did not file the request timely or failed to submit evidence.

The review process has been long and involved because of the difficulties encountered in attempting to secure documentation and in evaluating evidence submitted by the companies. In addition, some operators requested and were granted extra time to submit evidence. Some were granted up to 240 days to submit evidence. During the review process, all allegations and evidence submitted by the companies required extensive examination and evaluation. Many of the documents were court orders, legal business transaction papers, business permits, contracts, and pages from old business publications. Much of the data were old, incomplete, and difficult to understand. In addition, it was necessary to contact various organizations and agencies to determine the status and relationships of numerous companies. These contacts included State agencies, business bureaus, and public libraries which can verify the current status of certain businesses. We also contact the UMWA Fund to verify signatory agreements, dates of the agreements, and coverage status of employees.

We have completed virtually all of the stage one determinations and more than a third of the stage two determinations. Of the 471 requests, only 15 requests are still being considered at the first stage level. Decisions have been made regarding 8,417 of the 24,541 assignments reflected in these review requests. Of these, 4,930 assignments were modified (3,536 miners reassigned to other companies and 1,394 miners designated unassigned), 3,393 assignments were affirmed, and 94 were included in requests for review which were denied because the operator did not file the request timely or failed to submit evidence. Notices of affirmation and denial have already been released; reassignment notices are expected to be released by the end of June 1995.

If, after considering a request for review, SSA decides to change a miner's assignment, SSA applies the assignment criteria I described above to make the reassignment. Each new assignment is subject to the review process I described above. There are currently about 90 companies involved in litigation concerning the assignment of miners. Because the suits are still pending, I cannot discuss them.

Cost of SSA Workloads

The Coal Act did not provide funding for us to perform the work required of SSA. By law, SSA cannot use trust fund monies for work which is unrelated to Social Security programs. For this reason, SSA requested, and Congress provided, a supplemental appropriation of \$10 million for Fiscal Year 1993 to give SSA the necessary initial funding for this work. The funds were adequate to complete the assignments and begin the reviews. Congress also approved a change to SSA's 1994 administrative expense account appropriation language which permits SSA to use its administrative funds to carry out the requirements of the Coal Act and provides for reimbursement to the Social Security trust funds, with interest, not later than September 30, 1996.

SSA spent \$8 million of the supplemental appropriation in Fiscal Year 1993, and carried over \$2 million into Fiscal Year 1994. SSA spent another \$1.3 million of the supplemental in Fiscal Year 1994, and carried over \$0.7 million into Fiscal Year 1995.

If SSA receives requests for reviews of subsequent assignments at a rate comparable to the rate of requests for review of the initial assignments, we estimate the cost could increase by as much as \$10 million. We expect this amount to be spent over the Fiscal Year 1995-1996 period. Part of this work will be funded through the remaining supplemental appropriation, and the balance from the administrative expense account, with subsequent reimbursement from general revenues.

Conclusion

In conclusion, Madame Chairman, despite being given a difficult and complex task, SSA has carried out all of its responsibilities under the Coal Act concerning the calculation of premiums and the initial assignment of miners to operators. We continue the process of adjusting the status of the assigned miners as companies bring out new facts about corporate relationships and are processing the remaining requests for review as quickly as we can. I would be happy to answer any questions you may have.

Mr. HERGER. Thank you very much.

Mr. Brand, I appreciate your testimony.

Mr. Thornton, we want to welcome you before our Committee for the first time.

I would like to ask you a question.

Do you believe that the trustees have the discretion as to when

to impose penalties?

Mr. THORNTON. The trustees have a fiduciary responsibility to the fund to collect the maximum amount of revenues for the fund. In collecting premiums themselves, they have a certain amount of discretion to consider the costs involved in collecting the premiums versus the likelihood of collecting them. I think that once that process is completed, the responsibility for collecting the penalties is not with trustees, but with the IRS. So, in that sense the trustees do not have discretion to waive penalties but they have a certain amount of discretion with respect to collection of the premium itself.

Mr. HERGER. Thank you.

If discretion is needed, and it sounds like it might be in some instances; does that suggest that there is a problem with the act itself?

Mr. THORNTON. There may be an excessive penalty in the act. Currently, the penalty is \$100 per day per beneficiary and that can mount up to a sizable penalty in a short time. We would be willing to consider ways to adjust that penalty. As of yet, it has not been a problem because no one has been assessed that penalty.

I think Mr. Brand has explained in some detail why that has happened. Certainly, we could be willing to reopen and explore the

penalty structure of this act.

Mr. HERGER. Then the last question, are you satisfied that the fund trustees are meeting their common law and statutory duties under section 4980(b) of the Internal Revenue Code as fiduciaries?

Mr. THORNTON. We have no reason to think otherwise. Since the combined fund is a multiemployer nongovernmental benefit plan, the Labor Department has oversight responsibilities over the plan. To date, we are not aware of any irregularities that have required any particular action on the part of the Labor Department.

Mr. HERGER. Thank you.

The gentleman from Missouri, Mr. Hancock will inquire.

Mr. HANCOCK. I would like to get to the bottom line as quickly as possible.

Why should the Federal Government have any role in any privately financed, privately administered retiree health plan?

Mr. THORNTON. The Federal Government's role in this plan is actually fairly limited. The SSA, is involved in the assignment of employers and beneficiaries. IRS is involved in collection of penalties. The plan itself is a private nongovernmental fund run by trustees representing both coal companies and coal miners.

There is a transfer beginning in 1995 of moneys from the Abandoned Mine Land Fund to help defray the cost of orphan beneficiaries, but that is pretty much the extent of the Federal Government's involvement. I think at the time the act was enacted, it was recognized that this was a unique situation relating to the

coal mines going back to the Truman era of 1946.

Then Labor Secretary Elizabeth Dole's commission decided something more than collective bargaining would be needed to fix the situation. The previous administration was active in working out this compromise.

Having reviewed the bill, we have come to the conclusion that it was a reasonable solution to a very difficult situation, the main

objective being to make sure miners' benefits are provided.

Mr. HANCOCK. Here again, I think the actual answer to the guestion is of course that it got included in an act that nobody was in there when you get down to it. Very few people knew it was in there. At least the Ways and Means Committee did not know anything about it at the time.

Can you tell me how many penalty enforcement actions for failure to pay premium Treasury has initiated?

Mr. Brand. At this time, we have asserted no penalties and thus

no attempts to collect have been made.

Mr. HANCOCK. The trustees of the combined fund, are they providing you with names of individuals and corporations that are in arrears in paying their premiums to the fund as directed by the coal act? Are you getting this information?

Mr. Brand. There are two types of information.

First, there are sanctions that apply to the contributions during the transitional year. They furnished us information previously on companies that had not made those contributions. However, the sanction in that situation is a sanction that applies to a disallowance of certain deductions on the income tax return of the business entity. Since those returns had not yet been due, we have imposed none yet. Those returns now of course would have been due and presumably filed.

In our audit cycle, we will be into the returns this year that relate to that particular year of filing. We expect in August an updated list and we will put them into the return cycle and evaluate

them, whether we should examine that or not.

In terms of the penalties, we have not received a referral yet. It would appear that the compliance rate here is so substantial, and the referral of nonpayment would be from defunct small companies, so that the application of penalties wouldn't make sense.

Mr. HANCOCK. What is the SSA's involvement in this? I understand that there is quite a backlog of organizations that have appealed their assignments. Is that backlog problem being solved?

Mr. THOMPSON. Yes. We realized, after we made the initial round of assignments, when people came in to appeal, that a lot of the appeals had to do with whether a firm should have been assigned any miners. Did we have the wrong firm? We did not have the employer identification numbers for a lot of these firms. We had to guess at which firm it was and we got some wrong.

Then there were questions about whether this firm was a legitimate successor of a firm that had been in the coal business. It was clear we were going to have to work through all of those issues before we reassigned coal miners or else we would just be reassigning coal miners from one firm to another firm that shouldn't have been

assigned a coal miner in the first place.

We have spent a good deal of time sorting through to make sure that our list of companies eligible to be assigned a miner was a valid list. We think we have that pretty well straightened out and now we are actually assigning the miners. That has been the delay. We should have that wrapped up for this round in another couple of months.

We have about 24,500 miners involved in requests for review. I said in the testimony we have 8,500 that were assigned as of a week ago. We think the other 16,000 will be taken care of in the next couple of months.

Mr. HANCOCK. I understand that there have been some 200 companies that were initially notified that they might have some liability under this act, that have been released from all liability; is that correct?

Mr. THOMPSON. That is about right.

Mr. HANCOCK. Would you give me an estimate of how many companies that you did not find? Are you convinced that you found

all the companies that you were supposed to find?

Ms. O'CONNELL. Let me answer that. In the initial round, we found a lot of wrong companies and that is the 200 you are talking about. As we have gone through the appeals, through the evidence furnished by the companies in the appeals, we have identified companies that did not receive assignments in the first round that will when we do the reassignments. For example, we may have had 20 companies with identical names and very close addresses, and we got the wrong one. Now we presumably have the right one. So, I do not have an estimate of that number until we have done the reassignments, but we will have identified companies who did not receive assignments in the first round.

Mr. HANCOCK. Are you telling me that there are companies out there now that are going to get a notice in the near future that they owe money into a pension plan or into a health benefit plan that were not a party to the contracts and do not know anything

about it?

Mr. THOMPSON. They were presumably a party to the contract but previously we had identified a different company and now we realize we made a mistake.

Ms. O'CONNELL. They have to have been a signatory during the appropriate period and the miner had to have worked for them or a predecessor company in the right period, so they would have been

a party to the contract.

Mr. HANCOCK. Is it unusual in our scheme of things to have companies that have changed hands a number of times, and have not been in the coal business for maybe 20, 25 years, to later find that there is a contingent liability that the new owners are not aware of and had no record of. Do you know of another instance where we have done something like this?

Mr. THOMPSON. That has arisen several times. I will defer to somebody else on the question of whether that is reasonable or not.

Mr. HANCOCK. I think we know the answer to that.

Mr. THOMPSON. It has happened a couple of times.

Mr. HANCOCK. Can you give me a specific where it has happened?

Mr. THOMPSON. No.

Mr. HANCOCK. Are we going back to 1950 and telling people that they owe money for employee benefit plans?

Ms. O'CONNELL. That is correct.

Mr. HANCOCK. You cannot think of any other time?

Ms. O'CONNELL. Eastern Enterprises is no longer in the coal business. They sold that part of the company, and received assignments for that reason.

Mr. HANCOCK. I understand. The bill that we have introduced, I want to reiterate, is not going to take any benefits away from the miners that are retired. However, I think it is a case of who is going to pay for it rather than taking away any benefits. That certainly is not our position at all.

Thank you, Madam Chairman.

Chairman JOHNSON [presiding]. Thank you.

I did not get a chance in my earlier statement to welcome you, Mr. Thornton. This is your first opportunity to be on the other side.

Mr. THORNTON. Thank you very much.

Chairman JOHNSON. We appreciated your service on the Committee and we appreciate your service in the executive branch.

Mr. THORNTON. It is an honor to be here.

Chairman JOHNSON. Are you having any problems with the premium dollars flowing in and the way they were anticipated? In other words, are people paying and are they paying the amount

that you expect them to pay?

Mr. BRAND. I might respond to that. The collection of the premiums is with the fund itself, the combined fund. But the indications are that 91 percent of the premiums are being paid timely and that another 5 percent are subject to various types of arrangements such as escrow, litigation or bankruptcy, so there is a high degree of compliance in the actual payment of the premiums.

The understanding is that the unpaid premiums are small amounts spread among a number of small companies that in many,

many instances are insolvent or bankrupt themselves.

Chairman JOHNSON. The figure that we were given was that

there were 200 companies that were delinquent.

Mr. Brand. My understanding is that the 200 companies are not necessarily delinquent. They are in various stages of appeals or may have been relieved of responsibility or may be in bankruptcy. I believe that may be a question that is better asked of the fund representatives themselves. They would have that information.

Chairman JOHNSON. We will certainly do that.

Mr. Zimmer.

Mr. ZIMMER. Thank you, Madam Chairman.

I would like to ask Dr. Thompson and Ms. O'Connell whether you are familiar with the very recent Federal District Court case of the National Coal Association against Secretary Shalala, which was decided June 2 of this year and held that the SSA did not properly compute the premium amount under the 1992 coal act?

Mr. THOMPSON. I have heard of the case. I have been told that

the case was decided.

Mr. ZIMMER. Can you tell the Subcommittee whether the SSA

plans to appeal this decision?

Mr. THOMPSON. The staff is evaluating that and they haven't brought me a recommendation yet, so I cannot tell you today what we are going to do.

Mr. ZIMMER. Does the staff consider this decision to be an important one?

Mr. THOMPSON. I am sure.

Mr. ZIMMER. Do you know approximately what the total amount of premiums annually is and the total that could be eliminated if the National Coal Association case is upheld on appeal?

Mr. THOMPSON. I would rather supply that for the record.

Mr. ZIMMER. Certainly. I have no further questions. Thank you.

[The following was subsequently received:]

The figures in the first column are the per beneficiary premiums for each of the plan years as determined by SSA. The second column shows what the per beneficiary premium for each year would have been had they been computed using the method determined by the District Court to be the correct computation method. Since SSA does not have information about totals of premiums billed by the combined fund, we cannot determine the total effect of the court decision.

Per Beneficiary Premium	Original	Court Case
1st Plan Year (02/01/93-09/30/93)	= \$2,245.83	\$2,013.83
2d Plan Year (10/01/93-09/30/94)	= 2,245.83	2,013.83
3d Plan Year (10/01/94-09/30/95)	= 2,349.38	2,106.68

Chairman JOHNSON. I thank the panel for your testimony this morning and for your assistance in the future.

[Additional written Subcommittee questions and the responses submitted to IRS and Treasury follow:]

QUESTIONS FOR TREASURY AND THE INTERNAL REVENUE SERVICE.

- How many penalty enforcement actions for failure to pay premiums has the Treasury initiated, pursuant to section 9707 of the Internal Revenue Code?
- A. Taking into account the high level of compliance and that actions are underway to collect 95 percent of the delinquent premiums, the IRS has decided that the most judicious use of its enforcement resources would be to focus on those operators referred to the IRS by the Combined Fund for delinquent premiums. The IRS is working closely with the Fund to obtain this information on a systemic basis when they have determined willful nonpayment. To date, no referrals have been received from the Fund; thus, no penalties have been assessed.
- 2. Are the trustees of the Combined Benefit Fund providing you with the names of individuals or corporations who are delinquent in making their premium payments?
- A. Information from the Combined Fund indicates that 91 percent of the assessed premiums have been paid. The Fund has also indicated that proofs of claim, settlement negotiations, suits or other actions are pending for 95 percent of the uncollected premiums. It would not benefit the Fund, the beneficiaries, or the IRS to indiscriminately assess penalties against the companies that are financially unable to pay the premiums. Representatives from the Fund are cooperating with the IRS to ensure that we do not indiscriminately and prematurely impose the sanctions under the Coal Act.
- 3. Is it the responsibility of the Treasury Department to inquire as to whether the premiums due the Fund under the Act are actually being paid? Or do you simply wait for referrals of non-payers from the Fund?
- A. The statute does not address the reporting of delinquent operators by the Combined Fund. As noted in the answer to question 2, the IRS has met with Fund representatives regarding the coordination of collection efforts with the implementation of the penalty.
- 4. There are some reports that there are more than 200 delinquent companies.
 If you have not received referrals from the Fund, does that concern you?
- A. The number of delinquent companies does not reflect the amount of uncollected premiums. Our discussions with the Combined Fund indicate that 91 percent of the assessed premiums have been collected. Of the amounts that have not been collected, almost half are either the subject of escrow agreements with operators contesting the constitutionality of the Act or are attributable to operators known to be the subject of bankruptcy proceedings. The remaining uncollected premiums are spread among small insolvent or defunct operators and have been determined to be not collectible by the Fund.
- 5. Do you believe the Trustees have discretion as to when to impose penalties?
- No. The Trustees do not impose penalties and therefore have no discretion whether to impose penalties.

- 6. Does the Treasury or the Service have some discretion as to when to impose penalties?
- A. Under the statute, the Secretary of Treasury may waive all or part of the penalty, in the case of a failure that is due to reasonable cause and not to willful neglect, to the extent that it is determined that the payment of the penalty would be excessive relative to the failure involved.
- If discretion is needed, does that suggest that there is a problem with the Act itself?
- A. As stated in our testimony, we are concerned that the penalty may be excessive in certain cases, and a revised penalty structure may provide a better enforcement tool. However, we do not believe that this issue reflects problems with the basic financing structure of the Act -- requiring former employers to finance the health benefits promised to retired miners and their families.
- 8. Are you satisfied that the Fund Trustees are meeting their common law and statutory duties under section 4980(B) of the Internal Revenue Code as fiduciaries?
- A. The Coal Act provides that the Combined Fund is a plan described in section 302(c)(5) of the Labor Management Relations Act of 1947 (LMRA), an employee welfare benefit plan within the meaning of section 3(1) of the Employee Retirement Income Security Act of 1974 (ERISA) and a multiemployer plan within the meaning of section 3(37) of ERISA. The fiduciary duties are under ERISA. Both the LMRA and ERISA are administered by agencies in the U.S. Department of Labor.
- Have you received adequate funding from the Congress to carry out your penalty enforcement responsibility under the Act?
- A. The IRS did not receive any additional funding to administer the penalty provisions of the Coal Act. It does not benefit the Fund, beneficiaries, or the IRS to assess penalties against companies that are financially unable to pay the premiums or in cases where a penalty assessment will result in cessation of business operations or bankruptcy of the company. Additionally, it would not be a judicious use of IRS resources to assess penalties in these situations.
- 10. Do you have adequate personnel to carry out your penalty enforcement responsibility under the Act?
- A. Since the IRS did not receive additional funding to administer the Coal Act, resources to enforce the penalty provision would be redirected from other compliance activities. The IRS is ready to impose the sanctions in the Act when a penalty assessment will encourage voluntary compliance with making the required payments under the Act.

We will proceed with the next panel.

Russell Crosby, acting executive director of the United Mine Workers; John Ladley, partner, Ernst & Young; and Jeffrey Gathers, principal, Towers Perrin, Cleveland, Ohio.

Mr. Crosby, if you will proceed.

As we mentioned earlier, your full statement will be included in the record, and we ask you to summarize.

STATEMENT OF RUSSELL U. CROSBY, ACTING EXECUTIVE DIRECTOR, UNITED MINE WORKERS OF AMERICA, HEALTH AND RETIREMENT FUNDS

Mr. Crosby. Good morning, Madam Chairman, gentlemen.

I am Russell Crosby, acting executive director of the UMWA Health and Retirement Funds.

Thank you for inviting me here today to review the status of the UMWA Combined Benefit Fund and the UMWA 1992 Benefit Plan.

In 1992, when Congress passed the coal act, it created both the combined fund and the 1992 plan. Today, the combined fund serves over 92,000 retired miners and their dependents. With an average age of 73, almost 90 percent are eligible for Medicare and about 20 percent also receive Federal black lung benefits.

Four thousand three hundred retired miners and their dependents receive benefits from the 1992 plan, with an average age of 51, and about 44 percent eligible for Medicare; 5 percent also receive Federalblack lung benefits.

The combined fund receives financing from three sources, first, the beneficiaries themselves participate by the transfer of \$210 million from the 1950 Pension Trust. This has covered the cost of benefits for unassigned or orphan beneficiaries in the first 3 years of the fund's existence. Transfers of interest from the Abandoned Mine Reclamation Fund are expected to pay for benefits for the unassigned pool of beneficiaries for another 10 years.

Second, companies that signed the 1988 Coal Wage Agreement pay premiums for beneficiaries assigned to them. They paid for the combined fund's first year operations as well. Those companies also fund the 1992 plan while continuing single employer health plans

for their retirees.

Third, reach-back companies pay premiums for retired miners and dependents who worked for them and are now assigned to them under the act. This parallels the premium obligation of the

companies that signed the 1988 Coal Wage Agreement.

Both the combined fund and the 1992 plan have contracted with United Health Care Corp., a national leader in health care management, to provide claims administration and cost management services on a prepaid risk basis. United is now developing managed care initiatives to maximize the cost efficient delivery of benefits.

Health care cost-containment is not new to retired miners. The 1950 and 1974 benefit plans began cost-containment programs in 1984, with the result that for comparable services, the UMWA Benefit Trust had per capita expense trends almost 1 full percent below those of the Medicare Program.

In 1990, HCFA approved the funds' demonstration program for Medicare part B services. Since then, Medicare has paid the fund a negotiated flat fee per beneficiary and the fund assumed the risk

of providing part B services within that cost.

During the first years of the demonstration, the fund received more in payment than the cost of services, primarily by reducing medical fees. This is the source of most of the combined fund's net asset balance. However, for the current year and the anticipated future, the combined fund is expected to break even on the arrangement because Medicare has significantly reduced the amount it pays us.

The trustees are concerned about the likely effect on the combined fund of any overall reduction in Medicare benefits. Such a development can only increase the risk of future shortfalls in

income in relation to the cost of benefits.

A new demonstration proposal to extend the Medicare capitation arrangement to cover part A as well as part B services has been submitted to HCFA. While the proposal is under consideration, the fund and United Health Care are working to develop networks and other managed care interventions to maximize the quality of care while minimizing cost.

We believe that these benefit plans are a model of the kind of health care delivery and payment systems that the Congress has

hoped to promote nationally.

While Guy King of Ernst & Young will discuss the financial outlook of the combined fund, I can summarize the current picture. The fund's audited financial statements show that for the plan year ended September 1994, the Combined Benefit Fund had net assets of \$114.8 million. It provided \$338 million in medical benefits, of which \$159 million were covered by Medicare and black lung payments. In addition, death benefits of almost \$13 million were paid out.

Roughly, \$92 million of the combined fund's net asset balance comes from the Medicare relationship, not premiums paid by employers. Other sources include collection of pre-coal act delinquencies and credits of first-year contributions made by companies that signed the 1988 Coal Wage Agreement but had no

beneficiaries assigned.

Audited financial statements for the 1992 plan for the year ended December 31, show it had net assets of \$1.3 million. During that year, the plan provided almost \$10 million in medical benefits of which \$2 million was covered by Medicare and black lung payments.

In October 1993, Social Security provided a list of companies with beneficiary assignments and the fund immediately billed all companies the premiums owed for their retirees and their depend-

ents.

Companies appealed over 35,000 of the individual beneficiary assignments but Social Security expects to complete the appeals process this fall. These ongoing appeal decisions have caused a shifting of liability among companies as well as to the unassigned pool.

To ensure that premiums owed are paid, we maintain a systematic and aggressive program to collect delinquent contributions. While the coal industry includes a number of large, financially stable companies who reliably contribute to the fund, it also has

many small undercapitalized employers who start up and then shut down after a short time, often falling delinquent in the process.

Bankruptcies are also common in the industry, but we have not observed a significant increase in bankruptcy filings since the passage of the coal act. There was an annual average of 44 new bankruptcy filings involving the funds in each of the 5 years prior to the coal act, but there were only 36 new bankruptcy filings in the year after the coal act became effective.

Under the coal act, the combined fund beneficiaries are assigned to 688 different companies which are part of 520 control groups. So far, 215 of these companies have been relieved of liability as a result of Social Security appeal decisions.

Approximately 91 percent of assessed premiums have been paid. Of the \$30 million of delinquent premiums, about half is owed by two companies, one of which has entered into an escrow-type arrangement.

A total of 217 operators were delinquent as of March 1995. We are in the process of suing, filing proofs of claim or negotiating settlements in matters covering approximately 95 percent of the delinquent premiums owed by these companies. The remaining 5 percent is owed by numerous small employers who were assigned small numbers of beneficiaries. Many of these are out of business or have filed potentially successful appeals from their assignments.

While the uncertainties resulting from the Social Security appeals process have prevented final calculations of premium shortfalls or surpluses for the first two plan years, premiums appear to have fallen short of expenses.

The trustees asked Guy King of Ernst & Young to prepare actuarial projections of the combined fund's financial position over the next 10 years. As the former Chief Actuary of the Health Care Financing Administration, Mr. King is uniquely qualified for this work.

You have his report.

Mr. King has also explained the reasons why the projections of large surpluses found in the Towers Perrin study are improbable. Towers Perrin apparently relies on inconsistent assumptions, they assume that the combined fund's future cost trends will grow at a dramatically lower rate, but that the MCPI, which governs future premiums, will not experience a corresponding downward movement.

The fund's cost trends are closely linked to Medicare, and Medicare makes up a large portion of the MCPI. As Mr. King will explain in more detail, the pattern of premiums falling short of expenses is likely to continue into the future. The assets gathered from the Medicare Program and prior period collections will be needed to cover these future shortfalls.

I am now prepared to respond to any questions the Committee might have.

Thank you. Mr. Ladley.

[The prepared statement follows:]

STATEMENT OF RUSSELL U. CROSBY ACTING EXECUTIVE DIRECTOR OF THE UMWA HEALTH AND RETIREMENT FUNDS

Before the House Ways and Means Committee Subcommittee on Oversight June 22, 1995

Good morning, Madam Chairman and Members of the Subcommittee. It is my pleasure to be here today to address your inquiries concerning the administration of the UMWA Combined Benefit Fund and the 1992 UMWA Benefit Trust in accordance with the provisions of the Coal Industry Retiree Health Benefit Act of 1992 ("Coal Act").

HISTORICAL PERSPECTIVE

Before I discuss the specifics of the operations of these two funds, let me first provide you with some important background information. As you know, the provision of retiree health benefits in the coal industry has a long history dating back almost 50 years to the agreement between the then Secretary of the Interior, Julius A. Krug and John L. Lewis, President of the United Mine Workers of America ("UMWA"). The Krug-Lewis Agreement established an unprecedented system for providing health and pension benefits to active and retired miners and their families. Through subsequent collective bargaining agreements between the UMWA and the Bituminous Coal Operators' Association, Inc. ("BCOA"), this comprehensive health delivery system was carried forward, funded by contributions paid to the health trusts by signatory employers.

The health delivery system that was established through collective bargaining has been continuously administered by the UMWA Health and Retirement Funds ("Funds"), which is a collective reference to the family of employee benefit trusts that provide health and pension benefits to eligible miners and their eligible dependents. Prior to the enactment of the Coal Act, the Funds consisted of five trusts: the UMWA 1950 Pension Trust, the UMWA 1950 Benefit Plan and Trust, the UMWA 1974 Pension Trust the UMWA 1974 Benefit Plan and Trust, and the UMWA Cash Deferred Savings Plan of 1988.

THE COAL COMMISSION

By the late 1980s the UNWA 1950 and 1974 Benefit Trusts were in deep financial difficulty due to the diminishing number of contributing employers, rising costs and especially the relative growth of the population of "orphan" beneficiaries, those whose signatory employers had either gone out of business or refused to sign subsequent National Bituminous Coal Wage Agreements ("NBCWA") and stopped contributing. In 1989, then Secretary of Labor Elizabeth Dole created the Advisory Commission on United Mine Workers of America Retiree Health Benefits ("Coal Commission") to evaluate the problems facing the Funds and to propose a long term solution. After study, the Coal Commission projected that the financial difficulties of the 1950 and 1974 Benefit Trusts would worsen, resulting in a combined deficit of \$300 million by 1993. The Commission also recognized that

Retired coal miners have legitimate expectations of health care benefits for life; that was the promise they received during their working lives and that is how they planned their retirement years. That commitment should be honored. (Coal Commission Report at 1.)

Consequently, the Coal Commission made a number of recommendations, including a recommendation that companies signatory to past National Bituminous Coal Wage Agreements ("NBCWAs") should bear the cost of providing health benefits to their own retired miners. The Coal Commission also recommended that current and former signatory employers collectively share the cost of providing health benefits to retirees whose employers no longer existed ("orphan" miners). According to the Commission, the fairest method of financing this promised health care encompassed the "imposition of a statutory obligation to contribute on current and past signatories, mechanisms to prevent future dumping of retiree healthcare obligations, authority to utilize excess pension assets and the implementation of state-of-the-art managed care and cost containment techniques." (Coal Commission Report at 60.)

THE COAL ACT

In October 1992, Congress enacted the Coal Act as part of the Energy Act of 1992. It is a stated policy of the Coal Act "to provide for the continuation of a privately financed self-sufficient program for the delivery of health care benefits..." to coal industry retirees. This policy is effectuated through the identification of the "persons most responsible for plan liabilities in order to stabilize plan funding and allow for the provision of health care benefits to such retirees."

The Coal Act merged the 1950 and 1974 Benefit Trusts into a new private trust fund called the UMWA Combined Benefit Fund. Beneficiaries of the 1950 and 1974 Benefit Trusts as of July 20, 1992 are now covered by the Combined Benefit Fund, which has a statutory mandate to provide benefits on a prepaid risk basis and, to the maximum extent feasible, substantially the same coverage that was provided under the 1950 and 1974 Benefit Trusts as of January 1, 1992.

The Coal Act provides for financial stability of the Combined Benefit Fund by drawing from three constituent sources. First, the beneficiaries themselves were required to participate by the transfer of \$210 million from the 1950 Pension Trust in three installments of \$70 million in each of the first three plan years. This has been enough to cover the cost of providing benefits to the "unassigned" or orphan beneficiaries in the Combined Fund during these years. (For an additional ten years, transfers from the Abandoned Mine Reclamation Fund are expected to continue to cover this unassigned beneficiary cost.)

Second, operators who signed the 1988 NBCWA are required to pay premiums for beneficiaries assigned to them and a proportionate share of the death benefit cost and the cost of unassigned beneficiaries, to the extent this cost is not covered by the transfers described above. They were also required to advance funds to cover the first plan year's operations. In addition, the 1988 agreement operators provide the guaranteed funding of the 1992 Benefit Plan and are required to continue the single employer health plans for retirees in place as of the effective date of the Act. The creation of the 1992 Plan and continuation of the single employer plans contribute to the stability of the Combined Fund by allowing for the closed population of the Combined Fund, limiting the potential growth of its expenses.

Third, the coal industry operators who signed Coal Wage Agreements prior to 1988, often referred to as "reachbacks," are required to pay premiums for beneficiaries assigned to them and a proportionate share of the death benefit cost and the cost of unassigned beneficiaries, to the extent that this cost is not covered by the transfers described above. This obligation of the reachbacks parallels the 1988 agreement operators' premium

obligation. However, unlike the 1988 agreement operators, the reachbacks have no other obligations. Moreover, under the assignment criteria of section 9706, retirees are generally assigned to the employers who employed them more recently, so that a retiree who worked first for a reachback company and later for a 1988 agreement operator would be assigned to the 1988 agreement operator.

Pursuant to the Act, the UMWA and the BCOA created the UMWA 1992 Benefit Plan to provide health benefits to a class of orphan beneficiaries not cowered by the Combined Fund. This class includes beneficiaries who would have received benefits from the 1950 or 1974 Benefit Trusts but were excluded from the Combined Fund by its cut-off date of July 20, 1992. It also includes those beneficiaries whose employers have failed in their duty under the Act to provide benefits under single employer plans. Beneficiaries of the 1992 Benefit Plan must derive their eligibility from mine workers meeting the age and service requirements for eligibility as of February 1, 1993, who have retired on or before September 30, 1994. Thus the maximum number of potentially eligible beneficiaries of the 1992 Plan is the number who could be eligible for benefits under single employer plans mandated by section 9711.

The 1992 Benefit Plan is funded by two kinds of premiums. Prefunding premiums are paid by all 1988 agreement operators who maintain single employer plans under the Act, based upon the roughly 62,000 beneficiaries in such plans, as they are all potentially eligible beneficiaries of the 1992 Plan. Per beneficiary premiums are owed by employers who last employed beneficiaries actually receiving benefits from the 1992 Plan.

DEMOGRAPHICS OF THE COMBINED BENEFIT FUND AND THE 1992 PLAN

There are currently 92,083 retired miners and dependents covered by the Combined Benefit Fund. These beneficiaries, on average, are over 73 years old. Approximately 36% of Combined Fund beneficiaries are over 80 years old and that number is expected to exceed 50% in the next 6 years. Over 88% of Combined Benefit Fund beneficiaries are eligible for Medicare benefits and more than 19% of these beneficiaries also receive federal Black Lung Benefits.

There are 4,301 retired miners and dependents covered by the 1992 Benefit Plan. The average age of this population is 51; approximately 44% are eligible for Medicare benefits and 5% also receive federal Black Lung benefits.

Beneficiaries of the Combined Benefit Fund and the 1992 Benefit Plan are spread across the United States. However, the heaviest concentrations of beneficiaries are found in the coal field areas in southern West Virginia, western Pennsylvania, Ohio, Virginia, Kentucky, Alabama, Illinois, Tennessee, Florida and Indiana.

COVERED BENEFITS

Pursuant to the Coal Act, the health benefits provided to eligible beneficiaries under both the Combined Benefit Fund and the 1992 Plan is a continuation of the level of coverage that was provided by the former 1950 and 1974 Benefit Trusts. That plan of benefits is designed to provide beneficiaries with access to high quality health care with minimal out-of-pocket expenses while also containing costs. The Trustees do, however, have authority under the Coal Act to make certain revisions to the health plan in order to preserve its financial solvency. At the present time, covered services include inpatient and outpatient hospital care, physician and other primary care services, insulin

and prescription drugs, skilled nursing care and extended care, certain home health services and other benefits such as vision care, durable medical equipment, hearing aids and necessary ambulance services. For services that are covered by the plans, the cost sharing requirements are a \$5 copay per physician visit, up to annual maximum of \$100 per family, and a \$5 copay per 30-day prescription or refill, up to an annual maximum of \$50 per family. Beneficiaries are also protected by the Funds' Hold Harmless program against costs resulting from certain payment denials (i.e. charges that are denied payment as medically unnecessary or as excessive fees).

ADMINISTRATION OF THE PLANS

Both the Combined Benefit Fund and the 1992 Benefit Plan provide a "one stop shopping" approach for eligible beneficiaries and their providers. The Funds has processed and paid Medicare benefits on behalf of its beneficiaries since the inception of the Medicare program in 1965. Pursuant to the continuation of an arrangement with the Health Care Financing Administration ("HCFA"), the Funds pays Medicare Part B benefits (except for those Part B services that are processed by the Part A fiscal Intermediaries) for the Medicare eligible beneficiaries of the Combined Benefit Fund and the 1992 Benefit Plan. In addition, under an arrangement with the U.S. Department of Labor entered into in 1984, the Funds administers the health benefits portion of the federal Black Lung program for Funds' beneficiaries. Thus, plan benefits "wrap around" both the Black Lung and Medicare benefits.

As a result of a competitive bidding process, effective January 1, 1995, the Trustees of the Combined Benefit Fund and the 1992 Benefit Plan contracted with the United HealthCare Corporation ("UHC") for the delivery of administrative and cost management services to their beneficiaries. UHC is a large, well-recognized, national leader in the health care management industry. Pursuant to its agreements with the Combined Benefit Fund and the 1992 Benefit Plan, UHC assumed the administration and management of the health care benefits of each fund on a prepaid risk basis. UHC is now developing managed care initiatives to continue cost efficient delivery of benefits to this population.

Although some of the UHC initiatives will be new, the idea of cost containment in health care is not new to the UMWA Benefit Funds' population. The UMWA 1950 and 1974 Benefit Plans began successful cost management programs under the NBCWA of 1984 and expanded those programs under the NBCWA of 1988. Because of these programs, the 1950 and 1974 Benefit Trusts experienced significantly lower rates of cost increase per beneficiary than did the national population and dramatically lower rates than populations of comparable age. As the Ernst and Young study demonstrates, in a comparison of comparable services, from 1986 through 1994, the UMWA Benefit Trusts have had a per capita expense trend of increase of 0.8% below the trend of increase for the Medicare program.

Among the most successful cost management programs of the UMWA Health Funds prior to the formation of the Combined Fund were a national medical fee limit program, a drug pricing program based on negotiated acquisition cost for prescription drugs, strict limits on fees for durable medical equipment, including oxygen, drug and medical utilization review, including rebundling of lab and surgery fees, and promotion of the use of generic drugs. While the 1950 and 1974 Benefit Trusts paid providers on a fee for service basis with beneficiaries free to choose providers, the beneficiary population has always been extremely cooperative with the Funds' cost containment efforts, and this has enabled the Funds to negotiate for providers' cooperation in

programs to reduce costs. The Funds has maintained good communications with beneficiaries and providers to implement these programs through staff members at eight field service offices in the coalfields and through frequent mailings of information in beneficiary news letters.

THE MEDICARE ARRANGEMENT

As I mentioned earlier, the Funds has enjoyed a longstanding relationship with the Medicare program. At the time the Medicare Act was passed in 1955, the Funds provided most physician and related services through clinics in the coalfields that it helped sponsor. These clinics were paid on a retainer or other non-fee-for-service basis. However, starting in 1978, a fee-for-service system that embodied freedom-of-choice of providers was adopted. At the inception of the Medicare program, the Funds became a Group Practice Prepayment Plan and subsequently assumed its current status as a Health Care Prepayment Plan ("HCPP"). For a number of years, Medicare reimbursed the Funds for its beneficiaries' Part B medical and administrative expenses on a "reasonable cost" basis. That arrangement changed in 1990 when HCFA approved the Funds' demonstration proposal and entered into a capitation agreement for Part B services. Pursuant to that arrangement, HCFA pays the Funds a negotiated flat fee per beneficiary per month and the Funds assumed the risk of providing the Medicare Part B services for that fee. To the extent that these benefits cost less than the monthly fee to provide the services, the excess monies are the Funds' to keep and use to pay other benefits. However, HCFA's liability is also capped. Consequently, if the cost of Medicare services exceed the HCFA payments, the Funds must absorb the difference.

During the first years of the Medicare demonstration, the Funds received more in payment than the cost of services, and this is the source of most of the Combined Funds' current net assets. However, for the current year and the anticipated future, the Funds are expected barely to break even on the arrangement.

In January 1995, the Funds, on behalf of the Combined Benefit Fund and the 1992 Benefit Plan, submitted a demonstration proposal to HCFA to extend the capitation arrangement to cover Part A as well as Part B services for its beneficiaries. The Funds developed this proposal jointly with United HealthCare as a means of more effectively managing the health care costs of the Combined Benefit Fund's and the 1992 Benefit Plan's elderly population. The proposal is under consideration at HCFA. In the meantime, the Funds and UKC are moving forward with the development of networks and other managed care interventions to maximize the quality of care received by beneficiaries while minimizing cost.

COAL ACT ASSIGNMENTS

Under the Coal Act, the Secretary of Health and Human Services was required to assign beneficiaries to operators in accordance with certain attribution rules that are set out in the Act. 26 USC Section 9706. Beneficiaries who could not be assigned using the assignment rules set forth in the Coal Act are placed in the unassigned pool. As required by the Coal Act, the Fund transmitted to the Secretary information relating to the benefits and covered beneficiaries under the former 1950 and 1974 Benefit Plans and financial information for the Secretary's use in the calculation of the annual health premium. The Funds has also provided information as requested by the Secretary concerning the signatory status of operators and the work histories of covered beneficiaries for use in the assignment process.

In October 1993, the Secretary provided the Funds with a comprehensive list of assignments, and the Funds immediately billed all assigned operators and their related persons for the premiums and has pursued collection of the monies owed to the Fund. However, many operators appealed the assignments made by the Secretary--over 35,000 individual beneficiary assignments have been appealed--and the Secretary expects to complete that appeal process in the Fall of 1995. As a result of the appeals, there has been a shifting of liability among operators, as well as to the unassigned pool. The Funds hopes that much of the liability will be finally established by early next year. In the meantime, the Funds tracks the appeals decisions made by the Secretary, making adjustments to operator billings where appropriate.

FINANCIAL STATUS OF THE COMBINED BENEFIT FUND

Although Guy King of Ernst & Young is here today to discuss the financial outlook of the Combined Benefit Fund, let me briefly summarize the current financial picture of that Fund. The most recent audited financial statements of the Combined Benefit Fund show that for the plan year ended September 30, 1994, the Combined Benefit Fund had net assets of \$114,829,000. During that plan year, the Combined Benefit Fund provided medical benefits to beneficiaries in the amount of \$319,211,000, of which \$159,280,000 was covered by Medicare and DOL (black lung) payments. In addition, \$12,653,000 in death benefits was paid to the families of deceased beneficiaries.

As I stated earlier, most of the Combined Funds' net assets, approximately \$91.5 million of the total of \$114.8 million, comes from the margin of success in the early Medicare capitation program. Other sources have been collections of pre-Coal Act delinquencies and credits of first year contributions of 1988 Agreement operators. While the uncertainties resulting from the Social Security Administration appeal process have prevented final calculations of premium shortfalls or surpluses for the first two plan years, we can discern that premiums appear to have fallen short of expenses for these years. Therefore, premium payments have not been the source of the net assets. As Mr. King will explain in more detail, it appears most likely that this pattern of premium shortfalls will continue into the future, so that the assets gathered from the early years of the Medicare demonstration program and collections of past obligations are likely to be needed to cover these shortfalls.

The figures presented here are from our statements of accrued assets and liabilities. It is important to note that Generally Accepted Accounting Principles require accrual-based accounting for employee benefit plans that pay health care claims. This is because of the fact that health care services are received by beneficiaries months and even years before the plan receives, processes and pays the providers' bills. Thus, the cash receipts for any given period, even up to a year, are not likely to correspond to the cash disbursements for the same period. The appearance of cash surpluses or shortfalls at any given time is, therefore, never a good indication of the plan's financial position.

FINANCIAL STATUS OF THE UMWA 1992 BENEFIT PLAN

I also will present a brief summary of the financial situation of the 1992 Benefit Plan. The most recent audited financial statements for the plan year ended December 31, 1994 show that the 1992 Benefit Plan had net assets of \$1,295,000. During that plan year, the 1992 Benefit Plan provided medical benefits to beneficiaries in the amount of \$9,783,000, of which \$2,126,000 was covered by Medicare and DOL (black lung) payments.

DELINOUENCY COLLECTION

As required by the Employee Retirement Income Security Act of 1974 (ERISA), the Funds maintains a systematic, diligent, program to collect delinquent contributions. This program is designed to take appropriate action to pursue every delinquency until contributions are not collectible after diligent effort, due to insolvency and shutdown of the employer, including all jointly and severally liable entities. While the coal industry includes a number of large, financially stable employers, it also includes any small employers who often commence operations and then cease after a few years, (and sometimes after only a few months) due to adverse business conditions or adverse mining conditions. Such employers are often undercapitalized and often become delinquent in their contributions prior to cessation of operations.

Thus, bankruptcies are common in the coal industry, primarily because of its competitive nature. Since the enactment of the Coal Act, the number of bankruptcy filings appears to be trending slightly downward. The number of bankruptcy cases involving the Funds averaged 51 new filings annually in the ten years prior to the Coal Act, and averaged 44 new filings annually in the five years prior to the Coal Act, and numbered 36 new filings in the year after the Coal Act became effective. The frequency of bankruptcy poses a special challenge to the Funds' collection program. The Funds has met this challenge by maintaining a professional audit staff, located in the field service offices, that perform regular audits of signatory employers, and a staff of delinquency and withdrawal liability lawyers and paralegals, assisted by local counsel in firms specializing in this practice in coal field locations. The Funds' auditors and legal staff have developed expertise in pursuing those employers who seek to evade their contribution obligations. During the five years prior to the Coal Act, the Funds delinquency collection program collected over fifty million dollars for all of the Trusts, with the lions' share of this amount recovered to the 1950 and 1974 Benefit Trusts.

Under the Coal Act, the Combined Fund beneficiaries have been assigned to 688 different assigned operators. These 688 operators can be identified to approximately 520 different controlled groups of related persons, which we identified in earlier correspondence with the Subcommittee. So far, 215 operators have been relieved of liability as a result of SSA appeal decisions. To date, approximately 91.1% of the assigned premiums have been paid. Of the \$29.9 million of premiums that have not been paid, approximately \$6.3 million is due from a large assigned operator which is in litigation with the Fund and has entered into an escrow-type arrangement with the Fund. An additional \$6.6 million is accounted for by another assigned operator's Chapter 11 bankruptcy proceeding. The Combined Fund has filed proof of claims in this bankruptcy and taken extraordinary steps to protect the assets in the bankruptcy estate from unlawful dissipation. The Combined Fund has obtained one multi-million dollar settlement in another complex bankruptcy, which was also already pending at the time of the passage of the Act, resulting in payment of most of the premiums assigned to the bankruptcy debtor. Most significantly, the Combined Fund has defeated an attempt by one of the largest assigned operators to have its premium obligations discharged through a Chapter 11 bankruptcy proceeding commenced in 1986.

A total of 217 operators were delinquent, as of March 1995. We have sued, filed proofs of claim or commenced settlement negotiations in matters covering approximately 80% of the premiums owed by these operators. We have suits or other actions in preparation for an additional 15% of the premiums owed. The

remaining 5% is owed by numerous small employers who were assigned small numbers of beneficiaries each. Investigation indicates that many of these are out of business or have filed potentially successful appeals from their assignments.

The Coal Act also requires 1988 Last Signatory Operators and related persons to pay an annual prefunding premium to the 1992 Benefit Plan for all eligible and potentially eligible beneficiaries attributable to such operator. At the same time, the Coal Act requires 1988 Last Signatory Operators, Last Signatory Operators and related persons to pay a monthly per beneficiary premium to the UMWA Benefit Plan for each beneficiary receiving benefits from that plan attributable to such operator. We estimate the 1992 Benefit Plan's collection rate for the annual prefunding premium, paid by 1988 agreement operators, is approximately 90%. However, the collection rate for the per beneficiary premiums owed to the 1992 Benefit Plan is only 19%. The low collectibility of the per beneficiary premiums is not surprising, given that the employers that owe such premiums have already failed to meet their obligation to maintain individual employer plans and are most often in bankruptcy or no longer financially viable. Nonetheless, the Funds undertakes all reasonable efforts to pursue collection of the monies owed to the 1992 Benefit Plan, and it has brought actions for injunctions to compel employers who are able to continue their single employer plans, required by section 9711 of the Act, to do so.

Russell U. Crosby
Acting Executive Director

Chairman Johnson. Thank you, Mr. Crosby. Mr. Ladley.

STATEMENT OF JACK LADLEY, PARTNER, CONSULTING ACTUARY ERNST & YOUNG, L.L.P.

Mr. LADLEY. Thank you for the opportunity to speak to this Subcommittee. I am Jack Ladley, a partner of Ernst & Young, L.L.P., and the managing partner of its national actuarial services. I will testify on behalf of the firm.

I have been an actuary for over 25 years. Ernst & Young was engaged by the Board of Trustees of the United Mine Workers of America Combined Benefit Fund, to assist in projecting and reporting on the fund's future revenues and expenses. This was not an audit of the fund that we performed, but rather a series of actuarial projections, 10 years' future results.

We submitted our report to the UMWA Board of Trustees on March 13, 1995, and I will include a copy of that report for the

record.

[The information was not available at the time of printing]

Mr. LADLEY. Projections involving future health care costs are inherently uncertain. In addition, we have found the results in this case are highly sensitive to certain assumptions, most notably trend. For these reasons, Ernst & Young prepared projections under five different future possible scenarios.

The baseline or middle scenario indicates that the fund balance at the end of fiscal year 2004 is projected to be negative \$39 million. However, I would note that fund balances in this projection

prior are positive until the year 2003.

Two alternative scenarios were also projected which focused only on changes to health care cost trend rate. Alternatives 1 and 2, as they were called, to the baseline scenario, assumed that health care costs increased three-quarters of 1 percent per year less rapidly and three-quarters of 1 percent per year more rapidly respectively than the baseline scenario. The first alternative projects the fund balance to remain positive throughout the forecast and to end fiscal year 2004 at \$65 million. That is a positive. The second alternative to the baseline scenario indicates the fund in 2004 will be a negative \$147 million, but that a negative fund balance will first occur in 2002.

In addition, two other scenarios were projected which we termed most pessimistic and most optimistic. In this case, a number of our assumptions were changed, generally portraying situations where either all experience turned out very favorable or all the experience turned out to be quite adverse. The most pessimistic scenario produced a negative fund balance of \$624 million at the end of 10 years and the optimistic scenario produced a positive \$270 million.

It is clear from the summary results that wide swings in fund position can result from assumption changes which are relatively modest over a 10-year future period. The assumptions to which I am referring include population projections, mortality, medical costs, medical trend rates, expenses and investment earnings.

All of the underlying economic and health care assumptions in our report, including trend, are consistent with those in the 1994 Annual Report of the Board of Trustees of the Federal SMI Trust Fund. We believe that this is with an appropriate and actuarial

sound base from which to develop our assumptions.

We believe that in using this base, our resulting trend assumptions are not inconsistent with those typically used to value post-retirement medical benefits, and that the ultimate long-term trend rate through 10 years is reasonable.

There is clearly a plausible range of views as to whether health care costs can continue to grow as a percentage of the GDP. One plausible view is that they will slow down. However, we believe it is plausible that health care costs can continue to grow as a

percentage of the GDP at least for a 10-year period.

Considering all of these factors, we continue to feel that the five projected scenarios we presented in March to the combined fund trustees are reasonable. Other approaches to setting assumptions for projections such as this is are possible within current standards of actuarial practice. Because of the sensitivity of results, such assumption sets may produce different and even more widely varying results.

We understand the GAO will be examining the base and methodology for assumption-setting and performing their own projections for the fund. We expect the GAO may evaluate the appropriateness of one set of functions relative to another.

Thank you for the opportunity to speak to this Committee. I will

be happy to address questions.

[The prepared statement follows:]

TESTIMONY BY Jack Ladley, Partner and Consulting Actuary with Ernst & Young, LLP before the Subcommittee on Oversight House Committee on Ways and Means June 22, 1995.

Madam Chairman, My name is Jack Ladley. I am a Partner of Ernst & Young, LLP (E & Y) and the Managing Partner of its National Actuarial Services Practice. I have been an actuary for 25 years.

E &Y was engaged by the board of trustees of the United Mine Workers of America (UMWA) Combined Benefit Fund (Fund) to assist in projecting and reporting on the fund's future revenues and expenses. Our report analyzes revenues and expenses related to funding the health and death benefits of the approximately 96,400 covered beneficiaries of the Combined Fund. Our work focused on trust fund balances for the ten year period ending in the year 2004. We submitted our report to the UMWA Board of Trustees on March 13, 1995. I would like to include that report with my testimony for the record.

Projections involving future health care costs are inherently uncertain, but projections of balances in the Combined Benefit Fund are even more uncertain because of litigation and appeals which affect the Fund's revenue. In addition, we have found that the results are highly sensitive to certain of the assumptions. For these reasons, E & Y prepared projections under five different future scenarios. These scenarios are intended to illustrate various possible outcomes and also the sensitivity of the outcomes to changes in the assumptions made. It is highly unlikely that actual results for the fund will match those of any of these projections because of the sensitivity of results and the wide range of factors which impact results. Naturally, we sought to establish our assumptions on a sound actuarial footing.

The baseline or middle scenario indicates that the Fund balance at the end of the fiscal year 2004 is projected to be a negative \$39 million. However, I would note that Fund balances in this projection prior are positive until year 2003.

Two alternative scenarios were also projected which focused on changes to the health care cost trend rate assumption only. Alternatives one and two to the baseline scenarios assumed that health care costs would increase 3/4 percent less rapidly and 3/4 percent more rapidly, respectively, than the baseline scenario. Alternative one projects the Fund balance to remain positive throughout the forecast and to end fiscal year 2004 at \$65 million. Alternative two to the baseline scenario indicates the Fund in the year 2004 will be a negative \$147 million, but that a negative Fund balance first occurs in the year 2002.

In addition, two other scenarios were projected, which we termed "most pessimistic" and "most optimistic". A number of assumptions were changed for these scenarios, generally portraying the situations where either all experience was very favorable or all experience was quite adverse. The most pessimistic scenarios produced a negative Fund balance of \$624 million, and the optimistic scenario produced a positive \$270 million.

It is clear wide swings in Fund positions can result from assumption changes which are relatively modest, over a ten year future period.

The assumptions to which I have referred to include, but are not limited to, the following:

- Population Projections
- •Mortality
- •Medical Costs
- •Medical Trend Rates
- •Expenses
- Investment Earnings

Of these assumptions, the trend assumption is the most critical. Since they focus only on trend, alternatives one and two illustrate that Fund balances at the end of ten years are quite sensitive to changes in this assumption. It is necessary to link this assumption not only to the cost of the plan but also in an appropriate way to the income received by the plan. Some of the sources of reimbursement to the Fund are linked to trend assumptions.

All of the underlying economic and health care assumptions in our report, including trend, are consistent with those used in the 1994 Annual Report of the Board of Trustees of the Federal Supplementary Medical Insurance (SMI) Trust Fund. We continue to feel that this is an appropriate and actuarially sound base from which to develop our assumptions. It provides a linkage between the income and outgo of the Fund.

We believe that in using this base, our resulting trend assumptions are not inconsistent with those typically used to value post-retirement medical benefits, and that the ultimate long-term trend rate through ten years is reasonable.

Financial Accounting Standard Board (FASB) Statement 106 computations deal almost exclusively with the portion of retiree health care benefits which are not covered by Medicare, but our trend assumptions reflect a much broader array of benefits. FAS 106 post-retirement health care benefits typically fill in the coinsurance and deductible amounts which Medicare does not pay. These copayments increase more slowly than health care costs for the elderly, generally. For example, the Medicare hospital insurance (part A) deductible, which is indexed, has increased only about 4% per year and the Medicare supplementary medical insurance (part B) deductible, is frozen at the current level of \$100; thus, it would be expected that FASB 106 trend factors would be lower than trend factors for a plan like the UMWA Combined Fund, which is also at risk for the faster growing portions of Medicare benefits.

There is a plausible fange of views as to whether health care costs can continue to grow as a percentage of the GDP. One plausible view is that they will slow down. However, we believe it is plausible that health care costs can continue to grow as a percentage of the GDP, at least for a ten year period.

Considering all of these factors, we continue to feel that the five projected scenarios we presented in March to the UMWA Combined Fund Board of Trustees are reasonable. Other approaches to setting assumptions for projections such as this are certainly possible within standards of actuarial practice. Because of the sensitivity of results, such assumption sets may project different, and even more widely varying results. We understand that the Government Accounting Office (GAO) will be examining the base and methodology for assumption setting, and performing their own projections for this fund. We expect that the pGAO may evaluate the appropriateness of one set of assumptions relative to another.

Thank you for the opportunity to speak before this committee. I will be happy to address any questions you may have.

Chairman JOHNSON. Thank you. Johnson. Mr. Gathers.

STATEMENT OF JEFFREY L. GATHERS, PRINCIPAL, TOWERS PERRIN, CLEVELAND, OHIO; ACCOMPANIED BY DAVID ALLEN, GENERAL COUNSEL, UNITED MINE WORKERS OF AMERICA COMBINED BENEFIT FUND

Mr. GATHERS. Good morning.

My name is Jeff Gathers. I am a fellow in the Society of Actuaries and a member of the American Academy of Actuaries. I am employed as a principal and senior health and welfare actuary in the Cleveland office of Towers, Perrin, Forster and Crosby. This company, Towers Perrin, is a privately owned international firm of actuaries and management consultants.

My testimony describes the results of analyses performed by myself and other Towers Perrin actuaries of the outlook for future balances in the UMWA combined fund for retiree health care benefits. Thank you, Madam Chairman and Members of this Subcommittee, for the opportunity to present this statement today.

Towers Perrin began its analysis of the fund in 1994 by developing a preliminary financial forecasting tool or model to project how the fund's various income and outgo items would behave under alternative future economic scenarios. We most recently documented the results of our initial forecast model in a report dated January 27, 1995. At about the same time the trustees of the fund retained the firm of Ernst & Young to perform similar projections of funds operations.

The chart on your left summarizes the results for three Ernst & Young scenarios and for the January Towers Perrin results. The table compares the projected cumulative surplus at the end of the 2004 fiscal year.

You can see the Towers Perrin baseline had a projected positive balance of just over \$240 million relative to the other numbers referenced by Mr. Ladley.

I would like to comment on the nature of the difference between Towers Perrin's projections of results at the end of the 10-year period and the range of Ernst & Young forecasts. The Towers Perrin and Ernst & Young approaches are similar overall. However, there are distinct differences in several areas involving the demographic changes in the group, fund operations and most notably, the rate of increase in health care costs as measured by both prices, that is the medical CPI, and the trend in total benefit costs.

We subsequently revised the Towers Perrin model to include some new data that Ernst & Young had used and essentially to emulate their approach. We found that if we duplicate all of the Ernst & Young assumptions in our revised model, we were able to reproduce their baseline forecast of a \$39.9 million deficit in 2004.

However, we do not believe it is equally reasonable to use all of the Ernst & Young assumptions. If we adjust our calculations to change the assumptions related to every element except the medical cost trend, the combined effect is to increase the projected surplus from \$240 million to \$289 million relative to the Ernst & Young baseline of negative \$38.9 million. The significant difference between the Towers Perrin and Ernst & Young baseline estimates is thus due to the different assumptions about the trend in medical

benefits cost per beneficiary.

Ernst & Young has based their assumption on a series of annual rates that they describe as consistent with those used in the 1994 annual report of the Board of Trustees of the Federal SMI Trust Fund. It is most notable that these assumed future rates generally increase throughout the 10-year projection period to a maximum of 9.9 percent in 2004.

Past trend patterns do provide one source of information from which to project future health care cost trends. However, current actuarial practice has judged the continuation of high past trend rates indefinitely into the future to be an inappropriate assumption for postretirement benefit projections. Such trends imply ongoing growth in the health care economy that is much faster than the growth in other sectors. As a result, health care's share of the GDP would continue to increase to levels that the rest of the economy could arguably not support.

Towers Perrin has recently surveyed a number of Fortune 400 companies as to the assumptions used to value future postretirement benefits under Financial Accounting Standard No. 106. We found that more than 95 percent of respondents are using a declining trend rate assumption. The median assumption starts at 11

percent in 1995 and grades to 5.5 percent over 8 years.

Towers Perrin's approach for the fund's projection also uses a declining trend assumption. Specifically, our proposed trend assumption uses a basic annual trend rate of 8 percent in 1995 and grades

to an ultimate rate of 4 percent over 8 years.

In addition, we have adjusted the basic trend rate from 8 to 4 percent for the first 2 years of the projection to reflect additional projected savings from the fund's new capitated pharmacy program. Prescription drugs account for more than 60 percent of the fund's net benefit cost.

We have selected rates slightly lower than the 25th percentile of our survey results to reflect the expected ongoing effects of the trustees' comprehensive commitment to cost management in plan administration. These effects are already evident in the plan's results.

The second table shows the sensitivity of the revised Towers Perrin model to the cost trend assumptions across a range of current actuarial practice. All scenarios, including the Towers Perrin revised estimate and the Ernst & Young baseline, have been adjusted to include a 4 percent short-term reduction of the 1995 and 1996 trend rates to adjust for the pharmacy plan phase-in. You can see the range of results on the table here, all of them in the surplus area.

These results demonstrate that a surplus in the combined fund is expected after 10 years under a range of economic assumptions. We believe that the combination of recent results and the cost management approaches being taken by the trustees provide a strong basis for optimism in this period. In our opinion, the fund surplus in 2004 is likely to fall in the range of \$100 to \$300 million, reflecting the current health care environment and the trustees' commitment to cost management.

Thank you for the opportunity to present this testimony.

[The prepared statement follows:]

Congressional Statement of Jeffrey L. Gathers, FSA, MAAA

My name is Jeff Gathers. I am a fellow in the Society of Actuaries, and a member of the American Academy of Actuaries. I am employed as a Principal and senior health and welfare actuary in the Cleveland, Ohio, office of Towers, Perrin, Forster and Crosby, Inc. This company, more commonly known as Towers Perrin, is a privately owned international firm of actuaries and management consultants. About 12 percent of our employees are stockholders — called "Principals" — of the firm. We have been providing retirement plan actuarial services since 1917, when we designed one of the first private pension plans in the United States.

This testimony describes the results of analysis performed by myself and other Towers Perrin actuaries of the outlook for future balances in the UMWA Combined Fund for retiree health care benefits (the Fund). I have prepared this testimony today on behalf of the member companies of The Reachback Tax Relief Coalition. Thank you, Madam Chairman and members of this subcommittee, for the opportunity to present this statement today.

Towers Perrin began its analysis of the Fund in 1994 by developing a financial forecasting tool, or "model," to project how the Fund's various income and outgo items would behave under alternative future economic scenarios. We subsequently updated our model several times as more was learned about the actual financial experience under the Fund and the management approaches adopted by the Fund's trustees. We most recently documented the results of our initial forecast model in a report dated January 27, 1995.

At about the same time, the trustees of the Fund retained the firm of Ernst & Young to perform similar projections of fund operations. Ernst & Young submitted a report on March 13, 1995, which included results under five assumed economic and operating scenarios. The following table summarizes the results for the three principal Ernst & Young scenarios and for the January Towers Perrin results. The table compares the projected cumulative surplus at the end of the 2004 fiscal year (September 30).

Projected Fund Results as of September 30, 2004 (\$ Millions)

Model/Scenario	Cumulative Surplus/(Deficit) as of September 2004	
Ernst & Young - Baseline	(\$38.9)	
Ernst & Young - Most Optimistic	269.8	
Ernst & Young - Most Pessimistic	(624.3)	
Towers Perrin - January Baseline	240.8	

It is also notable that we extended our January projection model for 50 years; by this point, the surplus was projected to reach \$2.6 billion.

In the following paragraphs, I comment on the nature of the difference between Towers Perrin's projections of results at the

end of the ten-year period and the range of Ernst & Young estimates.

Because of the complexity of the Fund's operations, many assumptions are necessary to forecast the results. The Towers Perrin and Ernst & Young approaches are similar overall. However, there are distinct differences in several areas including:

- the distribution of the eligible population between assigned and unassigned beneficiaries
- assumed death rates
- the implications of premium delinquency
- conditions for transfers from the AML fund
- the cost of medical benefits per beneficiary at specific ages
- the rate of increase in health care costs, as measured by both prices (Medical CPI) and the trend in total benefit cost.

For several of these items, assumption differences reflect certain data that were used by Ernst & Young but to which Towers Perrin did not have access until after we had prepared our January report. We have subsequently reviewed most of these data and have modified our forecast model to reflect the new data and to emulate Ernst & Young's approach. If we duplicate all of the Ernst & Young assumptions in our revised model, we can essentially reproduce their baseline forecast of a \$38.9 million deficit in 2004.

However, we do not believe it is equally reasonable to use all of the Ernst & Young assumptions. If we adjust our calculations to change the assumptions related to assigned/unassigned populations, death rates, payment delinquency, AML transfers, initial cost per beneficiary and future Medical CPI — that is, every assumption except the medical cost trend — the combined effect is to increase the projected surplus from \$240.8 million to \$289.4 million, relative to the Ernst & Young baseline of (\$38.9) million.

The significant remaining difference between the Towers Perrin and Ernst & Young estimates is thus due to different assumptions about the "trend" in medical benefits cost per beneficiary. Ernst & Young has based their assumption on a series of annual rates that they describe as "consistent with those used in the 1994 Annual Report of the Board of Trustees of the Federal Supplementary Medical Insurance (SMI) Trust Fund," i.e., the fund through which Medicare Part B benefits are financed. It is most notable that these assumed future rates generally increase throughout the ten-year projection period, to a maximum of 9.9 percent in 2004.

Past trend patterns provide one source of information from which to project future health care cost trends. This notion appears to be the key to the SMI Trustees' and Ernst & Young's approach. However, current actuarial practice has clearly judged the continuation of high past trend rates indefinitely into the future to be an inappropriate assumption for postretirement benefit projections. Such trends imply ongoing growth in the health care economy that is much faster than growth in other sectors. As a result, health care's share of the Gross Domestic Product (GDP) would continue to increase — to levels that the rest of the economy could not support. For example, some projections have shown health care growing from its current 14 percent of GDP share to nearly 25 percent by 2010 if cost trends do not decline.

To confirm current practice in the area of trend assumptions, Towers Perrin has recently surveyed a number of Fortune 400

companies as to the assumptions used to value future postretirement benefits as of the end of their 1994 fiscal years. These assumptions appear in published financial results and are required (by SFAS No. 106) to reflect the employers' best estimates of future events. The reasonableness of the reported results is certified by each company's independent auditors. We found that more than 95 percent of respondents are using a declining trend rate assumption. The median assumption starts at 11 percent in 1995 and grades to 5.5 percent over eight years. The corresponding 25th percentile (relatively optimistic) rates are 9.5 percent grading to 5 percent, and the 75th percentile rates are 12 percent grading to 6 percent. Some employers select assumptions outside this range, when particular circumstances indicate that it is appropriate.

Towers Perrin's approach for the Fund's projection uses a declining trend assumption. Our proposed trend assumption uses a basic annual trend rate of 8 percent in 1995 and grades to an ultimate rate of 4 percent in 2003 (over eight years). We have selected rates that are slightly lower than the 25th percentile assumptions because of the trustees' comprehensive commitment to cost management in plan administration. The effect of this commitment is already evident in the plan's results. As stated in the Ernst & Young report, for example: "In 1993, the plan actually experienced an 8.5% reduction in per capita trend." In addition, we have adjusted the basic trend rate from 8 percent to 4 percent for the first two years of the projection to reflect additional projected savings from the Fund's new capitated pharmacy program. Prescription drugs account for more than 60 percent of the Fund's net benefit cost.

The table below shows the sensitivity of the revised Towers
Perrin model to the cost trend assumption across a range of
current actuarial practice. All scenarios, including the Towers
Perrin revised estimate and the Ernst & Young model, have been
adjusted to include a 4 percent short-term reduction of the 1995
and 1996 trend rates to adjust for the pharmacy plan phase-in.
In addition, we have slightly adjusted the Medical CPI increase
rates from the Ernst & Young assumption in later years to ensure
that the assumed CPI increase for each scenario is less than the
total benefit cost trend in each year.

Effect of Trend Assumptions on Projected Fund Results as of September 30, 2004 (\$ Millions)

Scenario (Initial/Ultimate Trend)	Cumulative Surplus
Survey Median (11.0%/5.5%)	\$157.7
Survey 25th Percentile (9.5%/5.0%)	257.4
Survey 75th Percentile (12.0%/6.0%)	67.9
Towers Perrin Updated Estimate (8%/4%)	289.4
Ernst & Young Baseline (8.1%/9.9%)	179.2

These results demonstrate that a surplus in the Combined Fund is expected after ten years under a range of economic assumptions. We believe that the combination of recent results and the cost management approaches being taken by the trustees provide a strong basis for optimism in this period.

In our opinion, the Fund surplus in 2004 will fall in the range of \$100 to \$300 million, reflecting the current health care environment and the trustees' commitment to cost management. Moreover, we believe that, if health care cost trends have fallen permanently by the early years of the next decade as virtually

all actuarial projections now assume, the outlook for growing surpluses after 2004 increases significantly.

Thank you again for the opportunity to present this statement.

Chairman JOHNSON. Thank you.

I thank the panel for your testimony. I have a couple of questions

that I would like to pursue.

First of all, and all of you can comment, could you briefly describe for the Subcommittee the scope of the benefits that this plan provides?

Perhaps, Mr. Crosby.

Mr. CROSBY. It is a comprehensive set of health benefits including drug, inpatient, outpatient coverage, home health care under certain circumstances. It is quite a comprehensive program of benefits for the retirees with minimum out-of-pocket expenses for the individuals concerned.

Chairman JOHNSON. Dental, vision, home care—

Mr. CROSBY. No dental.

Chairman JOHNSON. When you say minimal out-of-pocket, what do you mean by that?

Mr. CROSBY. There is roughly a family copayment of \$100 a year.

It is relatively small.

Chairman JOHNSON. It is my understanding that these benefits are age 22?

Mr. CROSBY. That is correct.

Chairman JOHNSON. Is it also true that they are available to unmarried grandchildren up to the age of 22?

Mr. CROSBY. When they are living as a dependent in the home, yes.

Chairman JOHNSON. And also parents of the retiree?

Mr. CROSBY. Yes, when living for 1 year or longer in the same

household as a dependent.

Chairman JOHNSON. So, they are broader in scope than most employer benefit plans both in terms of benefits provided and the number of people included in the family unit; would you agree with that?

Mr. Crosby. I think that is an accurate statement.

Chairman JOHNSON. Why is it that the net expenses—this is according to some materials that came from GAO—the premiums billed, and actual per capita reimbursed expenses, between 1993 and 1995 over a 2-year period essentially doubled from \$122 to \$228 million. That seems odd—at the same time the population declined from 109,000, roughly, to about 97,000. Is there any explanation for that?

Mr. CROSBY. I do not believe those figures are accurate. That

doesn't strike me as correct.

Chairman JOHNSON. You are welcome to submit figures to us on what the net expenses were, because the figures that we have raised a lot of questions.

Mr. CROSBY. That is for the period 1993 through—

Chairman JOHNSON. 1993 to 1995. You mentioned in your testimony that Medicare recipients were about 95 percent of your population; is that correct?

Mr. CROSBY. No, they are about 90 percent of the population.

Chairman JOHNSON. In 1993 and 1994, gross medical expenses were—the figures do not really matter—the Medicare payments were only about 50 percent of that. Now, that does surprise me. When 90 percent of your people are covered by Medicare, I would

expect that Medicare reimbursements would cover more than 50 percent of your gross medical expenses.

Mr. CROSBY. Almost 60 percent of our net benefits are in drugs, which are not covered through Medicare.

Chairman JOHNSON. Do you use any of the companies that are out there in the market that manage drug benefits?

Mr. CROSBY. Absolutely. We have a contract with Diversified Pharmaceutical Services and it is a capitated arrangement so that we pay them a flat fee each year under a 2-year agreement that will be renegotiated at the end of 2 years.

We pay them a flat fee and then they are responsible beyond

that for the actual costs incurred.

Chairman Johnson. What impact has that had on your costs?

Mr. CROSBY. That program started in January, so it is early to tell.

Chairman JOHNSON. Last, does your organization support moving from a per-ton basis for figuring the employer obligation to a per-hour basis?

Mr. CROSBY. We have no input into the negotiations between the

union and the Bituminous Coal Operators Association.

Chairman JOHNSON. Thank you.

I would yield to my colleague, Mr. Herger.

Mr. HERGER. Thank you, Madam Chair.

Maybe a question for you, Mr. Gathers. In reviewing reports, it appears that Ernst & Young used actual fiscal year 1994 and first quarter fiscal year 1995 fund expense data for your analysis. On the other hand, the Towers Perrin model appears to be based largely on fiscal year 1993 actual data. Using fiscal year 1993 data requires Towers Perrin to adjust your estimate to reflect the changes in the Medicare reimbursement rate in fiscal year 1994 and 1995.

My question is, do you feel that fiscal year 1995 estimates of the funds deficit or surplus—to what extent does a difference in the projections result from the fiscal year 1993 base year data used as

a starting point?

Mr. GATHERS. If I understand the question correctly, I think that the difference in the starting data or the baseline data was adjusted for as Towers Perrin moved from the initial model that we developed in 1994 to the revised model, which was referenced in my testimony, as having been updated to reflect the same data as Ernst & Young had used.

During the course of that development, that data, though it had not been available to us initially, was made available and we adjusted all of our starting points to be consistent with the Ernst & Young study in fact, so that that would not be a matter of

difference between the two projections.

Mr. HERGER. Do you have any comment also, Mr. Ladley?

Mr. LADLEY. No. I would echo that they have reproduced our model in every regard, I think, but one, perhaps a minor one. They seem to be consistent. I have not studied their approach, though.

Mr. HERGER. Thank you.

Chairman Johnson. Mr. Cardin.

Mr. CARDIN. Thank you, Madam Chairman.

I am concerned about trying to figure what the fund balances will be based upon, the projections that you have made, understanding of course that we are looking at this with the benefit levels remaining constant and out-of-pocket costs to beneficiaries remaining constant.

Mr. Gathers, you are suggesting that you believe that the appropriate growth level of the cost of the benefits will—should be

phased down to 4 percent? Is that what your model does?

Mr. GATHERS. That is correct. The baseline trend assumption starts at 8 percent at the beginning of this period and gradually reduces over the 10-year period, so that in the last year of the projection the trend rate for benefit costs is 4 percent, while the assumed trend rate for medical price increases is 3.5.

Mr. CARDIN. Half a percent above the market basket for general products. You base that on the fact that there would be no diminution of benefits to the beneficiaries; this is strictly holding down the

cost of services?

Mr. GATHERS. There is no expectation of pulling down the cost of services. As we say, these are positive trend rates going forward. There are no negative trend rates anticipated.

Mr. CARDIN. Do you have any historical data to reflect that any large health care plan has been able to sustain a growth rate as

low as 4 percent?

Mr. GATHERS. Over a long term in the past, that has not taken place, but we need to be cautious not to be so reliant on what has happened in the past that we overlook very likely outcomes that are different in the future.

Mr. CARDIN. There have been many innovative approaches that have been taken to health care that have worked, that have

brought down the health care costs. I understand that.

What we have not been able to demonstrate, unless you have information that I am not aware of, is any sustained effort to keep the growth rate at 4 percent or anywhere close to that over a sustained period of time. We have seen 1 year progress through innovative approaches where growth rate was held well below 4 percent, but we have not seen any, that I know of, any program where they have had a sustained lower growth rate anywhere close to what you are suggesting we should be using to plan the fund balances.

I read an article very recently from a periodical that used the same arguments that you used in projecting health care costs, saying that our society wouldn't tolerate an ever-growing share of the gross national product in health care and that there were innovative approaches being taken and that we must get the growth rate down to the levels that you are talking about. The problem was that article was written in the sixties.

What hope can you give me that we can sustain, without costshifting, that we can bring down the health care costs to that level? Is there something out there that I am not aware of?

Have there been some programs that have successful in doing this? How did you plan a model that you get down to 4 percent?

Mr. GATHERS. The principles of managed care have demonstrated that they are able to produce slower rates of increase across the board than unmanaged care arrangements and I think the notion that at some point the citizens of this country will not put up with chain reductions in their standard of living as we go from \$1 in \$7

being used for health care benefits to \$1 in \$4-

Mr. CARDIN. If I could get me some documentation for that, this Committee would be very grateful. I have seen one-time savings and short-term savings. I have not seen long trend lines of projected savings on the managed care programs.

If you can provide this Committee with some documentation to support that statement, it would be very helpful because, to my

knowledge, we do not have that to date.

We had a group of business leaders in health care reform before this Committee not long ago looking at innovative ways in which health care plans' costs had been brought down within large business plans. At that time I made an offer to the business people there whether they would take over the Medicare system at a growth rate of 3.9 percent adjusted for the demographics.

We did not have any takers that would take over our plans at a 3.9-percent growth rate; yet you are using as your projection a 4-percent growth rate in a similar population group where most are

eligible for Medicare.

I would like you to supply the Committee with documentation to

support a 4-percent growth rate.

[The information was not available at the time of printing]

Mr. Gathers. As I mentioned, it is not possible to document expectations for the future. We do have as documentation the survey of what prevailing actuarial practice provides. These are not just my own assumptions; these are not just Towers Perrin assumptions, but these are assumptions practicing actuaries use to evaluate postretirement benefit commitments for private employer plans throughout the country. The results of that survey information is included in my testimony and referenced in this table.

Mr. CARDIN. Because many of those plans are in trouble today.

Mr. GATHERS. I do not understand that reference.

Mr. CARDIN. Insolvencies, these plans are in jeopardy.

Mr. GATHERS. These are projections of future benefits, not with reference to the actual financing of the plans. These are obligations of the companies that are recognized on their balance sheets and the basis for that recognition is certified by the auditors for these companies.

Mr. CARDIN. Just document for us the results where we have

been able to achieve that. I would appreciate it.

[The information was not available at the time of printing]

Chairman JOHNSON. Thank you, Mr. Cardin.

I would like to just pursue Mr. Cardin's comment about what information, Mr. Gathers, you might be helpful in getting back to the Committee.

Since this plan has so much of its money going out into prescription drugs as opposed to overall health care growth rates, which we hope we will bring down in Medicare due to reform efforts that we intend to make in Medicare, I think very significant to your projections is what savings you might project from better managing the prescription drug benefit and that your expectations in that area could be very useful to us.

Thank you.

Mr. Hancock.

Mr. HANCOCK. Thank you.

Mr. Crosby, I am sure you recall that the Committee on Ways and Means in the House did not play a very significant role in developing the 1992 coal act. Can you tell the Subcommittee why it was necessary to establish two separate funds, the combined fund and the 1992 UMWA Benefit Plan, to provide health benefits to participants, rather than only one plan?

Mr. CROSBY. Basically, they involve cutoff dates of when people were eligible so that the combined fund was sealed as of one date and then there was another date for when eligibility began under

the 1992 plan-

Mr. HANCOCK. Is the plan administered by the same people with the same overhead or is it set up with a separate staff?

Mr. CROSBY. No. It is all handled out of the UMWA Health and

Retirement Fund staff.

Mr. HANCOCK. In other words, there is one set of overhead that covers the entire plan?

Mr. CROSBY. Yes; and several other plans as well.

Mr. HANCOCK. In your testimony you mention there is, roughly, \$29.9 million in delinquent premiums, and you have indicated that you are actively pursuing \$12.9 million of that. What is the situation on the other \$17 million?

Mr. CROSBY. What I said was that, roughly, \$13 million of it was reflected in just two companies, one of which has established a \$6 million escrow. Regarding the other delinquent cases, roughly, 95 percent of those delinquent amounts are now being worked either through bankruptcy court filing, proofs of claim, or other kinds of

legal actions to pursue those other employers.

There are, roughly, 5 percent that involve very small companies with limited numbers of beneficiaries who have been assigned where we have not yet pursued those. In some cases, it simply is not going to be cost beneficial to pursue some of the very small cases where it costs us a minimum of \$4,000 to file an uncontested claim and do the necessary research to pursue a claim that might well be smaller than that amount.

Mr. HANCOCK. Have these delinquencies been referred to the

IRS?

Mr. CROSBY. They have not at this point, because the SSA is still in process of handling appeals and moving assignments between companies and between the assigned pool and the unassigned pool. It simply does not make sense at this time to refer those cases to the IRS until that stabilizes.

Mr. HANCOCK. Do you know of any companies, in your judgment,

that can afford to pay and have chosen not to pay?

Mr. CROSBY. It is usually not a matter of cannot afford to pay or do not want to pay; if there is nothing out there, the company is no longer in business, the mail is returned—

Mr. HANCOCK. Companies that can afford to pay but, have

decided they are not going to.

Mr. CROSBY. I am not aware of any like that. We are pursuing all who can afford to pay through the legal process and the collection process.

Mr. HANCOCK. Getting to another area, our figures indicate that only 28 percent of the entire beneficiary pool are actually retired coal miners. The other 72 percent are surviving spouses and spouses of the miners and dependent adults.

Let me ask you a question about your plan. In the event of the death of a retired coal miner surviving spouse, can that include

more than one spouse?

Mr. CROSBY. Not at any one time.

Mr. HANCOCK. What about situations where there are two, a spouse and an exspouse, and both are drawing Social Security under that one name? In the event of the miner's death and the spouse's death, are the dependent children still covered under the

plan?

Mr. CROSBY. I believe they are. Our plan is not at the discretion of our trustees. The plan was negotiated between the UMWA and the Bituminous Coal Operators Association over a period of years and in fact the union opted for reductions or not to have additional income either through their pensions or current income in order to have lifetime health benefits. That is what they negotiated over the years. Our trustees are presented with the results of those negotiations and do not have discretion to modify the plans.

Mr. HANCOCK. Do you know of other plans that give lifetime benefits both to the employee and the surviving spouses?

Mr. Crossy. I wouldn't have any information on that.

Mr. HANCOCK. OK. You understand, we are still concerned about guaranteeing the integrity of this benefit plan, getting back to the question of who is responsible to fund it.

Mr. CROSBY. It is important to note that the plan was negotiated between the union and the companies. This legislation simply froze that in time to say that the benefits that were in place as of the

date are the benefits to be provided.

Mr. HANCOCK. I understand that, Mr. Crosby, and that is part of the problem. If in fact this was negotiated between the companies and the union, how come the SSA is having to spend millions of dollars administering it—why are the taxpayers putting up this money?

Mr. CROSBY. That was the wisdom of Congress. Mr. HANCOCK. You might have a very valid point.

We have got a declining enrollment in this, I would think. What

is the projection? Are we talking about 2045?

Mr. CROSBY. They are dying at the rate of, roughly, 6 percent a year, and you can pick a point in time and it is—from today, each year, roughly, 6 percent of this population dies. That is why when you look back at the original record on how many beneficiaries were to be covered by this plan, we are down to 92,000 today because after 3 years we have had substantial deaths in this population and they continue to die. The average age is 73. They are very old.

Mr. HANCOCK. One final question for Mr. Ladley. Your analysis on the combined fund—this gets back to Mr. Cardin's question—used a medical cost trend assumption rate as high as 9.9 percent on the outyears. I understand that is roughly twice the rate that you are using for other audit clients in their estimated liability or

funding obligations for their health care benefits.

Can you explain why the differential there between 9.9 and roughly half of what you are using for other of your audit clients?

Mr. LADLEY. The rate that you are referring to, that is much lower, is being used generally for Financial Accounting Standards Board analyses according to statement 106. Those computations deal with postretirement medical benefits typically for corporate plans. They deal almost exclusively with the portion of retiree health care benefits which are not covered by Medicare, filling in the gaps. That is not entirely but generally true.

Our trend assumptions reflect a different mix of benefits. This plan covers a variety of Medicare benefits, not just the gaps in Medicare. For example, the Medicare hospital insurance part A deductible which is indexed has increased only about 4 percent a year and the Medicare supplementary medical insurance part B deductible is frozen at a level of \$100. Therefore, it would be expected that the kind of rates that we are using in this projection and for this purpose would be different from the trends rates in FAS 106. The rates that we did select were chosen according to what I would call our assumption base, which is the SMI 1994 report, and that was adjusted for the specifics of this population. We think it forms an appropriate base.

Mr. HANCOCK. Do you agree with that, Mr. Gathers?

Mr. GATHERS. I believe I understand the distinction that Mr. Ladley is making, but I believe he overstates the differences in expected trends that would come from this distinction. Certainly in my experience in working with the valuation of employer obligations, I find that they have many of the same elements and that they are not just focused on the part A and part B deductibles, as he may suggest. They, in fact, cover a broad range of benefits for retired participants who have not yet reached Medicare eligibility.

Many of our clients, and I suspect Mr. Ladley's as well, have upward of 40 or 50 percent of the future benefits they are valuing for non-Medicare eligible participants. They also very commonly provide prescription drug programs, perhaps not as generous as the UMWA Fund Benefit Plan, but still in some cases quite expensive and accounting, as in the UMWA case, for more than half of the

benefit cost for participants over age 65.

It is also true that the UMWA Combined Benefit Fund is experiencing the same benefit of the low rate of increase relative to the part A copayment amounts for hospitalization benefits under Medicare. So, my sense is, and in fact as we approach FAS 106 valuations, it is our general strategy to look at the gross benefit costs and to recognize the effect of Medicare as an offset much as he is describing is going on in the combined fund. So, I believe that there is a minor distinction, not a substantive difference, that would account for the difference in outlook for long-term trend.

Mr. HANCOCK. Thank you, Madam Chairman.

Chairman JOHNSON. Mr. Portman.

Mr. PORTMAN. Thank you. Thank you all for being here.

Let me follow up with the final question.

It seems to me that one of the assumptions that has not been discussed and that one must make is the degree to which having a population that has an average age of 73, and I think 74 percent

of the beneficiaries are over the age of 70, that there would be certain health care cost differences between that population group and a group of younger workers. Has that been taken into account,

Mr. Gathers, in the analysis as to the percentage?

Mr. GATHERS. Yes. I think that there is another element which contributes to the year-to-year increase in the cost per beneficiary in this program or in other private programs, and that is to the extent the average age of the population is increasing, then that further increases the cost per capita, but that is not something that the methodology for the projection models includes with the trend. Rather, it is a separate element that recognizes that as any of the beneficiaries grows older, they will have costs at a higher rate than they would have at a younger age. I think that is recognized outside the scope of the trend rate.

Mr. PORTMAN. Mr. Ladley, do you have a comment?

Mr. LADLEY. Our report takes a similar approach with the actuarial model. In starting with the SMI base we actually remove any built-in aging factor that might be in there. So, we have it adjusted. We turn around and apply the resulting trend factor to the population projection, which would automatically adjust for the age differentials as this group moves forward. It is incorporated, and recognized there.

Mr. PORTMAN. The other major assumption I would think that would affect that would be the 6 percent figure, whatever the death rate might be and how that is actuarially figured. I would assume the 6-percent increases, given that we have 74 percent of the beneficiaries over the age of 70.

I guess my conclusion from listening to the testimony and reading as much as I have been able to is that this is a relatively fluid situation. There is likely to be some surplus. What it is is hard to tell.

I would think given that 60 percent of the funds are currently being used in the pharmaceutical drug area for prescription drugs, that whatever arrangement you have with Diversified should be monitored closely by this Subcommittee. I hope you will get back to us.

To the extent that the capitation program could reduce costs, I think that might be as significant as the Medicare capitation, working the other way. I just would hope that we could get a better record of that. Apparently, that is just since January?

Mr. CROSBY. Correct.

Mr. Portman. Given the aging population, given the emphasis on drugs, I would hope that we could get a better handle on this over the course of the next few months so that we can have a better sense of this. Having listened to the testimony, I am not sure that I have a good sense of where we are going to end up. I think it is a relatively fluid situation.

Any comments on that? Would you agree with that summary or am I missing something?

Mr. GATHERS. It sounds appropriate to me.

Mr. PORTMAN. Mr. Crosby, any thoughts on that?

Mr. CROSBY. I think you are correct.

Mr. PORTMAN. I yield back. I look forward to hearing from the companies that are present. I appreciate your giving us all this data.

Chairman JOHNSON. Would you provide us with information on your 6-month experience in the prescription drug area, Mr. Crosby. I would like to alert the panelists that we will be sending you some additional questions in writing. I would like Mr. Crosby, for the purposes of the Committee, if you could just explain to us why there are two funds?

This Committee was not a part of developing this legislation, as you may recall, and it is not clear to me why you have to have the combined fund and the 1992 UMWA Benefit Plan Fund to provide benefits instead of one fund?

Mr. CROSBY. The trustees do not participate in the legislative

process either, so-

Chairman JOHNSON. All right. I will try that question later on. Could you briefly tell me whether or not you have received any amounts as a result of the evergreen litigation, and if not, what kind of revenue you expect to receive from that source?

Mr. CROSBY. Actually, I have with me our general counsel who

can address-

Chairman JOHNSON. That would be fine. If you will state your name for the record.

Mr. ALLEN. I am David Allen. I am the fund's general counsel. The evergreen litigation was commenced in 1988. At this time, there have been some substantial settlements in the litigation. Litigation against those who have not settled is still pending in the district court here after a court of appeals decision, and has been referred to a mediator. Negotiations are underway. It would be at this time impossible and indeed inappropriate to comment on any likely outcome of that process.

Chairman JOHNSON. Thank you.

Mr. CROSBY. Madam Chair, you had asked earlier about net assets or net expenses changing between the first and second plan years. While I was sitting here, it dawned on me what you are looking at is the first plan year was an 8-month year. It was not a 12-month year.

Chairman JOHNSON. In 1993?

Mr. CROSBY. Yes. Fiscal year 1993 was a transition year that ran for 8 months. That is the only explanation on why you are seeing a dramatic increase in net expenses. In fact there have been only two plan years since the act came into effect.

Chairman JOHNSON. That is helpful. However, the increase from 1993 to 1994 is from \$122 to \$177 million, roughly \$50 million, and

from 1994 to 1995, it is \$177 to \$228 million.

Mr. CROSBY. We are not in 1995 yet.

Chairman JOHNSON. That is projected on the basis of your

experience at this point. Thank you very much.

I thank the panel and call the next panel. In the next panel we will hear from Clifford Miercort, the North American Coal Corp.; John Faltis, Anker Energy Corp.; Jim Chenoweth, Lone Star Steel; John Patton, Davon Inc., Alan Law, Mountain Laurel Resources Co.

I would like to particularly welcome Lone Star and North American. Sam Johnson, an esteemed colleague, is tied up in a markup today.

Mr. Miercort, please proceed.

STATEMENT OF CLIFFORD R. MIERCORT, PRESIDENT AND CEO, NORTH AMERICAN COAL CORP., DALLAS, TEXAS

Mr. MIERCORT. I am Cliff Miercort, the president and chief executive officer of the North American Coal Corp. I appear here today with representatives of eight other reach-back companies and we represent some 307 companies who are currently being billed for reach-back premiums mandated by the coal act, also known as the Rockefeller Act.

Each of us has a different story to tell of injury inflicted upon our companies, and in many cases upon our personal lives as well by this arbitrary, retroactive tax. Even though currently making a profit, the tax of the Rockefeller Act has imposed a tremendous burden upon us. To put it into perspective in 1992 we wrote off \$110 million to cover the new liabilities imposed on us by this tax.

This writeoff is more than 70 times the average annual profit we ever made from the mines that employed UMWA personnel. The story is set forth in more detail in my prepared statement which

I ask permission to submit for the record.

In the few minutes I have this morning I would like first to review how Congress was induced, maybe a better description would be to say deceived, into passing this retroactive and unprecedented legislative rewrite of prior collective bargaining agreements, and then to discuss the financial dimension of the reach-back tax, and finally to suggest a couple of approaches to fix the problem.

In early 1988, during negotiations for a new wage agreement, the executive committee of the BCOA, Bituminous Coal Operators Association, told the UMWA, United Mine Workers of America, that they were prepared to walk away from their responsibility to

fund the health benefits of UMWA retirees.

By using this threat, the BCOA was able to force a fundamental change in the 1988 wage agreement that was eventually signed. Previously, both pension and health benefits for UMWA retirees had been financed on a pay-as-you-go basis primarily on a per-ton charge for the production of each signatory company.

As shown on the chart on your left, the total contributions to the benefit and pension funds for 1987, which is the column on the far left, totaled \$640 million. That was for 1987, which was the last

year of the 1984 wage agreement.

The 1988 agreement changed the funding formula to entirely a charge per hour for the signatory company and a lower unit amount as well. This resulted in a contribution of only \$255.5 million in 1989, as shown on the next column, a reduction of nearly \$385 million per year or approximately \$1.30 per ton of bituminous coal produced.

To their credit, the UMWA leadership was concerned that the reduced level of contribution would put the benefit funds into jeopardy. However, the negotiating Committee of the BCOA said that they would agree to guarantee the costs which would require the

BCOA signatory companies to increase the level of funding if it were required to keep the funds solvent.

Later, in a comprehensive review of the situation, a Federal District Court confirmed that the BCOA had deliberately set its health fund contribution at a minimal rate in the face of clear indications that it would result in underfunding. Unfortunately, in 1992, when the day came that the benefit funds were running out of money, the BCOA refused to honor their contractual commitment. Instead they sought to perpetuate their self-generated funding crisis until finally a Federal District Court ordered them to honor their guarantee to keep the fund solvent.

It is clear that the so-called funding crisis was entirely manufactured and manipulated by the BCOA so as to create a climate of panic with which they hoped to impact the legislative process. Then they were successful in getting the UMWA to join them in an effort to force a legislative solution.

The documents that were produced in the Pittston versus the UMWA litigation in Abingdon demonstrate the cynical record of cooperation between the UMWA and the BCOA and the deliberate creation of fear among the retirees to produce the passage of the Rockefeller Act.

The Lobbying Act reports show that the BCOA and the UMWA spent \$3 million in their efforts to achieve the economic bonanza of the Rockefeller Act. As shown on this chart, it was money very well spent.

The passage of the Rockefeller Act resulted in a further reduction of \$132 million in the amount the companies who signed the BCOA agreement had to pay into the fund. This is the level of savings the head of the BCOA boasted to members they would receive from the passage of the act. When you add that amount to the amount that the BCOA saved from the 1988 agreement, you get the column that says \$516.8 million. That was their total savings per year from what they had been paying in 1987.

At the same time, the act put a tax of \$52.7 million on reachback companies, who had been out of the business of mining bituminous coal for 10, 20, 30 and in some cases 40 years. That is shown on the column on the right side of the chart.

It is instructive to review how much the funds were in a deficit position during the period of 1988 to 1993, the deficit that BCOA made into a supposed national crisis. The average deficit was only \$10,800,000 per year. Thus, the true issue was not a financial crisis of the funds, but rather how much the BCOA could take from someone else, primarily the reach-back companies who, unfortunately, did not have the same political clout they did.

What can Congress do to fix this terrible inequity? The reachback companies currently pay the combined fund about \$53 million per year, which is only 10 percent of the yearly savings that have been realized by the BCOA companies. One partial solution is H.R. 1370, the Myers-Hancock bill, which would dedicate any surplus in the funds above a safety cushion to credit against reach-back company premiums. This bill would alleviate the reach-back as long as there is a surplus in the funds. Because of this, it is not a complete fix to the problem.

We believe based on the combined fund statements from March 1995 that there is at least a surplus of \$221 million on a cash basis

and a \$147 million surplus on an accrual basis.

Another solution would be to remove the reach-back portion of the act entirely. As the chart reflects, a complete replacement of the reach-back payments by the current signatories would require the giving up of only \$53 million, which is 21 cents per ton of their previously realized yearly savings of \$1.83 per ton. This would put the responsibility for retiree benefits back onto the signatory companies, where they had always been prior to the Rockefeller Act. It would get the government out of enforcing an obvious unfair

It would get the government out of enforcing an obvious unfair and discriminatory law. It would place the cost of collective bargaining on the parties who negotiated the agreements, where it has always belonged. This system works for everyone else in

America. Why not for the bituminous coal industry?

Thank you.

[The prepared statement follows]:

CONGRESSIONAL STATEMENT OF CLIFFORD MIERCORT

It has frankly not been much fun at times to be the CEO of North American these past three years since the Rockefeller Coal Act was passed. My company has been accused by various adherents of the bill of a failure of corporate citizenship and worse. I am grateful to you and the committee for the opportunity to set the record straight.

First, as I am confident will be demonstrated by the record of this hearing, it is increasingly clear that passage of the Rockefeller Act with its attendant infliction of pain on a host of American companies was entirely unnecessary. The records of the Fund itself demonstrates that the only funding crisis was one deliberately induced by the BCOA through its change in the rate and method of contribution to the Funds from per ton to a per hours worked basis, producing a deliberate under-funding of the both the 1950 and 1974 health benefits fund by 1992.

Second, the Rockefeller Act has unilaterally transferred the hitherto unquestioned responsibility of the current 1988 signatory operators to meet the entire liability of the 1950 and 1974 Funds on a pay-as you-go basis to a combination of the reachback companies, the coal industry generally, and the 1988 signatories through mandatory contributions to the Combined Fund created by the Act. This has created a wealth transfer to the BCOA companies estimated by at least two sources at more than \$130 million a year and the legalized confiscation of approximately \$50 million annually from the reachback companies. The amount of this windfall was confirmed in February 1993 in a letter from the President of the BCOA to his members. This kind of legislative restructuring of collective bargaining arrangements is unprecedented in American history and can only be explained as the outcome of a highly cynical and sophisticated political lobbying campaign which carefully concealed from the Congress the purpose and the effect of what it was being asked to do. No one can believe that any legislator would willingly create the kind of economic and psychological damage which has been described here today.

Third, North American has been falsely accused of hiding behind smaller reachback companies in its expressing its outrage over the unprincipled, but painstakingly crafted economic rape of the reachback companies produced by the Rockefeller bill. The truth is that the BCOA companies have been and continue to hide behind North American in an effort to justify the legalized theft of reachback company assets produced by the Coal Act. Let me explain.

Historically, as companies chose not to participate in subsequent Bituminous Coal Wage Agreements, the remaining signatory companies continued to cover the costs of retirees who had worked for others. New companies who entered the business and signed a Bituminous Coal Wage Agreement paid into the Funds on the same basis as companies who had been in the business for a long time, even though they may have yet not had any retirees. This approach was the core concept behind the multi-employer retiree health benefits system. In fact, during the 34 years that North American Coal contributed to the Funds, we paid millions of dollars for benefits to orphan miners from other companies that had gone out of business or elected not to sign a new Bituminous Coal Wage Agreement. In addition, when we left the business in 1984, the Funds were fully solvent.

In 1978 the BCOA agreed to change in a fundamental way the method of providing health care to current employees and subsequent retirees. In order to end two decades of perceived waste and abuse by the funds, each company would henceforth run its own health benefits program to provide the level of benefits established by the current NCBWA. The 1974 Health Benefits Fund was preserved at the insistence of the UMWA to be an explicit multi-employer safety net to provide health benefits to those who retired after 1975 when the 1950 fund was closed and whose employer ceased to be

a NCBWA signatory. By the mid-1980's several companies left the ranks of NCBWA signatories and successfully established through clear judicial precedent (over the opposition of the BCOA and the UMWA) that they had no continuing liability for payments to the funds and that their retirees were entitled to receive benefits from the 1974 fund. North American left the bituminous coal industry in 1984.

Since that time the BCOA has hidden behind us and the other reachback companies to justify:

- the false statement that a financial crisis existed that would bankrupt the funds because the BCOA could not afford to meet its clear contractual commitments;
- the false statement that legislation was needed to prevent future withdrawals from the NCBWA when withdrawal liability had already been established by the 1988 NCBWA; and
- the confiscation of reachback company assets to relieve BCOA companies of a large share of liability for 1950 and 1974 Fund retirees.

The unconscionable nature of the wealth transfer to the already rich BCOA companies engineered by the Rockefeller Act is difficult to overstate.

A final reason why the Coal Act is particularly unfair to North American Coal is that there is no mechanism for passing on to our customers any of these retroactive assessments. Under the terms of our sales contracts, our customers had the obligation to pay for all costs of our employee benefits. When we made the business decision to leave the bituminous coal industry, we made every effort to assure that North American Coal had fulfilled all of its multi-employer benefit obligations, and to ensure that these obligations were paid by our customers as provided for in our contracts. We relied on the clear and unambiguous language of the Wage Agreement, in making this judgment. Our interpretation of this language has been confirmed by several federal court decisions. Had we any way of knowing that new benefits obligations would be imposed on us retroactively, many years after leaving the bituminous coal business, we would have included such costs in the closing that would have been paid by our customers. Our customers, had they been advised of these costs, would have been fully prepared to pay them. As you can well understand, with the complete closure of all of our bituminous coal mines, we no longer have the ability to pass along the reachback assessments to our former customers for whom we mined the bituminous coal in question. For us there is no Rockefeller Act to pass these costs backward on a retroactive basis.

The net result of the retroactive re-writing of all of our contractual obligations has been that in 1992 my Company had to take a one-time charge to earnings of \$110,000,000 after tax. To put this amount in perspective, this charge was more than 70 times greater than the average annual profits made by all of North American Coal's bituminous coal mines during the entire 21-year period from 1960 to 1980. However, since 1992, the large BCOA companies have been pocketing over \$130 million each year. This simply is neither right, nor fair.

It is my hope that, as a result of this hearing, your committee (and ultimately the entire Congress) will correct these inequities so that small reachback companies will no longer be pushed to the wall by this law and that you will rectify the extraordinary financial burden on the larger reachback companies. This can be done in such a way that it would not adversely affect the BCOA member companies. Indeed, even if the reachback companies were completely removed from the Rockefeller Act, the BCOA companies would still pay less into the Funds on a per ton basis than the amount we paid when we were a signatory to the Bituminous Coal Wage Agreement. The reachback tax is unfair, it has been held unconstitutional by one Federal court, and needs to be changed. Thank you for your time, Madam Chairman.

THE NORTH AMERICAN COAL CORPORATION

SIGNATURE PLATE II. 14785-PRESTON ROAD. SUITE 1100

CLIFFORD R. MIERCORT President and Chief Executive Officer

July 28, 1995

The Honorable Nancy Johnson House Subcommittee on Oversight 1136 Longworth House Office Building Washington, DC 20515

Dear Chairwoman Johnson:

I appreciated very much the opportunity to provide testimony regarding the "Reachback Tax" issue to the Subcommittee on Oversight of the House Ways and Means Committee. I hope you agree with me that the Reachback Companies offered compelling cases, illustrating that a retroactive tax to pay for health benefits that were never promised by those companies and that reaches back ten, twenty, thirty, and, in some cases, forty years, is totally unfair.

I am pleased to submit answers to the questions raised in your letter to me dated July 10, 1995. My answers are detailed in the enclosure entitled, "Questions for Clifford R. Miercort of The Reachback Company Panel". In addition, I would like to make the following observations and recommendations.

in reading the transcript of the June 22 hearing, I was struck by the inaccuracies that were presented by those who testified on behalf of the United Mine Workers of America (UMWA) and the Bituminous Coal Operators Association (BCOA). One inaccuracy that must be addressed is their assertion that the Reachback Companies promised lifetime medical benefits to their former union employees. This is a baseless contention without factual or legal support. Do you know of any company that would agree to pay for a future liability when they do not know with any certainty the level of benefits or the costs? I know that North American Coal would not and did not do so. The BCOA/UMWA National Wage Agreements that we signed, the last one being in 1984, never obligated us, nor any of the other Reachback Companies, to pay for lifetime medical benefits.

To help you make an informed decision on this matter, I am enclosing a copy of a letter and summary that we sent last year to Mr. Allen Huffman, Tax Counsel for Senator Dorgan, debunking the theory that we and other Reachback Companies promised lifetime medical benefits (also known as the "Evergreen Theory"). In addition, I would call your attention to the detailed analysis, entitled "Who Promised What to Whom When?", already submitted to the Committee by Jonathan C. Rose, partner of Jones, Day, Reavis and Pogue. I am convinced that, after you and your staff analyze these materials, you will concur with me that the "Evergreen Theory" is without merit, and that none of the Reachback Companies promised to provide lifetime benefits.

The other blatant inaccuracy which must be addressed is the false charge that the healthcare of the retirees will somehow be jeopardized by your addressing the Reachback tax issue. The Reachback Companies have not advocated any change in the benefit levels for the retired miners. The UMWA and BCOA representatives continue to make this unfounded and irresponsible accusation to deliberately worry the retirees, so they will become active in opposition to your fixing the problem. The real issue involves not the taking away of any retiree benefits, but deciding which companies should pay for them.

I know as you go forward in your deliberations on this issue that there will be intense opposition from those companies who have unjustifiably benefited by the unfair imposition of retiree healthcare costs on the Reachback Companies. However, the serious and unjust burden imposed on the Reachback Companies by the Coal Act can and must be relieved.

My sense from the hearing was that a number of the Members would prefer legislation that would provide a comprehensive and final solution to the problems faced by the Reachback Companies. As I mentioned in my testimony, a solution would be to remove the Reachback portion of the Act and have the Reachback beneficiaries reassigned.

Thank you for the opportunity to provide this additional information for the official record of the hearing.

Sincerely, Affordk. Whind

Clifford R. Miercort

Chairman JOHNSON. Thank you. Mr. Chenoweth.

STATEMENT OF JIM CHENOWETH, DIRECTOR, CORPORATE AFFAIRS, LONE STAR STEEL CO., DALLAS, TEXAS; ACCOMPANIED BY RHYS BEST, PRESIDENT AND CHIEF EXECUTIVE OFFICER, LONE STAR STEEL CO.

Mr. CHENOWETH. Thank you, Chairman Johnson, for allowing me to come before you this afternoon. I also wanted to introduce the chief executive officer of Lone Star Steel, chief executive officer and president Rhys Best, who is here also and would be able to answer questions should you want to ask them.

I am here to tell you the shocking story of what the coal industry Retiree Health Benefit Act of 1992 has done to Lone Star Steel Co.

and to the good men and women who work there.

Lone Star is a fully integrated steelmill located in northeast Texas. We are able to produce 1 million tons of steel a year and we convert virtually all of that steel either into pipe that is used in oil and gas wells or into tubes used in the automotive industry.

Lone Star was founded during World War II as a defense manufacturer. Coal was a necessity in the steel-making process then, but modern technology changed that long ago. We haven't needed coal at Lone Star since the new electric furnaces replaced the old blast furnaces and open hearth furnaces many years ago. Lone Star ceased coal mining in 1963. In other words, we have not had a coal miner on our payroll since President Clinton was in high school; not in the last 32 years, not one. Had a coal miner retired from Lone Star Steel Co., he would now be 97 years old.

Lone Star Steel has never been a member of the Bituminous Coal Operators Association. Since at least as far back as 1963, we have not signed a coal miners union agreement nor a health care agreement nor pension agreement, not one. That did not seem to matter to Congress when it passed the Coal Industry Health Benefits Act of 1992 and ordered us to begin paying \$69,561 each month to the health care fund. We do not have that kind of money sitting around Lone Star ready to ship to Washington.

We consider what the Congress has done is an illegal taking, unjustly and unnecessarily confiscating our assets without a moral or ethical right, much less a legal right. Already a Federal District Court has held that this act is an illegal taking and is therefore

unconstitutional at this moment.

Our recently retired-Congressman from Texas, Jake Pickle, the past Chairman of this Subcommittee, described the egregiousness of this act better than I could. This is a statement that he made to this Subcommittee in October 1992.

Today the eastern States' coal industry is dominated by foreign-owned companies and about 4 years ago the coal operators decided they were no longer going to live up to their responsibility to pay the health benefit plan, so they reduced their contributions and the plan today faces insolvency.

That was 1992.

Now Congress is being blackmailed into bailing this plan out by taxing companies that have no current connection with the bituminous coal industry. It is as if Congress is a gang mugging an innocent passerby and justifying it by saying, well, our family and friends are hungry. Mr. Pickle's complete comments are attached to our printed testimony and I strongly urge you to read every bit of it.

By deciding to assign this obligation to Lone Star Steel without good reason or logic, the government caused an unanticipated drain on our funds and necessitated the establishment of a \$11 million reserve to cover this imposed liability straight out of cash flow. It was hard, and it hurt us severely. Worst of all, it hurt our people.

These takings represent 40 cents an hour for every one of our active employees. Put another way, these takings add \$2 a ton to our cost of all pipe we ship, and nowadays it means a lot of pipe we do not ship due to being no longer competitive. It is especially true for exports. When it comes to transferring funds to another industry mandated solely by government fiat, we not only cannot afford it, but we are confident that the courts some day will uphold our contention that this 1992 act is illegal and it is unconstitutional.

Thirty-two months ago Congress acted quickly, and in so doing has harmed a class of American businesses now known as reachbacks. This was done with no hearings, no comments, no consideration to the harm done. The act of 1992 is bad legislation at its worst and, again, as Mr. Pickle described it, "I believe that the coal provision is a travesty of justice, an embarrassment to the Congress and we should never let ourselves be put in this corner again."

Now the facts are evident. Will Congress be just as quick to stop our bleeding and heal our wounds? Lone Star Steel asks to be relieved of this undeserved burden of being forced to pay someone

else's bills.

Thank you for the opportunity to plead our case today. [The prepared statement and attachment follow]:

STATEMENT OF JIM CHENOWETH OF LONE STAR STEEL COMPANY

UNITED STATES HOUSE OF REPRESENTATIVES

SUBCOMMITTEE ON OVERSIGHT

Thursday, June 22, 1995

Good morning, Madam Chairwoman. Thank you for this opportunity to tell the shocking story of what the Coal Industry Retiree Health Benefit Act of 1992 has done to Lone Star Steel Company and the good men and women who work there.

Lone Star is a fully integrated steel mill in a town in Northeast Texas of the same name. It's a nice town and we think we have a pretty nice company. We are able to produce a million tons of steel per year. We convert virtually all of our steel either into pipe used in oil and gas wells, or into tubes used in the American industrial equipment, transportation equipment and automotive industries.

Lone Star Steel was founded during World War II as a defense manufacturer. Coal was a necessity in the steel-making process then. But modern technology changed that long ago. We haven't needed coal at Lone Star since new electric furnaces replaced old blast furnaces and open hearth furnaces many years ago.

Lone Star Steel ceased coal mining in 1963 -- when President Clinton was still in high school! Lone Star has not had a coal miner on its payroll in 32 years. Not one.

Lone Star Steel has never been a member of the Bituminous Coal Operators Association. Since at least as far back as 1963, we have not signed a coal miners' union agreement, a health care agreement or a pension agreement. Not one.

That didn't seem to matter to the Congress, however, when it passed the Coal Industry Retiree Health Benefit Act of 1992 and ordered us to begin paying \$69,561.02 per month into this union retiree healthcare fund. Madam Chairwoman, we do not have that kind of money sitting around Lone Star, ready to ship off to Washington. We consider what the Congress has done an illegal taking, unjustly and unnecessarily confiscating our assets without a moral or ethical right, much less a legal right. Already a federal district court has held this act as an illegal taking and is therefore unconstitutional.

Our recently retired Congressman from Texas, Jake Pickle, the past chairman of this subcommittee, described the egregiousness of this act far better than I ever could. Allow me to quote briefly from his statement to this subcommittee in October 1992. (QUOTE)

"Simply put, the mine workers and the bituminous coal operators agreed decades ago to establish a health plan that would be paid for by all who mined coal in the eastern United States. As long as 'coal was king' this agreement worked reasonably well."

Mr. Pickle went on (QUOTE), "Unfortunately, the coal industry changed dramatically. Today, the eastern states' coal industry is dominated by two foreign owned companies. About four years ago the coal operators decided that they were no longer going to live up to their responsibility to pay for the health benefit plan. And so they reduced their contributions, and the plan today faces insolvency."

Then Mr. Pickle emphasized (QUOTE), "Now congress is being blackmailed into bailing this plan out by taxing companies that have no current connection with the bituminous coal industry. It is as if Congress is a gang, mugging an innocent passerby, and justifying it by saying 'Our family and friends are hungry'."

By deciding to assign this obligation to Lone Star Steel without good reason or logic, the government caused an unanticipated drain on our funds, and necessitated the establishment of an \$11 million reserve to cover this imposed liability. It has hurt us and hurt us severely. Worst of all, it has hurt our people. These takings represent 40 cents for every hour worked by our active employees. Also think of the huge ripple effect a 40 cents per hour pay raise would have on the local economy. Put another way, these takings add \$2 per ton to our cost for all pipe we ship. Often it means pipe we don't ship because we no longer are competitive. This is especially true for exports. These takings are threatening our economic viability and severely limiting our global competitiveness.

Now, Mr. Pickle continued, and (QUOTE), "We can all be sympathetic to the plight of the mine workers, but their benefits should be paid by the coal companies, not everyone else. Why are we kow-towing to these huge foreign owned companies? It was their cut throat business practices that drove the domestic coal companies out of business. And now we bail them out? We let them escape their obligations while they ship their profits overseas. We should be ashamed," he told the committee.

Let me further describe how Lone Star Steel has been impacted by this act.

Lone Star Steel Company in 1994 had annual revenues of \$350 million and 1500 employees with approximately half of them members of the United Steel Workers Union. We are leaders in the marketplace of energy industry tubulars and automotive industry tubulars. We have received the "E Star" award for excellence in exporting our products into more than 60 foreign countries.

The energy boom of the 70's ended in a bust in the 80's and Lone Star Steel was forced to cut 5,000 jobs. Revenues dropped from \$1 billion to \$200 million. We finally were driven into Chapter 11 and, in slightly less than two years, Lone Star reorganized. We paid our creditors in cash of 84 cents on the dollar. Now in the 1990's we are slowly recovering. We are paying our bills. Our business has become marginally profitable again. We are investing heavily in environmental protection. We are leader in recycling of ferrous scrap and other materials.

But when it comes to transferring funds to the government due solely by government fiat, we not only cannot afford that, but we are confident the courts will someday uphold our contention that the Coal Industry Retiree Health Benefit Act of 1992 is illegal and unconstitutional.

In a note of prophesy, Mr. Pickle added (QUOTE), "Let me also warn my colleagues, you have not heard the last of this issue. I tell you, we are setting a precedent today that will come back to haunt us. Today, we are bailing out the mine workers' plan, and letting the mine operators have a windfall. Who will be next? Will it be the steel industry? The airlines? Tire and rubber companies? Or perhaps it will be the auto industry?"... Finally, he stated, "I believe that the coal provision is a travesty of justice and an embarrassment to the Congress. We should never let ourselves be put in this corner again."

In October 1992, Mr. Pickle warned this committee that the talk of the fund going under was bogus, and sure enough today we see this fund is awash in cash. The actual fact is that the miners' union did not need the money that was taken from companies like Lone Star Steel.

Why then is Congress forcing us to continue to further bloat the Fund's glutted surpluses?

Another question more basic is why should the Congress even be involved at all in the micro-management of a non-government healthcare fund, directly interfering with a collective bargaining process which was working?

Thirty-two months ago, the Congress acted quickly to severely harm a class of American businesses now known as "Reachbacks". This was done with no hearings, no comments, no consideration to the harm done. The Coal Industry Health Benefit Act of 1992 is bad legislation at its worst. Now that the facts are evident, will Congress please be just as quick to stop our bleeding and heal our wounds? Lone Star Steel asks to be relieved of this undeserved burden of being forced to pay someone else's bills. I thank you for the opportunity to plead our case today.

REMARKS OF CONGRESSMAN J.J. PICKLE BEFORE THE HOUSE WAYS AND MEANS COMMITTEE OCTOBER 5, 1992

Mr. Speaker, I rise today in support of the energy bill. I support this bill because it includes important incentives for solar energy and much needed relief for independent producers who explore and develop energy supplies. And I'm especially pleased about new incentives for expanding our use of alternative fuels, like compressed natural gas. Alternative fuels will not only help curb our imports of petroleum, but will also improve our environment by cutting down on harmful emissions. These are all good, and vital pieces to our national energy strategy.

But there is one part of this bill which is deplorable, and that is the bituminous coal health benefit bailout. Mr. Speaker, this bailout, as well intended as it may be, is a terrible injustice, and sets a precedent in the area of employee benefits that we will all live to regret.

Simply put, the mine workers and the bituminous coal operators agreed decades ago to establish a health plan that would be paid for by all who mined coal in the eastern United States. As long as "coal was king" this agreement worked reasonably well. Unfortunately, the coal industry has changed dramatically. Today the eastern states coal industry is dominated by two foreign owned companies and the number of miners has drastically declined. About four years ago, the coal operators decided that they were no longer going to live up to their responsibility to pay for the health benefit plan. And so they reduced their contributions to the plan, and the plan today faces insolvency. And now the Congress is being blackmailed into bailing this plan out by taxing companies that have no current connection with the bituminous coal industry.

Mr. Speaker, we should not do this! It is wrong! It is as if we are a street gang mugging an innocent passerby, and justifying it by saying that our family and friends are hungy. We should stick to the original agreement and force those companies who are mining eastern coal to meet their obligations. We can all be sympathetic to the plight of the mine workers, many of whom are elderly and in ill health. But these benefits should be paid by the coal companies, not everyone else. Why are we kowtowing to these huge foreign owned coal companies? Why are we raising taxes on domestic energy companies to pad the profits of these foreign profiteers? It was their cut throat business practices that drove the domestic coal companies out of business, and now we bail them out. We let them escape their obligations and ship their profits overseas. We should be asthamed!

Let me also warn my colleagues, you have not heard the last of this issue. We pay for this bailout by taxing any company or its successor which ever had any connection with mining coal under the BCOA agreement. We have no idea who all these companies are. There will now be a rush to track them down and tell them that they will have to pay millions of dollars a year into this health plan over which they have no control. Some will be forced into bankruptcy, others will be forced to lay off workers. And they will blame you and me, and they will be right. So plan today what you will tell them, it won't be easy.

Finally, I tell you that we are setting a precedent today that will come back to haunt us. Today we are bailing out the mine workers plan and letting the mine operators have a windfall. Who will be next? Will it be the steel industry? The airlines? Tire and rubber companies? Perhaps it will be the auto industry? I tell you right now that there is good reason to believe that the steel industry is already making plans to get a similar bailout.

The members should know that our defined benefit pension plans, which are guaranteed by the Pension Benefit Guaranty Corporation, are underfunded by over \$40 billion dollars. Some of the largest companies in America have deliberately chosen to underfund their plans by billions of dollars. And, when I raise this issue no one wants to talk about it. The companies refuse to appear before the Oversight Subcommittee. I am accused of frightening people and undermining confidence in our pension system. I do not want to frighten anybody. But we must insist that companies that make benefit promises keep their promises.

At the same time the other Body was hatching this plan to bail out the coal health plan, it balked at adopting a proposal to make companies properly fund their pension plans. It seems inconvenient to pressure companies to keep their pension promises. There are always a thousand excuses for putting this responsibility off to a later day. But the later day always comes. For the coal industry it comes today and we have chosen to rob Peter to pay Paul. Who will we hijack when the time comes to bail out the rest of our retirement system? Every company that has ever sponsored a pension plan or ever intends to should ask that question. Because today we are telling the world that if you play by the rules and meet your responsibilities you pay the penalty, and the sharp operators who run and hide go free.

Mr. Speaker on balance this is a good bill. It would be better if we had stood our ground and held the coal operators to their own promises. This provision to make other companies pay the coal industry's bills is just a selfish regional request. The other body has caved in to this blackmail by three or four key senators. We can all agree to protect the miners' benefits, but we should have agreed to make the mine owners and operators pay. I, for one, was willing to do so. However, I am not willing to block this entire bill for this one reason. But, I believe that the coal provision is a travesty of justice and an empharrassment to the Congress. We should never let ourselves be put in this comer again.

Chairman JOHNSON. Thank you very much, Mr. Chenoweth. Your testimony is a stark reminder that the words in the pediment of the Supreme Court are indeed difficult to realize. I used to walk to work past the Supreme Court building every day and on the pediment it reads, "equal justice under law." It is very hard to write the law so that there is equal justice and the injustice that is imposed on your company by this law is really appalling.

I am going to yield the chair to my colleague, Mr. Portman from Ohio—he has voted and I have not. I will be back shortly and he will take over. I think hearing from the companies has been very useful to us. We will finish the panel, have questions and then have a short recess before the next panel so those of you serving

on the next panel might want to get a bite of lunch.

Mr. PORTMAN [presiding]. Thank you, gentlemen, and apologies for the inconveniences. I left about 10 minutes ago to offer an amendment on the House floor and I learned that we now have two additional procedural motions before that. I appreciate your patience.

Mr. Faltis.

STATEMENT OF JOHN FALTIS, PRESIDENT, ANKER ENERGY CORP., MORGANTOWN, WEST VIRGINIA

Mr. FALTIS. Distinguished Members of the House Subcommittee, thank you for the opportunity to testify. I am John Faltis, president of Anker Energy Corp. I am here today on my own behalf. I am anxious to tell you about how my company is affected by the Coal Industry Retiree Health Benefit Act, because as it stands, the act unfairly puts Anker Energy at a competitive disadvantage with

large BCOA companies.

It is no coincidence that the large BCOA companies spent a great deal of time and money getting the act passed. There is no question that the miners should receive the retiree health benefits as promised. However, under the act, companies like mine, companies who never promised to pay the benefits, and who never had representatives in a position to affect management of the retiree health funds are now forced to pay for an unfair share of those benefits, while the largest coal companies, the ones who fought so hard to pass this act in the first place, reap huge windfalls.

Anker is a medium-sized, West Virginia-based coal company with offices and operations in Connecticut, Maryland, Kentucky,

Indiana, Oklahoma and Pennsylvania.

We supply our coal to customers in 14 States, including Connecticut, New Jersey, New York, Ohio, Maryland and Missouri. Two of our affiliates had only limited periods of employment under UMWA coal wage agreements.

In both cases the miners were employed for only a fraction of their mining careers. However, the act is forcing Anker to pay full lifetime retiree and dependent health benefits. This is unfair, especially since the BCOA companies we compete with receive a windfall of hundreds of millions of dollars under the act, giving them an unfair advantage in the marketplace.

The bottom line is this act has put at risk my 600 employees and put at risk hundreds of additional contractors and other people

that rely on our business to survive. It has put their job security and their benefits at risk as well.

Anker has been assigned liability under the act two ways. First, 20 years ago, one of Anker's affiliates, King Knob Coal Co., operated as a contract miner for a BCOA member company, one of the largest coal companies in the world. Under the contract mining arrangement, the BCOA company owned the coal reserves and King Knob mined the coal. King Knob is required by the BCOA company to sign a coal wage agreement and use only union workers to mine the coal.

Unlike many contract mining arrangements, it was the BCOA company and not King Knob that was liable to pay the health

benefits for the miners employed at the operation.

In the early eighties, the BCOA company unilaterally terminated its contract with King Knob, causing the layoff of most of the miners. Briefly, King Knob later took over the mine to complete reclamation required by law, rehiring some of the workers for a short period. Under the reach-back provision of the act, Anker will be asked to pay the liability that the large BCOA company dumped on us.

Anker has another very limited relationship with union workers. Over a 6-month period in the late seventies an Anker affiliate purchased the stock of Reliable Coal Co., a small, insolvent UMWA-organized company. Reliable was about to lay off its 200 workers when it became an affiliate of Anker.

Unfortunately, market conditions forced the mine to close after only 6 months and the Reliable miners were laid off. Under the act Anker is solely liable for the lifetime retiree health benefits of the former Reliable miners and their families, as well as a portion of the retiree health benefit costs of unassigned miners.

To bring this inequity into focus, the Reliable miners worked in the mines for more than 20 years. An Anker affiliate employed them for only 6 months, one-fortieth of their work life, but Anker must foot the bill for all in lifetime retiree health benefits and that of their families as well.

Ladies and gentlemen, this amounts to a huge retroactive payment for the few hours these Reliable miners were employed. Clearly this imposes a severe and unfair burden on Anker.

As a result of the act, Anker has been informed by the combined fund that it can anticipate 220 assignees for a one-time cost of \$1.2 million and an annual cost of \$500,000. These are huge costs for my company to bear, especially as they were not bargained for, were not anticipated, and have no relationship to any revenue-producing operation of my company. Again, costs like these jeopardize the jobs of my 600 active employees and the many others that depend on our company.

In closing, I ask you to help my company and its employees by removing the unintended inequities caused by the act and providing for a more evenhanded allocation of retiree health benefit liability. Undoubtedly, proposals such as H.R. 1370 will alleviate some of these burdens, but to be truly fair, these costs must be borne by those BCOA companies that reap the benefits of long-term labor agreements while having market dominance. Action or inaction on this act could mean the difference between survival and insolvency for Anker and many other companies. Thank you.

[The prepared statement follows:]

STATEMENT OF JOHN FALTIS PRESIDENT OF ANKER ENERGY CORPORATION

INTRODUCTION

Thank you for the opportunity to present the views of Anker Energy Corporation regarding the Coal Industry Retiree Health Benefit Act ("the Act"). Anker Energy is a related person to a "reachback company". A reachback company is a company which was not signatory to a contract with the UMMA in 1992, but was signatory to a UMMA contract at some time since 1950 and employed at least two UMMA miners for at least one day. Under the Act, such companies are assigned liability to the "Combined Fund" created by the Act not only for the health benefits of miners they employed, but also for a percentage of the benefit costs of miners whose employers are no longer in business.

Anker Energy never signed a union contract. But the Act contains a "related person" clause, which provides that if a former employer is insolvent or no longer in business, companies related to the former employer (such as its parent or its sibling corporations) will be liable for the former employer's retiree health benefit costs. The reachback provision, together with the related person provision, burdens operators like Anker Energy with onerous and unfair liability for the health benefits of persons with little or no connection to the operator. Reachback operators are forced to pay benefits that they never contracted to provide.

The fundamental goal of the Act is to ensure that these miners receive adequate retiree health benefits. Anker Energy wishes to contribute to this goal, and is willing to pay its fair share of the costs of these benefits. However, Anker Energy believes that the disproportionate and unfair impact of the Act in its present state, not only overburdens coal companies that had limited union involvement, but negatively impacts the livelihood of its workers.

Anker Energy is a West Virginia coal company that provides coal to customers in 14 states. In its 20 years of business, Anker Energy affiliates had only two limited periods of employment under the UMWA coal wage agreements. The first occurred in the late 1970s when an Anker Energy affiliate, acquired and unsuccessfully tried to revitalize a mine owned by an insolvent unionized operator. This involvement lasted only 6 months. The second occurred in the early 1980s when another Anker Energy affiliate acquired a coal mine from one of the largest members of the Bituminous Coal Operators Association ("BCOA"), and operated it for only 4 years.

In both cases, Anker Energy affiliates employed the miners for only a fraction of their mining careers; they worked the bulk of their careers for someone else. But in both cases, the Act forces Anker Energy to pay full lifetime retiree health benefits to these miners and their dependents, as well as a portion of the retiree health benefit costs of unassigned miners and beneficiaries, resulting in a disproportionate and unfair burden on Anker.

Anker Energy competes with large BCOA companies that are receiving a substantial cost savings as a result of the Act. Even the BCOA has estimated annual savings to its members in excess of \$100 million. As a result, Anker Energy is placed at a competitive disadvantage. The competitive disadvantage is especially severe because Anker Energy sells coal in the spot market where BCOA companies traditionally sell coal at lower prices. This competitive disadvantage has serious implications for Anker Energy and the over 600 West Virginians it employs. While the Act raises Anker Energy's per-ton cost of producing coal, it lowers the per-ton cost of Anker Energy's BCOA competitors — clearly not the original intent of the Act.

Anker Energy supports proposals for alleviating the Act's burdens for all coal operators, such as H.R. 1370, but it believes that bill would better serve its purpose if it rectified the disproportionate effects of the Act. Full relief would exempt from the Act coal producers whose union activities have been limited. As it stands, the bill reduces premiums based in proportion to an operator's assigned beneficiaries as a percentage of all assigned beneficiaries. Even though this helps reachback operators compete with companies that rely

heavily on union employment, it makes no special provisions for the reachback operators who have suffered the most under the Act. The unfair competitive advantage that the Act gave to the larger operators when the Act was passed will not be removed.

A Company should not be assessed liability as a "related person" when the miners were employed by the company less than one year.

In the late 1970's, an affiliate of Anker Energy purchased the stock of Reliable Coal Company, a small, insolvent UMWA-organized coal company. Anker Energy intended to turn the company around by retooling Reliable's facilities to mine metallurgical coal -- a highly competitive business where coal prices are established in the world market. Anker Energy borrowed large sums of money and invested it in the mine, intending to sell metallurgical coal at a price high enough to service the debt. However, Anker Energy's cost of borrowing skyrocketed when interest rates climbed above 20 percent, and its expected revenues plummeted when the price of metallurgical coal dropped, making it impossible to continue the operation without losing the entire company. Market conditions forced Anker Energy to close the mine after only 6 months. It is worth emphasizing that the Reliable miners were laid off because of unavoidable market forces, not because of union affiliation.

Under the Act, Anker Energy is considered a related party to Reliable, the last employer of these miners to have signed a coal wage agreement. Therefore, even though Anker Energy's controlled group employed Reliable's miners for only 6 months, the Act holds Anker Energy solely liable for the lifetime retiree health benefits of 50 former miners of Reliable and every member of their families, as well as a portion of the lifetime retiree health benefit costs of unassigned beneficiaries. The 50 Reliable miners worked in the mines for more than 20 years. The Anker affiliate employed them for only 6 months. Yet Anker must foot the bill for all of their lifetime retiree health benefits, and that of their families. In other words, they worked for an Anker affiliate for less than 1/40th of their work life, but Anker must pay 1004 of their benefits and the benefits of their families. Clearly, this imposes an unfair burden on Anker.

The Act should be amended to protect companies that have employed miners for short periods of time from being held liable for lifetime health benefits earned through years of employment with other coal operators.

Contract miners should not be liable under the reachback provision for the health benefits of retirees who were employed in a contract mining arrangement.

Coal mining operations often involve a bifurcation of rights, with one company owning the economic rights to the coal reserves (the "contracting company") and another company (the "contract miner") performing the mining under contract for the benefit of the contracting company. In certain circumstances, the reachback provision of the Act has the effect of unfairly allocating liability for retiree health benefits to contract miners rather than to the contracting company.

One of Anker Energy's affiliates, King Knob Coal Company ("King Knob"), operated as a contract miner for one of the largest coal companies in the United States. The contracting company is a BCOA company and a member of the BCOA team that negotiates the coal wage agreements. As a condition of its contract mining relationship with this large contracting company, King Knob was required to sign a coal wage agreement and use only union workers to mine the coal. Under the mining agreement, the contracting company, not King Knob, was required to pay the health benefit contributions for the miners employed by King Knob on the contracting company's behalf. This arrangement

continued for 15 years, at which time the contracting company unilaterally terminated its contract with King Knob, causing the layoff of most of the miners. King Knob later acquired the reserves from the contracting company, hired back some of the laid off miners, and over the next 4 years mined out the remaining reserves and closed down the mine.

Under the reachback provision of the Act, however, even though the contracting company (i) effectively employed these miners for 15 out of the 19 years coal was extracted from this mine, (ii) was contractually obligated to pay all miner health benefits during the 15 years, and (iii) caused the layoff of these miners when it unilaterally terminated the contract, the Combined Fund has assigned it none of the liability for the retiree health benefits. Instead, the Combined Fund has required King Knob to pay all the retiree health benefits of the miners employed by the operation, the health benefits of their dependents, and a portion of the retiree health benefit costs of unassigned beneficiaries.

To rectify this inequity, the reachback provision of the Act should be modified in the context of a contracting company/contract miner relationship so that upon termination of a mining contract by a contracting company, the retiree health benefits of miners who were laid off as a result of the contract termination are attributable to the contracting company rather than the contract miner.

CONCLUSION

In closing, we ask this subcommittee to review the Act and the inequity it has created in its attempt to protect miner's benefits. We support efforts to reform the Act, such as H.R. 1370, which would rebate surplus assets to all entities paying into the Combined Fund. But to be truly fair, reform should provide for a more equitable allocation of retiree health benefit liability than that provided by the Act. These changes could mean the difference between survival and insolvency for many coal companies.

Mr. PORTMAN. Thank you. John B. Patton, president of Davon Inc., Columbus, Ohio is recognized.

STATEMENT OF JOHN B. PATTON, PRESIDENT, DAVON INC., COLUMBUS, OHIO

Mr. PATTON. Distinguished Members of the Committee, thank you for asking me to testify. I am John Patton. I am the owner and president of Davon Inc., an Ohio business. We manufacture and deliver ready-mixed concrete products and mine and process limestone, sand and gravel. We employ 275 people, with excellent wages and benefits in the high unemployment areas of south central Ohio. Many of our employees are represented by the International Union of Operating Engineers. The union has actively supported us in seeking relief from the 1992 coal act.

There are three groups of companies affected by this legislation and the differences between them are significant. The first group is the post-1988 companies, those in the coal business after 1988,

including the current members of the BCOA.

The second group is the reach-back companies, those in the coal business from 1978 through 1988. The third group is the super reach-back companies, those who left the coal business before 1978. Davon is a super reach-back company.

Please review the summary chronology attached to my written testimony, which shows there is absolutely no connection between super reach-back companies, including Davon, and the alleged problems that Congress sought to address in the 1992 coal act.

Davon's predecessor, the New York Coal Co., sold all of its coal mining interest in 1954. I would like to repeat, in 1954. We have in no way been affiliated with the coal business since then. Davon was formed in the late fifties after my family purchased the stock of the New York Coal Co., then a Maine corporation. They renamed the company and reincorporated it into Ohio. So, Davon has never been in the coal business.

Let's focus on 1978, a crucial year as it relates to Davon and the 1992 coal act. In 1978, the year the UMWA retirees were promised lifetime benefits at the bargaining table by all companies then in the coal business; 1978, the year singled out to delineate the super reach-back companies from the reach-back companies; 1978, the Coal Commission report which led to this act recommended only applying the act to the post-1978 companies. The commission would not have included Davon and other super reach-backs; 1978, Davon and Templeton, who you will hear from in the next panel, had been out of the coal business for 24 years.

The act does not even generate significant revenues from super reach-backs. They represent only about \$10.8 million or no more than 3 percent of anticipated fund revenues, which is insignificant to the fund's revenue from other sources or its surplus, which is well over \$100 million.

Super reach-backs should be excluded before battle lines are drawn over the amount of the surplus and what, if any, other changes should be made to the act.

They should be exempt because it is wrong to include them in the first place, not because there may now be a surplus. A super reach-back exemption should not be contingent upon any specific

level of surplus.

Miners were promised benefits and they should get them, but those who promised the benefits should pay for them. If it were not for this law, the BCOA and others would have to pay these health insurance premiums, as they promised to do in collective bargaining.

This brings us to the true effect of this law. The act, without any conceivable justification, takes our money and uses it to pay for an

obligation of the BCOA and others.

The 1992 coal act has cost Davon over \$800,000. It has drained capital from our company and cost us jobs. The proposed Myers-Hancock bill does not give super reach-backs the complete exemption they deserve. It treats us like other reach-back companies. We are not like them. We were long gone in the coal industry when retiree health benefits were promised in 1978.

A mistake has been made. Remember 1978. Honor it as a legitimate cutoff date and please exempt all super reach-backs from this legislation. We do not belong in it.

[The prepared statement follows]:

TESTIMONY OF JOHN B. PATTON PRESIDENT OF DAVON INC. OF COLUMBUS, OHIO BEFORE THE SUBCOMMITTEE ON OVERSIGHT, COMMITTEE ON WAYS AND MEANS, UNITED STATES HOUSE OF REPRESENTATIVES Washington, D.C., June 22, 1995

Good morning Madam Chairman and members of the subcommittee. Thank you for inviting me to testify.

I am the owner and president of Davon, an Ohio business. We manufacture and deliver ready-mix concrete products and mine and process limestone, sand and gravel. We employ 275 people, with excellent wages and benefits, in the high unemployment areas of south central Ohio. Many of our employees are represented by the International Union of Operating Engineers. The union has actively supported us in seeking relief from the 1992 Coal Act.

There are three groups of companies affected by this legislation and the differences between them are significant:

- Post-1988 companies: those in the coal business after 1988, including the current members of the BCOA;
- 2) "Reachback" companies: those in the coal business from 1978 through 1988; and
- "SUPER" Reachback" companies: those who left the coal business before 1978; Davon is a SUPER Reachback company.

Please review the summary chronology attached to my written testimony which shows there is absolutely no connection between SUPER Reachback companies, including Davon, and the alleged problems that Congress sought to address in the 1992 Coal Act.

Davon's predecessor, New York Coal Company, sold all of its coal mining interest in 1954. We have in no way been affiliated with the coal business since then. Davon was formed in the late 1950's after my family purchased stock of the New York Coal Company, then Maine corporation. They re-named the company and re-incorporated in into Ohio. So,

DAVON HAS NEVER BEEN IN THE COAL BUSINESS.

Let's focus on 1978, a crucial year as it relates to Davon and the 1992 Coal Act.

- 1978: the year UMWA retirees were promised lifetime benefits at the bargaining table by all companies then in the coal business.
- 1978: the year singled out to delineate the SUPER Reachback companies from Reachback companies.
- 1978: The Coal Commission report, which lead to this Act, recommended only applying the Act to the post-1978 companies; the Commission would not have included Davon Inc. and other SUPER Reachbacks.
- 1978: Davon (and Templeton) had been out of the coal business for 24 years.

The Act does not even generate significant revenue from SUPER Reachbacks. They represent only about \$10.8 million, or no more than 3% of anticipated fund revenues, which is insignificant to the Fund's revenue from other sources, or its surplus which is well over \$100 million.

SUPER Reachbacks should be excluded BEFORE battle lines are drawn over the amount of the surplus and what, if any, other changes should be made to the Act. They should be exempt because it was wrong to include them in the first place, not because there may now be a surplus. A SUPER Reachback exemption should not be contingent on any specific level of surplus.

Miners were promised benefits and should get them. But those who promised the benefits should pay for them, not SUPER Reachback companies. If it were not for this law, the BCOA and others would have to pay these health insurance premiums, as they promised to do in collective bargaining. This brings us to the true effect of this law. The Act, without any conceivable justification, takes our money and uses it to pay for an obligation of the BCOA and others. The 1992 Coal Act has cost Davon over \$800,000. It has drained capital from our company and cost jobs.

The proposed Myers Hancock Bill does not give SUPER Reachbacks the complete exemption they deserve. It treats us like other Reachback companies. We are not like them! We were long gone from the Coal Industry when retiree health benefits were promised in 1978.

A mistake has been made. Remember 1978. Honor it as the legitimate cut off date and please exempt all SUPER Reachbacks from this legislation. We do not belong in it!

Mr. PORTMAN. Thank you. Alan T. Law is recognized.

STATEMENT OF ALAN T. LAW, PRESIDENT, MOUNTAIN LAUREL RESOURCES COMPANY, MOUNT HOPE, WEST VIRGINIA

Mr. LAW. I am Alan Law, president of the Mountain Laurel Resources Co. Thank you, Mr. Chairman and Members of the Subcommittee for this opportunity to address you on an issue which is of utmost concern for me and my company.

I am here to represent not only my company, but also all of those small reach-back companies whose corporate lives and in some cases personal livelihood have been destroyed by the coal act. Through a stock purchase, I acquired Mountain Laurel in 1992 before the enactment of the coal act.

In 1989, Mountain Laurel negotiated an agreement with trustees of the health and retirement funds for a full and complete settlement of our obligations to the funds at that time.

I would like to quote from a letter dated July 25, 1989, whereby Mountain Laurel sent a letter to the fund expressing our condition on accepting the agreement.

The UMWA health and retirements funds hereby release and discharge forever Mountain Laurel Resources Co. and its predecessor, the New River company, and all persons acting by, through or for said companies from any and all claims, complaints, liabilities, obligations, courses of action and demands of any kind whatsoever, either currently pending against said companies or unasserted, known or unknown to the United Mine Workers of America health and retirement funds for and in consideration of the withdrawal of liabilities here and before set forth to be paid by Mountain Laurel Resources Co.

Based on that agreement and what we thought was a valid and binding agreement, we proceeded to restructure our company. With only six employees, we were primarily interested in the property holdings for the recreational development potential and not in further development of its coal holdings.

I had absolutely no interest in running a coal mining company and I have never employed a coal miner. For nearly a decade the coal activity of our company has been limited to the receipt of passive income from coal leases. I first became aware of the magnitude of our potential disaster in mid-1993 and my worst fears were confirmed in October of that year when we received premium properties for a total of 2,071 miners and dependents.

The annual premiums assessed were in excess of \$5.1 million, or five times the company's current annual revenues. Obviously, this amount was beyond our financial capability, and all the more frightening was the IRS penalty of more than \$200,000 per day if we failed to pay. I appealed to the new combined fund and to then Treasury Secretary Lloyd Bentsen for their urgent help, all to no avail.

In testimony before your Committee in September 1993, I heard then-Assistant Secretary Leslie Samuels advise the members that while the administration could not support a bankruptcy exemption for companies which could not pay the premiums due, he was confident that companies could respond to their premium notices by asking the combined fund trustees for a stretched out payment schedule, and that this would be discretionary with the trustees.

I am here before you today to testify that based on my experience, no such stretched out payment schedule is possible. Based on the conduct of the combined fund in my case, it appears that the trustees possess no such discretion whatsoever to enter into long-term pay out agreements.

With our first \$420,000 monthly premium due on November 25, 1993, and with no response from the fund to our plea for help or assistance, we were forced to file for bankruptcy on November 19, 1993. Unfortunately, our nightmare did not end with the filing of

our petition for reorganization.

Our initial assignment of beneficiaries was so inaccurate, many of our premiums were required to pay for benefits for the dead. Our assigned beneficiaries included my wife's uncle, who died 16 years ago, and literally dozens of beneficiaries who are allegedly more than 100 years old. Other assigned beneficiaries only worked for the company for a matter of weeks, but that did not matter. They said if you once employed a miner under the UMWA agreement and are technically still in business and the miner has retired, you could be liable for a lifetime of benefits.

So, Mountain Laurel was put into bankruptcy. Eighty-eight years' worth of work proudly serving West Virginia and our Nation's industrial sector down the drain. It is not enough to be put in bankruptcy, however. Lawyers for the combined fund continue to hound me and my wife over every single company expenditure, including the company-provided health insurance policies for

us.

Every time we travel to Washington to plead for relief from this nightmare, every expense is challenged by their examiners. In their latest move, the trustees have threatened to sue me and my wife personally under some ultra ego theory for the total net present value of the liability, which is now to be estimated to be \$40 million. Indeed, they have given me a copy of their proposed complaint to prove that they are serious.

In the past months since going into bankruptcy, I have attended several meetings with Senator Rockefeller and even more meetings with his staff. I believe that they are honestly dismayed and concerned at the impact the coal act has had on companies like mine. However, no corrective legislation has yet been proposed that has

been acceptable by all parties.

Mr. Chairman, I applaud you. I know no one wants to revisit this enormously complex and contentious issue, but this problem needs fixing. If any form of relief is justified, is reasonable, is reasonable and is fair, it is relief for small reach-back companies who do not have the financial resources to meet their obligation imposed by the act. It is not that we just do not want to pay; we cannot.

Small companies need relief and we need it now. We cannot wait. With your help in the coming months, we can prevent more

Mountain Laurel bankruptcies this year. Thank you.

[The prepared statement follows:]

CONGRESSIONAL STATEMENT OF ALAN T. LAW

I am Alan Law, President of the Mountain Laurel Resources Company, Mt. Hope, West Virginia. Thank you, Madam Chairman and members of the subcommittee, for this opportunity to address you on an issue which is of the utmost concern for me and my company.

I am here to represent not only my company but also all of those small reachback companies whose corporate lives and in some cases personal livelihood have been destroyed by The Coal Act.

Through a stock purchase, I acquired Mountain Laurel¹ in 1992 before the enactment of The Coal Act. I have never employed a miner. With only six employees, we were primarily interested in the property holdings for their recreational development potential and not in the further development of its coal holdings. I had absolutely no interest in running a coal mining company. For nearly a decade, the coal activity of our company has been limited to the receipt of passive income from coal leases.

I first became aware of the magnitude of our potential disaster in mid 1993 and my worst fears were confirmed in October when we received premium notices for a total of 2,071 miners and dependents. The annual premiums assessed were in excess of \$5.1 million or five times the company's current annual revenues. Obviously, this amount was beyond our financial capability -- and all the more frightening was the IRS penalty of more than \$200,000 per day if we failed to pay. I appealed to the new Combined Fund and to then Treasury Secretary, Lloyd Bentsen, for their urgent help -- all to no avail.

In testimony before your full committee in October of 1993, I heard Assistant Secretary Leslie Samuels advise the members that while the Administration could not support a bankrupicy exemption for companies which could not pay the premiums due, he was confident that companies could respond to their premium notices "by asking the Combined Fund trustees for a stretched-out payment schedule" and that this would be "discretionary with the trustees."

I am here before you today to testify that based on my experience no such stretched-out payment schedule is possible. Based on the conduct of the Combined Fund in my case, it appears that the trustees possess no such discretion whatsoever to enter into long-term payment agreements.

With our first \$420,000 monthly premium due on November 25, 1993, and with no response from the Fund to our plea for help, we were forced to file for bankruptcy_on November 19, 1993. Unfortunately, our nightmare did not end with the filing of our petition for reorganization.

Our initial assignment of beneficiaries was so inaccurate, many of our premiums were required to pay for benefits for the dead. Our assigned beneficiaries included my wife's uncle who died 16 years ago and literally dozens of beneficiaries who are allegedly more than 100 years old. Other assigned beneficiaries only worked for the company for a matter of weeks. But that didn't matter. They said that if you once employed a miner under a UMW agreement and are technically "still in business," you could be held liable for a lifetime of benefits.

Mountain Laurel is the successor company to "The New River Company," historically one of the largest coal producing companies in West Virginia after its original founding in 1906. In the 1960's New River was acquired by CSX Railroad and subsequently sold off during its reorganization. Subsequently due to changing domestic and world metallurgical coal markets, Mountain Laurel ceased coal production in 1985 and was restructured into a coal reserve holding and service organization.

So Mountain Laurel was put into bankruptcy. Eighty-eight years worth of work, proudly serving West Virginia and our nation's industrial sector, down the drain.

It's not enough to be put in bankruptcy, however, lawyers for the Combined Fund continue to hound me and my wife over every single company expenditure including the company- provided health insurance policies for us -- every time we travel to Washington to "plead" for relief from this nightmare -- every expense is challenged, by their examiners. In their latest move, the trustees have threatened to sue me and my wife personally under some sort of "alter ego" theory for the total net present value of the liability which is now estimated to be \$40 million. Indeed they have given me a copy of their proposed complaint to prove that they are serious. They now have my wife's small, inactive landscaping firm, known as Mother Nature's Designs, in their gunsights -- when her firm only generated \$5,000 in earnings some five years ago.

In the past months since going into bankruptcy, I have also attended several meetings with Senator Rockefeller and even more meetings with his staff. I believe that they are honestly dismayed at the impact of The Coal Act has had on companies like mine, however, no corrective legislation has yet to be proposed to me.

Madam Chairman - I applaud you. I know no one wants to revisit this enormously complex and contentious issue, but this problem needs fixing. Small companies need relief and we need it now. We just can't wait. Only with your help in the coming months can we prevent more "Mountain Laurel" bankruptcies this year.

Thank you.

Mr. PORTMAN. Thank you, Mr. Law, and I thank all the panelists for excellent testimony. Some of my colleagues will be coming back in a moment.

The first question would apply to any of the companies represented. Given the liabilities you have talked about, what kind of litigation have you proceeded with—I would imagine that the litigation might stem from the 1992 Act. Maybe we can just go down the line, Mr. Miercort, starting with you. Have you filed any lawsuits subsequent to the 1992 Act?

Mr. Meircort. We have filed a constitutional challenge against the act. It has been consolidated with some other companies' challenges as well. It is being heard by the Washington district court. The oral argument will be next week. I think someone earlier did mention that the Federal District Court in Pittsburgh recently did declare that in the Unity Realty Case that the act is indeed unconstitutional.

Mr. PORTMAN. Do other companies have a different basis for litigation?

Mr. CHENOWETH. This is Rhys Best, chief executive officer of Lone Star Steel Co. I think he can answer that very directly.

Mr. BEST. He has worked so long on the problem. He has already retired from the company, so he is not familiar with our litigation. We filed a constitutional challenge in Texas in Federal Court and that is in discovery and preparation of papers. We are just filing responses to the requests from the various lawyers. It has not been set for hearing.

Mr. PORTMAN. And that also is on a constitutional basis?

Mr. BEST. Yes, it is. It is based as a constitutional challenge on Federal law on one case and the other challenge is that Lone Star filed for bankruptcy reorganization in June 1989 and was reorganized in May 1991, and so we do have a bankruptcy challenge, as well, under the Code.

Mr. FALTIS. We haven't filed any suit or started any action yet. We are asking for relief, though, at least on an administrative basis because we do not feel we rightfully have the liabilities that are being imposed on us.

Mr. PORTMAN. Mr. Patton?

Mr. PATTON. We have filed, again, a constitutionality issue. We have lost at the lower level. We are appealing. We made a very conscious decision when we began the litigation process to position this to go all the way to the Supreme Court if we could possibly get there, and that remains our intention today. We have also sought administrative relief from the SSA.

Mr. Portman. Mr. Patton, you mentioned in your testimony that your company has expended over \$800,000 already in relation to the super reach-back status that you have in relation to the problems before the Subsempittee today.

lems before the Subcommittee today.

Does that \$800,000 include your legal fees that you have expended?

Mr. PATTON. Yes, sir, it does.

Mr. PORTMAN. Could you give us an estimate of what your legal fees have been to date?

Mr. PATTON. Approximately \$330,000 to \$350,000.

Mr. Law. Our company is in the reorganization process in the bankruptcy court. I might tell you that under the combined fund's basic interpretation of this act, is that they consider these premiums or contributions to be a tax, and they consider them to be a necessary and actual expense of the estate that should be paid

as an administrative expense.

Certainly I do not hold this position and we will be filing challenges to that assertion in the near future. But if it is considered to be an administrative expense and a tax, then filing for bankruptcy protects no one. It becomes a nondischargeable item and they dictate the terms of their settlement with you or perhaps destroy your company completely and try to press for liquidation. So, we are actively involved in litigation with them.

Just last week we were served with some potential litigation where they want to lift the automatic status afforded by the bankruptcy court to proceed against my wife and I personally. So, it is

an ongoing battle with us.

Mr. PORTMAN. Thank you. I would like to relinquish the gavel and recognize the Chair of the Committee, Nancy Johnson, for questions.

Chairman JOHNSON [presiding]. Have any of you challenged

assignments made by the SSA of orphaned individuals?

Mr. MEIRCORT. Yes, Madam Chairman. We have challenged a number of the assignments. We had been assigned approximately 1,300 beneficiaries in total and we have challenged approximately 25 to 30 percent of them, on the order of 250. We have yet to hear one word from the administrative review. We have been told that ours is probably the last in the pile.

Chairman JOHNSON. How long ago did you challenge?

Mr. MIERCORT. This was several years ago; within the timeframes required by the act.

Chairman Johnson. And are you paying for that 30 percent at

Mr. MEIRCORT. Yes, ma'am, we are.

Chairman JOHNSON. If they reallocate them, will you be reim-

Mr. Meircort. It is my understanding that we will be if they are inappropriately allocated.

Chairman JOHNSON. And what does it cost you to challenge?

Mr. MIERCORT. The administrative cost of the challenge is probably in the tens of thousands of dollars for staff time and other work.

Chairman JOHNSON, Millions?

Mr. MEIRCORT. Thousands. In terms of the challenge, that itself is just staff time. In terms of our answer to Mr. Portman's earlier question, we have spent on the order of half a million dollars on

our legal challenge.

If possible, I would like to add one other comment regarding the legal challenge. I think it goes to a point that was made by one of the other members of this panel. The president of Davon made the point that there were lifetime benefits promised to all UMWA retirees in the 1978 agreement. That is factually incorrect. It is not true. It is clear by the documents that were entered into by the BCOA companies in 1978 that there was never a lifetime guarantee of benefits. That is one of the points in our oral arguments we will be making next week on the constitutionality challenge.

I can point you to the point in the documents, but will just read a couple of quotes from the agreements that we entered into, the

only ones that we signed.

The explicit agreement by the signatory employers to make specific contributions to the trust are effective during the life of this agreement. Another part of the agreement, ending when the agreement is terminated. Also, in the general description which some people cite as the area that says we promised lifetime employment, it says, health benefits are guaranteed during the term of this agreement subject to the terms of the agreement at the levels of benefits provided in the plans. There has never been ever a lifetime guarantee of payments.

[Additional written Subcommittee questions and the responses

submitted to North American Coal Corp. follow:

QUESTIONS FOR CLIFFORD R. MIERCORT OF THE REACHBACK COMPANY PANEL

1. Have you appealed any assignments of employees made by the Social Security Administration? With what result? At what expense?

Yes, 231 beneficiaries to date. After 13 months, we received review of only 46. Of this 46, 35 were removed from our billing list. There are currently 185 challenges outstanding. To date, these challenges have cost us approximately \$200,000.

2. Do you have any pending litigation under the 1992 Act?

Yes, a constitutional challenge.

3. Can you describe what your legal costs have been?

Approximately \$200,000.

4. What is your approximate annual premium liability under the Act?

\$3 million

5. What steps would you recommend that Congress take to remedy the problems created by the 1992 Act?

H.R.1370 would provide some temporary relief; however, I recommend consideration be given to providing permanent relief to reachback companies.

Chairman JOHNSON. Thank you. We have to leave to vote in 5 minutes and when we leave to vote I am going to recess the hearing for half an hour.

I want to ask the panel if you could very quickly compare the benefits you are providing under this program to the benefits you

are providing to your own employees?

Mr. FALTIS. If I may, we have extensive benefit plans for our employees and cover almost 100 percent of everything. We have an incentive program that we share cost savings with our employees, but the actual benefit that we guarantee our employees is very broad and we have adopted in our own operations, our employees aren't represented by a union, but we also provide for retiree health costs as well.

Chairman JOHNSON. Do you provide for grandparents and grandchildren? In your definition of family benefits, do you include

grandparents and grandchildren?

Mr. FALTIS. No. What we do is we have a defined contribution plan, so we provide a pool of money to our employees both through a 401(h) and a 401(k) so that they will have a pool of money to draw upon. It is different for retirees. It is not a defined benefit plan, but a pool of money that they can draw upon for their benefits.

Chairman JOHNSON. For their medical benefits?

Mr. FALTIS. Medical, yes. We have both a 401(h) and a 401(k). Chairman JOHNSON. Any others?

Mr. BEST. I am Rhys Best, chief executive officer of Lone Star Steel Co. We employ 1,500 employees approximately, 1,000 represented by the United Steelworkers of America. So, we have union employees.

Our health care plan extends to the employee and their immediate dependents through age 22 and that is all. We also by contract do not provide any health care benefits beyond age 65. That is a contract that we have had for over 30 years.

The actual benefits within the plan are very adequate, but are much less than what I have read in the BCOA agreements.

Mr. MIERCORT. For North American Coal we provide benefits for the employee and direct dependents until age 21 and we have an 80/20 copay situation so the level of benefits is much more modest.

Mr. PATTON. We have a comprehensive health care program, again, 80/20, benefits for dependents up to age 21. We presently have no health care benefits for retirees.

Chairman JOHNSON. So, you are contributing under this plan to a considerably richer benefit plan that defines dependent benefits far more broadly in terms of who is provided benefits as well as what benefits are provided than you are for your own employees; is that a fair statement?

Mr. Patton. That is correct.

Chairman JOHNSON. I assume, Mr. Law, that before you ended up in bankruptcy that you had a similar situation.

Mr. Law. Currently we have an 80/20 copay with \$1,000 deductible, but it is just two employees, myself and a receptionist/secretary.

Chairman JOHNSON. There are many fairness issues here and you have helped to shed some light on some of them and we thank you for being here and for your testimony.

[Recess.]

Chairman JOHNSON. The hearing will reconvene.

Members are tied up with a vote still, but they will be returning promptly and we have a series of amendments that are going to be considered and then the votes bunched, so that will result in another significant recess. I want to get started and move as quickly as possible.

Mr. Kindig, the president of Pittston Coal Co., will begin.

Welcome.

STATEMENT OF KARL K. KINDIG, PRESIDENT, PITTSTON COAL CO., STAMFORD, CONNECTICUT

Mr. KINDIG. Thank you.

I am Karl Kindig, president and chief executive officer of Pittston Coal Co. from Lebanon, VA. Pittston is a subsidiary of the Pittston Co. located in Stamford, CT.

I would summarize my testimony and ask that my full testimony

be included in the record.

The Pittston Co., and specifically Pittston Coal Co., support retiree medical benefits. As a company, we provide medical benefits for thousands of our retirees, not all of them as generous as those that have been mandated by the coal act, but we do provide those benefits for our retirees and strongly support the concept of retiree benefits, particularly those negotiated in a collective bargaining

arrangement.

I would like to make three points. Some of them have been made before today. First of all, that the coal act resulted in a very significant shift of the burden for retiree health care in the coal industry, from a group of companies that had agreed in a collective bargaining agreement to assume that burden to a large number of companies that had not agreed to assume that burden; that the crisis that led to the enactment of the coal act was largely manufactured; and that the coal act is a significant threat, in my view, to the concept that collective bargaining is the foundation for the Federal labor policy.

The shift of the burden by the coal act has been well documented. It is documented in the staff Committee report which I would note is a very thorough job, by and large. It is an excellent

report.

Clearly in their and in other testimony before this Committee, is documented the significant financial benefit that was received by the large BCOA companies at the expense of the reach-back compa-

nies and others.

I would also like to submit for the Committee's consideration a report by energy ventures analysis, a very reputable analytical firm in the coal industry, that details in some length the benefits received by the large BCOA companies and the burden shift that has been occasioned by this legislation.

The crisis that—the apparent crisis that led to the enactment of the coal act was largely manufactured by a series of events. The first event was the 1988 BCOA-UMWA agreement which shifted the mechanism for funding retiree medical benefits for the 1950 fund retirees from dollars per ton to cents per hour.

The rates set in that agreement were set at a level far below that necessary to fund those benefits and that fact was known by BCOA and UMWA at the time that that contract went into effect. They dealt with the problem in that contract by including a guarantee clause that provided that the signatory companies would make up any deficit caused by any underfunding.

The problem, of course, occurred—when the time came to honor that commitment, the BCOA companies simply did not pay. They refused to honor their guarantee clause and, therefore, caused a minor underfunding in the benefit fund which was used by the BCOA and the UMWA as a public relations ploy to create the appearance of a crisis that led to the enactment of the coal act. I think the statement that was read into the record by Congressman Hancock at the early part of this hearing is very good evidence of that.

From a collective bargaining standpoint, Pittston engaged in a lengthy collective bargaining process with United Mine Workers in 1989 and 1990, that ultimately culminated in a collective bargaining agreement. That process was with the direct participation of the Federal Government.

The collective bargaining process was under the auspices of then-Secretary Dole and former Secretary of Labor William Usury as mediator through much of that process. The Federal Government was very much involved in the collective bargaining agreement, people were aware of what was in the collective bargaining agreement, and as part of that collective bargaining agreement, we made provision for millions of dollars of contribution to the 1950 fund, as well as continuing to provide our single employer benefit plan under the 1974 fund.

The coal act, despite that Federal involvement essentially abrogated our collective bargaining agreement. I think that Congress ought to ask the question whether it is going to set itself up as the arbiter of last resort for parties to collective bargaining agreements who want to improve their position after the collective bargaining process is over. If that is to be the policy of the Federal Government, I think it has grave consequences for what heretofore has been the foundation of Federal labor law, that is the encouragement of collective bargaining between private parties.

That concludes my remarks.

[The prepared statement follows:]

Testimony of Karl K, Kindig Before the Ways and Means Subcommittee on Oversight to Examine the Operation of the Energy Act of 1992 Related to the Funding and Providing of Health Benefits of Retired Coal Miners June 22, 1995

Good morning Madam Chairman and Members of the Subcommittee. My name is Karl Kindig and I am President and Chief Executive Officer of the Pittston Coal Company (Pittston), a subsidiary of The Pittston Company of Stamford, Connecticut. I am here today to voice support for the Committee's thorough review of the impact of the Coal Act.

In doing so, I want to emphasize that over the years we have been, and continue to be, committed to supporting health benefits for retired mine workers. Amending the flawed Coal Act will not in any way harm the beneficiaries of the Combined Fund. We appreciate the opportunity to appear before you Madam Chairman and distinguished members of the Oversight Committee, to explain the devastating effects of this punitive tax and why it is necessary to amend the Act.

The Coal Act

The Coal Industry Retiree Health Benefit Act of 1992 established the Combined Fund as of February 1, 1993 by merging two existing UMWA retiree health benefit trusts. The Combined Fund is financed mostly by annual premiums assessed to certain companies, called operators, that signed any coal wage agreement with the UMWA after 1950, irrespective of whether those companies (i) were signatory to the 1988 National Bituminous Coal Wage Agreement between the BCOA and UMWA, (ii) had entered into a separate agreement with the UMWA for retiree health care or (iii) had exited the coal business. For companies, like Pittston, which had negotiated and fulfilled all of its commitments in a separate labor agreement, and for those companies which had complied with all contractual obligations prior to leaving the coal business, the Act constituted a punitive, retroactive employer mandate.

The Reachback Tax was promoted as an emergency effort to avoid a projected "deficit" in the United Mine Workers of America (UMWA) Retiree Health Benefit Funds. This deficit, however, never materialized. Instead, the UMWA Combined Benefit Fund Trustees estimate a more than \$145 million surplus growing at \$6.5 million per month. Meanwhile, the number of beneficiaries with claims against the Fund -- currently at less than 95,000 -- will continue to decline because of mortality. The underlying principle of the Reachback Tax was to protect against a shortfall that never occurred. This Ill-conceived tax was tacked on to the 1992 energy bill and was never critically reviewed. Had it been scrutinized, the damage done so far could have been avoided.

Shifting the Burden

The UMWA and the BCOA garnered support for the Coal Act by predictions of an imminent financial crisis in the health benefits plan, but the deficit which first appeared in the aggregate UMWA benefit funds in 1989 was entirely foreseen by the BCOA and the UMWA when they signed the 1988 wage agreement. This agreement changed the BCOA contribution formula from one based largely upon tonnage produced by a signatory company to one based exclusively upon the aggregate annual number of hours worked by its miners and set the hourly rate at a level known at the time to be inadequate. In addition to disadvantaging metallurgical coal producers like Pittston (which due to mining conditions produce fewer tons per man hour than steam coal producers), this change virtually guaranteed a static or declining level of BCOA contributions to the benefit funds in the face of rising health costs. While BCOA coal production remained constant, industry productivity increased and miners' man-hours plummeted. The less well capitalized producers and those who were engaged in more labor-intensive mining of metallurgical coal had imposed on them a greater proportion of the benefits obligation.

With the enactment of the Coal Act, the 1988 signatories further reduced their retiree medical expense by some \$135 million or 57%!

The manipulation of the funds for the benefit of the large BCOA companies is pervasive and well documented:

- 1988 Agreement BCOA and UMWA recognize that the new hours-based contribution formula was insufficient and would lead to under-funding. The BCOA maintained, and the UMWA agreed, that the Guarantee Clause, obligating the BCOA signatories to make up any shortfall, would adequately protect the Funds.
- 1990 1992 BCOA compenies renege on the Guarantee Clause obligations knowing that they would eventually have to pay but manufacturing the appearance of a crisis. The UMWA makes no effort to couple compliance with this contractual commitment.
- 1991 1992 UMWA cynically outlines a strategy to exploit the manufactured crisis in order to achieve Congressional action.
- 1992 Coal Act passed.
- 1993 Retirees' medical fund deficit "magically" disappears without any contribution from BCOA companies as contemplated by the Coal Act.

Abrogation

Pittston was uniquely impacted by the Coal Act since the statutory reachback provision abrogated Pittston's existing collective bargaining agreement with the United Mine Workers (UMWA). This agreement was negotiated after a long and bitter strike which resulted in civil penalties of over \$64 million being imposed upon the UMWA for violations of court-ordered injunctions. Following the intervention of former Labor Secretary Elizabeth Dole, and as a result of the direct mediation of former Labor Secretary William Usery, a complex settlement agreement was reached wherein Pittston agreed to contribute millions of dollars to the UMWA benefit funds and to continue providing medical benefits to post-1974 retirees under its single employer plan. The agreement also contained a unique provision requiring UMWA opposition to legislation such as the Coal Act. This provision was critical since Pittston feared, justifiably so in hindsight, that the UMWA and certain major producers would attempt to shift the burden of their benefit contributions to the backs of others and, in the process, upset our freely negotiated collective bargaining agreement. By its active support of the Coal Act, the UMWA breached this major provision. The Coal Act, in many ways, abrogated Pittston's collective bargaining agreement and undermined the Federal Government's commitment to collective bargaining as the comerstone of national labor policy.

Soft Export Markets

Pittston's competitors in the metallurgical marketplace are principally foreign companies or mining arms of socialized governments. Exporters of metallurgical coal, doing business in a highly competitive worldwide market, do not enjoy any form of long-term contract and cannot pass through the significant costs imposed by the Coal Act. Producers of steam coal for the domestic market, on the other hand, sell coal under long-term contracts which may allow such costs to be passed through to the consumer. Pittston, therefore, stands with a small number of similarly impacted companies having its ability to compete severely hampered. Today, because of the Coal Act, Pittston finds itself under severe financial pressure. Without Congressional action, Pittston will be hampered in its ability to raise the capital necessary to replace mines as their reserves are exhausted, thereby resulting in lost jobs in Appalachian communities which can ill afford additional economic hardship.

The major coal producers with multi-national interests, in a calculated move designed to freeze-out and eliminate competition, have become beneficiaries of the Coal Act at the expense of the Reachback companies like Pittston. Since 1988, the major coal companies which control the BCOA have used the retiree health care issue to improve their competitive position relative to their smaller competitors.

- Prior to 1988, retiree health care expense was assessed on the basis of dollars per ton of coal produced. Since coal is priced by the ton, no competitive advantage resulted.
- The 1988 shift from dollars-per-ton contributed to dollar-per-employee-hour produced a competitive advantage to the larger, highly-capitalized companies to the detriment of smaller, more labor-intensive companies.
- The Coal Act resulted in a further cost shift by substituting <u>past</u> employment rather than current economic activity which had been the historic measure of contribution. As a result of these manipulations, the BCOA companies as a whole have dramatically reduced their retiree medical liability, shifting the cost burden to those companies less able to pay.

Over time, the economic hardship visited by the Coal Act will result in further concentration in the coal industry as the smaller companies succumb to the economic burden of the Coal Act and either fail or are bought out by the BCOA companies.

Hancock-Myers Reachback Tax Relief Amendment, H.R. 1370

It is our goal and that of other Reachback companies to improve the Coal Act without causing harm to retired miners. The Hancock-Myers bill is one such effort. The growing surplus in the Fund would be used to reduce or eliminate the premiums assessed against the Reachback companies while maintaining a safety cushion of at least 10% of the previous year's costs. In the improbable event the Fund's expenses exceed the safety cushion, the Reachback Tax would be resumed.

Congress did not intend for the Fund to develop a surplus and did not provide for its occurrence. It is now Congress' responsibility to remedy a burdensome mandate in excess funding for the Combined Fund in order to reduce the surplus that is rapidly accumulating. The most recent report released by the internationally recognized benefit consulting firm, Towers Perrin, projects a January surplus of \$240.8 million by the year 2004. The Fund is a private fund created by Federal statute, which is financed by a small group of companies; as such, it is appropriate that Congress direct that any unintended surplus be distributed to the payor companies in a manner which is fair and equitable. The Hancock-Myers bill addresses the excess funding and remedies an unintended result by restoring surplus funds to those who have suffered the most under the Act's provision without, in any way, undermining the financial viability of the Retired Mine Workers Health Benefits Fund. It is important to emphasize that under the Hancock-Myers proposal the Reachback companies will continue to serve as guarantors of the Fund, fully liable for immediate payment of their premiums, should the Fund experience a shortfall.

Coal Act Benefits

Pittston is firmly committed to supporting those retirees, and their families, who worked for Pittston for a significant portion of their career, and who retired from Pittston, that is, Pittston's own retirees. While we are open to other legislative suggestions which correct the Coal Act's deficiencies, Pittston has not and will not support any action which assigns retired miners' health benefits costs without considering reasonable vesting standards and a company's ability to make payments. The Coal Act contains no such protections or provisions, assigning to Pittston and other Reachback companies responsibility for lifetime health care for former "employees" (and their families) who

worked for the company for as little as one shift, one day, one week, decades ago. Indeed, of the total beneficiaries, only 28% ever actually worked in the mines. We consider the transition from tonnage to man-hours to liability based on <u>past</u> employment to be a harsh lesson about power and special interest politics. The real winners under the Coal Act are not the retired miners, whose benefits were never at risk, but the large BCOA companies which, with the compilicity of the UMWA, have used this issue in the most cynical manner imaginable to further their own economic interests.

Closing

We are extremely pleased that the majority of the Ways and Means Committee has cosponsored legislation amending the Coal Act. We urge prompt enactment of corrective legislation to remedy the effects of the flawed Act. I would be happy to answer any questions from the Chairman and the distinguished members of this Subcommittee.

Chairman Johnson. Very useful remarks Mr. Kindig. Mr. Ives.

STATEMENT OF J. ATWOOD (WOODY) IVES, CHAIRMAN AND CHIEF EXECUTIVE OFFICER, EASTERN ENTERPRISES, WESTON. MASSACHUSETTS

Mr. IVES. Thank you, Madam Chairman, and good afternoon.

I am chairman and chief executive officer of Eastern Enterprises. Eastern Enterprises owns a gas utility in New England and a marine transportation company operating on the inland waterways. So, why am I here?

In September 1993, out of the blue, we received a bill for over \$5 million under the coal act. I did not know what the coal act was. I did know that Eastern had previously been in the coal business, but it had not employed a single coal miner since 1965. Yet, under the act, we are being asked to pay for lifetime health and death benefits for more than 1,400 miners and dependents. Some of these miners had worked for Eastern for less than a week.

The projected aggregate cost of these benefits imposed on us is between \$70 and \$100 million. Now you know why I am here.

Eastern does not challenge the basic principle that miners and their dependents should receive all of the benefits contracted for on their behalf by their union, but what we do question and what is simply wrong, is the decision to reach back and impose millions of dollars of liability on companies that are no longer in the coal business, never made any of the promises that the act is intended to enforce, and never contributed in any way to the creation of the perceived funding crisis. Eastern should not have been included in the act because it never made the promises the act seeks to enforce.

Let me explain. First, prior to 1965, when Eastern was in the coal business, it met all of its contractual obligations to its miners. Eastern left the coal business 30 years ago when it created a separate corporation, Eastern Associated Coal, which took over all of the assets and liabilities of Eastern's coal operations, including responsibility for its miners' benefits.

Second, Eastern never signed a Coal Wage Agreement after 1964. The Coal Commission, appointed by Secretary Dole, found that only the 1978 and subsequent UMWA agreements had promised and guaranteed retiree health and death benefits for miners and their dependents. However, the act as finally passed inexplicably reached back to include former operators who never promised lifetime benefits or signed the guarantee or evergreen clauses in the 1978 agreements. Even the Senate sponsors of the act admit that they never intended to include those super reachback companies in the act.

Third, one of the problems the coal act sought to cure was that of coal companies dumping their miners into the fund when leaving the industry. Eastern never dumped a single miner. The successor company to Eastern's coal operations continued Eastern's former mining operations, employed its union miners and made all of the contributions to the fund that Eastern would have made had Eastern itself continued in the business.

If you want to talk about dumping, the BCOA is the real dumper. They reduced their annual contribution to the fund by \$350 million as a result of the 1988 UMWA agreement. Further, under the act, they dumped the financial responsibility for the promises

they made on super reach-backs and reach-backs alike.

The coal act hits us where it hurts. The imposition of this grossly unfair liability significantly impedes Eastern's ability to invest in its current operations and interferes with the legitimate expectations of Eastern's shareholders. The up to \$100 million liability imposed on Eastern by the act has dollar-for-dollar, reduced its ability to invest in its current operations located in New England, Florida, Minnesota, Missouri, Ohio, and Pennsylvania, among other States.

In sum, it is totally inappropriate to include super reach-back

companies such as Eastern in the coal act.

Fact, super reach-backs in the aggregate have less than a \$13 million annual assessment under the act. This is less than 4 percent of the \$350 million annual reduction BCOA members negotiated for themselves in the 1988 contract. Any principled modification to the act should address this gross inequity.

Thank you.

[The prepared statement follows:]

STATEMENT OF J. ATWOOD IVES, CHAIRMAN AND CEO EASTERN ENTERPRISES, WESTON, MA

BEFORE THE SUBCOMMITTEE ON OVERSIGHT COMMITTEE ON WAYS AND MEANS U.S. HOUSE OF REPRESENTATIVES

ON THE COAL INDUSTRY RETIREE HEALTH BENEFIT ACT OF 1992 JUNE 22, 1995

Madam Chairman and Members of the Subcommittee, I greatly appreciate the opportunity to appear before you today as you review the impact of the Coal Industry Retiree - Health Benefit Act of 1992 (the "Coal Act"). Because of the unfairness of this statute and its unjust effects on companies like Eastern Enterprises ("Eastern"), which I will describe, I urge you to enact legislation to provide relief from the Act to that group of companies most unfairly included within its reach.

Eastern stopped mining coal in 1965. After that time it never again employed a miner and never again signed a United Mineworkers of America ("UMWA") coal industry wage agreement. Nonetheless, the Coal Act imposes liability on Eastern for over \$70 million to fund the lifetime health and death benefits for retirees and their families that were promised by other coal operators in later UMWA agreements, years after Eastern left the industry.

Eastern does not challenge the basic principle that miners and their dependents should receive all of the benefits contracted for on their behalf by their union. We do question, however, whether Congress actually had to step in and take such extraordinary measures to insure that miners' benefits would be funded, and believe it was simply wrong for Congress to reach back and impose millions of dollars of liability on companies like Eastern that never made any of the promises that the Act is intended to enforce and that never contributed in any way to the creation of the perceived funding problem.

Let me give you a brief overview of Eastern and how it came to be involved with the Coal Act. The facts will show that the Coal Act's imposition of liability on super reachback companies such as Eastern is inequitable and should be rectified. H.R. 1370 is a beginning — a more principled response would be to exempt super reachbacks from the Act altogether.

Eastern Enterprises

Eastern is a holding company headquartered in Weston, Massachusetts, which owns two operating subsidiaries: Boston Gas Company, a gas utility, and Midland Enterprises, a marine transportation company headquartered in Ohio that operates barges on the inland waterways. Since Eastern owns no coal fields or coal leases and has been out of the coal business for thirty years, you can imagine how surprised we were when, on a Friday in September 1993, out of the blue, we received an initial bill for \$5 million for Coal Act liabilities. According to the bill, Eastern was assigned 1,427 coal miners and dependents for whose lifetime benefits Eastern and its subsidiaries would thenceforth be responsible. All of the miners worked for Eastern 30-50 years ago; some worked for a total of less than a week and earned a total of less than \$100 in wages. Nonetheless, the Coal Act requires Eastern to

pay lifetime health premiums for such individuals and their dependents. Eastern's total liability under the Coal Act is projected at \$70-100 million!

How did Eastern get saddled with this unbelievable liability without any knowledge of or involvement in the funding problem that gave rise to the Coal Act? That is a question we have been asking ourselves for almost two years.

The Coal Act of 1992

As this Subcommittee is well aware, the purpose of the Coal Act is to assure that UMWA retirees and dependents will receive for life the benefits promised in collective bargaining agreements negotiated by the UMWA and the Bituminous Coal Operators' Association ("BCOA"). The Act is based substantially on the 1990 findings of the Coal Commission, a body appointed by then Secretary of Labor Elizabeth Dole, to address the perceived funding crisis. As it turns out, the so-called funding crisis may actually have been created by the BCOA, which negotiated dramatic changes in the funding formula in 1988, significantly reducing the signatory coal operators' annual payments to the funds and inevitably leading to the problem. The initial bill approved by Congress would have replenished the funds through an industry-wide coal tax. That measure was vetoed by President Bush. Congress next considered legislation to reach back and lock in earlier commitments made by signatories to the 1978 and later national bituminous coal wage agreements ("NBCWAs") in accordance with the Coal Commission's conclusions that signatories to those later agreements had promised and guaranteed contributions for UMWA retiree health and death benefits to the funds and thus could be statutorily forced to contribute to their funding.

It is important to remember that the collective bargaining agreements prior to 1974 provided for defined contributions to the UMWA funds and made no promise of any particular level of benefits, or even that benefits would continue once available monies were spent. The 1974 agreement for the first time committed funds to provide lifetime benefits for miners and greatly expanded the class of covered individuals; the 1978 agreement for the first time committed employers to contribute enough to assure payment of the 1974-promised benefits into the future. Thus, those agreements brought about major transformations in the nature and funding of retiree health benefits, completely replacing and fundamentally restructuring the benefits promised to miners and retirees under previous agreements.

When Congress finally enacted the Coal Act, it included at the last minute — without hearings or full public airing — provisions that would "reach back" to hold liable for fund contributions any signatory to a union coal wage agreement not just going back to 1978, but going all the way back to 1950, notwithstanding the Coal Commission's recommendations. While firms that had signed the 1974 and 1978 agreements had at least arguably made promises to pay lifetime benefits indefinitely, the Act inexplicably also held liable those who had exited the coal industry before 1974.

Thus did Eastern, which had been out of the coal business since 1965, get pulled into the Coal Act.

Eastern's Former Coal Business

Eastern was in the coal business and was signatory to wage agreements with the UMWA only from 1950 through 1964. During that time, Eastern complied fully with each and every obligation it had under those agreements and contributed in excess of \$50 million in defined benefit contributions to the miners' benefit plans.

In 1965, Eastern transferred its coal operations to a new subsidiary, Eastern Associated Coal Corp. ("EACC"). EACC was the successor to Eastern's coal operations; it took over Eastern's assets and assumed Eastern's coal-related liabilities, including responsibility for all Black Lung benefit claims as well as for all other past and future obligations to miners. EACC continued virtually every aspect of the operations of Eastern's former coal division: it employed the same miners, utilized the same management, operated the same mines and machinery, maintained the same company housing and stores, operated the same summer camp for the children and grandchildren of miners, and assumed the banking relationships of its predecessor. Most important, EACC fulfilled Eastern's obligations under the existing 1964 – NBCWA, thereafter signed the subsequent NBCWAs, including the 1974 and 1978 agreements, and made all of the contributions to the UMWA funds that Eastern would have made had it stayed in the coal business. It thus only seems logical and appropriate that EACC, not Eastern, should be financially responsible for the promises it made.

Peabody Coal Company, owned by Hanson PLC, a British conglomerate with over thirty billion dollars in assets, now owns EACC and continues its operations and derives revenues therefrom to this day. Ironically, one effect of the Coal Act is to allow companies, like Peabody, that signed the 1974 and 1978 agreements, to reduce substantially their funding obligations for retiree health benefits while huge liabilities for those obligations are directed to companies like Eastern that are no longer in the coal business.

Eastern Never "Dumped" Miners

Both the Coal Commission and Congress identified as a key factor giving rise to the funding problem the exit from the coal business of bituminous coal operators in ways that left their mines unworked, or their employees without jobs or at work for nonunion companies that did not contribute to any UMWA funds. Unlike those operators, Eastern never abandoned its miners by terminating coal operations. Eastern never converted its operations to nonunion status. In short, Eastern never "dumped" a single union miner or retiree -- it never shifted the liability for the health care of its employees to other employers. Quite the contrary, Eastern's former coal operations have continued in operation under Peabody and have continued to generate revenues to support the UMWA funds. Eastern was not a contributor to the problem, but, under the Coal Act, it was forced, without notice, to be part of the solution.

Fairness and Equity

Many of the stories being related to the Subcommittee today tell of family firms and small companies being bankrupted by the Coal Act. Many of the stories involve hardship and distress. That is not Eastern's tale. We are, fortunately, a healthy company. However, the \$70-100 million in premiums that we have been assessed under the Coal Act represent almost a quarter of Eastern's total net worth (shareholder investment). This huge liability has a direct dampening effect on Eastern's existing operations by decreasing the amount of capital -- dollar for dollar -- available for investment in such non-coal operations. Eastern already has or will have to contemplate reduced investments in New England, Ohio, Minnesota, Missouri, and

Florida, among other states. This drain on capital ultimately reduces Eastern's ability to be competitive in the solely non-coal businesses in which it is engaged.

Investors, whether managers of giant retirement funds or individuals with their personal savings, should be able to rely on an understanding of a company's current operations when making investment decisions. The Coal Act manifestly interferes with the legitimate expectations of Eastern's shareholders and investors by imposing, long after the fact, a totally unexpected and unreasonable retroactive liability. Neither Eastern nor its investors could have anticipated this enormous liability in the absence of any rational connection between the liability and Eastern's former coal operations.

The people who have a stake in Eastern and its operating companies, whether investors, employees, retirees, or customers, should not have to bail out companies that remain in the coal business today. Those who sell coal and can properly allocate the cost of miners' health care benefits to those sales can and should pay for these benefits, particularly since they, and not Eastern, promised them.

Imposing liability on Eastern under the Coal Act is unfair and inconsistent with the purposes of the Act. The objective of the legislation was to affirm — and to provide a framework for — administering preexisting private contractual promises and agreements voluntarily made by signatories to the 1974 and subsequent UMWA agreements. Eastern and other super reachback companies never signed those agreements and never made those promises. They should be relieved from Coal Act liability.

Strong arguments have been advanced by reachback companies as to why they should not be liable under the Coal Act. While they did sign the 1978 UMWA agreement (and later agreements prior to 1988), their commitment was limited to contributions from current operations, and they completely fulfilled that obligation. Eastern supports relief for all reachback companies.

Legislative Proposals and Coal Miners

Neither H.R. 1370 nor even the entire elimination of Coal Act liability for Eastern and other super reachbacks would deprive a single UMWA retiree or dependent of his or her benefits. Not only does there currently exist an estimated \$145 million surplus in the Fund, but it is also our understanding that premiums from all super reachbacks amount to only \$10-13 million annually, and not all super reachbacks are able to pay.

In closing, let me summarize: Eastern is a super reachback company that never promised the benefits the Coal Act was meant to protect. Moreover, Eastern never shut down union mining operations or dumped miners or retirees for others to support. As a non-dumping, super reachback company, we in no way created or added to the funding problem, and any modification to the Coal Act should address our situation. Certainly, there is no principled basis for including super reachbacks in the Coal Act or otherwise requiring them to pay for promises made by other companies. At the very least, everyone ought to be able to agree that the Act needs to be amended to exempt this class of companies.

I appreciate having the opportunity to testify today and urge the Subcommittee to approve legislation to relieve from liability under the Coal Act those companies, like Eastern, that should have never been included in the first place.

Chairman JOHNSON. Thank you. Ms. Gerwin.

STATEMENT OF SUZANNE GERWIN, ON BEHALF OF THE BUCHANAN COUNTY COAL CO., CINCINNATI, OHIO

Ms. Gerwin. Good afternoon, Madam Chairman. I am Suzanne Gerwin, appearing on behalf of my mother, Viea Taylor, who due to extremely poor health is unable to appear before you today. She asks that I tell you all how much she appreciates your Subcommittee examining the impact of the coal act and to hearing testimony on the plight of the reach-back companies, apparently the only parties to suffer due to the enactment of the 1992 coal act.

My mother is the president of Buchanan County Coal Corp., and under the 1992 act, the company was assigned 57 beneficiaries, mostly surviving spouses. Buchanan has not mined any coal since 1974 and has not been party to UMWA wage agreement since 1966. And yet our first 12 months of premiums totaled nearly

\$200,000.

Thanks to the coal act, my mother was made responsible for the lifetime health care benefits for miners and their dependents who worked for my grandfather for a matter of months in the fifties and sixties. Currently, Buchanan County Coal receives only passive income through the receipt of income on one land lease, but that lease income is not nearly enough to pay for the premiums. To forestall bankruptcy and the imposition of huge IRS penalties, mother has been forced to liquidate personal assets to pay the reach-back bill.

Her total contributions as of May 25 have been \$274,887.86. I have spent a number of months trying to understand how we could be held responsible for these people. I have struggled through verbal smog and rhetoric of evergreen clauses, obligations, dump-

ing, orphan miners.

I have tried to understand the significance of the 1978 agreement and the reach-backs and what all this had to do with me. When it came to me, it was pretty simple. When my grandfather's coal company was in business, UMWA Health and Pension program was run by the union. The plan was supported by a multiemployer agreement to make a pay-as-you-go contribution based on current production. Buchanan and every other company paid asset contributions whether or not it had any retirees at all.

When the company left the coal business, it stopped paying and new entrants started to pay. This is how things always worked.

Basically, I feel that we have all been exploited. I think that BCOA has become a cartel and that they have exploited everyone from the retired mine worker, current mine worker, the Federal Government, and ultimately the American taxpayer. BCOA exploited the fear of retirees. They are afraid of losing their health care. They exploited the union fear of losing union jobs.

They exploited Congress by deceiving it into believing there was a crisis which justified it rewriting collective bargaining agreements, imposing this reach-back tax and handing over public dollars to support a private pension fund. This cynical exploitation of

us all by BCOA has forced the following tragic results:

Some companies are snuffed out immediately. The Lanzendorfer Trucking Co. in Pennsylvania cannot even afford to make the first premium payment. Other companies like the Codell and Ward Coal Co. in Lexington, Kentucky, would never be able to pay the first premium, and the surmounting penalties I think of about \$6 million will send Codell to its grave, I know.

There are other companies like Rick Wienzierl's company, Barnes and Tucker, in Pennsylvania, they will die a slow death. They have been paying nearly \$4 million a year into the fund and he has been forced to cannibalize his company to generate enough cash to pay the premiums each month. He has 12 employees and his company

probably will not survive the year.

I want to conclude by saying that I resent the position that my mother and I have put in. We are being portrayed as rich coal barons who want to do nothing but make money and we do not want to pay for our miners's health care. Neither my mother or grandfather ever operated Buchanan County Coal in a dubious fashion or dumped anyone. They paid what they owed.

I think that this whole shifting of costs and retiree health care is a shell game and I think the red ball is the miners' health care fund, and I think you all know who I think the shell game operator

is—it is basically the BCOA.

I hope that this hearing will provide the necessary momentum for the Congress to act this year in enacting relief for all reachback companies irrespective of size, particularly before all small reach-back companies disappear.

Thank you.

[The prepared statement follows:]

STATEMENT OF SUZANNE GERWIN on behalf of THE BUCHANAN COUNTY COAL CO

I am Suzanne Gerwin and I am appearing on behalf of my mother, Viea Taylor, who due to her extremely poor health was unable to appear before you today. She asked that I tell you how much she appreciates your subcommittee examining the impact of The Coal Act and to hearing testimony on the plight of the reachback companies -- apparently the only parties to suffer due to the enactment of the 1992 Coal Act.

My Mother is the president of Buchanan County Coal Corporation and under the 1992 Act, the company was assigned 57 beneficiaries - mostly surviving spouses. Buchanan has not mined any coal since 1974 and it has not been a party to a UMWA wage agreement since 1966. And yet our first twelve months of premiums totalled nearly \$200,000. Thanks to The Coal Act, my mother was made responsible for the lifetime health care benefits for miners and their dependents who worked for my grandfather for a matter of months in the 1950's and 1960's.

I have spent a number of months trying to understand exactly how we could be held responsible for these people. I struggled through the verbal smog of BCOA rhetoric about "evergreen clauses", moral obligations, and dumping of orphan miners. I tried to understand the significance of the 1978 agreement and the reachbacks and what all this had to do with me. Finally, when it came to me, it was pretty simple. When my grandfather's coal company was in business, the UMWA health and pension program was run by the union. The plan was supported by a multi-employer agreement to make pay-as-you-go contributions based on current production. Buchanan and every other company paid a set contribution whether or not it had any retirees at all. When a company left the coal business, it stopped paying and new entrants started to pay. This is how things always worked.

The game changed somewhat after 1978 when the employers set up their own individual benefit plans in order to stop the continuing waste in a plan run by the union.

However, the rules never changed for retirees pre-1976 -- they were still in the union plan supported by multi-employer pay-as-you-go contributions. The pre-1976 retirees are the vast majority of the current retirees (more than 80,000). They were in the so-called 1950 Fund.

The BCOA and the Rockefeller bill applies to those pre-1976 retirees the concept of individual company responsibility and the concept of "orphan miner" which never existed with respect to those retirees.

Under this verbal facade, the BCOA has constructed a bold and ingenious scheme to saddle the reachback companies and the entire coal industry through the AML fund with a huge share of costs of the 1950 Fund which belongs rightfully only to them.

This is truly shameful particularly when it is obvious that the BCOA could fully afford to pay what it actually owes.

Currently Buchanan County Coal receives only passive income through the receipt of income from one land lease but that lease income has not been nearly enough to pay the premiums. To forestall bankruptcy-and the imposition of huge IRS penalties, my mother has been forced to liquidate personal assets to pay the reachback bill. Her total contributions are now \$274.887.86.

Just last week in response to her appeal to SSA, she was notified by one of the Social Security field offices that the beneficiaries may have been improperly assigned. We still don't know if this decision is final but if it is, she won't be forced to liquidate her holdings in Premier Industries where my brother and I are employed. Premier makes paper plates, hot dog holders and ash trays -- it has never had any connection to the coal industry. Without relief from SSA, the Coal Act had put Premier Industries at

risk and the jobs of 54 people (primarily single mothers) in Covington, Ky. at risk. Premier provides health care coverage for these employees - many of whom have pre-existing conditions. How sad and how ironic if the Coal Act had resulted in the elimination not only of the employment of 54 workers but their health insurance coverage as well.

I hope the SSA decision will become final and that we may be among the lucky few to escape the reachback web. For those who have not been so lucky and who previously testified before you, I would like to update you on their woes:

- Rick Wienzierl of Barnes and Tucker in Pennsylvania has been paying nearly \$4 million annually to the Fund. He has been forced to cannibalize his company to generate enough cash to pay the premiums each month. His 12-employee company will probably not survive the year;
- 2) The Lanzendorfers' only ties to the coal industry were through the hauling of Union-mined Coal. This three employee trucking firm could never afford to pay any of their monthly premiums and they wait each day in fear that the trustees will enforce the obligation and force them into bankruptcy;
- The Coal Act forced M&H Coal, a small 1988 signatory, into bankruptcy resulting in the loss of more than one hundred and twenty jobs in West Virginia.
- CF&I Steel's bankruptcy judge discharged their Coal Act obligations and the company was subsequently acquired by an Oregon steel company.

This is but a small sample - the list goes on and on.

I hope Madam Chairman that this hearing will provide the necessary momentum for the Congress to act this year in enacting relief for all reachback companies irrespective of size — particularly before all of the small reachback companies disappear Thank you.

Chairman JOHNSON. Thank you for your testimony. Mr. Templeton.

STATEMENT OF THOMAS E. TEMPLETON, PRESIDENT, TEMPLETON COAL CO., TERRE HAUTE, INDIANA

Mr. TEMPLETON. Thank you, Madam Chairman. I am Tom Templeton, president of Templeton Coal Co. Inc., of Terre Haute, Indiana. I am here on behalf of my company, our subsidiary, Sherwood Templeton Coal Co. and Princeton Mining Co., and we support H.R. 1370. Although all three companies I speak for today have coal or mining in their names, all of us left the mining industry in the fifties and sixties and have never reentered the coal min-

ing business.

The coal act imposes a tax liability on the former reach-back coal companies who had signed UMWA agreements as far back as 1950. The whole premise of the coal act was that coal companies had made so-called promises to provide lifetime health care benefits for retired miners and their families in 1978 and later. Super reach-back companies are those that did not sign the 1978 or later agreements with the UMWA. The coal act sponsors said they wanted to stop companies from dumping their responsibility onto the companies that had faithfully kept their commitments. Instead, the coal act empowers major largely foreign-owned operating coal companies to abandon the contracts they negotiated and dump their obligation on companies like us who left the industry generations ago. This is a travesty and surely not what Congress truly intended to happen.

There are four major reasons why the reach-back tax should not apply to companies like Templeton, Princeton Mining and Sherwood Templeton. The alleged promises were in an agreement signed by BCOA companies in 1978 and later. The coal act imposed liability on Templeton for promises it could not have made since it left the collective bargaining process in 1954, 24 years before these

agreements were negotiated.

Second, Templeton has been given responsibility for about 36 beneficiaries, including an estimated 9 orphans. Only 4 of the 36 beneficiaries ever worked for Templeton and only 2 of those are still alive. Templeton's funding of the original plan should have been sufficient to carry those four miners through their retirement, though Templeton did not promise it would. But the new plan that BCOA and UMWA created in the seventies, added 23 Templeton miners' wives and dramatically increased benefit levels without Templeton's knowledge or consent. The funding formula of the old and new plan still withstood all these increases until the BCOA and UMWA changed the funding formulas in 1988.

Third, the coal act compels Templeton to pay for orphan beneficiaries. Some of these orphans retired from other companies as recently as 1992, 38 years following Templeton's exit from coal mining. We will be required to pay for orphan benefits until about

the year 2030 and probably longer.

This is 76 years after we left the coal business and 24 years after mortality tables suggest our last assigned beneficiary will die. These orphans were never associated with Templeton and likely do not even know we exist. Even though fund transfers have paid the

orphans so far, we expect transfers to end in about 2004, leaving us to pay the next 26 years.

Templeton expects to pay just over a million dollars for all the coal act premiums over the 30 to 40 years of liability. We estimate we could pay \$52,000, if only paying for our assigned miners.

Fourth, we do not believe even the coal act primary sponsors intended to involve companies signing UMWA contracts earlier than the alleged 1978 promises. In fact, the Dole Commission which Congress appointed in 1989 to study the problem and make recommendations, did not suggest going back further than 1978. The super reach-back provisions were added by the conference Committee and were never debated by the House or the Senate.

Let there be no confusion about our interest in the well-being of miners. Our company's founders, my grandfather, John A. Templeton, and my great-uncle Philip Penna left dismal lives as miners in their native Scotland and England to come to America in search of better working conditions.

Eventually, Templeton worked his way through the mining ranks to become a mine boss, and Penna was instrumental in the founding of the UMWA, becoming its second international president. Then in 1920, Templeton and Penna founded Templeton Coal Co.

Inc. Templeton mines were always union mines.

However, demand for our deep coal declined significantly in the fifties, and in 1954 we decided to close our last mine. Though the company was in financial crisis, it did what was right for its employees, as it always had done in the past. Templeton satisfied all its obligations to its miners and their benefits under the 1950 Welfare and Retirement Fund.

Templeton began diversifying in the fifties. Instead of mining coal, we now produce laboratory equipment, inspirational gifts, electric heating elements and plastic bathroom accessories and distribute plumbing, heating and air-conditioning products. We also lease land to others for farming and coal production.

We hope the Congress will completely exempt coal act liability for super reach-back companies like ours who left the industry before 1978. Super reach-backs have no accountability to the situation and represent no more than three percent of anticipated fund revenues.

In conclusion, I ask that you please consider our story carefully. Is it right that Congress impose a tax on our companies for a busi-

ness we left four decades ago?

Is it fair that we be held accountable for promises operating companies may have made over two decades after we left the coal mining business? How long should we be forced to fund retiree health care benefits for people who never worked for Templeton, and how can it be that a company is legally mandated to pay retiree benefits 24 years after its last retiree dies?

We have been paying our coal act premiums while spending countless hours and dollars resisting this dreadful circumstance. We could be using this time and these dollars developing new business as our competitors are doing. It is not right and only Congress can make it right.

Thank you for your time and consideration.

[The prepared statement follows:]

HOUSE OF REPRESENTATIVES COMMITTEE ON WAYS AND MEANS SUBCOMMITTEE ON OVERSIGHT

HEARING ON PROVISIONS OF THE ENERGY ACT OF 1992 RELATED TO THE FUNDING AND PROVIDING OF HEALTH BENEFITS OF RETIRED COAL MINERS

June 22, 1995

STATEMENT

Thomas E. Templeton
President
Templeton Coal Company, Inc.

Speaking On Behalf Of

TEMPLETON COAL COMPANY, INC.

Terre Haute, Indiana

SHERWOOD-TEMPLETON COAL COMPANY, INC.

Indianapolis, Indiana

PRINCETON MINING COMPANY, INC.

Terre Haute, Indiana

I. Introduction

My name is Tom Templeton, and I am president of Templeton Coal Company, Inc. of Terre Haute, Indiana. I am here on behalf of my company, our subsidiary Sherwood-Templeton Coal Company, Inc., and Princeton Mining Company. We support H.R. 1370. Although all three companies I speak for today have "coal" or "mining" in their names, please understand that all of us left the mining industry in the 1950's and 60's and have never re-entered the coal mining business.

Templeton's history is illustrative of the fundamental unfairness thrust upon it and similarly situated companies, such as Princeton Mining and Sherwood-Templeton, because of changes made to the health care benefits of retired coal miners decades after we left the coal mining business. The Coal Act imposes a tax liability on former "Reachback" coal companies who had signed a UMWA agreement as far back as 1950. The whole premise of the Coal Act was that coal companies had made so-called promises to provide "lifetime healthcare benefits" for retired miners and their families in 1978 and later.

"Super-Reachback" companies are those, like Templeton, that did not sign the 1978 or later agreements with UMWA. The Coal Act sponsors said they wanted to stop companies from dumping their responsibilities onto the companies that have faithfully kept their commitments. Instead, the Coal Act empowers major, largely foreign-owned, operating coal companies to abandon the contracts they negotiated and dump their obligations on companies like Templeton, Princeton, and Sherwood-Templeton who left the industry generations ago! This is a travesty, and surely not what Congress truly intended to happen.

II. Why The Reachback Tax Should Not Apply to Super-Reachbacks like Templeton, Sherwood-Templeton, and Princeton

There are four major reasons why the Reachback tax should not apply to companies like Templeton, Princeton, and Sherwood-Templeton:

- The first reason is obvious. The alleged "promises" were in agreements signed by BCOA
 companies in 1978 and later. The Coal Act imposed liability on Templeton for promises it
 could not have made, since it left the collective bargaining process in 1954, 24 years before
 these agreements were first negotiated.
- 2. Templeton has now been given responsibility for about 36 beneficiaries, including an estimated 9 orphans. Only 4 of the 36 beneficiaries ever worked as miners for Templeton and only 2 of those are still alive. Templeton's funding of the original plan should have been sufficient to carry those 4 miners through their retirement, though Templeton did not promise it would. The BCOA and UMWA created a new plan in 1974 after dissolving the plan Templeton had funded. The new plan added 23 Templeton miners' wives and dramatically increased benefit levels without Templeton's knowledge or consent. The funding formula of the old and new plans still withstood all of these increases until the BCOA and UMWA changed the funding formulas in 1988.
- 3. The Coal Act compels Templeton to pay for orphan beneficiaries. Some of these orphans retired from other companies as recently as 1992, 38 years following Templeton's exit from coal mining. We will be required to pay for orphan benefits until about the year 2030, probably longer. That is 76 years after we left the coal business and 24 years after mortality tables suggest our last assigned beneficiary will die. These orphans were never associated with Templeton and likely do not even know we exist. Though fund transfers have paid the orphan charges so far, we expect these transfers to end in about 2004, leaving us to pay the next 26 years. Templeton expects to pay just over \$1 million (including Sherwood-Templeton) for all Coal Act premiums over the 30 to 40 years of liability. Templeton expects it would only pay \$51,910 if paying only for its 4 assigned miners and not wives or orphans.
- 4. We do not believe even the Coal Act's primary sponsors originally intended to involve companies signing UMWA contracts earlier than the alleged 1978 promises. In fact, the Dole Commission, whom Congress appointed in 1989 to study the problem and make recommendations, did not suggest going back further than 1978. The Super-Reachback provisions were added by the Conference Committee and were never debated by either the House or Senate.

III. Background of Templeton, Sherwood-Templeton, and Princeton

A. Templeton Coal Company, Inc.

Let there be no confusion about Templeton's interest in the well-being of the miners. Our company's founders, my grandfather, John A. Templeton the first, and his brother-in-law, my great uncle Philip H. Penna, left dismal lives as miners in their native Scotland and England to come to America in search of better working conditions. Eventually, Templeton worked his way through the mining ranks to become a mine boss, and Penna was instrumental in the founding of the UMWA, becoming its second international president. Then in 1920 Templeton and Penna founded Templeton Coal Company, Inc. as president and vice president respectively. Templeton mines were always union mines. Mining was still dangerous, hard work, but Templeton, Penna, and the generations of Templeton family since then never forgot their past and treated miners with dignity, respect, and concern for their well being. The Company and its employees thrived in the 1920's, 30's, and 40's.

Templeton was signatory to National Bituminous Coal Wage Agreements (NBCWA) from 1950 until 1955, though it was never a member of the BCOA. Templeton last contributed \$.40 per ton of mined coal to that retirement and welfare fund. Templeton's contribution supported health care for retired miners as required by the NBCWA. Wives were not covered under the NBCWA. Wives were added by BCOA companies and the UMWA to the NBCWA in 1974. That year they abolished the plan Templeton had funded and created a new plan, to which Templeton was not a party.

Demand for our deep mined coal declined significantly in the 1950's, and in 1954 our board decided to close the last mine. Some miners worked into 1955 shutting down the mine. Though the company was in financial crisis, it did what was right for its employees, as they always had in the past. Templeton satisfied all its obligations to its miners, the miners' benefits under the 1950 Welfare and Retirement Fund, and its entire obligation to the UMWA. Templeton

contributed approximately \$850,527 into the Welfare and Retirement Fund between its beginning in 1950 until closure activities ended in 1955.

Templeton began diversifying in the 1950's. Instead of mining coal, we now produce laboratory equipment in Terre Haute Indiana, inspirational gifts in Seymour Indiana, electric heating elements in Allegan Michigan with some administrative services in Indianapolis, bathroom accessories in Franklin Indiana, and distribute plumbing, heating and air-conditioning products at 10 locations throughout Iowa. We also lease land for farming and coal production, mostly in Indiana and Illinois.

Under the broad definition of "related persons" in the 1992 Coal Act, all of these businesses suddenly bear liability for the cost of benefits for retired UMWA coal miners. Those costs are determined by the benefit levels and eligibility criteria as negotiated between the UMWA and the BCOA in 1988, 34 years after we closed our last mine. This sudden liability erodes the financial viability of these subsidiary companies.

Templeton was originally notified of 41 assigned beneficiaries. Through appeals with SSA the 41 has been reduced to 27, with a prospective liability of 9 orphans, or 36 beneficiaries altogether. Of the 27, 10 have already died. The Coal Act includes the dead when prorating orphan liability. Those 10 dead assigned beneficiaries and those who die later will create orphan liabilities for Templeton from the time orphan payments are expected to begin in 2004 until the fund ends around the year 2030. Only 4 of Templeton's 36 beneficiaries are retired miners that once received a health benefit while working for Templeton, and only 2 of those are still living. Templeton expects to pay \$924,000 for its 30-40 years of liability under the Coal Act, just over \$1 million when including Sherwood-Templeton. It would pay only \$51,910 if paying only for the miners it once covered.

B. Sherwood-Templeton Coal Company, Inc.

Sherwood-Templeton was signatory to National Bituminous Coal Wage Agreements from 1950 until 1960, though it was never a member of the BCOA. Sherwood-Templeton's contribution supported health care for retired miners as required by the NBCWA. Again, wives were not covered under the NBCWA. Wives were added to the NBCWA in 1974 under an entirely new plan.

In 1960 Sherwood-Templeton sold its last mine to AMAX. Sherwood-Templeton satisfied all its obligations to its miners, the miners' benefits under the 1950 Welfare and Retirement Fund, and its entire obligation to the UMWA. Sherwood-Templeton contributed approximately \$2,043,626 into the Welfare and Retirement Fund between its beginning in 1950 and the mine sale in 1960.

Sherwood-Templeton began diversifying in the 1970's. Instead of mining coal, it now produces electric heating elements in Allegan Michigan. It also leases land for farming and coal production, mostly in Indiana and Illinois.

Under the broad definition of "related persons" in the 1992 Coal Act, its Michigan business suddenly bears liability for the cost of benefits for retired UMWA coal miners. Those costs are determined by the benefit levels and eligibility criteria as negotiated between the UMWA and the BCOA in 1988, 28 years after selling its last mine and 18 years before the Michigan businesss was acquired. This sudden liability erodes the financial viability of this Michigan company.

Sherwood-Templeton was originally notified of 5 assigned beneficiaries. Through appeals with SSA that number has been reduced to 3, with a prospectiive liability of 1 orphan, for a total of 4 beneficiaries. One of the 3 dead. The Coal Act includes the dead when prorating orphan liability. The dead assigned beneficiary and those who die later will create orphan liabilities for Sherwood-Templeton from the time orphan payments are expected to begin in 2004 until around the year 2030. None of Sherwood-Templeton's assigned beneficiaries are retired miners that once received a health benefit while working for Sherwood-Templeton. Sherwood-Templeton expects to pay \$78,200 for its 30-40 years of liability under the Coal Act for people it

never, ever, provided a health benefit in the past. It would pay nothing if paying only for the miners it once covered.

C. Princeton Mining Company, Inc.

Princeton Mining Company was signatory to National Bituminous Coal Wage Agreements from 1950 until 1966, though it was never a member of the BCOA. Princeton Mining Company's contribution supported health care for retired miners as required by the NBCWA. Again, wives were not covered under the NBCWA. Wives were added to the NBCWA in 1974 under an entirely new plan.

In 1966 Princeton Mining Company leased its last mine to an unrelated corporation. Princeton Mining Company satisfied all its obligations to its miners, the miners' benefits under the 1950 Welfare and Retirement Fund, and its entire obligation to the UMWA. Princeton Mining Company contributed approximately \$3,300,000 into the Welfare and Retirement Fund between its beginning in 1950 and 1966.

Instead of mining coal, Princeton now produces agricultural commodities, processes and distributes popcorn wholesale, and owns certain oil well working interests, certain non-producing coal rights, and real estate

Princeton Mining Company has been assigned 127 beneficiaries, with 16 now dead. Princeton has a prospective liability of about 42 orphans, for a total of 169 beneficiaries. The Coal Act includes the dead when prorating orphan liability. Those 16 dead assigned beneficiaries and those who die later will create orphan liabilities for Princeton Mining Company from the time orphan payments are expected to begin in 2004 until the fund ends around the year 2030. Only 13 of 127 of Princeton Mining Company's assigned beneficiaries are retired miners that once received a health benefit while working for the Company. Princeton Mining Company expects to pay \$260,781 in 1995, though it would pay only \$30,542 if paying only for the miners it once covered. Princeton expects to pay several million dollars for its 30-40 years of liability under the Coal Act.

IV. Conclusion

We hope Congress will completely exempt Coal Act liability for Super-Reachback companies like ours who left the industry before 1978. Super-Reachbacks have no more accountability to the situation than car dealers and cattle ranchers and represent no more than 3% of anticipated fund revenues.

Please, consider our story carefully. Templeton's history was founded on the principles of respect of our union employees and doing what is right. Is it right that Congress imposed a tax on our companies for a business we left four decades ago? Is it fair that we be held accountable for promises operating coal companies may have made over two decades after we left the coal mining business? How long should we be forced to fund retiree health care benefits for people who never worked for us? How can it be that a company is legally mandated to pay retiree benefits over 24 years after its last retiree dies?

We have been paying our Coal Act premiums while spending countless hours and dollars resisting this dreadful circumstance. We could be using this time and these dollars developing new jobs and new business as our competitors are doing. It is just not right! Only Congress can make it right! Thank you for your time and consideration.

Chairman JOHNSON. Thank you.

I thank the panel.

Mr. Templeton in your testimony, you make a statement that was not one of the ones that you included in your oral testimony. You say that Templeton will spend just over \$1 million on these benefits, when if it had to pay only for the miners it once covered, it would only have to pay about \$52,000?

Mr. TEMPLETON. That is right.

Chairman JOHNSON. In other words, if you paid for the health benefits of the people that you employed even though you are no longer in the business, but if you reached back just to your own employees, it would cost \$52,000, are you talking about per year?

Mr. TEMPLETON. No, that would be over their remaining lives

rather than \$1 million.

Chairman JOHNSON. The reality is you will pay \$1 million?

Mr. TEMPLETON. Yes.

Chairman JOHNSON. That is very helpful, and the detail that you

included in your statement was very helpful.

Suzanne Gerwin, I wanted to clarify your conversations with the SSA. You say in your testimony that, just last week, in response to her appeal to SSA, your mother was notified by one of the field offices that the beneficiaries may have been improperly assigned.

What do they mean by, may have improperly assigned, and what impact will, may have, have on the payments that you are required

to make?

Ms. GERWIN. It is—we were notified by the Southeast Regional Office that we may have been erroneously assigned. We appealed our assignment on the basis of passive income, that Buchanan County Coal is no longer in business, and it is not. It has no activity. The impact may have been relieved is just that, it is I do not know what they mean and I won't know until I get the final letter from the Baltimore office. I am assuming that is where the head of the SSA is.

Chairman JOHNSON. At this point, you have some hope that your

appeal has succeeded?

Ms. Gerwin. Very much hope. I believe that every indication is that—we are not sending in our June 25 payment, and I know of only two other companies that have gotten relief in this fashion, and they ultimately do get their money back. That however—the impact that this 18-month or 16-month ordeal has had on my employer and my business—I make paper plates. That is what I do in Coving to the coverage of the cover

in Covington, Kentucky.

My brother and I run a paper plate manufacturing company. As soon as my mother's money was going to run out, probably around August, we were going to have to start paying the, I believe it is ten thousand-nine hundred something dollars a month premiums to the fund. We weren't going to let my mother go through bankruptcy. We would have stepped in and used basically moneys from Premier Industries, the paper plate manufacturing company to pay this fund, this tax. That impact would have been a drastic impact on my company and Premier.

We have 54 employees. We insure them. We find it ironic that we have 57 beneficiaries and the 54 jobs at Premier were in jeop-

ardy. They were going to lose their health care and their jobs, so

I jokingly said I will pay for the difference.

Chairman JOHNSON. From what you have heard today, are the benefits that you provide your employees more generous or less generous?

Ms. GERWIN. They are far less generous. We just do single coverage. We do not have the ability to pay full family coverage and do not at this point have a retiree benefit plan for our workers.

Chairman JOHNSON. Thank you.

Mr. Ives, in your statement on the third page, you mention that Eastern never converted its operations—Eastern never dumped a single miner or retiree. It never shifted the liability for the health care of its employees to other employers. Quite the contrary. Eastern's former coal operations have continued in operation under Peabody and have continued to generate revenues to support the UMWA fund. If your successor company is continuing to pay, aren't

you double reimbursing for those same people?

Mr. IVES. Technically, I think the answer is no to that. What I said in the testimony was that Eastern when it owned Eastern Associated Coal, paid all of the contributions that Eastern Associated Coal as a subsidiary of Eastern should pay, and when it left the business, the funds were sound and in good financial shape. The coal act reaches back to employees who were employees of Eastern when it operated its coal businesses in 1965 and prior. This was back when the UMWA agreements and the BCOA agreements—

Chairman JOHNSON. Is there an overlap between the employee group of 65 prior, and the employee group of 65 post?

Mr. IVES. Not that I am aware of.

Chairman JOHNSON. So, the successor company generated a whole new work force?

Mr. IVES. No. The people who worked for Eastern Associated Coal now work for Eastern Associated Coal owned by Peabody.

Chairman JOHNSON. I understand that there would be some people that were not employed by the new company that had been employed by you but had left for one reason or another.

Mr. IVES. Prior to 1966.

Chairman JOHNSON. Are you paying only for those? Has there been an adjustment so that you are not paying for the people who went to the successor company and who are being paid for through the successor company?

Mr. IVES. We have only been billed for those who worked for

Eastern prior to 1966.

Chairman JOHNSON. And who did not continue in the employ of the successor company?

Mr. IVES. That is my belief.

Chairman JOHNSON. Thank you. I wanted to clarify that.

Mr. Kendig, you mention on the second page of your testimony that this agreement changed the BCOA contribution formula from one based largely on tonnage produced by a signatory company, to one based exclusively on the aggregate number of hours worked by its miners. That shift from tonnage to hours worked seems to be the cause of the change in liability burden amongst the companies, the shifting of that burden from basically high-production, low-

worker companies to the less-efficient, higher labor cost companies.

What would happen if we shifted that back?

Mr. KINDIG. I think that certainly—we sell coal by the ton, not by the hour and we certainly believe that a tonnage based payment is more equitable because it distributes the costs across the economic units that we actually sell. When the BCOA determined to move from a tonnage rate to an hourly rate, that created a discrimination among all the coal companies subject to that agreement in respect to their productivity.

Those that have very large highly productive surface mines or long wall mines would have a benefit, and those that operated thin seams for different qualities of coal—in our case, we mine a substantial amount of metallurgical coal from very thin seems, some in the 42-inch range, and you do not get a lot of tons per man-hour. When you shift from a tonnage burden to an hourly burden, those companies that are less productive because of their mining conditions or because of their capitalization bear a greater burden than those that are highly efficient.

Chairman JOHNSON. Thank you.

Mr. Hancock.

Mr. HANCOCK. Mr. Templeton, when did you first hear about the coal act?

Mr. TEMPLETON. I think the first notice I got was an article in Forbes Magazine. I was aware of things going on in the industry, but never anything like this. Then because of that we began to look into it and one of our people went to a seminar about the coal act, and it was at that time, later in 1993, that we really learned the magnitude of what had hit us. Because of that, I wrote the National Coal Association, which one of our subsidiaries is a member of, and asked why didn't you inform the members of something like this?

In their return, they decided to remain neutral and mute on the issue. I wish they would have come out in favor of it. At least we would have known what was going on. So, it was only at that later time we found out what had happened.

Mr. HANCOCK. Do you know of any reach-back companies that

did have input in the drafting?

Mr. TEMPLETON. There were no hearings, as I understand it, so there was no input. The only thing I received later from the National Coal Association was that the Dole Commission Report indicated that there was consideration ongoing back as far as 1978 in assessing liability, but never anything going back to 1950.

Mr. HANCOCK. That is kind of an expo facto deal.

Mr. TEMPLETON. It certainly was—is.

Mr. HANCOCK. Ms. Gerwin, the situation that you are in—exactly how is Premier Industries connected to Buchanan Coal? Buchanan Coal is a corporation?

Ms. GERWIN. Yes, sir.

Mr. Hancock. A privately held corporation?

How many stockholders are involved—you have no stockholders

other than your mother?

Ms. GERWIN. No, sir. My grandfather died in 1976 and he left Buchanan County Coal to his two daughters. My mother gave my aunt a lump sum of money and my mother retained the land-lease income. I believe there is a tipple or some form of structure on the land down in Virginia somewhere, and she receives an income based on an easement situation.

Mr. HANCOCK. Are we talking about a mineral right lease of some kind?

Ms. GERWIN. Maybe. I do not really know. They call it like a—it is a very long lease, like 99 years. It is kind of like China or Hong Kong. They just pay us—we have never really, you know, wanted to rile them up and ask them why they keep sending us this money, because the company that pays us has not mined coal since I think the late seventies, and we continue to receive a lump sum ever spring from this company. That is basically what Buchanan is.

And Premier Industries, my father bought it in 1981 and he passed away in 1983. We make paper plates in Covington, Kentucky. Now, obviously, when my father died, he was president, the stock went to my mother, but she doesn't own Premier Industries. My brother and I own it.

Mr. HANCOCK. You and your brother own the stock of Premier Industries?

Ms. GERWIN. Yes, sir. It is nonvoting stock because she did not want her children to be able to have their way with the company. It is not voting stock. She basically has control of the purse-strings of Premier and we just run the company.

Am I clear?

Mr. HANCOCK. OK.

Ms. GERWIN. Basically this law, because what is going to happen is that there is no way my mother can afford to pay these premiums. She was—what am I going to do? Good luck mom—so then the obligation was going to fall onto Premier Industries.

Mr. HANCOCK. I understand that. Where I am having a bit of a problem, Buchanan Coal, it doesn't have any assets; is that correct?

Ms. GERWIN. It has an income once a year, one lump sum. We receive I think it is \$100 and something, \$100 and change, not much, and we receive it once a year. She has two—there are some bookkeepers that were on a pension, a retirement account in that company that she has to pay out of that.

Mr. HANCOCK. And she has paid in \$274,000 of personal assets? Ms. GERWIN. Yes, sir, and capital gains tax when she liquidated some stocks, P&G, Coca-Cola, so she had to sell stock and pay capital gains and then pay this. I was screaming at her, she was crazy to do that and she was terrified about the penalties.

Mr. HANCOCK. It seems she should just transfer the stock and let them sell it and she wouldn't have to pay capital gains on it. That wouldn't work except through some charity.

Has anybody on this panel heard of any type of a situation like this that has occurred before that the U.S. Congress has done?

Mr. IVES. No, sir. As a person not in the coal business and not finding out about the act until we got the bill, I said how can our country do this to us, interfere between two contractual parties who have the capacity to settle their differences and to pay the price? I saw the miners out there with their signs, keep the promises. We agree. Those who make them, should keep them.

Mr. HANCOCK. This Committee wants to make sure that, as I have mentioned two or three times, that the members of the UMWA get exactly what they were promised. It is a case of who

is legally obligated to pay for it.

One other question. We are in a situation now with Superfund. We have spent I do not know how many billions of dollars and most has gone for legal fees. Not much has been accomplished. Do you have any idea of what kind of legal fees have been involved in this thing since it started? I am sure that you all have been—

Ms. GERWIN. I know just to generate—

Mr. HANCOCK. Say legal and accounting fees.

Ms. GERWIN. To generate the appeal and to keep coming to Washington and lobby to find out, I know our Cincinnati law firm, we are in excess of \$60,000 and that is just last count. The bills keep coming in. I would estimate that we are approaching \$75,000 that we have spent so far. And that is to appeal. That is to basi-

cally get where we never should have, which is not here.

Mr. KINDIG. I have no idea what our legal fees are but I am sure that they would be shocking. They generally are anyway. I know that we have spent well over \$100,000 just to have a firm go through and check the assignments that were made to us of the various beneficiaries, found several people who were dead. They are still dead, but we are still paying for them, and that process seems to drag on.

We cannot seem to get the relevant parties despite the fact that we have submitted evidence that these people are dead to stop paying for them, so we keep sending them a check every month. I guess it will get adjusted sooner or later, but the cost of dealing with this act over and above the premium expense has been very significant.

Mr. TEMPLETON. We have spent in excess of \$250,000 in legal

expense in contesting the legislation.

Mr. IVES. Eastern Enterprises has spent in excess of \$1 million. We have challenged over 800 individual assignments. Each booklet that we have sent to the SSA is about an inch thick. The lady who testified today, Ms. O'Connell, says she has 34 cartons of filings that we have made with her. It takes that much time when the people that you are talking about worked for a company that you no longer own, that have been gone for 25 years.

The act is insidious in that it covers anybody who is an affiliate, so you have to look at not only who employed the people, but what is the affiliate company, which can be three or four transactions away from who the person on the Social Security card was in order to determine who the appropriate person is. The SSA has a difficult job. We also have challenged the constitutionality of the act in the

Federal Court of Massachusetts, which is pending.

Mr. HANCOCK. Madam Chairman, we have four companies represented here. We just mentioned 1.36 million dollars' worth of legal fees, and that probably does not count all the in-house time just to these four companies and not a penny of that went to help the miner; did it?

Mr. KINDIG. I did not want to know this number. Counsel informs me that the legal fees are in excess of \$2 million, in addition to the other costs.

Mr. HANCOCK. You just added another \$1.7 million, four companies, and not a penny of it to the benefit of the miners that we are concerned about.

Thank you, Madam Chairman.

Chairman JOHNSON. Mr. Portman.

Mr. PORTMAN. I thank the Chairman.

I have read all the testimony and I appreciate your being here

and the very excellent statements by all companies.

Ms. Gerwin, looking at your testimony and hearing some of the questions and answers, I want to commend you for taking the time to analyze this situation, and then in your testimony to put it in plain English. You have done a remarkable job of cutting through some of the bureaucratic language and some of the distracting arguments here and there, and have distilled it pretty well, especially as to the super reach-back companies. I think it is a huge fairness issue.

When you look at the super reach-back companies and what percentage they are paying into the fund, it is de minimus. The saddest part is it wasn't even necessary, and yet you have incurred all these fees.

I hope we can get to the point where we can go beyond the good legislation that Mr. Hancock has introduced and deal with the

super reach-back problem.

You have also spent a lot of time, looking at your testimony, in talking to others. You have testimony about the Lanzendorfers and H&H Coal, and CF&I, and Barnes & Tucker, so you have probably spent time talking to small businesses that are in your situation.

With that information, is there anything else you would like to add for the record about what these other companies are going through who are in a super reach-back position and struggling to

make ends meet?

Ms. GERWIN. I think the Committee needs to know there are a lot of companies out there. I have talked to about 40 in Kentucky alone, 10 or 15 in West Virginia, 2 or 3 in Ohio, a couple in Pennsylvania. The response is they are suspicious; this doesn't affect me. I said, that is what I said. They are like, I am not going to pay it. That is what I said.

My advice to them or what I was trying to get them to realize is that it is a law and that some day these penalties will have to be collected, and that being an ostrich and sticking your head in the sand may be an immediate solution, but it is not going to go away. This was before I knew we were going to have the chance to testify and bring this slight oversight to your attention.

They are scared. They are running, changing phone numbers. If I can call you on the phone and find you, I surely think the IRS

will be able to.

Lyda Codell, I talked to her. She is 78 years old. I tried to get her to come to Washington with me to talk to Senator Ford and Senator McConnell last year, she is too sick to come. Her grand-daughter said that she would come but she did not like to leave her grandmother. This woman's premiums are \$22,000 a month and she has not paid.

I calculated her penalty at around \$4 million and that was 11 months ago. So, I do not know what she is going to do if she ever

gets a notice in the mail from IRS. She will probably have a heart

attack or something.

To answer your question, there are a lot of companies out there and they are not able to appeal like I did. There are a lot of companies that have nowhere to turn. The law the way it is written applies to them. They employed miners; therefore, they are responsible.

Mr. Portman. Let me ask a couple of other questions. Mr. Ives, you talked about super reach-back and reach-back and why you think there is a difference. Obviously, the 1978 date is critical to that. Can you expand as to why you think super reach-back and

reach-back companies should be treated differently?

Mr. IVES. Yes, sir. I think both have been disadvantaged. I think that in 1974 and in 1978, when the promises of extended benefits were included in the contract, prior to 1974—most of the super reach-backs are prior to 1974—the benefit plans were defined contribution plans, which meant that the payments that were made by coal operators prior to that time paid the money to the UMWA Welfare and Retirement Fund of 1950, the union had their own funds, and they provided the benefits and were responsible for them, and there was zero promise of anything further than making those payments. And if the union ran out of money or misappropriated, or whatever else, that was their issue, not the company's issue. So, we feel that the companies who never had an implied promise and were paying into defined contribution plans had completed all their obligations.

I think that the reach-back companies were companies that had entered into agreements. I think they got torpedoed by the 1988 agreement where the funding got changed and they have a legitimate argument as well. I think our predicament is totally—is the

most egregious thing I have ever heard.

Mr. PORTMAN. Because you had not made a commitment?

Mr. IVES. No commitment at all.

Mr. PORTMAN. Thank you all for being here.

I hope we will be able to learn enough in today's proceedings to come up with a remedy for the most egregious example, I think, which is the super reach-back situation.

I vield back.

Chairman JOHNSON. Are your employee benefit plans as generous in benefits offered and in definition of family coverage as this plan?

I asked Ms. Gerwin that.

Mr. KINDIG. I am not aware of any plan other than the plans that are associated with the United Mine Workers that are anywhere near this generous. We think we provide adequate retiree medical care for our employees, but they are nowhere near this generous. If all our plans were this generous, we would be doing nothing but funding the plans, not investing in new job opportunities or anything else.

Mr. TEMPLETON. The same thing applies. We pay for employees, we share dependent coverage cost, but we have no plans that cover

health benefits for retirees.

Chairman JOHNSON. Thank you.

Mr. Ives.

Mr. IVES. We have health care benefit plans. We, like most other companies, have put in various capitation and copay as well as preferred provider programs that have actually lowered and significantly reduced the rate of increase in costs. Several of our plans have actually gone down in costs.

As a matter of fact, both regular employees and union employees at both Boston Gas and at Ohio River Co. are wondering why their benefits are being reduced at the same time we are being asked to make significant contributions for people, for the miners who never worked for us.

[Additional written Subcommittee questions and the responses submitted to Pittston Coal Co., Eastern Enterprises, and Templeton Coal Co., Inc. follow:]

August 25, 1995

Honorable Nancy L. Johnson Chairman, Subcommittee on Oversight Committee on Ways and Means U.S. House of Representatives Washington, DC 20515

Dear Congressman Johnson:

Enclosed are the answers of Pittston Coal Company to the additional questions relative to the Coal Act posed by the Subcommittee on Oversight. As you will note from our answers, we continue to believe that the Act, in addition to its other deficiencies, has been very destructive to the collective bargaining process, heretofore the keystone of federal labor policy.

I would like to reiterate the appreciation of our Company for you concern about this illconceived law. Hopefully, your efforts and those of your colleagues will be successful in redressing its obvious inequities.

Very truly yours,

QUESTIONS PRESENTED FOR THE PITTSTON COAL COMPANY

1. What relevance does the 1992 Act have to Pittston's faith in its ability to rely on collective bargaining to resolve issues with its employees?

Madam Chairman, the answer is quite simple, the Act has greatly undermined the collective bargaining process. The 1992 Coal Act represents unprecedented federal intrusion into a private contract, the implications of which carry far beyond the interests of coal companies. The entire system of collective bargaining, which affects many industries, has been compromised. The assumption by Congress of the role of final arbiter in labor disputes will undermine confidence in the collective bargaining process. No employer, or union for that matter, will be able to make concessions in bargaining for fear that what it receives in return will be taken away by Congressional action.

What impact did the 1992 Act have on Pittston's collective bargaining agreement with the UMWA? What added costs did it impose? How?

Because of the Act, important provisions of Pittston's hard fought labor agreement with the UMWA was completely abrogated. This agreement was reached following the direct intervention of the Federal Government in the person of then Secretary of Labor Dole after a very difficult mineworker strike against Pittston Coal Company. The Act had the effect of codifying the concessions made by Pittston Coal as part of its collective bargaining agreement, while negating substantial benefits Pittston Coal received as quid pro quo.

In its 1990 labor agreement with the UMWA, Pittston Coal contractually agreed to make a substantial payment to the UMWA 1950 Benefit Trust and to maintain first dollar medical benefits for its employees through its single employer plan. The Act extends the scope of Pittston Coal's liability to mineworkers who were never employed by Pittston Coal, an imposition that was specifically avoided in the collective bargaining agreement.

Not only must Pittston Coal struggle to fund over \$10 million annually in newly imposed health care costs, it may no longer negotiate over health care cost containment issues affecting pre-1993 retirees. In summary, Pittston Coal's cash flow has been substantially affected and Pittston Coal cannot reinvest in its core coal business to the extent necessary to meet long term objectives all because Congress, in the case of the Coal Act, abandoned collective bargaining in favor of legislative intervention

Please elaborate on the portion of your testimony that describes the alleged windfall that the 1992 Act provided for large, foreign-owned coal companies.

The windfall was the result of a well conceived public relations and legislative plan directed by the BCOA, which is largely comprised of multi-national coal companies. First, in the 1988 National Bituminous Coal Wage Agreement, the BCOA engineered a change in the way miner benefits were calculated from tonnage to man-hours worked, thereby successfully shifting beneficiary costs from larger companies to smaller companies whose operations were more labor intensive. This resulted in huge annual savings for the largest and most profitable companies at the expense of smaller operators. But this formula also caused an artificial retiree's health plan funding crisis. To solve this artificial "crisis" the BCOA supported the ill-conceived Coal Act to further reduce their financial obligations and shift these costs (i) to companies which had left the coal business, (ii) to companies, like Pittston, which had negotiated independent labor agreements, or (iii) to smaller coal companies which could not afford to guarantee lifetime health care for all UMWA retirees.

The BCOA's windfall was augmented by the inability of companies like Pittston, which rely heavily on exports, to pass through the added costs of the additional premiums. Finally, the smaller companies are effectively frozen out as future competitors due to cash flow disparities. The BCOA companies will be able to buy up the coal reserves of former signatories, which are driven out of business by the federally mandated retiree health care costs. Thus, not only is the Coal Act an abandonment of over sixty years of federal labor policy promoting collective bargaining, it is anti-competitive as well.

J. Atwood Ives Chairman and Chief Executive Officer

July 24, 1995

Representative Nancy L. Johnson Chairman, Ways and Means Subcommittee on Oversight 1136 Longworth House Office Building Washington, DC 20515

Re: The Coal Act

Dear Chairman Johnson:

I am pleased to respond to your July 10, 1995 letter seeking responses to various questions for the official record of the Subcommittee on Oversight's hearing on the Coal Act. I have already elaborated on some of the issues raised by those questions in my July 7, 1995 letter to you, but I will be more detailed here in response to your specific questions. Your questions are right on the mark and Eastern's responses, as well as those of other companies, will further demonstrate that the Coal Act imposes an unprecedented burden that is both unprincipled and bad public policy.

1. Have you appealed any assignments of employees made by the Social Security Administration? With what result? At what expense?

Eastern's appeal efforts have been two-pronged: they have involved both a blanket challenge on a single ground to all of the assignments made to Eastern and individual challenges on numerous other grounds to over 1,000 of the beneficiary assignments. The process began for Eastern in September 1993 when we received the initial assignments of 2,323 beneficiaries. In October 1993, we were billed for 1,494 of these beneficiaries. Since Eastern had long ago sold its coal operations and simultaneously transferred all of its records, we had no means to confirm whether these individuals had ever worked for Eastern, let alone whether they were eligible for benefits under the Act or properly assigned to Eastern. We realized that a Herculean effort would be required to uncover the rationale for these assignments when SSA repeatedly refused to provide Eastern with the basis for its decisions or with any information that would permit Eastern to evaluate whether the assignment was correctly made, or whether the beneficiary was eligible for benefits. As a result, in order to meet the strict appeal deadlines, Eastern employed a sizeable team of outside and in-house lawyers, paralegals, investigators and other support personnel to determine whether the assignments had been properly made.

As a result of our efforts, which took the better part of a year, we found that hundreds of beneficiaries should have been assigned to other companies whose corporate status and history we researched, at great expense, because SSA considered it too costly and burdensome for the government to do so. Additionally, we determined that numerous beneficiaries were ineligible because the beneficiary was either deceased or did not otherwise meet the eligibility requirements of the plan. In the end, after compiling a database of information containing over 12 megabytes of information (approximately 50 metropolitan area phone books!), Eastern filed individual appeals with SSA from the assignment of 1,079 beneficiaries. These appeals contained detailed analyses and historical information regarding the beneficiaries and the other companies for whom they worked. The appeals together comprised 34 shipping boxes of material transmitted to SSA. This nine month process of developing information and filing the challenges required thousands of man-hours of work by lawyers, paralegals and other support staff and has cost Eastern nearly a million dollars in legal and consulting fees and costs to date! (This does not include litigation and lobbying expenses which have also been enormous). The bill just for shipping the 34 boxes to SSA was over \$2,000!

To date, while SSA has not yet ruled on all of the individual appeals submitted by Eastern, it has already agreed with Eastern's analysis on 53 out of the 112 appeals that SSA has reviewed so far. In addition, SSA has acknowledged that a number of the beneficiaries are ineligible for benefits and therefore should never have been assigned to Eastern in the first instance! While Eastern can derive some satisfaction from the reduction in its liability resulting from its successful appeals, Eastern (and other companies) should never have been required to bear the burden and expense of researching and analyzing these assignments.

In addition to challenging the propriety of individual assignments, Eastern has also mounted a blanket appeal calling into question the propriety of assigning any beneficiaries to Eastern. The basis for our challenge is that EACC (Eastern's former subsidiary, now owned by Peabody Coal Company) is the successor to Eastern's former coal division and should therefore have received all of the assignments made to Eastern based on SSA's own internal guidelines. SSA repeatedly represented that Eastern would receive a decision on its successor company challenge prior to the time the individual miner challenges would otherwise be due. Nonetheless, that was not the case and, as discussed above, SSA ultimately required that Eastern file all of its individual appeals before it would rule on the successor issue.

In the end, SSA denied Eastern's claim that EACC should be responsible for all of the beneficiaries assigned to Eastern. SSA's decision was, and is, completely at odds with the assignment provisions of the Coal Act and with SSA's own internal guidelines and instructions. Notwithstanding SSA's refusal to reassign beneficiaries to EACC, we

have recently learned, through a limited response by SSA to a FOIA request, that SSA has reassigned beneficiaries to successors in other instances nearly identical to Eastern's case. SSA has refused to provide additional evidence of assignments to successors unless Eastern pays SSA up front \$74,000 in "costs"! Eastern has appealed SSA's decision; that appeal has been consolidated with the federal court action now pending in the United States District Court for the District of Massachusetts, discussed in greater detail below.

Finally, and unfortunately, lest it appear that Eastern is nearing the end of the assignment and appeal phase of the Coal Act, a little over a week after the Subcommittee hearings on the Coal Act, Eastern received 413 new assignments from SSA (presumably reassignments from other companies to whom the beneficiaries had been erroneously assigned). Many of these assignments appear to be based on purported employment for a predecessor of Eastern's subsidiary, Midland Enterprises Inc., a marine transportation company that has never been in the coal business, never employed a single coal miner and never signed a single UMWA coal wage agreement. The tenuous connection to Eastern apparently arises from the purchase by Midland of certain barge assets from another company which then ceased its operations. That same company had previously sold certain coal operations to a current BCOA member. This is truly a perverse result of SSA's interpretation of the Coal Act! These new assignments may not only add tens of millions of dollars to the amount of Eastern's liability, but it begins anew the agonizing, time-consuming and expensive appeal process! Moreover, SSA has indicated that this is not the end of the reassignment process, but rather that it is an ongoing process that will continue to result in new reassignments in the future.

2. Do you have any pending litigation under the 1992 Act?

Yes. <u>Eastern Enterprises v. Donna Shalala, et al. and Eastern Enterprises v. Peabody Holding Co., Inc., et al., Civil Action No.93-12372-WF</u> (D. Mass. 1993).

On November 1, 1993, Eastern filed a complaint in Federal District Court in Massachusetts against the Secretary of Health and Human Services and the Trustees of the UMWA Combined Benefit Fund challenging the constitutionality of the Coal Act as applied to Eastern on due process and takings grounds.

Eastern also filed a third party complaint in that action against Peabody Holding Co., Inc. and Eastern Associated Coal Corp. alleging that Peabody and EACC are responsible for any liability Eastern is forced to bear under the Coal Act on account of the transfer of Eastern's Coal Division to EACC in 1965 and the subsequent sale of EACC to Peabody in 1987.

On February 15, 1995, Eastern amended its complaint to add an appeal of SSA's denial of Eastern's blanket appeal on successor company grounds, described above. A hearing on Eastern's motion for summary judgment on its appeal of SSA's decision is scheduled for August 15, 1995.

3. Can you describe what your legal costs have been?

Eastern's legal fees and costs for its outside counsel and support staff covering the administrative challenges, the federal court case and its efforts to obtain a legislative solution by way of an exemption from the Act total approximately \$1.5 million through June 30, 1995. This figure, however, does not capture the huge resources Eastern and its subsidiaries have expended in terms of executive and other in-house staff time devoted to these issues.

4. What is your approximate annual premium liability under the Act?

Eastern's approximate annual premium liability is \$3.2 million for the first full year (October 1, 1993 - September 30, 1994). Eastern's total projected liability based on the original assignments (not including the 413 new assignments or any future assignments) is between \$70-100 million. With the addition of the most recent assignments, Eastern's liability could increase by \$20 million or more and the annual premium could exceed \$4 million or more. As noted above, it is also possible that Eastern will receive additional assignments that will add to its total liability.

5. What steps would you recommend that Congress take to remedy the problems created by the 1992 Act?

Eastern strongly recommends that Congress amend the 1992 Coal Act, not just to "remedy the problems," but to right the injustices and undo the harm caused by that statute. Congress should start with the simple proposition that those who are not responsible for the problem should not pay for the remedy: Reachback companies that did not sign the 1988 UMWA agreement should not be liable for Coal Act payments. Period. This would not affect miners' benefits, since present BCOA companies -- who are the sources of the problem -- will remain responsible for maintaining the funds' viability to pay for benefits that those BCOA companies guaranteed.

Should the Committee conclude that it is not feasible to carve out all reachback companies from the 1992 Act, Eastern urges that basic tenets of justice and fairness require that Congress exempt from the Act those super reachback companies like Eastern that never signed the 1974 and 1978 UMWA agreements, these agreements

being the sources of any possible argument that signatories promised lifetime health benefits to coal miner retirees and their dependents.

I hope you will find the above information useful in determining how best to resolve the many inherent problems with the Coal Act. I think you will agree that the Act is unprecedented not only in its retroactive effect, but also in the outrageous burden it has imposed on companies unfortunate enough to be caught in its web. I know you will try to assist us in obtaining complete relief from this truly unfortunate and ill-connecived piece of legislation. Please let me know if I can provide you with any additional information that will assist you in this task.

Sincerely,

JAI:law

HOUSE OF REPRESENTATIVES COMMITTEE ON WAYS AND MEANS SUBCOMMITTEE ON OVERSIGHT

HEARING ON PROVISIONS OF THE ENERGY ACT OF 1992 RELATED TO THE FUNDING AND PROVIDING OF HEALTH BENEFITS OF RETIRED COAL MINERS

Hearings Of June 22, 1995

This Response is Submitted Tuesday, August 01, 1995

Response To "Questions For The Reachback Panels", As Requested By Chairman Johnson's Letter Dated July 10, 1995

Thomas E. Templeton
President, Templeton Coal Company, Inc.

QUESTIONS FOR THE REACHBACK COMPANY PANELS

1. Have you appealed any assignments of employees made by the Social Security Administration? With what result? At what expense?

Answer: Templeton appealed its originally assigned 41 beneficiaries. Our wholly owned subsidiary, Sherwood-Templeton Coal Company also appealed their original 5 assignments. Through appeals with SSA, Templeton has had 14 beneficiaries removed, for a total of 27 remaining assignments. Most of these appeals were successful because we were able to show the miners should be assigned to other companies or they worked for us in non-union capacities. However, since the June 22, 1995 Hearings, SSA assigned us 16 new beneficiaries based on 8 miners, though it remains unclear if all 16 are alive to be assigned. Sherwood-Templeton has had similar appeals experience and is now responsible for 4 beneficiaries after winning 3 appeals and getting 2 new assignments. We have begun the appeals process on all new assignments.

Templeton and Sherwood-Templeton spent \$43,109 in legal expenses preparing the first round of appeals. We have no estimate what the second round will cost. We are unable to determine how many hours our staff spent sorting through 40 year old boxes of dusty records searching for information that might help us.

2. Do you have any pending litigation under the 1992 Act?

Answer: Yes. Templeton and Sherwood-Templeton filed suit challenging the constitutionality of the Coal Act under the "Due Process" and "Takings" Clauses. We were not successful in the U.S. District Court, Southern District of Indiana, and have

filed an appeal in the Seventh Circuit Court in Chicago, Illinois. We firmly believe the 1992 Coal Act to be unconstitutional as it pertains to Templeton Coal Company, Inc. and Sherwood-Templeton Coal Company, Inc..

3. Can you describe what your legal costs have been?

Answer: Through May of 1995, Templeton and Sherwood-Templeton have spent \$214,240 in legal fees, including the \$43,109 for appeals of assignments, but excluding legislative expenses.

4. What is your approximate annual premium liability under the Act?

Answer: Templeton and Sherwood-Templeton paid \$164,790 for the fiscal year ending 9/30/94. We expect to pay \$40,339 in fiscal year 1995, which was a substantial reduction primarily because of credits owed and reduced liability from successful appeals. In 1996 our costs are expected to more than triple. If we are required to pay on all 16 new assignments plus 2 more for Sherwood-Templeton, we will owe 20 months of back premium amounting to approximately \$62,614. In addition, we would pay \$94,633 in regular premiums. After adjusting for \$19,923 in credits we are owed from successful appeals, we expect to pay \$137,325 for fiscal year 1996. Costs could go much higher. We are told SSA will not complete this round of the reassignment process until September 1995. New assignments could further increase our costs. Templeton has always been and hopes to always remain current in its Coal Act obligations.

5. What steps would you recommend that Congress take to remedy the problems created by the 1992 Act?

Answer: Though we support H.R. 1370, we agree with Congressman Hancock's opening remarks saying we should consider legislation that goes further. It is wrong that Templeton pay even one dollar, considering we have not signed a UMWA contract in over four decades.

We support suggestions that legislation relieve all Reachback Companies of all future liability. To be successful, we believe alternatives must (1) remove all future liability imposed upon Super-Reachback companies, (2) be revenue neutral, perhaps by shifting costs back to the companies who made the promises or through use of the surplus, and (3) not effect the security or benefit level of the miners.

Congress should consider that if the relief it passes is not complete and equitable, it will likely face harmed companies seeking relief for years to come. We urge Congress to consider total relief for all Reachback companies.

Chairman JOHNSON. Thank you very much. I appreciate the testimony of this panel.

I look forward to working with you in the months ahead to see if we can create legislation that is fairer to all.

Thank you.

The next panel will be Mr. Trumka, president of the United Mine Workers of America, Chris Farrand, vice president of Peabody Holding Co., and Page Henley, senior vice president of Development, Westmoreland Coal.

Mr. Trumka, if you will start please.

STATEMENT OF RICHARD L. TRUMKA, INTERNATIONAL PRESIDENT, UNITED MINE WORKERS OF AMERICA

Mr. TRUMKA. Thank you.

If I might ask just a procedural question. I listened intently to some of the things you were saying. I heard a number of misstatements. For instance, Mr. Ives said that the money was paid to the union over this period of time. The money was never paid to the union but was always paid into a tripartite trust that his company always had a say in.

Mr. Kendig said that he did not know of any benefit plans as lucrative as the plan that is under question here, and all of his

employees received those exact benefits.

My question is can, after reviewing the transcript, we submit corrections or at least our side of the story with those gross misstatements?

Chairman JOHNSON. You certainly will be able to do that and we

encourage you to do that. We want the record to be straight.

When you do that, I want you to look at not only the benefits but the copaid structure. Because the reason that I am asking those questions is that the Employee Benefit Research Institute which looks at these plans has written about the UMWA benefits and they say the absence of significant beneficiary cost-sharing requirements, they say that two reports comparing the UMWA benefits with those offered under other large group plans highlight both the generosity of the UMWA benefit package and the absence of significant beneficiary cost-sharing reforms. These features remain essentially unchanged under the 1992 Act.

They go on later that the lack of an annual deductible premium contribution requirements, those kinds of things, plus the unusually broad definition of dependent coverage are unique to those

plans. At least that is my understanding.

Mr. TRUMKA. We will be happy to respond to each of those.

When comparing those benefits, please understand that over the years mine workers' beneficiaries have fore-gone pension payments. Their pensions are far lower than anybody else's pensions, so they could have a health care benefit. When you look at that, please compare the pension benefits.

We will be happy to respond to that in absolute detail, because I think when you look at it, you will understand that these are promises made to these people by the White House a number of years ago, and I think they have earned these benefits and we will

do everything we can to make sure they maintain them.

Madam Chairman, and Members of the Subcommittee, thank you for the opportunity to appear on behalf of nearly 100,000 retired miners and survivors who receive their medical insurance coverage from the UMWA.

Chairman JOHNSON. Before you get started, I need to clarify an

earlier statement.

You cannot offer rebuttal remarks that will be included in the record, but we will be submitting questions to everyone who appeared and we will submit a broad enough question so that you will be able to offer whatever information you think is relevant and the answers to the question do become part of the record.

Mr. TRUMKA. Will we have sufficient time after we get a tran-

script of this hearing?

Chairman JOHNSON. The transcript will be ready in about 10 days and you are welcome to come and read it. We do not give out copies. Then you will have time to submit the answers to questions at your pace.

Mr. TRUMKA. The transcript will be ready in 10 days and we can

come read the transcript?

Chairman JOHNSON. It will be transcribed in 10 days and available.

Mr. TRUMKA. Can we copy it ourselves?

Chairman JOHNSON. Apparently not. You can come read it.

But I am not sure that you need to go over it in that detail. I think the things that you want to say, we will ask you questions, we want to be sure that you have a chance to put on the record everything you think is relevant, and I think that is probably the more important fact.

Mr. TRUMKA. I sat here for a very short period of time and I listened to a number of misstatements, and I do not want the Committee to be misled because of a misstatement. I heard a number of them, and we would like to correct them. If we cannot do

anything other than read the transcript, we will do our best.

Madam Chairman and Members of the Subcommittee, thank you for the opportunity to appear on behalf of nearly 100,000 retired miners and survivors who receive their medical insurance coverage from the UMWA combined fund. The Coal Industry Retiree Health Benefit Act which established the Miners Health Benefit Fund was enacted in 1992 with bipartisan support and was signed into law by President Bush after a series of negotiations with the Bush White House.

It averted what would have been the end of a nearly 40-year-old health care system for one of our Nation's most vulnerable populations. At the time of the act's passage, the average beneficiary was 76 years old and more than half were elderly widows. Most of these retirees worked their entire lives in the mines under conditions that average Americans would find appalling.

Many still suffer from the debilitating effects of mine accidents or respiratory problems caused by exposure to coal dust. Cutting off health insurance benefits for this group of Americans was unthinkable to Congress, and it acted wisely to fashion a compromise that has provided real health security to tens of thousands of elderly

retirees and widows.

In addition to discussing the status of the coal act and its effect on various groups, I would like to discuss H.R. 1370, a bill that would reduce the medical payments of a select group of companies in the combined fund based on the fund's short-term surplus.

H.R. 1370 would result in the one thing that everyone agrees should not happen, including one of its sponsors, Representative Hancock. I was very pleased to hear you reiterate that you did not want the elimination of health care benefits for the retirees who were promised those benefits and who are now too old and too infirm to find alternative health insurance coverage.

Simply from our perspective, H.R. 1370 is a dagger very pointed and sharp pointed straight at the heart of the coal act and at the welfare of the combined fund's beneficiaries. Recent information from GAO and a well-respected accounting firms, details the

precarious financing of the Miners Medical Fund.

The studies make it clear that eliminating all but 10 percent of the surplus as has been proposed in the Myers-Hancock bill would cause the fund to become insolvent almost overnight. If this occurs, the combined fund trustees will be left with the same impossible dilemma that confronted the trustees for the old 1950 and 1974 health funds; that is, a mandate to provide a specific level of benefits but insufficient income to pay for them.

When this happened in 1991, doctors, hospitals, pharmacies, and other medical service providers went unpaid until eventually the trustees concluded that they had no choice but to cut benefits.

Madam Chairman, I spent each and every day during that period of time working with the trustees, working with hospitals, working with beneficiaries, small pharmacies, ma and pa pharmacies, trying to prevent the cutoff of those benefits. In the end, the benefits were not cut, but only because the court stepped in and forced the employers to sharply increase the amount of their contribution, and because the following year Congress passed the coal act.

The studies prove another important point and that is that the current surplus is temporary and is due in large part to the rate at which the Federal Government was, and I reemphasize the word, was reimbursing the fund for Medicare services. However, in July 1994, the contract with Medicare was renegotiated and the

rate was reduced by 25 percent.

I want to emphasize that the surplus is not the result of premium payments made by any companies that have been assigned benefits, neither reach-back companies nor BCOA companies.

The bottom line is that the Myers-Hancock bill will greatly exacerbate the fund's financial flight and lead inevitably to a situation

where benefits will once again be threatened.

When it passed the coal act, Congress was keeping the commitment made by President Truman, who, after taking control of the mines during a nationwide strike, negotiated a settlement with the coal operators that included the creation of the UMWA Welfare and Retirement Fund. Congress must not now go back on that promise.

Many of the major companies supporting H.R. 1370, in fact, its major beneficiaries, dumped their own retirees less than a decade ago on companies that were still bargaining with the UMWA. In effect, the bill rewards the companies that promised their employ-

ees lifetime medical benefits and then walked away from that promise, thus causing the crisis that led to the coal act's passage.

I am absolutely certain that Congress will not want to grant this group of companies what amounts to a significant tax break at the cost of medical care for retired coal miners.

Importantly, H.R. 1370 would also make it impossible to consider the claims of the small number of companies that may have legitimate problems meeting their full premium obligation under the act. If premium relief is to be considered, it should be based on provable hardship, not on the claim that an employer should be able to lawfully unload its retiree health care liabilities on others

despite having the financial ability to continue paying.

Madam Chairman, I am ready to work with the Subcommittee to address the problem of small companies that might have legitimate problems meeting the premium obligations under the act. The UMWA has no reason, and I emphasize no reason, to want any company pushed into bankruptcy by the act, but I believe that such cases are few and far between, and we should be careful not to overreact to suggestions that legions of small companies are being forced out of business because they must now pay for retiree health care.

As the Subcommittees moves forward with its deliberations over the coal act, I urge you to place yourself in the role of fiduciaries of the Miners' Health Fund and that you take extra special care that the security of the retirees is not put in jeopardy.

Thank you, Madam Chairman. [The prepared statement follows:]

Statement of Richard L. Trumka International President United Mine Workers of America

to the Subcommittee on Oversight Committee on Ways and Means

U.S. House of Representatives June 22, 1995

Madam Chairwoman and members of the Subcommittee, thank you for this opportunity to appear on behalf of the nearly 100,000 retired miners and survivors who receive their medical insurance coverage from the UMWA Combined Fund.

The Coal Industry Retiree Health Benefit Act, which established the miners' health benefit fund, was enacted in 1992 with bipartisan support and signed into law by President Bush. It averted what would have been the end of a forty-year-old health care system for one of our nation's most vulnerable populations; at the time of the Act's passage, the average beneficiary was 76 years old and more than half were elderly widows.

Most of these retirees worked their entire lives in the mines, under conditions that average Americans would find appalling. Many still suffer from the debilitating effects of mine accidents or respiratory problems caused by exposure to coal dust. Cutting off health insurance benefits for this group of Americans was unthinkable to Congress, and it acted wisely to fashion a compromise that has provided real health security to tens of thousands of elderly retirees and widows.

In addition to discussing the status of the Coal Act and its effect on various groups, I would like to discuss H.R. 1370, a bill that would reduce the medical payments of a select group of companies in the Combined Fund, based on the Fund's alleged surplus.

H.R. 1370 would result in the one thing that everyone agrees should not happen, and that is the elimination of health care benefits for the retirees who were promised these benefits and who are now too old and too infirm to find alternative health insurance coverage. Put simply, H.R. 1370 is a dagger pointed straight at the heart of the Coal Act and at the welfare of the Combined Fund's beneficiaries.

Recent information from both the General Accounting Office and a well-respected accounting firm details the precarious financing of the miners' medical fund and suggests that eliminating all but 10% of the surplus--as has been proposed in the Myers-Hancock bill--will cause the Fund to become insolvent almost overnight.

If this occurs, the Combined Fund trustees will be left with the same impossible dilemma that confronted the Trustees to the old 1950 and 1974 health funds—a mandate to provide a specific level of benefits but insufficient income to pay for them.

When this happened in 1991, doctors, hospitals, pharmacies, and other medical service providers went unpaid, until eventually the trustees concluded that they had no choice but to cut benefits. In the end, benefits were not cut, but only because the courts stepped in and forced the employers to sharply

increase the amount of their contribution and because the following year Congress passed the Coal Act.

According to the General Accounting Office, which in June 1994 projected a continuing surplus, "it now appears that annual deficits—instead of surpluses—are likely to occur, which would erode the current surplus over time." The current surplus of approximately \$114 million will be necessary to cover annual operating deficits, which, according to the GAO, may occurr as soon as this year.

It is important to keep in mind that for the first 18 months of the Combined Fund's existence, a surplus accumulated largely due to the rate at which the Health Care Financing Administration had contracted to reimburse the Funds for Medicare services. However, when the risk contract with HCFA expired in July 1994, it was renegotiated and reduced by nearly 25%.

According to the GAO, which had used the old HCFA contract rate in its June 1994 forecast, the new rate will not result in a surplus, and as a result, deficits are likely to occur. A projection of long-term revenue and expenses conducted in March by the firm of Ernst and Young found that the most likely case—which it called its baseline projection—is for the Fund to begin experiencing annual operating deficits in 1995. By 2003, the study predicts, the Fund will face a negative balance of \$3.5 million; in 2004 the deficit will grow to almost \$40 million.

Although the Committee will have an opportunity to question actuaries on both sides of the issue, it is important to understand that the projections relied upon by the Funds and by the GAO were based on medical cost trends that have been accepted by the Ways and Means Committee in its Medicare deliberations and should therefore be an acceptable basis on which to form a conclusion about the Fund's financial condition.

The bottom line is that the Myers-Hancock bill will greatly exacerbate the Fund's financial plight and lead inevitably to a situation in which benefits will once again be threatened. When it passed the Coal Act, Congress was keeping the commitment made by President Truman, who, after taking control of the mines during a nationwide strike, negotiated a settlement with the operators that included the creation of the UMWA Welfare and Retirement Funds. Congress must not now go back on that promise.

In decisions upholding the constitutionality of the Coal Act, numerous federal courts have cited the government's role in the establishment and continued existence of the miners' medical care program. In one recent case, the court wrote:

"Given the fact of continued provision of health care to UMWA represented retirees, as well as the pervasive nature of the government's regulation of virtually every facet of the coal industry, multi-employer benefit funds in general, and the UMWA Funds in particular, any expectation that any Last Signatory Operator may have had that it could freely and forever walk away from its responsibilities to UMWA retirees, and dump its share of the liabilities on the operators that were still contributing to the UMWA 1950 and 1974 Benefit Plans, would be patently unreasonable." Holland, et al. v. Kennan Trucking Co., et al., Civ. No. 2:93-1223 (S.D. W. Va. March 15, 1995).

At the time of the Act's passage, we faced the imminent collapse of the multi-employer trust funds, known as the 1950 and 1974 Benefit Trusts, that provided health care benefits to over 120,000 retired coal miners and their survivors. Skyrocketing health care costs and a steady decline in the number of contributing companies had resulted in a deficit of over \$100

million, and the likelihood that benefits would be cut off when the then-current UNWA-BCOA agreement expired, on February 1, 1993

By 1992 fully two-thirds of the beneficiaries in the UMWA Funds had worked for companies that were no longer contributing toward their benefits. The signatory companies—those companies with whom the UMWA still bargained—had employed only 30% of the retirees covered by the Funds. The other 70%, known as orphans, had been employed by companies that were no longer signatory to a UMWA agreement. But that did not mean that these employers were out of business or unable to continue paying for their retirees' medical coverage.

The compromise that was worked out between the Bush White House and the Congress followed the recommendations of the Coal Commission, the panel established by Labor Secretary Elizabeth Dole to examine and make recommendations concerning the financial crisis facing the UNWA Funds.

The basis for the Commission's recommendation is summarized in its introduction: it says "retired coal miners have legitimate expectations of health care benefits for life; that is the promise they received during their working lives and that is how they planned for their retirement years."

That conclusion framed the congressional debate that followed. It echoed what the courts had said and what the miners have always believed, that upon retirement they are entitled to health care for life. To guarantee that this commitment would be honored, the Commission recommended that a statutory obligation to contribute should be imposed on current and former signatories to the National Bituminous Coal Wage Agreement (NBCWA).

Adopting the Commission's conclusion that coal companies that had signed the 1950 or later NBCWA bear the responsibility for providing lifetime health benefits to their own retirees, the final compromise looked back to 1950 to find companies to whom current beneficiaries could be assigned.

The funding mechanism Congress established guarantees that only those companies that signed collective bargaining contracts that promised retiree health care would be liable for premiums under the Act. In many respects, the Act represents a codification of the contractual commitment that former signatories once voluntarily undertook.

Many of the major companies supporting H.R. 1370-in fact, its major beneficiaries--dumped their own retirees less than a decade ago on companies that were still bargaining with the UMWA. In effect, the bill rewards the very companies that promised their employees lifetime medical benefits and then walked away from that promise, thus causing the crisis that led to the Coal Act's passage. I am certain that Congress will not want to grant this group of companies what amounts to a significant tax break at the cost of medical care for retired coal miners.

H.R. 1370 would also make it impossible to consider the claims of the small number of companies that may have legitimate problems meeting their full premium obligation under the Act. If premium relief is to be considered, it should be based on provable hardship, not on the claim that an employer should be able to lawfully unload its retiree health care liabilities onto others despite having the financial ability to continue paying.

Madam Chairwoman, I am ready to work with the Subcommittee to address the problem of small companies that may have legitimate problems meeting their premium obligations under the Act. The UMWA has no reason to want any company pushed into bankruptcy by the Coal Act. But I believe that such cases are

few and far between, and we should be careful not to overreact to the suggestion that legions of small companies are being forced out of business because they must now pay for retiree health care.

As the Subcommittee moves forward with its deliberations over the Coal Act, I urge you to place yourselves in the role of fiduciaries of the miners' health fund and that you take special care that the security of the retirees is not put in jeopardy.

Chairman JOHNSON. I regret that we are going to have to break for half an hour. We have 7 minutes left in this vote and there are four 5-minute votes.

When we come back we will through questioning give you a chance that will fit in better. I think rather than getting halfway through the next statement, it is probably better to lay over the next two statements until we return.

The hearing will be in recess for half an hour.

[Recess.]

Chairman JOHNSON. The hearing will resume. We probably will be interrupted with one more vote, but we are going to start back on our track here.

Mr. Farrand.

STATEMENT OF CHRIS FARRAND, VICE PRESIDENT, COR-PORATE DEVELOPMENT, PEABODY HOLDING CO., ST. LOUIS, MISSOURI; ON BEHALF OF BITUMINOUS COAL OPERATORS OF AMERICA

Mr. FARRAND. Thank you, Madam Chairman. I am vice president of Peabody Holding Co., but I am here representing the Bituminous Coal Operators Association today and, as you know, BCOA is a multiemployer group that represents certain producers of coal in the U.S.

My company has two subsidiaries that are members of BCOA, Peabody Coal Co. and Eastern Associated Coal Corp. I would ask the Committee's permission to submit my written statement for the record and make a few brief comments, if I may.

I would like to address the questions that were raised today about the crisis, it was called, whether the crisis was real in 1992, and what choice or choices the Congress and the Bush administration had when they passed the Coal Mine Retiree Health Benefits Act. I would like also to address the comments that were made earlier about the so-called windfall to BCOA companies.

The crisis was indeed very real from our standpoint and I am going to give a brief recitation of why I think that is the case. A promise was made, it has been referred to several times today, that really began back in 1950, and through a succession of labor agreements, the promise was maintained. In fact subsequently the courts ruled that it was in fact a promise, but the court's rulings did not affirm any methods of keeping the promise.

There was no funding mechanism defined on a permanent basis to support the promise that these certain closed groups of coal mine retirees and their dependents would receive retiree health care benefits for life. Under the 1988 National Bituminous Coal Wage Agreement, the situation was exacerbated. The funding base for the benefit trust, was depleted, not, I might add, because the funding mechanism switched from tons to hours worked.

If I can digress for a minute, Madam Chairman, since you asked the question, in 1988 the fund was a defined benefits plan and the courts ruled that the signatories—who were more than just the BCOA companies, but the entire body of signatories to the 1988 agreement—would have had to put up contributions in any case to fulfill the promise for at least that term that benefits would be forthcoming.

It is irrespective of whether we did it on the basis of hours or tons; the same amount of money had to be put forth by the same signatory group. It was a question which members of the group would pay how much, but nevertheless the tons versus hours funding mechanism itself did not create the crisis.

What created the crisis was the fact that the funding base in total had shrunk because you had fewer signatory companies. You had a number of companies who had either left the coal business or, frankly, refused to continue to pay. They did not feel they were obligated to fulfill the promise and therefore refused to pay into the funds.

As this funding base shrunk, the obligation on individual producers, whether it is tons or hours, grew. It was like a downward spiral, Madam Chairman, because, as the premiums rose per unit of output, whether you call it hours or tons, there was an incentive or an impetus for more and more companies to get off and we were heading off a cliff, frankly, at the end of the 1988 agreement.

Looking to the end of that agreement, which expired in February 1993, we knew there was no way that signatory companies could continue to pay premiums and remain in business. I will put some

parameters on that.

At the end of the 1988 agreement, each of us was paying a combined premium of \$3.67 per hour worked by each employee. What that meant was that we were paying an increment of about 25 percent of our hourly wages not for our employees', but mostly for somebody else's retirees' benefits.

For example, our two subsidiary companies were paying premiums that amounted to 16 percent of the total premiums paid to the funds. We only have about 4 percent of the beneficiaries in that fund, so we were paying \$3 to pay for somebody else's retirees for every \$1 we were paying for our retirees.

During the term of the 1988 agreement, the signatories to that agreement put \$1.1 billion into the two benefit trusts and the funds staff have calculated that about \$600 million of that \$1.1 billion was to pay for companies who were no longer paying for their own retirees.

In effect, if you put yourself in our position at the time, we were subsidizing our competitors. Many of these companies are still in the coal business competing with us every day. To put that \$3.67 number into perspective, at the productivity rates in 1992, for a typical Eastern underground mine, it is about a dollar a ton cost disadvantage in a market that sells coal based on pennies a ton.

The fact remains we could not as producers have agreed to another National Bituminous Coal Wage Agreement under the conditions we had in the 1988 agreement. We simply could not do it.

The Bush administration had a foretaste of this problem as a result of the 1989 Pittston strike and out of that strike, as has been mentioned earlier, came the Dole Commission. The Dole Commission looked at the problem and said we have three choices to deal with this. One, we can make all of the current and former signatories pay into a fund on a shared basis. But that begs the question of who is going to get which share, and they decided that wouldn't work.

A second option was to apply an industrywide tax, and we have a history of that in our industry. We have the abandoned mine land fee, which is an industrywide tax, to pay for the liabilities of some other companies which are no longer in business, and we have the black lung excise tax, which is also an industrywide tax, to pay for abandoned orphaned beneficiaries who are determined to have black lung disease.

The third choice, of course, was—and it was the administration's choice, which Congress adopted, which was to say that the people who made the promise or their successor corporations should be held accountable for the benefits of the people who retired from either those entities or their predecessor entities, and they should do it individually, and for the true orphans we will find other sources of funds.

The other source of funds was the surplus in the 1950 pension trust. So, we found a surplus which, in essence, the BCOA companies put up, and used these funds to deal with the orphans and gave the reach-back companies the obligation to pay for their own retirees only. That was the solution.

They faced a dilemma and they came up with a solution that was the fairest and simplest of the three options. I am not suggesting that all are perfect or any of them are perfect, but they chose an option that stands on the principle. The principle is that if there are retiree benefits promised, they should be paid by their former employees and not by the people who did not employ them, many of whom must compete against them.

The other option, of course, was to let the system collapse. In that case there would have been, I think, Mr. Trumka would agree, probably a long and bitter strike. We did not feel that was an option either. So, the choice that Congress selected, imperfect though it may be, was the fairest and simplest of those available at the time.

Madam Chairman, I want to address one other issue, which is the windfall concept that was spoken of this morning. I am sorry we do not have the nice colored chart that was up here earlier—

Chairman JOHNSON. We have it individually.

Mr. FARRAND. If you have copies of it, I would like to address it, if I may. The chart suggests that, it was a BCOA created crisis. First, numbers associated here are not reflective of BCOA companies, but of all the companies who signed the 1988 agreement. There were only 14 companies in BCOA and over 300 companies signed the agreement. The most important point I would like to make about this chart is the fact that the so-called savings that have been mentioned, \$385 million, includes about \$450 million associated with the pension trusts, not the benefit trust, not health care, but pensions.

The reason why the 1988 signatories were no longer paying pension fund premiums is that the pension fund had become fully funded. In fact, it had a surplus and we are now using that surplus to deal with health care benefits for orphaned miners, orphaned retirees.

We had, in essence, advance paid the fund. It was fully funded— Chairman JOHNSON. Would you clarify for me what amount of the \$384 million you were putting in your pension fund or the companies were putting in their pension fund? You are saying that this

combines health and pension payments.

Mr. FARRAND. What is reflected on this chart is a combined payment amount including the pension fund, and my point is simply this. The pension fund payments disappeared not because anybody shirked their duties. In fact, it had been fully funded. In fact, it had been overfunded.

I would argue, I guess, that those signatories of 1988, of the 1988 agreement, were in effect paying the pension obligations of a whole lot of companies who had dumped their retirees into the fund, and we took care of those pension obligations, and now we simply argue that they ought to at least pay their retiree health benefits. We have taken care of their pension obligations. So, I question the validity of the assumption that we saved all this amount of money.

To sum that up, I would argue that in our industry, like all commodity prices, the coal price has gone down in real terms dramatically, over the last 10 years, about 50 percent. Had we continued to fund, or I would argue continued to subsidize the people who were no longer paying their obligation in those combined funds, we could not remain in business. That was the crisis. Nobody could afford to sign an agreement similar to what we had in 1988 and remain a competitive, effective company in the coal business. Congress recognized that. They chose the best of the three options available, and that is what we have today.

I will be happy to respond to any questions you have.

[The prepared statement follows:]

STATEMENT OF CHRIS FARRAND VICE PRESIDENT, CORPORATE DEVELOPMENT PEABODY HOLDING COMPANY, INC. ON BEHALF OF BITUMINOUS COAL OPERATORS' ASSOCIATION

Madame Chairman and members of the Subcommittee, my name is Chris Farrand. I am Vice President for Corporate Development of Peabody Bolding Company, Inc. I am appearing on behalf of the Bituminous Coal Operators' Association (BCOA), the multi-employer bargaining association representing a group of employers in the bituminous coal industry. Two Peabody Holding Company subsidiaries, Peabody Coal Company and Eastern Associated Coal Corporation, are members of BCOA.

A Brief History of the Events Leading to the Coal Industry Retiree Benefit Act of 1992 ("Coal Act")

I understand a representative of the UMWA Health and Retirement Funds will provide the Subcommittee with a history of evolution of retiree health care in the coal industry. Revertheless, a brief history is necessary to understand the predicament facing our industry, Congress and the Bush Administration when the Coal Industry Retiree Health Benefits Act was passed in 1992.

The provision of health benefits in the coal industry dates back almost 50 years, when the government seized the nation's mines and imposed a settlement to a labor dispute. The agreement between President Harry Truman and John L. Lewis, then president of the United Mine Workers of America (UMWA), resulted in the establishment of a system for providing health care benefits to both active and retired miners. This system was incorporated into the 1950 labor agreement. The 1950 Benefits Plan and a second fund called the 1974 Benefits Plan were later established as the multi-employer mechanisms through which these benefits were funded. Provisions for retiree health care benefits were included in every subsequent national labor agreement between the union and the industry.

In essence, the successive labor agreements had perpetuated the inherent promise made by President Truman, but the payment mechanism underpinning that promise was negotiated on a contract by contract basis.

However, in recent years, especially between 1988 and 1992, the funding base for the 1950 and 1974 Plans deteriorated badly as many companies left the business or just refused to pay.

Meanwhile, the courts in several different actions confirmed that a promise of lifetime benefits had been made, but they did not affirm a payment mechanism for hidiling that promise. In what can only be called extraordinary interpretations of contract law, the courts imposed upon the remaining signatories to the 1988 National Bituminous Coal Wage Agreement higher and higher premiums to cover the shortfalls in the Benefit Plans. As the premiums rose, so too did the impetus for more employers to leave the plans. More beneficiaries in the multi-employer funds became "orphaned" to be supported only by the remaining companies who were signatory to the 1988 Labor Agreement.

As an example, by the time the Coal Act passed in 1992, two of Peabody Holding Company's subsidiaries, Eastern Associated Coal Corp. and Peabody Coal Company were paying a total of 16 percent of all the premiums paid into the Funds, but only 4 percent of the beneficiaries in the Funds had retired from the two companies and their predecessors.

This "crisis" was not manufactured by BCOA companies. Rather, as the premiums continued to rise, fewer employers could justify paying them and remain in business. With this "snowballing" effect, the Funds became ominously known as the "Last Man's Club." Collapse of the multi-employer funding system was inevitable.

By 1992, with impending expiration of the National Bituminous Coal Wage Agreement (MBCWA), the funding mechanism had deteriorated even further as more companies had dumped retirees into the Funds. Of the \$1.1 billion contributed for health benefits by 1988 signatory companies during the term of the 1988 labor agreement, over \$600 million was for retirees of companies that were no longer making payments into the Fund. Left unresolved, this issue would have made renewal of the NBCWA impossible for

one simple reason: 1988 signatories could not afford to continue to pay for the benefit costs of others companies' retirees and, in order to survive, they were prepared to end their relationship with the Funds.

In 1992, BCOA employers were paying a premium of \$3.67 per hour per worker, not to their employees or even their retirees, but to a Fund to pay benefits largely for someone else's retirees. In a very competitive industry such as ours, the operating cost differential associated with these contributions made continuation of that system untenable. The contention that the 1988 signatory companies received a "windfall" as a result of the Act is simply incorrect.

At issue, of course, was the fate of the 118,000 beneficiaries if the system and the funding base for their health care benefits collapsed.

In 1988, as a result of a protracted strike against Pittston Coal Company by the UMWA primarily over this issue, Secretary of Labor Elizabeth Dole created a special commission to seek a long-term solution to the coal mine retiree health care issue. The Dole Commission recognized the dilemma and offered three possible solutions:

- 1. Past signatory employers could pay for their own retirees.
- 2. Current and former signatories could share the cost of benefits.
- An industry wide tax could be assessed against all current coal operators.

Of the three choices identified by the Dole Commission, the funding mechanism selected by Congress and the Bush Administration was the simplest and fairest. The 1992 Coal Act, as a matter of principle, assigned responsibility for retiree benefits to former employers and related companies of the retirees, not to companies that did not employ them.

The Coal Act is Working Reasonably Well

The Coal Act is essentially working as envisioned by Congress. It should be noted that the Combined Benefit Fund created by the Act encompassed a closed group of beneficiaries whose average age is now 73. In fact, the number of beneficiaries has decreased by 20 percent since implementation due to the age of the population, and there are now approximately 95,000 beneficiaries remaining in the Combined Fund.

Also, it should be noted that the health care cost containment measures required by the Act have been implemented, resulting in a more efficient and cost effective system. The rate of increase in per capita health care costs has slowed, despite the increasing average age of the beneficiary population.

As a result of the assignments by the Social Security Administration (SSA), the number of orphan beneficiaries in the Funds - those whose former employers either refused to pay or were thought to be no longer in business - decreased from 74,000 before the Act, to less than 28,000 currently. That is because the number of these so-called orphans were in fact retirees from companies still in business -- many still in the coal business -- and the beneficiaries have been assigned to them accordingly.

It should also be noted that the Coal Act provided a process for appeal of incorrect assignments. Some 175 companies have already been relieved of liability as a result of the appeals process, which is continuing.

The underlying principle of the Act is that employers should pay for their own retirees, and retiree benefits should not be subsidized by other companies, especially those in the same business.

As a result of the Act, the cost of health care benefits for this closed group of beneficiaries has improved. Moreover, no reachback company is

paying anything more than a per capita charge for its own former employees and dependents.

Finally, the Second and Sixth Circuit Courts of Appeal have upheld the Constitutionality of the Act.

H.R. 1370

H.R. 1370, a bill recently introduced, proposes a moratorium on payment obligations for a select group of so-called "reachback" companies whenever there is a cash surplus of 10 percent or more in the Combined Benefit Fund at the end of any year.

As a result of the initial assignments by the Social Security Administration, responsibility for per capita premiums covering 85 percent of the beneficiaries in the Combined Fund were assigned to just 25 companies, most of which are very large corporations. Of the remaining companies assigned beneficiaries under the Act, 186 companies pay less than \$25,000 per year and 132 pay less than \$10,000 per year.

Under H.R. 1370, 10 of these 25 largest companies would be excused from paying premiums whenever a cash surplus exists in the Combined Benefit Fund. These 10 companies now contribute more than \$42 million annually to the Combined Fund. These contributions would have to be replaced by funds substantially derived from other companies' contributions, or from the Pension Fund or from pre-payments from the Medicare system. In other words, health care costs for 19,000 beneficiaries of these 10 large companies would have to be partially, if not wholly, subsidised by other companies.

A shortfall of \$42 million is 25 percent of the premium contribution base of the Fund and is a very serious shortfall that would accelerate the prospect of a deficit in the Fund. Not only can the Combined Benefit Fund not afford relieve this amount of premium payments, to do so would be grossly unfair to the companies which would be forced to continue to pay, especially those who are in competition with many of the same companies who would be relieved of their obligations.

BCOA is also concerned about the provision in HR 1370 which would calculate the annual surplus in the Combined Fund on a cash basis, rather than an accrual basis. As indicated earlier. H.R. 1370 excuses certain companies of premium payments whenever there is a cash surplus of 10 percent or more at the end of a year in the Combined Fund. This measurement of a surplus in the Fund ignores the 60 to 90-day backlog of claims payable at the end of a given period. Without the continued premiums from the excused companies to help pay these backlogged claims, the Fund would immediately face cash flow difficulties.

If the Social Security System, which currently is well funded, were to adopt this same approach, in which contributions from employers and employees would be excused in any year after the fund had a 10 percent cash surplus, the System would soon collapse. Yet that is exactly what is being proposed in H.R. 1370 for the Combined Benefit Fund.

Projections for the Combined Fund

Ernst and Young has recently performed an independent actuarial analysis of the financial condition of the Fund. The actuary, Mr. Guy King, has concluded that the current surplus in the Fund is temporary and not large from an actuarial standpoint. Moreover, Mr. King projects that the Fund may be in a deficit position by 2003. GAO has subsequently supported Mr. King's projections.

Subsequent to Mr. King's analysis, the Federal District Court for the Northern District of Alabama overturned the initial per capita premium rate set by the Department of Health and Human Services. This ruling will result in a reduction in premiums of as much as 10 percent for all employers who contribute to the Combined Benefit Fund, and, if upheld on appeal, will further reduce the prospects for any future surpluses in the Combined Fund.

Chairman JOHNSON. I have to go vote, but I wanted you to finish. It will take me about 7 minutes and I will recess the Committee for 7 minutes, but I expect to be back promptly.

Mr. FARRAND. I have already missed my flight. Fine.

[Recess.]

Chairman JOHNSON. The hearing will reconvene. Some of my colleagues are on their way, but I think we will proceed without them and they will join us late.

Mr. Henley.

STATEMENT OF R. PAGE HENLEY, JR., SENIOR VICE PRESIDENT OF DEVELOPMENT, WESTMORELAND COAL CO., PHILADELPHIA, PENNSYLVANIA

Mr. HENLEY. Thank you, Madam Chairman. Recognizing that I am tail-end Charlie of a long day, I would like to submit my written remarks for the record—

Chairman JOHNSON. Your testimony, as everyone else's, is

included in the permanent record.

Mr. HENLEY. My name is Page Henley. I am senior vice president of development for Westmoreland Coal Co. Westmoreland is the Nation's oldest independent coal company. It began its operations in 1854 and as you would expect over the years has had quite a number of employees, many of whom are currently retirees under the United Mine Workers BCOA agreement.

The other point I would like to make is that Westmoreland, while a signatory company to the National Coal Wage Agreement since 1950, is not today a member of the Bituminous Coal Operators Association. We have in the past been members of BCOA, but today we negotiate with the United Mine Workers

through a separate organization and agreement.

We are vitally interested in this subject because like the Peabody group of companies, \$3 out of every \$4 we paid over a number of years went to pay for retirees of companies other than Westmoreland.

Today, Westmoreland, with approximately 650 hourly workers is paying for 2,213 former employees who are now retirees of our company. If you were to quadruple that figure, you would get an idea of what the 650 employees would have to generate in the way of income for our company to cover the costs of not only our own retirees, but the other industry retirees which we were paying for

prior to the passage of the act.

We believe that the act restored what should have been present all along, and that is an sense of fairness and equity. You have heard a great deal about fairness today and you have heard from a number of situations which I would agree with the presenters create unique hardships. However, there is a process for working out those hardships, and one of those today, the Buchanan Coal Co. operation, has apparently received an exemption from the act. The act is working. I believe that is the proper recourse for those persons and companies who have had an unfair situation thrust at them by the act.

What I would like to emphasize is, as Mr. Farrand said, many of the companies that are complaining about the act are companies that are still in the coal business, still competing with us, and are very glad to have us pay for their retirees. That is a nice thing to do, and we believe in being beneficent, but we cannot do that anymore.

Ås a practical matter, Westmoreland Coal Co. is a company experiencing significant financial distress. In 1994 Westmoreland sought protection under chapter 11 of the U.S. Bankruptcy Act to enable it to be protected from its creditors while it sold a large property it owned in the State of Kentucky to enable it to pay off its significant debt.

We have come out of Chapter 11 and are currently in the process of restructuring the company to be able to continue to compete in this business. However, with the costs that we are paying through the combined fund and the other funds, today Westmoreland Coal Co. is, in effect, being operated to pay health benefits for its retirees.

We are not here to seek sympathy, but I think it is a point that not all of the companies that are benefiting from the fairness and equity which this act reinstituted are companies that are large, wealthy and owned by a diverse group of owners. Westmoreland is an American publicly held company.

We would call upon the Committee to carefully examine the act and the impact of the act on this industry. I think the Committee and all of the speakers here, regardless of their viewpoint on the act, have said that we owe the retirees their promised retirement.

The medical program under the act was instituted a number of years ago when views on medical insurance and medical care for persons was entirely different than it is today. These men, for the most part, that are the retirees worked for many companies, built this industry, made a lot of money for the companies that are currently paying for their retirees and a lot of companies who are now complaining about paying for their retirees. There is no question but that these people and their dependents are due the moneys they receive. The issue is how in equity and fairness should those moneys be paid to fund those programs.

We say that this act did restore a proper balance. It says in very simple terms that if you hired someone to work for you, you were a signatory to the Bituminous Coal Wage Agreement since 1950, and you are capable of making those payments, these are your people, and you should pay for them. That is all this act really does, bottom line.

For those companies who are now our competitors to come in and say that is not fair because for some other reason they have managed to remove themselves from this obligation is really an effort to achieve a competitive advantage, and this is nothing more than a standard economic battle. We recognize our obligation to take care of our employees and we will run our company in such a way as we will honor that obligation. We just do not think it is fair that we should be required not only to honor our obligation, but to honor the obligation of those who have dumped their obligation on the remaining signatory companies.

Thank you, Madam Chairman. I will be delighted to answer any questions.

[The prepared statement follows:]

Statement of R. Page Henley, Jr. Senior Vice President -- Development, Westmoreland Coal Company June 22, 1995

Before The U.S. House of Representatives Committee on Ways and Means

Mr. chairman and Committee members,

My name is R. Page Henley, Jr. and I am Senior Vice President of Development, Westmoreland Coal Company, the nations oldest independent coal company. In December of 1994 we emerged from Chapter 11 bankruptcy proceedings. Our company operates mines in the states of Virginia, Kentucky and Montana. Prior to the Chapter 11 proceeding, we also produced coal from mines in West Virginia and Kentucky which we no longer own. In fact we were the nation's 24th largest coal producer out of hundreds in 1993 producing about 11.6 million tons of coal.

Primarily because of noncompetitive mining costs, in an extremely competitive market, we had so close our West Virginia mines and sold our Kentucky Criterion mining operation in Kentucky.

We have been assigned 2, 213 retirees under the Coal Industry Retiree Health Benefit Act of 1992 (the "Coal Act.") Our annual contribution to cover these retirees' costs is approximately \$5,200,000.

We understand that there are some companies complaining about the burdens of the Coal act and that is why you are holding these hearings. The reasons I am here today is to tell the Committee that as a financially strapped coal company, fighting for our very existence, we are extremely concerned about maintaining the equities of the Act as passed by the Congress in 1992. Our pre-act obligations created a very inequitable dilemma which contributed to our financial difficulties.

Up until the passage of the Act, Westmoreland like other signatories to the wage agreement with the UMWA, was not only paying for the benefits of our own coal miner retirees and their dependents but was paying for other retirees "dumped" by companies far more capable than we to provide contractually promised benefits for their own retirees. The financial burden of assuming a share of paying for other companies' retirees benefits was a significant burden upon our company at a critical time. Those who dumped their beneficiaries on Westmoreland and other signatories of the 1988 Wage Agreement now have the audacity to now claim that since we no longer have to pay for their former retirees' benefits we have obtained a "windfall!" This is a ridiculous assertion. In truth the Act restored the equity which should have been there all along.

I would hope that you would not reburden our company in any way by the passage of such ill-conceived and unfair legislation as that currently before you in the form of H.R. 1370 or other proposals suggested to this or the 103d Congress. For our part, we feel the Coal Act is working as intended, equitably placing the burden of funding benefits upon all employers both former and current.

I'm sure there have been some improper assignments of liability, but I understand the appeals process is working and over 175 companies have been excused. This is the proper way for companies to achieve relief if there are inequities. If there is any relief to be granted because there are surplus funds, then relief should go across the board to all contributors to the Combined Benefit Fund, not just to those who were forced to own up to their responsibilities by the Coal Act.

In closing I would like to reiterate that the Coal Act restored the proper equity to the Coal industry's responsibility to care for its retirees. If legislation such as H.R. 1370 is passed this equity will be destroyed and we will revert to the former time when just a few companies bore the burden of many other companies' retirees as well as their own. We trust the Committee will see this campaign to pass H.R. 1370 for what it is — a blatant effort to pass their responsibilities to others for their economic and competitive advantage.

Thank you.

Chairman JOHNSON. Thank you for your testimony, and I apologize that the order of the panels wasn't better. It was before, but

they got switched around.

I welcome back my colleague from Ohio, Mr. Portman. We really need to get at the issue of promises made because my understanding is that only the companies that signed the 1978 agreement and following agreements committed themselves to what is called the evergreen provision and we did have someone on the record today read from the contract that they had signed which made it very clear that, as most labor contracts, the obligation was for the life of the contract.

In 1978, when you adopted a contract with an evergreen clause, you did something different; we are obliged to pay this whether these people worked for us, whether we are in business, no matter what happens. I consider that one kind of promise. I think one of the problems is that the promise wasn't the same all along the line. All of you have said that it is not true, so let's hear it.

Mr. TRUMKA. I guess I will go first. That was considered at great length, and the same argument was made to the Dole Commission appointed by Secretary of Labor Elizabeth Dole under the Bush

administration.

Chairman JOHNSON. Weren't the 1978 agreements the first

agreements to conclude the evergreen clause?

Mr. TRUMKA. Madam Chairman, the evergreen clause is not the only promise that was made. Back in 1950 miners were told this and this is what the Dole Commission found as a matter of fact, that when they retired, they would get two things, a pension and health care for life. They took reduced pensions since 1950 in order to help pay for that health care. That is what the conclusions of the Dole Commission were, as a matter of fact.

Chairman JOHNSON. But at the time that that agreement was made, there was a pool that employers paid into. When they got out of the business they paid up and left. So, on both sides it was a different agreement. When it was put in writing in 1978 and provisions were made in writing for long-term obligations, there was

also a long-term commitment of funding.

The preceding agreement—I agree with you miners had a right since that seemed to be, even though it wasn't in the contract, but companies also had a right to believe that their obligations could be fulfilled if they left by paying up on their own people and the successor company, whoever hired them. I guess I am saying that the obligation pre-1978 was in fact different from the obligation of post-1978 although I hear what you are saying about the expectation.

Mr. TRUMKA. The expectations are absolutely clear. Everybody agrees, I think even the people that say they want out of the reachback provision would agree that the expectations were clear, that miners were led to believe in contract, in word and in deed that when they retired they would get two things; a pension and health care for life.

In 1978, a new clause was instituted. Some of the people that testified here today, regardless of this act, were post 1978 signatories. Pittston, for one, has been judged to owe an evergreen obligation. That is the clause you are talking. Nonetheless—I am speak-

ing from the beneficiaries' point of view. They were promised two things, health care and pensions. They took lower pensions so that they could have health care.

Chairman JOHNSON. Thank you.

Mr. Farrand.

Mr. FARRAND. I would respond very simply that there have been at least two court decisions which affirmed that a promise of benefits was made. What they did not do is affirm a method of paying for those promises and the obligation to provide benefits was there, the obligation to pay for them went from contract to contract.

I might point out that even the BCOA companies, who did live up to those obligations, had a legal right after expiration of the 1988 agreement to say, I am sorry; we are not going to do this anymore. We did not. We found another way to do it, and we are paying for our obligations and retirees and for the orphans with moneys we previously put into the pension trust.

Chairman JOHNSON. Mr. Farrand, I found your comments on the

chart very useful.

Mr. FARRAND. Thank you.

Chairman JOHNSON. Also in our background materials there is the information that absent the provisions of the 1992 coal act, the 1988 signatory companies would have been paying essentially 100

percent of the expenses of the retiree health benefits fund.

In contrast, during fiscal year 1995 the premiums paid by the 1988 signatory operators are expected to contribute approximately 38 percent of the income of the combined fund. Premiums paid by reach-back companies will account for approximately 24 percent and a transfer from the pension fund about 32 percent and investment income from accumulated assets 6 percent. This agreement did give the operating coal companies extraordinary relief. It went from 100 percent liability down to 38 percent.

Mr. FARRAND. Madam Chairman, I beg to disagree. We did not have to provide any benefits after the 1988 agreement expired. The relief we got was not from the obligations that we owed our own retirees or their dependents. The relief we got was an implied obligation that existed from the 1988 agreement to pay for somebody

else's retirees.

If anybody had relief, it was the reach-back companies that dumped their retirees into the funds that we were subsidizing. We were in effect subsidizing our competition and we couldn't afford to do that anymore and that is why we came to Congress.

Chairman JOHNSON. And your sense of outrage at having to pay for employees that were not yours is parallel to the outrage we heard on the earlier panels, companies having to pay for employees

that were not theirs.

Mr. FARRAND. There is a fundamental difference, if I might. The obligation for a lot of those people, and there may be individual cases which are erroneous. In fact, I think the SSA has already relieved 175 companies of their obligation that they were erroneously assigned beneficiaries.

I am sure each case differs and I have some familiarity with some, but I do not pretend to be an expert. But there is a difference; that is, that those companies or most of them had either

predecessors or subsidiaries that signed an agreement that had the

promise in it, to put it in simple terms.

Chairman JOHNSON. That is where we get into muddy water. A lot of those companies did not sign agreements. There was an assumption, but later on there were agreements that were clear. Before the agreements were only based on the environment in which we were all operating.

Mr. FARRAND. Our industry has a long history of having companies go in and out of business or be traded or sold or whatever. We have a phrase in our industry called legacy costs. If you acquire something you better be damned certain what those legacy costs are.

Legacy costs by definition in our industry are retiree health care, retiree pension obligations and post mine reclamation obligations. Some of those companies had those obligations, but may not have been aware of it. They acquired those obligations either in the purchase of other companies or they had them in the contract which they signed, but did not really understand.

Chairman JOHNSON. Mr. Hancock would like to join in this.

Mr. HANCOCK. You are talking about legacy costs. In 1990, how would anybody have been able to predict the legacy costs that they are involved in now? In 1991, how would any legal advisor or financial advisor have been able to predict the legacy costs of the employee benefit plan of this company that you might be buying?

Mr. FARRAND. I am not certain I understand your question.

Mr. HANCOCK. You say when you buy a company, an obligation of the buyer is to look at the legacy costs. How could anybody prior to the passage of the coal act be able to predict the legacy costs? Mr. FARRAND. The act was designed, Congressman, to assign

beneficiaries-

Mr. HANCOCK. I understand. I am saying that if I had wanted to buy a coal company in 1990 or a company that was no longer in the coal business, but had at one time been in the coal business, how could I possibly have predicted or analyzed or determined any potential unfunded liability of the legacy costs of a pension plan and health plan on a law that did not even exist?

Mr. FARRAND. Well, there were contracts that existed that people signed and they had clauses in them that had at least an implied obligation. The fact that Congress changed the definition of that obligation they could not have anticipated, and to that extent I

agree with you.

The fact is that those companies did sign agreements. Many of them who appeared today signed agreements that had an evergreen clause in them. Certainly, the court decisions, if they had any connection with the coal industry, they knew what the court decisions were that said the promise had been made as far back as 1950 and there was an obligation there.

Mr. HANCOCK. This is for Mr. Trumka. In correspondence to the Congress you have suggested that you think relief for some small businesses may be necessary. If the coal act has resulted in economic problems for these companies, then wouldn't a comprehensive review of the coal act be reasonable, not just a quick fix for a few businesses?

Mr. TRUMKA. First of all, I think we have to give the act a chance to work and let things start to settle down. It has only been there 18 months. You have just seen and heard testimony today how it is working.

I believe that if we let it work for awhile and we find out that there are companies that are truly going to be jeopardized, and not the claim of it, but come in and talk about it, that they are going to be jeopardized, if that is the case, we would be interested in looking at a way to help them solve that problem, because it doesn't do us any good to say to a company your out of business. We would be better off saying if you cannot afford to do a full

loaf, then you should perhaps give a part of a loaf. We would all be better off. I think we need to let the act work to see if it can sift out. You talked about legal bills today. There is a lot of them, all because they challenged the constitutionality of this act, all of which they have lost. There have been a number of challenges about assignments, some successful, some not, but the act is starting to work.

What we cannot do without jeopardizing the health care that these people were promised, and they were promised this and they believed the promise, and we gave up pensions in order to keep the health care. We gave, \$210 million of our pension money went into this very fund. That is how the orphans, the people without anybody out there, their last company is gone, that is how they are getting health care, from our pension money. So, one more time we are giving it.

Before you say take the surplus out of this thing, let it act, and we made a commitment that if there are companies jeopardized by this—not a company that is making millions of dollars and this would be nice to get rid of so that he or another company has to pay for their pensioners and that is what they are asking us to do, but a company that is genuinely jeopardized, we would be in favor

of helping them.

Mr. HANCOCK. I understand you are—in fact, you said several times that the pensioners were promised health care for life and also a pension for life. As you know, we have had some problems there and that is why we had the Pension Benefit Guarantee Corp., because some were improperly funded.

Mr. TRUMKA. That is correct.

Mr. HANCOCK. It would appear to me that when you promise somebody health care for life that you ought to fund it at that time instead of future funding. We also, in 1964-65 when we passed Medicare, promised basically certain minimum standards of health care for life. They were not told that they were going to have to start paying premiums for it later on.

My question is, we are in a different time now and we want to save the system. In fact, even Medicaid now, they are talking about controling costs, that you need to have some type of beneficiary

contribution.

The President's plan even said that the only way we are going to get it under control is if the beneficiary has some type of financial investment in it. Have you considered anything like that?

Mr. TRUMKA. Sure. Let me tell you something you may not know. We are pretty proud of this. This group of beneficiaries, we have a cost-containment program. We were the first ones to do HMOs in the fifties with the funds. Our costs are lower per beneficiary

than Medicare are. So, we are doing our part.

When you talked about why we do not fund health care plans, Congress has made it impossible for a company to fund them because if you go beyond this year's current expenses you cannot deduct it. I tried to get them to do that and I negotiated with them three or four times and I said we got to start funding them. They said are you crazy? I cannot deduct it. That makes good business sense, and I guess they convinced me of that.

The other thing, in 1978 our pension funds were very underfunded. In fact, there was a chance at that time that they were going to go belly up. And these companies, the companies that were signatory, actually accelerated the pension funds from 1978 until

roughly, 1990, 1992, and we fully funded those plans.

Guess what, a lot of those companies that sat here today and promised their pensioners pensions did not pay a cent to fund those pensions. These guys did. They stayed with it, paid an accelerated amount to fund the pensions that the previous companies had promised but not paid for.

Mr. HANCOCK. One of the things that we are looking at in the tax bill is a modified form of funding of medical care for individuals, which is called the medisave account. I hope we are able to

get that done.

Mr. TRUMKA. I hope we can work with you on that.

Mr. FARRAND. May I add an addendum? I am sure he is unaccustomed to having me agree with him, but I am going to agree with him in two respects.

One, I would associate ourselves with his remark that we are willing to work with the Committee to address some ways in which small companies that are financially unable to meet their premium obligations can be dealt with, as long as there is the basic principle that wherever they are capable, the former employers ought to be responsible for their own retirees.

Having said that, I want to address one thing in H.R. 1370 that you reminded me of just now. That bill in simple terms, as I understand it, would relieve the reach-back companies of premium obligations whenever there is a cash surplus in the benefit fund exceeding 10 percent of the annual claims against the fund. That

is a real problem.

There is a backlog of payment streams, of payment requirements and claims, maybe 60 to 90 days. If you cut off the cash or cut off a large portion of the premiums due starting in January because there happened to be a 10 percent cash overhang from the previous year, that fund will be certainly in cash flow difficulties if not in deficit in very short order.

The analogy I would think of is if you have a Social Security trust fund now and it is over funded, if you excuse the employers and employees of the country of contributions to the Social Security trust fund because there happened to be a temporary cash surplus in the account, I think you would have to agree that it would go belly up in a hurry and that is the same thing that is in your bill. That is why we are concerned that once you open that door, once

you reduce the payment stream the fund may slip into a deficit

quickly.

There is a court case out there that says the premium levy is too high. That needs to be addressed. There may be assignments out there that are erroneous, but that is being addressed within the mechanism of the act and I do not believe it needs to be corrected by statute.

Mr. HANCOCK. Thank you.

Chairman JOHNSON. Mr. Portman.

Mr. PORTMAN. I thank the Chair and appreciate the testimony. I did get to hear from Mr. Trumka before I left. I was intrigued by your comments on small business relief. I was happy to hear

your response to earlier questions on that by, Mr. Hancock.

Just a brief comment. We were talking earlier about the constitutional challenges. You indicated that, yes, many of these companies, smaller and midsized in particular, have expended what would seem to be an enormous amount for legal and accounting fees and that their challenges had been unsuccessful. We have the recent Unity Real Estate case.

I understand that goes more to a takings issue than to a due process claim. That case would only, as I read the summary, confirm what we have learned today, which is that there are companies who are in a situation where application of the 1992 act is patently unfair. Are you familiar with that case?

Mr. TRUMKA. Not with that specific case, no.

Mr. Portman. I think it was June of this year or maybe late May, but it was, in essence, saying that this was more an appropriation than a public program concerned with employee benefits, the 1992 Act. I think there is some evidence that, to me, is consistent with what we have heard today that there are certain companies that find themselves in a very unfair situation.

I earlier commented on the super reach-back companies, and I do think they are in an unusual situation. Mr. Farrand talked about the fact that every company situation is different. I am sure it is. And every commitment is different whether in writing or otherwise, but I think the 1978 timeline is a difference with a distinction

or a distinction with a difference, or both.

I think we have to be careful about just saying companies that cannot afford to pay or small companies might be deemed to get some relief, which I agree with, but we need to look at the fairness and do this in a principled way. I see super reach-back companies as being in a different situation. Do you have any comment on that?

Mr. TRUMKA. I do indeed. First of all, what I would say is there is a number of—in the coal industry there are a number of situations where we have current companies that are paying for the past sins of some of the companies that were in front of us today, the Abandoned Mine Reclamation Act, for instance.

Whenever a company went out of business before they just left the mine there; we have to reclaim that. Whenever we had companies that had their employees incur black lung and we decided to compensate for that, those people were gone and we had these companies that are ultimately paying through a black lung tax. Some of the unfairness, I guess, is on both sides, and let me tell you what we face going into the negotiations. We had companies that were still in business that were really trying to be honorable and live up to the promises that they made and they were paying \$3 for somebody else's pensioners for \$1 of their own pensioners.

They said to us, and they weren't posturing; they said, we cannot do it anymore. We cannot continue to pay because things keep shrinking smaller and smaller. And they tried to address that specifically in 1978, and with the Evergreen clause. It was called the Last Man's Club. They wanted everybody to know that there wouldn't be a last man. But we still kept getting more of a last man around.

The 1950 figure came about with negotiations with the White House, and the 1950 figure, whenever they decided that they did not want an industry tax actually came from the White House negotiators, the Bush administration negotiators. They realized we had to have a certain amount of money and if you weren't going to have a tax across the industry like you did with the abandoned mine lands or the black lung tax, you had to have a funding stream.

He pays for every single one of his pensioners plus he pays a big share for the orphans in addition to his own. He has never gotten a break on that. The only way that we could have got the funding stream necessary was for them to reach back, and that was, as I recall, a proposal from the White House negotiators.

Mr. Portman. Even the Bush White House wasn't perfect, right? I understand that context. I think we could talk all day about the history of that, how it evolved, whether it was a reasonable proposal or not or whether it was put forth as a reasonable proposal in terms of super reach-back or whether anybody thought that it would ever be enacted.

What I come back to is I think it is worth backing up and taking a look comprehensively at the 1992 act and how it applies to various companies. I do see a distinction between those who were part of the Evergreen process in 1978 and those who were not.

You look at individual circumstances and it is not being applied fairly. At the same time, I will agree that based on the testimony I heard earlier today, the degree to which there is going to be a surplus has yet to be seen. I think that is an honest evaluation. I do not think anybody can pinpoint what that number will be or that there will be a significant surplus. I hope I am wrong and I think it would depend on external factors such as the new capitation plan.

Mr. TRUMKA. I hope you are wrong, too.

Mr. PORTMAN. I do think we need to look at the whole thing. I am encouraged by your statement on small business and would encourage you to work with us to look at the whole situation and try to come up with something that is fair, particularly as it relates to those companies who were not in the coal business at the crucial time in 1978, weren't part of that agreement, were not part of the Evergreen clause.

Although I have many questions, Madam Chair, my red light is on and I yield back.

Chairman JOHNSON. There is one other area that I think we need to pursue. Do the participating companies or the union—does anyone exercise any oversight over this fund and the medical

expenditures?

Mr. TRUMKA. Yes. There is a number of people that exercise oversight over it. The companies do because they want to keep costs as low as they can. We do because we want to keep medical benefits. Under this fund we are on a locked formula, so costs cannot go out of sight without us losing the benefits. In addition, you have Social Security and DOL.

Chairman JOHNSON. Perhaps one of you could explain why when prescription drugs are such a large part of your expenses you have only this year adopted a protocol to help manage those benefits. It

seems to me that would have been done 1, 2 or 3 years ago.

Mr. TRUMKA. It was done several years ago. In the sixties we had mail-order drugs that were mailed out from the funds. Those programs ultimately went by the wayside. There are a lot of prescriptions because this population is so old they are on maintenance drugs.

We have, as far back as 1978, begun doing cost-containment with those health care costs. If you look at them, this group of beneficiaries, despite their age being older than the Medicare popu-

lation, does better than Medicare does.

Chairman JOHNSON. Why, if that is the case, and 90 percent are Medicare folks and you are getting a capitated Medicare payment and they cost less than Medicare, why are you having trouble paying for this?

Mr. TRUMKA. Here is why. Because Medicare CPI does not use

utilization.

Chairman JOHNSON. That is the complaint—

Mr. TRUMKA. It gives you a cost increase for cost, but this group because of their age, and the actuaries talked about this today, I believe; this group has a much greater utilization because of their age. Because of utilization, even though they do better at the cost, the utilization is higher. That is why the medical CPI, as it is predicated being paid to them, will not cover this group, long term

costs even if, as we are currently doing, we do better.

Chairman JOHNSON. We need a better explanation of the figures we have showing. What percentage of outlays are covered by Medicare reimbursements, because it is 50 percent one year and 47 percent another year. If you have 90 percent Medicare recipients, you ought to be able to do better than that. Even if Medicare is under reimbursing, it is not under reimbursing 50 percent. It is just—I do not know what the explanation is. I just want to make sure that it is clear that we need better information about the governance of the medical expenses and of this fund as we move forward.

I also want to get back to Mr. Farrand's comment that you want to stay with the principle of people paying for their own employees. You know, in 1988, some companies chose to satisfy by a withdrawal liability provision that was supposed to provide them with freedom in a sense by making a substantial settlement when they left the fund.

Those companies, in a sense, are now paying a second time. I just point that out because I find very disturbing the inequities that this law has imposed on many employers, and I find it disturbing to see employers who are only distantly related to coal production contributing to richer benefits for others than they are

contributing for their own employees.

I see this from the point of view of a policymaker who watches these issues across our society, and just as in the pension area where companies went bankrupt, the government picks up those costs through the Pension Benefit Guarantee Fund, but we do not pick up whatever was negotiated. We pick up a minimum cost. The fact that from the 1988 agreement to the 1992 law there wasn't any renegotiation of benefits, which has gone across every industry throughout our society, there wasn't any change in the extraordinary definition of dependents or perhaps any look at the benefits. That is concerning to me.

Mr. TRUMKA. I am concerned about a lot of things. First, your question about the reimbursement rate not paying for Medicare

drug costs. If you give it to me, I will be glad to answer it.

Second, if you show me the companies that have paid for it and you think this will be a double payment because they withdrew from the funds and paid for the amount of their health care, I will

be happy to answer that as well.

And third, I hope you are not suggesting by your statements that these people do not deserve the benefits they receive. They get pensions of under \$200 a month. They gave up pensions to get this level of benefits and then \$210 million was taken out of their pension funds to pay for the orphans. They could have received increased pensions. Now, they are too old to go back and strike the deal again.

This deal was they would get this level of benefits and this level of pension and not one of them has said they want anything better than the deal. They just want the deal. Those benefits have been examined by the Dole Commission and found to be fair when you

combine them with the pension that they get.

My dad and mother happen to be recipients of those benefits, that pension and that health care, and their employer, LTV, dumped them after my dad worked 44 years for that company, dumped them and said, too bad; you are not going to get health care. It nearly killed my dad. And like my dad, there are thousands of them out there.

I hope you are not suggesting by this that the benefits they get

are underserving, because they earned every one of them.

Chairman JOHNSON. We are certainly conscious of the importance of health benefits to retirees and that this industry has managed the health benefits differently than other industries because of the health exposure in this industry, which is different than in most industries.

I just think it is important to recognize that in this particular area under this particular law the issue of fairness is really difficult, and we have reached a point where I think we do have to look at what is happening to some of those that were affected in a way that, frankly, no other law has ever affected people in our society.

Under no other law has government come back 20 years later and said while it used to be this way, now it is that way. The only other parallel I can think of is Superfund and holding people retroactively liable for things that were perfectly legal and actions that they took that they thought were complete. We are having a lot of trouble with that.

I think this all deserves a careful review. We certainly are sensitive to the needs of the people involved, but we are going to be looking and seeing what we can find, how we can alleviate some of the gross injustices that this law has imposed on some companies. That is where I am starting. I am not starting with any conclusions, but I think the questions are significant.

Mr. Farrand.

Mr. FARRAND. Thank you. As the Committee proceeds in this manner, I would ask you to keep the concept of fairness in context. It is a relative term. I go back to the dilemma that I outlined ear-

lier. You had some not very happy choices.

Either you could let this fund go bankrupt and in effect deny the benefits to the people who were promised them and that will be extremely unfair. You could impose the costs of this fund across the entire industry, including companies that never had any connection with the national UMWA agreement, and that was perceived to be unfair.

You could impose these costs on a shared basis across all the signatories past and present and that was deemed to be difficult to do because it did not determine how you would precisely apportion the share of costs. Or you could go back to the principle we mentioned earlier, which is, the companies that made the promise should pay. I am not suggesting in each case that is fair in an absolute context, but I would ask you to keep in mind the relative context.

Mr. Henley. I wanted to add that the fairness, as Mr. Farrand said, cuts both ways, and there is a fairness issue in companies like ours being required to pay for other people's retirees, and what I have tried to reiterate in my remarks is that this act restores a good old American custom of taking care of your own, and these men who worked and made these companies, in many ways, what they are today are people that are owed something this act has restored that equity and that balance.

While you have heard many cases that it may be unfair for being brought in, to cast this act out, then, will recreate what was, in fact, an ever-increasing unfair burden on other companies. So, it is a very difficult balancing act that you are about. I fully agree.

Chairman JOHNSON. I thank you for your testimony and for your patience throughout the day. I thank my two colleagues who hung in here with me for most of the day.

The hearing is adjourned.

[Whereupon, at 4:25 p.m., the hearing was adjourned.]

[Submissions for the record follow:]

STATEMENT OF THE ASSOCIATION OF BITUMINOUS CONTRACTORS. INC.

before the

SUBCOMMITTEE ON OVERSIGHT OF THE COMMITTEE ON WAYS AND MEANS

on the

COAL INDUSTRY RETIREE HEALTH BENEFIT ACT OF 1992

The Association of Bituminous Contractors, Inc. ("ABC") submits the following statement to the Subcommittee on Oversight of the Committee on Ways and Means, to be included as part of the printed record of the June 22, 1995, Oversight Hearing on the Coal Industry Retiree Health Benefit Act of 1992 ("Coal Act").

ABC is an association of approximately 100 construction companies which perform construction work for coal company customers. ABC members are small and medium-sized independent construction contractors. ABC members are not coal mining companies, and do not mine coal. Unlike coal companies which perform work under the National Bituminous Coal Wage Agreement, ABC members are covered under a separate collective bargaining agreement with the United Mine Workers of America known as the National Coal Mine Construction Agreement. ABC and the UMWA have negotiated a series of such agreements beginning in 1968. Under the National Coal Mine Construction Agreement, retired UMWA construction workers are provided health and other benefits from a separate multiemployer plan known as the 1978 Retired Construction Workers Benefit Trust. These benefits are funded by contributions from employers signatory to the Construction Agreement.

Congress enacted the Coal Act believing that certain coal mining companies had "dumped" their retirees into the old UMWA Benefit Funds (known as the 1950 and 1974 Benefit Funds) and that the only way to make the Benefit Funds solvent was to "reach back" to pre-1988 Coal Wage Agreement signatories for contributions. In formulating the "reachback" definitions to accomplish this goal, Congress inadvertently used language that has been interpreted to bring construction contractors, members of ABC and other employers signatory to the National Coal Mine Construction Agreement, within the scope of the Coal Act. No one in Congress or elsewhere ever expressed the belief that construction contractors were intended to be targets of the Coal Act. Nonetheless, since October 1993, the federal agency charged with assigning UMWA retirees to their former employers (previously the Secretary of Health and Human Services and now the Commissioner of Social Security) has been pursuing ABC members for contributions under the Act.

ABC submits that the Coal Act should be amended to clarify that assignments of beneficiaries cannot be made to employers on the basis that they were signatory to the National Coal Mine Construction Agreement. This can be accomplished by amending the definition of "wage agreement" under the Act to specifically exclude the National Coal Mine Construction Agreement in the same manner that the definition of "wage agreement" specifically includes the National Bituminous Coal Wage Agreement. This amendment is required for the following reasons:

ABC members and their employees are not part of the coal industry to which the "reachback" provisions of the Coal Act were aimed. Rather, ABC members are part of the construction industry. They work under an agreement with the United Mine Workers of America only when they perform construction work for union coal commanies.

ABC and the UMWA have successfully negotiated collective bargaining agreements with health and pension plans to take care of retired UMWA construction workers. The most recent agreement went into effect on February 11, 1995, and requires signatory contractors to make contributions to the 1978 Retired Construction

Workers Benefit Trust to fund health benefits for construction worker retirees.

Although a handful of beneficiaries of what was formerly the UMWA 1950 Benefit Plan at one time had some measure of employment with ABC members, the inclusion of these individuals in the 1950 Fund was the result of the UMWA's desire to provide them benefits from the 1950 Fund. With the concurrence of both the UMWA and the BCOA, whose trustees controlled the 1950 Fund, these individuals were provided benefits from the 1950 Fund without any expectation of contributions from ABC members. Therefore, whatever funding difficulties the 1950 Fund ultimately experienced can in no way be attributed to ABC member companies. The concept of "reachback" simply does not apply to construction contractors who did not have any obligation to make contributions in the first place. It is not only unreasonable but totally irrational and arbitrary to hold construction contractors liable for a problem they did not create.

The assignment of Combined Fund beneficiaries to construction contractors unfairly burdens ABC members who have fully provided for the health benefits of their UMWA construction worker retirees, and who have lived up to all their obligations under the National Coal Mine Construction Agreement. Even though the number of Combined Fund beneficiaries assigned to construction companies is small in the overall scheme of the Act (less than 100), it creates an unfair, unreasonable and intolerable burden on those contractors who are required to subsidize another industry's problem.

The inequities being inflicted on construction contractors can and should be eliminated by amending the Coal Act to exclude the National Coal Mine Construction Agreement from the definition of "wage agreement" as that term is used under the Coal Act. Because the number of beneficiaries assigned to construction contractors is os small, such amendment will not significantly affect the current or future financial status of the Combined Fund.

Respectfully submitted,

ASSOCIATION OF BITUMINOUS CONTRACTORS, INC.

Record Statement by SMALL NON-COAL PRODUCING COMPANIES AGAINST THE REACHBACK TAX Submitted to the SUBCOMMITTEE ON OVERSIGHT COMMITTEE ON WAYS AND MEANS

Hearing on Coal Industry Retiree Health Benefit Act of 1992 June 22, 1995

This written statement for the printed record of the public hearing on the Coal Industry Retiree Health Benefit Act of 1992 is being submitted on behalf of small, non-coal producing companies, whose existence, and the lives of whose owners and employees, have been drastically affected by the reachback provisions of the Act. The statement is submitted by representatives who have obtained the consent of over 75 companies to express the views of small, non-coal producers under the title, "Small Non-Coal Producing Companies Against the Reachback Tax."

"Small Non-Coal Producing Companies Against the Reachback Tax" is not an officially organized or incorporated entity. It is the name given to a class of companies (a) who are small, most having gross annual revenues less than \$25 million; (b) who are reachback and super reachback companies, none having signed the 1988 UMWA-BCOA Wage Agreement or a subsequent agreement; (c) who ceased coal mining operations before February 1, 1988; (d) who fulfilled all obligations to the last UMWA-BCOA Wage Agreement to which they were signatory; and (e) who, by virtue of their small size, are drastically impacted by the financial burden imposed upon them by the reachback provisions of the Act.

Many of the companies who share the views expressed herein could not afford to hire, for one day, the legal staff and lobbyists on which the large 1988 signatory and reachback companies have expended millions in attempting to shift the cost of UMWA retiree health benefits, which prior to the Act were governed solely by private contract. The position of these small companies needs to be expressed and, more importantly, needs to be heard.

These small companies had no opportunity to participate in any of the discussions or negotiations that led to passage of the Act. Many did not even know about the Act until they received notice that they were expected to pay premiums for beneficiaries of benefit plans into which they had made all required contributions, and which were solvent when they left the coal business.

These small companies cannot be accused of "dumping" retirees. Most were small operators who were forced out of coal mining by large operators, whose capital allowed them to develop large mines with lower production costs, and whose coal pricing tactics left small operators little choice but to cease operations. The reduction in small and medium-sized mines is evident from Table VI. Trends and Number of Mines by Size (Mine Production Range) on page 74 of the Committee Print, "Development and Implementation of the Coal Industry Retiree Health Benefit Act of 1992" dated June 22, 1995 (hereinafter "Committee Print").

These companies, though small in size, represent the largest group in number of companies impacted by the Act. According to the Committee Print, as of March 31, 1995, 257 reachback companies are responsible for premiums for assigned beneficiaries. Of this group, our information indicates that only 103 are actually paying premiums, of which more than half are believed to be small, non-producing companies. The remaining 154 reachback companies are paying nothing, largely because they cannot afford to. Some of these companies have filed bankruptcy. Some are engaged in litigation. All run the risk of crippling fines and penalties under the Act, mainly because they have no other choice.

These small companies, which have now been assessed unexpected premiums under the Act, did not run from their mine operation obligations. They survived. They met reclamation and environmental obligations, preventing these from being dumped on state agencies or the Abandoned Mine Lands Fund. They met Workers' Compensation and Federal Black Lung obligations. Some even moved into new industries, creating jobs, paying wages and taxes. They should be applauded, but instead, Congress rewarded them with the reachback provisions of the Act, imposing totally unexpected and unforeseeable obligations for retiree health care which, by private contract and court decision, had never before been their obligation.

These small, non-coal producing companies now come forward as the group which most closely embodies Congressman Pickle's warning,

"Let me also warn my colleagues, you have not heard the last of this issue. We have no idea who all these companies are. There will now be a rush to track them down and tell them that they will have to pay millions of dollars a year into this health plan over which they have no control. Some will be forced into bankruptcy, others will be forced to lay off workers. And they will blame you and me, and they will be right. So plan today what you will tell them, it won't be easy." Remarks of Congressman J. J. Pickle, Before the House Ways and Means Commitee, October 5, 1992.

These small companies, which no longer produce coal and which did not sign the 1988 Agreement, now seek a fair response. We played by the rules. We met our responsibilities. Why should we pay the penalty while other companies reap substantial benefit from the Act? As the Committee staff has reported:

"Absent the provisions of the 1992 Coal Act, the 1988 signatory companies would have been paying essentially 100% of the expenses of the UMWA Retiree Health Benefit Funds. In contrast, during fiscal year 1995, the premiums paid by the 1988 signatory operators are expected to contribute approximately 38% of the income of the Combined Fund. Premiums paid by the reachback companies will account for approximately 24%, the transfer from the UMWA 1950 Pension Fund 32%, and investment income on the accumulated assets of the Fund 65%."

Committee Print at page 34.

The small, non-coal producing reachback companies appeal to the members of this Subcommittee for legislation which will address the devastating impact of the Act upon them. H.R. 1370 is not such legislation, and Small Non-Coal Producing Companies Against the Reachback Tax oppose it. H.R. 1370 does not solve any problems for small reachback companies. As indicated previously, many are not paying premiums, H.R. 1370 does not relieve any of these companies from liability for premiums, fines or penalties - they remain subject to collection efforts for premiums due since October 1, 1993, and further subject to litigation costs and expenses for contesting premiums.

More importantly, H.R. 1370 will use up the surplus which has developed in the Combined Fund, eliminating one possible source of funding relief for small companies. The beneficiaries of H.R. 1370 are the large reachback companies, many of whom are still producing coal and would be responsible for payments for retiree health benefits under the Evergreen litigation. H.R. 1370 merely adds injustice upon injustice by relieving producing companies who, absent the Act, would otherwise be liable for retiree health care under the Evergreen clause.

Small Non-Coal Producing Companies Against the Reachback Tax urge that H.R. 1370 be withdrawn and be replaced by legislation which, at a minimum, gives meaningful relief to small, non-coal producing reachback companies drastically impacted by the Act. In oral testimony before the Subcommittee, representatives of the BCOA and the UMWA expressed support for such legislation. Moreover, representatives of our group have met with Senator Rockefeller, the principal sponsor of the Act, and he has expressed a willingness to entertain amendments to the Act which relieve small companies of unnecessary burdens so long as relief does not jeopardize retiree benefits.

Relief for small companies is not an expensive proposition. Small Non-Coal Producing Companies Against the Reachback Tax estimate that of the \$47,900,000 in annual premiums now being paid by all reachback companies, only \$5 million is being paid by small, non-coal producing reachback companies. With a surplus in the Fund in excess of \$100 million, relief of \$5 million annually is a relatively small amount, but it will go a long way towards relieving the desperate situation the Act has created for many small companies.

We urge the members of the Subcommittee to consider legislative alternatives to H.R. 1370, and to meet with other interested Congressmen on both sides of the aisle to discuss alternatives which will not again leave small, non-coal producing companies and their employees stranded behind all other interest groups.

We appreciate the opportunity to present this written statement and would welcome the opportunity to meet with and respond to inquiry from any member or staff person concerning the comments herein or possible alternative legislation.

Small Non-Coal Producing Companies Against the Reachback Tax

STATEMENT SUBMITTED BY RICHARD D. RIVERS VICE PRESIDENT BERWIND CORPORATION OF PHILADELPHIA BEFORE OVERSIGHT SUBCOMMITTEE HOUSE WAYS & MEANS COMMITTEE June 22, 1995

Madam Chairwoman, I am Richard D. Rivers, Vice President of the Berwind Corporation of Philadelphia, Pennsylvania.

The purpose of my testimony is to endorse subcommittee action on H.R. 1370 as a first step in rectifying a grievous wrong that was inflicted upon certain "Super Reachback" companies during consideration of the Coal Industry Retiree Health Benefit Act of 1992.

I would like to briefly outline why I believe these companies in general, and Berwind in particular, should be totally exempt from the Coal Act:

A. History and Purpose of the Coal Act.

- The purpose of the Coal Act was to work a "bail out" of two health benefit plans for UMWA retirees. The two plans were created in 1974 by the UMWA and the coal companies that were BCOA members at that time.
- The Coal Act in effect merged the two benefit plans created in 1974 into a new Combined Benefit Fund and then required not just the signatories to the 1974 and later contracts with the UMWA, but any company which had signed a contract since 1950 to make contributions to the Combined Fund.
- Because the 1974 plans were perceived to be in dire and immediate financial distress, portions of the Coal Act were hastily drafted and adopted without a hearing and with scarcely any discussion.
- 4. As a result, the Coal Act imposed, almost inadvertently, substantial liabilities on "super reachback" companies such as Berwind -- i.e., companies which ended their relationship with the UMWA and the BCOA before the 1974 benefit plans were even created.

B. Including the "Super Reachbacks" was Almost Unintentional.

The Coal Act's "super reachback" to companies that had gone out of the coal mining business prior to the 1974 NBCWA was all but unintentional.

- The Coal Commission's recommendation was that, at most, only 1978 and later signatories should be held responsible for the solvency of the plans established in 1974.
- No one seems to know why, or at who's behest, the "super reachbacks" were included in the Coal Act. They were stuck in just before the Act was passed and without any sort of notice or hearing.

C. The Plight of the "Super Reachbacks"

 The plight of Berwind Corporation of Philadelphia typifies the Coal Act's egregiously unfair applicability to the pre-1974 "super reachback" companies.

- a. Berwind ceased mining coal and employed its last UMWA miner in 1962 -- 30 years before the Coal Act was passed. At that time, Berwind was signatory to the 1950 NBCWA which required Berwind to make a defined contribution of 30 cents per ton of coal produced to the UMWA Welfare and Retirement Fund of 1950, but only during the life of that Agreement. That Fund's Trustees had sole power to decide what benefits would be paid and to whom. Berwind fully satisfied its obligations to the 1950 Fund by contributing over \$8 million to it between 1950 and 1962, a period during which Berwind had net operating losses from its coal operations of almost \$10 million. The 1950 Fund was solvent at the time Berwind ceased participating in it. It was also solvent in 1974 when its assets were delivered over to the newly created 1950 Pension Plan.
- b. Beginning in 1974 -- 12 years after Berwind ceased mining coal, ceased employing UMWA-represented miners, and ceased participating in, or benefiting from, UMWA/BCOA contract negotiations -- the BCOA operators and UMWA voluntarily agreed to significant changes in the provision of health benefits to UMWA retirees. The 1950 Fund, a "defined contribution" plan, was eliminated, and it was replaced with two "definedbenefit" plans. Thereafter, changes were intentionally made in the funding mechanism for the benefit plans created in 1974 to reduce premiums paid by the large, more labor-efficient and highly profitable operators who were, and still are, in control of the BCOA. Changes were also made in 1974 to the plans' benefits and beneficiaries which predictably increased the newly created plans' operating costs. As a result of those changes, (and notoriously lax claims administration by the Trustees), and to no one's surprise, the plans created in 1974 became financially weak. The UMWA and the BCOA convinced Senator Rockefeller that the Coal Act was the solution to that problem.
- 2. The extreme retroactive "super reachback" liabilities created by the Coal Act are substantial. Berwind must pay over \$2 million per year to the Combined Benefit Fund. Berwind's total premiums are expected to reach \$25 million or more by the time all the Combined Benefit Fund's beneficiaries die. A significant portion of Berwind's \$25 million premiums will be attributable to persons who never worked for Berwind at all and, in at least one instance, to a miner who worked for Berwind in 1949 only long enough to earn a grand total of \$7.75 in pay.
- 3. Moreover, all of the funding and benefits changes made to the benefit plans in 1974 and thereafter were, of course, the result of trade-offs inherent in the collective bargaining process. The trade-offs were presumptively beneficial for, and advantageous to, the members of the BCOA at the time, but they were of no benefit to strangers to the 1974 and later UMWA contracts, such as Berwind and the other "super reachbacks".

D. The Combined Benefit Fund Doesn't Need the "Super Reachbacks".

All the "super reachback" companies together now contribute an
estimated 2.9 percent of the Fund's premiums. That amount could
either be paid from the Combined Benefit Fund's ever-growing
surplus or it could easily and automatically be picked up by the

remaining contributors to the Combined Benefit Fund \cdots i.e., the BCOA members who should have made those payments in the first place.

2. By and large, the present BCOA members are financially well able to pay for the benefits they created. More than 80% of the tons produced by BCOA companies are produced by two very large, highly profitable, foreign-controlled coal operators. They are the companies reaping the benefit from the Coal Act. They have bragged that the Coal Act is saving them millions of dollars per month because other companies such as the "super reachbacks" are being forced to pick up their obligations. THAT IS JUST NOT RIGHT!

E. "Super Reachbacks" Should be Totally Exempt.

In conclusion, let me state that the only fair and equitable solution to this situation is to grant relief to all companies which have been required to make payments for which they should not be obligated, as is called for in H.R. 1370. In the case of "Super Reachback" companies, that requires a total exemption from the Coal Act.

Richard D. Rivers Vice President Berwind Corporation

STATEMENT OF CLEVELAND-CLIFFS INC

to the SUBCOMMITTEE ON OVERSIGHT COMMITTEE ON WAYS AND MEANS

HEARING ON COAL INDUSTRY RETIREE HEALTH BENEFIT ACT OF 1992 June 22, 1995

This written statement for the printed record of the public hearing on the subject Act is being submitted on behalf of Cleveland-Cliffs Inc and its consolidated subsidiaries ("Cleveland-Cliffs") by M. Thomas Moore, who is Chairman and Chief Executive Officer of the parent company.

Cleveland-Cliffs is an Ohio-based natural resource Company that manages five iron ore mines and pellet plants located in Michigan and Minnesota with 4,900 employees and an annual production capacity of 34 million tons. It does not manage or have an ownership interest in any coal mine or coal-related operation.

The Act affects Cleveland-Cliffs, solely as a so-called "reachback" company, and as such we are paying assessments of approximately \$1 million per year. Our exposure is brought about by prior activities and transactions of a company which was acquired by Cleveland-Cliffs in 1986 for its iron ore businesses. It is our view that all health benefit obligations of this acquired subsidiary to coal retirees and their beneficiaries have previously been fulfilled.

Our assessments are flowing into the so-called "Combined Fund" which is used to pay coal industry retiree health benefits. The benefits and their original contemplated funding were provided by multi-employer collective bargaining between the United Mine Workers (UMW) and Bituminous Coal Operators Association (BCOA) member companies. However, substantially-reduced employer contributions commenced with the 1988 agreement, as did the financial problems that led to the Act's reachback provision. We contend that the reachback assessments are essentially an indirect subsidy to present member companies of the BCOA, which should be held solely responsible for the health benefits of BCOA beneficiaries.

Not only do we question federal mandates to solve financial problems arising from private contracts, but we believe that forcing prior signatory operators no longer in the coal business to subsidize the cost of benefits inadequately funded by signatories to <u>subsequent</u> coal wage agreements sets a bad legislative precedent and is grossly unfair to reachback companies.

While in prior years we have expressed in considerable detail our rationale for strongly opposing the reachback provision's enactment, we are not now seeking its repeal. We are merely asking for conditional relief because of the growing surplus status of the Combined Fund, and we are prepared to resume payments in the event the Fund resources are not sufficient in the future to assure payment of approved health benefits to beneficiaries.

H.R. 1370 is the answer regardless of differing points of view about the original requirements of the Act, the present surplus condition of the Combined Fund, or the adequacy of the Combined Fund to meet future health benefits. This is especially true in light of the nationwide trend toward declining health benefit costs. H.R. 1370 merely suspends the reachback assessments on the condition that an adequate Combined Fund surplus continues to exist; and it requires the resumption of reachback assessments if the Combined Fund surplus falls below a reasonable "safety cushion" amount.

The Combined Fund's surplus is now approaching \$150 million. With the safety cushion feature in place to automatically resume reachback contributions if additional funds are needed in the future to satisfy health benefit claims, there is no sound reason to oppose H.R. 1370.

It is perplexing, however, that BCOA member companies and others have found a way to attack the bill based on a controversial projection of future costs. An actuarial report has recently been produced which projects a Combined Fund

deficit in 2003 as its base case estimate. This estimate and its health care trend rate assumptions are vastly in conflict with other studies that project a huge, constantly growing surplus; and serious questions have been raised about its assumptions by a well-recognized actuarial organization.

Suffice it to say that this recent report is too dependent on questionable assumptions concerning estimated cost trends to justify denial of equitable relief to reachback companies. In any event, should there be valid doubt about the surplus condition of the Combined Fund in years to come, the safety cushion feature of H.R. 1370 provides a safeguard that ensures appropriate restoration of cash resources.

Approval of H.R. 1370 is urgently requested.

FLORENCE MINING COMPANY

July 5, 1995

Phillip D. Moseley, Chief of Staff Committee on Ways and Means U. S. House of Representatives 1102 Longworth House Office Building Washington, DC 20515

Date of Hearing: June 22, 1995

The Florence Mining Company is a 1988 last signatory operator as defined in the Coal Industry Retiree Health Benefit Act of 1992, and as such maintains an individual employer plan for its pensioners. Additionally, Florence is liable for payment of per beneficiary premiums for any pensioner assigned to it in the 1992 Benefit Plan. We recently received notice from the UMWA 1992 Benefit Plan that the Trustees of the Plan were preparing to implement the security provisions of the Act. Based upon the annual per beneficiary cost set by the Trustees for 1995, this action will require us to post security of approximately \$1.5 million. It must be noted that the 1995 annual cost of \$3,077 set by the Trustees represents a 31% increase over the previous year's cost.

Section 9712(C) of the Coal Industry Retiree Health Benefit Act of 1992 mandates the development of managed care and cost containment rules by the UMWA 1992 Benefit Plan, which may then be utilized by 1988 last signatory employers to assist in controlling costs in their individual employer pensioner plans. To date, no such managed care and cost containment rules have been forthcoming from the 1992 Benefit Plan.

The Bituminous Coal Operators Association and the United Mine Workers of America have reached agreement on certain cost control measures for the BCOA company plans mandated by the Act. These controls are not available to 1988 last signatory operators. However, the implementation of the BCOA/UMWA cost controls serves to verify the need for them, a need which has not been met by the Trustees of the UMWA 1992 Benefit Plan.

The UMWA 1992 Benefit Plan is preparing to impose substantial security requirements upon 1988 last signatory operators under the terms of the Act. At the same time, the UMWA 1992 Benefit Plan has failed to develop and make available to the 1988 last signatory operators the managed care and cost containment rules mandated by the Act. This imposes a double penalty on the operator in that increasing costs, as evidenced by the Plan's set 31% increase for 1995, requires that higher security be posted and in that the operator is unable to implement cost-saving measures in its individual employer plan.

Unless and until the Trustees of the UMWA 1992 Benefit Plan have fulfilled their cost control obligations under the Act, no security requirements should be added to the already heavy burden placed on the 1988 last signatory operators by the Act. Additionally, legislation should be considered to force cost controls on the Trustees because of the excessive cost increases in the premiums.

Very truly yours,

Ralph Woods President

cc: Rep. John P. Murtha Sen. Rick Santorum Sen. Arlen Specter

RECORD STATEMENT BY LINDSEY COAL MINING COMPANY LIQUIDATING TRUST TO THE OVERSIGHT SUB-COMMITTEE OF THE HOUSE WAYS AND MEANS COMMITTEE CONCERNING THE 1992 COAL ACT

More than fifty years ago, between August of 1946 and August of 1952, a small Western Pennsylvania mining company, Lindsey Coal Mining Company, Inc., (Lindsey), employed less than 20 men on a full or parttime basis, many for less than a two year period. With the nationalization of the mines, Lindsey was required to pay into the "welfare and retirement fund" on a per ton basis, although Lindsey itself had never signed any BCOA agreement concerning these benefits. In 1952 Lindsey stopped mining, entirely and thereafter employed no miners, engaged in no mining activity, its only employee being one part-In the 1970s, Lindsey went into complete liquidation time clerk. (forming Lindsey Coal Mining Company Liquidating Trust) with all of its assets held in trust. The only income of Lindsey Liquidating Trust was passive in nature - royalty payments from gas leases, infrequent coal royalties and occasional sales of real estate. Monthly income now averages less than \$10,000.

In 1993, Lindsey Liquidating Trust was notified by the Combined Fund and the Social Security Administration that it was an Assigned Operator required to make payments to the Combined Fund or be subject to severe penalties. Lindsey Liquidating Trust has paid into the Combined

¹ There is current litigation in the United States District Court of the Western District of Pennsylvania at Docket No. 94-1043 concerning numerous challenges to the 1992 Coal Act. Court action involving this litigation has been pending January 1995 awaiting a decision on Motions for Summary Judgment. Copies of Briefs are available upon request.

Fund in excess of \$100,000 but has recently given notice that it may no longer be capable of making such payments after this summer due to drastically reduced income.

Although there is current legislation concerning relief for former mining operators designated as "Reachback companies", such proposed legislation is simply a moratorium upon payments because of the economic hardship caused those companies. We urgently request that Members of the Sub-Committee consider the drastic economic impact on Reachback companies. Remedial legislation should be implemented, not only in fairness to those entities caught in this oppressive web, but because the original legislation was fundamentally flawed and improper as applied to Lindsey and other companies in similar circumstances. The original intention of the 1992 Coal Act was to encompass only those companies which promised lifetime benefits to United Mine Workers. However, when the 1992 Coal Act was enacted, Congress incorrectly included within its purview, all companies that at anytime were affiliated with coal mining activity even though they never promised lifetime benefits.

The only argument that has been presented by the UMW Combined Fund in an attempt to justify inclusion of Reachback companies within the Coal Act, is that prior mine operators created "an atmosphere that promised lifetime benefits to those who would retire from the industry." However, even union mining companies did not promise lifetime benefits until 1978 when Lindsey Coal Mining Company was already of of business and in the process of liquidation. Therefore, how could a company such as Lindsey create an atmosphere of lifetime benefits when it was not even operating in the industry at that time?

Lindsey Liquidating Trust realizes the Committee will hear testimony from other Reachback companies as to the draconian effect of the 1992 Coal Act. We would hope Members of the Committee will correct the Act from the beginning and enact retroactive relief? Even by the broadest application of Constitutional principles, no free enterprise system can possibly survive if subjected to this form of intrusion by its government. There is much more at stake than "Reachback Relief." It is a question of Congress correcting a dangerous and confiscatory precedent.

Respectfully submitted,

Jeffrey Lundy, Esquire Attorney for Lindsey Coal Mining

Company Liquidating Trust

219 East Union Street P.O. Box 74 Punxsutawney, PA 15767 (814) 938-8110

We suggest the Committee examine analogous situations and decide whether Congress would ever conceivably apply such broad reaching legislation to other citizens. For example, in contemplating national healthcare reform would Congress even remotely consider legislation that required an amployer of a worker forty years ago, to pay premiums today for lifetime benefits of that former employee? Surely not.

STATEMENT FOR THE RECORD

Maxus Energy Corporation

Subcommittee on Oversight
Committee on Ways and Means
U.S. House of Representatives
Hearing on the Coal Industry Retiree Health Benefit Act
June 22, 1995

Maxus Energy Corporation is an independent oil and gas exploration and production company headquartered in Dallas, Texas. Maxus once owned and operated through its subsidiary, Gateway Coal Company, the Gateway Mine located in Green County, Pennsylvania. One of Maxus' predecessor companies acquired Gateway from two steel companies, both of which became bankrupt and defaulted on coal purchase agreements.

As a result of these bankruptcies, Maxus' predecessor lost over \$50 million on its brief ownership of the mine, which was closed in May of 1990. During the time the mine was active, United Mine Workers of America (UMWA) health benefits were provided as specified by the labor contract to which Gateway was a party. Currently, Gateway retirees receive health care benefits which are more comprehensive than those received by the retirees or employees of Maxus Energy Corporation. There is no charge for premiums, but these retirees provide about \$150 per year in copayments, according to the union's specifications.

In 1988, Gateway was an operator of a bituminous coal mine at which it employed hourly employees who were represented by the UMWA for bargaining purposes. Gateway became bound by the National Bituminous Coal Wage Agreement of 1988 (NBCWA) as a "me too"

signatory company, thereby accepting terms and conditions established in the 1988 NBCWA. The 1988 Agreement added a new wrinkle to the treatment of coal miner retirees by requiring, for the first time, that an employer ceasing operations must pay withdrawal liability to the multi-employer plans. Gateway was assessed and paid withdrawal liability of \$3,940,370.17.

As a result of the Coal Act of 1992, Gateway was assessed an additional \$5,180,526.95, and it is also currently paying premiums of \$115,107.54 every month. The combined Fund now holds Gateway's \$3.9 million withdrawal liability (as well as all of its other contributions), but will never accept any of Gateway's retirees. Instead, Gateway is required to maintain its individual employer plan for retirees perpetually and at its own expense.

H.R. 1370, the subject of the hearing, would amend the Internal Revenue Code to reduce the mandatory premiums to the UMWA Combined Benefit Fund by certain surplus amounts in the Fund. Maxus requests that we receive a credit against the cost of future premiums for the withdrawal liability payments previously made. Such a credit would put Maxus on the same financial footing as all other 1988 Agreement operators, i.e., we would be required to pay for the lifetime benefits of our retirees — we just would not be required to pay twice.

Thank you for your consideration of our request for equitable treatment in this legislation.

PALMER COKING COAL COMPANY

June 29, 1995

Phillip D. Moseley, Chief of Staff Committee on Ways and Means U.S. House of Representatives 1102 Longworth House Office Building Washington D.C. 20515

RE: Coal Industry Retiree Health Benefit Act of 1992

Hearing on Thursday, June 22, 1995 before Congresswoman Nancy L. Johnson's Subcommittee on Oversight of Ways and Means

Dear Mr. Moseley:

Our company is one of hundreds of victims of the Coal Industry Retiree Health Benefit Act of 1992, passed as a little-debated rider to the National Energy Policy Act. Our company left the coal industry nearly fifteen years ago and terminated our agreements with the United Mine Workers of America (UMWA). Upon termination in 1981 we paid the UMWA \$157,738.36 as part of our withdrawal liability. In addition, we ended up paying our attorney more than \$30,000.00 when we had to successfully litigate the UMWA's original miscalculation of our withdrawal liability.

In November, 1993 we received a letter from the UMWA and subsequently from the Social Security Administration informing us that we owed the UMWA another \$186,000.00. And each succeeding year our company has been billed a similar amount by the UMWA Health Fund. For a small company like ours, these kinds of liabilities are crippling. We left the coal industry fifteen years ago and now operate in business as a sand and gravel mining firm. Yet, thanks to the 1992 Act we face continuing liabilities for a situation which we did not create.

The 1992 law basically enacts an ex post facto tax to be paid by any company who was ever a signatory to a UMWA contract between 1950 and 1988. The tax is assessed by the Social Security Administration but paid directly to the United Mine Workers of America. A company who was signatory to a UMWA agreement is responsible for the health benefits of all retirees who last worked for that company. In the case of Palmer Coking Coal Company (Palmer), we were the last underground coal mine to operate in the state of Washington. As coal mines closed in Roslyn, Cle Elum, Wilkeson, Newcastle and Carbonado, miners from these communities came to our company in Black Diamond seeking employment during their last years of work. It was quite common for Palmer to hire 50

Coal Industry Retiree Health Benefit Act of 1992

year old, 55 year old, and even 60 year old coal miners seeking employment in the twilight years of their work life. These older coal miners came to Palmer several years away from retirement and usually worked to about age 65. Palmer, as a signatory to the UMWA contracts, assisted these elderly miners by giving them several years of employment during the period our company was phasing out our coal mines.

This accommodation of proud men in a declining industry has now come back to haunt Palmer. Though a miner may have worked thirty years for a different coal company in Roslyn, Palmer's employment of this man for the final two or three years before his retirement results in Palmer being liable for all of his (and his dependent's) health needs in retirement. As Palmer was the last coal mining company in Washington we now find ourselves responsible for scores of miners who spent most of their working years employed by other coal companies which went out of business and laid off their workers.

Palmer left the coal mining industry in the early 1980's but we did it honorably. All of our elderly UMWA coal miners were allowed to reach their retirement age before Palmer ended it's contract with the union. The 4 or 5 young men who were still employed in coal mining were transferred to new work in our gravel extraction business. All of our employees were treated honorably and with respect as we tried to meet their retirement needs. However, the UMWA, the large coal companies, and their friends in Congress chose to target innocent companies like us to bail out a mismanaged union health fund. And until the last of these retired miners (and their dependents) die, our company will be making monthly payments of \$15,000.00 to a union which we legally and financially left fifteen years ago.

An added injustice is the fact that as the "last signatory operator", Palmer Coking Coal Company is the "assigned operator" who is responsible for paying retired miners' health benefits. What this means is that although a coal miner may have worked twenty years for another coal operator, if he worked for Palmer Coking Coal Company during the last few years of his employment, Palmer is totally responsible.

Our company has requested from the Social Security Administration, the work histories of the list of miners assigned to us. We have been shocked to find that many of the assigned miners worked for Palmer for only 2 or 3 years out of a 30-40 year coal industry employment history. Yet under the "Coal Industry Retiree Health Benefit Act of 1992", Palmer is paying approximately \$3500 per miner or beneficiary, per year, to provide health benefits. In one particularly egregious case, a now-deceased miner worked for Palmer sporadically and part time over a period of four years. During this time period, Palmer paid about 5% of this man's total earnings. His total four year earnings from Palmer were a mere \$867 (1955-1958). Yet now, some 36 years later, Palmer is being

Coal Industry Retiree Health Benefit Act of 1992

assessed \$3500 per year in health benefits to this man's widow, a 57 year old, gainfully employed woman.

In another shocking example, Palmer Coking Coal Company, Inc. employed Waino Wakkuri in 1959 for a few weeks and he earned \$367.81. Now, some 36 years later, Palmer Coking Coal Company, a family partnership long out of the business of mining coal, must pay all of Mr. Wakkuri's widow's health and death benefits as administered by the UMWA Benefits Fund. Our cost this year for supplying said benefits will equal about \$3,500.00. And, we face continuing payments to the UMWA for future years.

The Coal Industry Retiree Health Benefit Act of 1992 is a cruel joke which has been visited upon hundreds of small companies like ourselves. This cruelty comes with a crippling price tag. This crippling price tag comes in the form of an unfair tax on small companies who have left the coal industry. The purpose of this unfair tax is to subsidize the big coal companies who comprise the Bituminous Coal Operators Association (B.C.O.A.) and their accomplices in the UMWA. We urge you to repeal this tax or at the very least exempt small coal companies from this pernicious "reachback" tax.

Very truly yours,

William Kombol, Manager Palmer Coking Coal Company

cc: Washington Congressional Delegation

Private Benefits Alliance

SUBMISSION OF THE PRIVATE BENEFITS ALLIANCE TO THE WAYS AND MEANS COMMITTEE OVERSIGHT SUBCOMMITTEE ON THE COAL INDUSTRY RETIREE HEALTH BENEFIT ACT OF 1992

The PBA (herein "the non-signatory companies") is a coalition of coal producers which never have participated in the United Mine Workers of America ("UMWA") Retiree Health Benefit program. PBA was formed in 1990 for the limited purpose of opposing legislative action to require non-signatory coal companies to finance other companies' UMWA retiree health care benefits. PBA's members are located in all coal mining regions of the United States, with their greatest production in the West. Some PBA members have collective bargaining agreements with unions other than the UMWA; others operate without a union.

The PBA companies participated in the legislative process which led to passage of the Coal Industry Retiree Health Benefit Act of 1992 ("The Coal Act"). This Act is the product of extensive negotiations and compromise. As the Committee recognized on page 3 of its July 22, 1995, Committee Print, notwithstanding their neutrality in the dispute and the economic disadvantage to them, the non-signatory companies agreed to the compromise under which up to \$70 million per year could be transferred from the Abandoned Mine Lands fund to supplement UMWA retiree health care benefits. This compromise was an alternative to proposals made by certain factions to levy a new tax on the entire coal industry. A large part of the burden of any such new tax would fall on non-signatory companies.

As an effort is undertaken to modify The Coal Act, PBA asks that the Committee be mindful of the entire history of legislative negotiations leading to The Act's passage and, particularly, that the non-signatory companies never have been a part of the UMWA retiree health care plans and had no role in contributing to their funding problems. While to date, we have heard nothing to suggest that changes under consideration could result in a tax assessment on an industry-wide basis or an increase in the amount of moneys now appropriated from the AML Funds to supplement the provision of benefits under The Coal Act, PBA writes this letter to record that it would strongly oppose any such proposal.

Now, as in the past, PBA objects to changes which would, or could, have the result, directly or indirectly, of imposing any obligation to finance the UMWA's welfare programs on the hundreds of non-UMWA coal industry employers who have managed their own benefit programs judiciously. At the June 22, 1995, hearing on this issue, several Committee members expressed their concern about the unfairness of assessing the super-reachback companies since they did not make the promises which are resolved by The Coal Act. This argument applies to an even greater degree to the non-signatory companies. PBA takes the position that the AML monies allocated to the Combined Fund should be eliminated and turned back to their originally intended purpose before any consideration is given to exemptions of any companies.

In any event, if changes are to be made, such legislation must also provide language guaranteeing that the non-signatory companies are exempt from The Coal Act and any new burdens to finance benefits for their competitors' employees.

STATEMENT OF PAUL W. MACAVOY ON BEHALF OF THE REACHBACK TAX COALITION

I. Introduction

A. Professional Background

My name is Paul W. MacAvoy and I am the Williams Brothers Professor of Management Studies at the Yale School of Management. My professional work has centered on regulation and strategic decision making by firms in the energy, transportation, and communications industries. I have authored numerous journal articles and sixteen books, including most recently Industry Regulation and the Performance of the American Economy (W.W. Norton 1992). I have served as a member of the President's Council of Economic Advisers. I have also served as a member of the board of directors for several corporations, including (currently) Alumax Corporation, American Cyanamid Company, the Chase Manhattan Bank Corporation, and LaFarge Corporation. My previous directorships include AMAX Corporation, a major American coal producer, on whose board I served for fifteen years up to this year. AMAX subsequently merged with Cyprus AMAX.

B. The Reachback Tax Issue

This statement is presented on behalf of the Reachback Tax Coalition, a group of companies mandated by the Coal Act of 1992 to contribute to a health benefit plan (the "Combined Fund") for retirees of the United Mine Workers Association ("UMWA"). The Coal Act has two major aspects: the first requires contributions from sources other than signatories to the 1988 National Bituminous Coal Wage Agreement ("NBCWA") to the UMWA Combined Health Care Fund, and the second is a Reachback provision which provides that companies that had signed a NBCWA contract at any time since 1950, but not the 1988 NBCWA contract (the "Reachback" companies), are now required to contribute to the Combined Fund as well. The primary purposes of my statement are to analyze the economic justification for the Coal Act's requirement that Reachback companies make contributions to the Combined Fund and to assess the overall consequences of the Act. In preparing this statement, I have reviewed a number of materials, including the Coal Industry Retiree Health Benefit Act of 1992 ("Coal Act", or "Rockefeller Act"); Congressional hearings on UMWA health benefits; the Dole Commission Report on the Coal Industry; testimony of witnesses appearing before this Committee; and court decisions relating to the Coal Act and UMWA retiree henefits.

II. The Appropriate Role for Federal Intervention in the Operation of an Industry

In passing the Coal Act, Congress imposed a new federal tax policy mandating which companies would contribute to the Combined Fund to provide lifetime health benefits to retirees of the UMWA. Before considering the details of how the Coal Act has operated, it is important to step back and ask whether such intervention by the federal government can be justified.

From an economic policy perspective, government intervention in the operation of an industry is justifiable only when it serves to solve a market failure or rectify a circumstance of incomplete contracts. Prime examples of market failures include the market's inability to take account of externalities, such as air pollution caused by a manufacturing plant, or a market's inability to prevent monopoly prices. In such instances, federal intervention can potentially rectify the market failures, through such mechanisms as the imposition of taxes in the form of effluent charges and antitrust actions to prevent the exclusionary use of market power by monopolies.

Federal intervention in an industry can also help to ameliorate problems between private parties in circumstances in which contracts fail to specify the actions that should be taken given certain outcomes. In the current context, two rationalizations of this type were offered to justify federal intervention in the form of the Reachback provisions of the 1992 Coal Act. First, the health benefit plans were allegedly so deficit-ridden as a result of unforescen circumstances that only federal intervention could prevent their financial collapse. Second, so-called "orphan" workers were allegedly in danger of not being covered or, alternatively, of having the costs of their coverage bestowed unfairly on the companies still part of the agreement, thereby threatening its continuation or renewal.

Both of these rationalizations were factually without foundation at the time Congress passed the Coal Act in 1992. There was no justification for this type of dramatic federal intervention in the coal industry.

In 1992 the extant collective bargaining agreements between coal companies and the UMWA reflected their efforts over time to reach equitable divisions of wage and benefits compensation to workers. Since companies and employees historically and predictably exited from the bituminous coal industry over time, these wage and benefit negotiations necessarily involved both past and future generations of firms and workers in the industry. Since the 1930s, labor relations in this industry have been tumultuous and, at times, violent. They have involved intense struggles over health and pension benefits just as much as wages. However, negotiations were always internalized just to those companies and workers who benefitted from NBCWA contracts.

Being a part of the bargaining process leading to a contract was essential for a unionized producer of bituminous coal. For parties to that process to go outside of the terms of a voluntarily negotiated wage and benefits contract to tap other, unrelated sources of funds to either decrease the cost obligation of signatories to the contract or increase the negotiated wage and benefits package is not any more justifiable for the coal industry than it would be for any other industry. If this were to become a general practice, it would lead to large and serious misallocations of resources across the national economy.

It might be argued that orphans "dumped" by exiting companies on remaining firms constitute an example of an incomplete contract for which federal intervention in the market is required. This argument also is factually incorrect. The voluntarily negotiated NBCWA contracts explicitly took into consideration the possibility that firms would exit the industry. Before the mid-1970s, the UMWA pension and health benefit programs were both combined in one union-run "pay-as-you-go" plan financed by multi-employer contributions assessed on a per unit of production basis. An employer's obligation to contribute stopped when it exited the industry or otherwise ceased to be a signatory to the contract. In 1978 when each employer prospectively took on the responsibility of providing health benefits to its current employees and future retirees, a multi-employer plan was set up specifically to cover the cost of providing health benefits to workers "orphaned" when their former employers left the industry. Thus, there was no incompleteness to the contracts along these lines. Government intervention to provide for such "orphans" in the form of taxing firms who previously exited the industry was, therefore, completely unjustified.

Some analysts have cited prior actions by the federal government in the coal industry and argued that those actions in some way justify federal intervention in matters regarding health care benefit agreements between coal companies and the UMWA. For example, in his September 1993 statement before the Ways and Means Committee, Richard Trumka, President of the UMWA, noted that the Truman Administration ended a coal strike by seizing the coal mines for a year and argued that this intervention began a continuing government commitment to improved health care in the nation's coal fields." Mr. Trumka was correct that the federal government has from time to time attempted to prevent or control the economic disruption resulting from coal strikes even to the extent of President Truman's seizure of the mines. The government has, also at times, in an arbitration role assisted in negotiation of health care agreements between coal companies and the UMWA. However, in the immediate aftermath of the seizure of the mines and during the five decades until the Rockefeller Act, the government has explicitly made clear that questions of wages and benefits were subject to the process of collective bargaining. The actions on the part of the federal government in helping to settle strikes have never involved the imposition of specific contract terms and in no way create a precedent for the type of federal intervention such as that undertaken in the 1992 Coal Act. Indeed, there was no strike in 1992. Mandating that Reachback companies contribute to the Combined Fund was not part of a strike settlement process; rather it resulted from skillful political use of the legislative process to root out and supplant the results of more than forty years of collective bargaining in a manner never undertaken before in the coal industry, much less any other industry.

Mr. Trumka's justification for federal intervention taking the form of the Reachback mandate was that "every company still in existence with assets to provide for the promised health care was justly asked to step forward and pay for the cost of providing health care to its retirees." Since this would necessarily involve asking Reachback companies with no continuing financial obligations to fund the proposed health care plan, Mr. Trumka correctly, albeit ironically, noted: "Obviously, there was no way for private parties to achieve these ends. We needed congressional intervention." The obvious reason was that government compulsion was necessary to extract payments from firms

that had already complied with all of their legal liabilities before exiting the bituminous coal business. The need for legal force to achieve a desired economic result is hardly an adequate reason for federal intervention in private sector industry.

III. The Specific Rationale for the Coal Act in 1992

In the absence of a principled justification for federal intervention, special reasons were advanced by the Act's supporters at the time of its passage in 1992. They, too, are entirely specious. Advocates stated that there was a funding crisis and that unacceptable levels of "orphan" retirees threatened the collapse of the UMWA funds. Both of these reasons were factually wrong.

A. The Alleged Crisis in Funding Retiree Health Benefits

At the time the Congress was urged to pass the Coal Act it was told that there was a large and growing deficit in the UMWA Health Benefit Funds which jeopardized the continuation of retiree health benefits. The source for this proposition, the Dole Commission, reported that there would be a \$300 million deficit in the health benefit funds by the end of 1993. In response, the Coal Act contained a provision requiring the 1988 signatories to pay off the deficits before the statutory Combined Fund took over the funds.

This provision was never used, however, because the deficit (\$114.3 million at the end of 1991 according to the General Accounting Office) was reduced to \$58.4 million by the end of 1992. Thereafter, through collections and expenditure adjustments, the trustees retrospectively found in November 1994 that by Jamuary 1993 the fund had in fact moved to a \$16.7 million surplus. This result had been achieved as a result of a comprehensive injunction issued by Judge Glenn Williams in federal court in Abingdon, Virginia which required: (1) the Bituminous Coal Operators Association ("BCOA") to increase their rate of funding of the 1950 and 1974 health benefit trusts as provided for in the "guarantee" clause in the 1988 contract; (2) the trustees to require all eligible beneficiaries to sign up for Medicare; (3) the trustees to stop paying more than Medicare contract rates to reimburse Medicare providers; and (4) the trustees to provide health benefits for the remainder of the 1988 agreement until February 1993.

Judge Williams also wryly observed that the BCOA had argued against the injunction on the grounds that dire consequences would flow from it — "the Rockefeller bill would be defeated and the BCOA because of its small size would be eliminated." The cynical nature of this argument is readily apparent. Indeed, it appears that in fact the alleged fund deficit was wholly akin to numerous political myths, e.g., the Kennedy missile gap of 1960, in that it simply never existed. This conclusion is supported by a recent study of the expected future balances of the Combined Fund performed by Towers Perrin, a prominent international benefits and compensation firm, which finds that the fund will have a cumulative surplus by September 2004 of approximately \$289 million.

B. The Alleged Dumping of Orphan Retirees as Creating an Insuperable Financial Burden on the BCOA

The allegation that certain companies had created a financial crisis for the funds by dumping their orphan retirees on the BCOA companies was accepted uncritically by some interested in the passage and subsequent defense of the Coal Act. This allegation has been used to mask the reality of a clear exercise of political and legislative power by the BCOA in cooperation with the UMWA to transfer to others a large amount (approximately \$123 million annually, consisting of \$53 million from Reachback companies and \$70 million from the federal Abandoned Mine Lands trust) of its costs for retiree health care established under prior collective bargaining agreements.

The claim that dumping of orphans endangered the financial stability or the continuation of health benefit funds cannot withstand scrutiny. The 1950 Health Benefits Trust which covered all pre-1976 retirees was a multi-employer plan which by definition never had "orphans." All retirees received their health benefits from the fund directly and any retiree's benefits were not related to any particular employer. This fund was always financed on a current production basis by current signatories to the most recent NBCWA. The Rockefeller bill by its assignment of 1950 fund beneficiaries to prior employers accomplished a wealth transfer to the BCOA companies from the Reachback companies without any orphan dumping justification. The 1950 Health Benefits fund was simply where most of the beneficiaries – some 80% and thus most of the expense – were located

The question of orphans only arose with respect to the 1974 Health Benefits Fund. In 1974, the ERISA statute was passed and was in 1980 definitively extended to multi-employer agreements. As this statute applied only to pensions, it dictated the separation of the health and benefit funds into separate trusts for the first time. In the same time frame, while negotiating the 1978 NBCWA, the BCOA insisted in taking back the management of health benefits from the Funds because of its belief that control of benefits administration by each signatory company would end two decades of waste and abuse by the Funds.

Under the 1978 NBCWA, each signatory company was henceforth responsible for providing the contractually agreed level of benefits to each of its own active employees and retriees. At the insistence of the UMWA, the 1974 Health Benefits Fund was retained to provide benefits for all "orphan" retirees and their beneficiaries who retired after the 1950 Fund closed in January 1976 from companies who left the industry. In 1976, for the first time, at the insistence of the BCOA, individual companies became responsible for the health care of their active employees and their retirees who were not covered by the 1950 Fund. Thus, it is only with respect to the retirees in the 1974 Fund, a relative handful, that the concept of orphan had any relevance.

But the Rockefeller Coal Act not only addressed the problem of the 1974 Fund orphans but undertook a massive restructuring of liabilities for the 1950 Fund as well. The numbers of retirees in the 1974 orphan category was relatively modest – approximately 16,000 – as compared with the 100,000 in the 1950 Fund, and was financially manageable by the BCOA signatories under then current contractual arrangements. In addition, the anticipation that the number of "orphans" would greatly increase if other firms with large numbers of retirees were to leave the industry was in fact addressed in the 1988 agreement by imposition of contractual withdrawal liability upon signatory firms later exiting the industry. Thus, the Combined Fund and the Reachback taxation process instituted by the Rockefeller Act was in no way necessitated by the problem of future withdrawals by BCOA signatories.

In his 1993 testimony, Mr. Trumka repeated the claim that dumping of orphans "on a dwindling number of signatory companies" led to a crisis necessitating government intervention. But in fact production by signatory companies in the 1979 to 1989 period leading up to the Coal Act was quite stable, so that total payments into the fund were stable. Indeed, a significant number of BCOA firms were simply acquired by the BCOA firms remaining in the industry. Thus while it was the case that the absolute number of BCOA firms had declined, the remaining firms produced, on average, enough additional coal to make fund payments to replace those of the exiting firms. There was no reason to expect that remaining firms would fail to carry out the contractually agreed upon provision of health care benefits for workers orphaned by the exit of firms from the industry.

IV. Adverse Consequences of the Coal Act

A. Reachback Firms Are Unjustifiably Required to Contribute Large Sums of Money

The first adverse effect of the Reachback provision of the Coal Act is the direct one that Reachback companies are taxed at the rate of approximately \$53 million per year. Table One presents data for several publicly traded Reachback companies on their lines of business and revenues, while Table Two describes these lines of business in more detail. As is clear from the tables, the firms currently produce many different products, most having nothing to do with bituminous coal production. For example, Allied Signal's business lines are in the automotive, aerospace, and engineered materials industries. Their production of such items as anti-submarine warfare systems is leagues away from the bituminous coal industry. Likewise, Union Carbide's chemicals and plastics operations, encompassing the production of such items as materials and systems for printed wiring and circuit boards, in no way relates to coal mining.

The annual financial obligations under the Coal Act of these Reachback companies are also shown in Table One. These payments range from six hundred thousand dollars for Union Carbide to over twelve million dollars for LTV. While these payments are not so large as to threaten the financial stability of these companies, they make no economic sense. Effectively, a tax for coal retirees' health benefits is being levied on sales of cockpit data recorders and automatic coffeemakers.

TABLE ONE REVENUES, LINES OF BUSINESS, AND ANNUAL LIABILITIES FOR SELECTED REACHBACK COMPANIES, 1994

			Reveaue by	Assuel
Company Name	Total Revenue	Lines of Business	Lines of Business	Reachback
	(*000,000*)		(#000,0000)	Liability
Altico Signal, Lat.	\$12,817	Astomotive	\$4,922	
	ļ	Acrospect	\$4,623	\$2,100,000
		Engineered Materials	\$3,272	
Cleveland Cliffs, Inc.	\$379	Iron Ore and Other	\$379	\$840,256
LTV Corp.	\$4,529	Sacci	\$4,230	\$12,100,000
		Escrity Products	\$299	
Lone Star Technologies	\$357	Official Products and Services	\$215	\$834,732
		Industrial Products	\$142	
Maxus Energy Corp.	\$682	On and Offshore Oil and Gus	\$682	N.A.
NACOD Industries, Inc.	\$1,965	Meterial Headling Equipment	\$1,179	\$2,868,600
	Į.	Small Electrical Appliances	\$377	
		Lignite Mining	\$250	
		Retail Kitchenware and Appliances	\$64	
		Other Operations	\$1	
Union Carbide	\$4,865	Chemicals and Plastics	\$4,865	\$594,269

TABLE TWO
DETAILED LINES OF BUSINESS OF SELECTED REACHBACK COMPANIES

Company Name	Detailed Lines of Business
Allied Signal, Inc.	Designa, develops, massefactures, markets and services aerospace products including aircraft angians, environmental control systems, corchité data recorden, space-pointing devices and control systems for spacecraft and anti-submarine warfare systems; designs, engineers and manufactures automotive products such as braiking systems, engine components and safety restraint systems; develops, produces, and markets specialty engineered materials including sylon, fluorine products, onlines, resins, specialty films and circuit board laminates.
Cleveland Cliffs, Inc.	Controls, develops and lenter iron ove and coal reserver; manages and owns interest in miner; owns interests in a railroad providing services to the miner, and produces and selfs coal and iron ove pellets.
LTV Corp.	Produces and selfs steel and related steel items; manufactures and distributes drilling and production equipment; distributes seamless steel tubular products and cilified supplies.
Lone Star Technologies	Holding company with subsidiary which manufactures and markets oilfield casting, tubing, line pipe, specialty tubing and flat rolled steel.
Maxis Energy Corp.	Holding company with subsidiaries which explore for and produce oil and gar; purchase, gather and process natural gar; and produce natural gas liquids.
NAACO Industries, Inc.	Hoding company with subsidiaries which design, manufacture, and market fortifit tracks and selected service parts; manufacture and market small electrical appliances such as blenders and food processors; some and market lignite coal for use by electric utilities; and operate specialty retail stores offering histonomere, small appliances, and related accessories.
Union Carbide	Hodding company with subsidiaries which produce ethyleae coide/glycol; manufacture broad range of derivatives of ethyleae coide/glycol; supply solvents, resins, intermediates, emulsions and additives to a broad variety of markets; manufacture and supply specialty chemicals; provide materials and systems for printed wiring and circuit boards; supply process technology, catalysts, molecular sieve absorbeats, process plants and technical services to the petrochemical and gas processing industries.

The Coal Act's effects on smaller companies has in many instances been more direct and more severe. Table Three contains brief descriptions of some of the more egregious examples of the arbitrary nature of the tax. The Act requires Princeton Mining Co., for example, to contribute even though it ceased coal mining operations in 1966 and currently produces and distributes

popcorn. Another payer under the Act is 41 Liquors, a liquor store owned by the widow of a man who ran a construction business that worked on union mines. Ohio Mining Co., another Reachback firm, is the a real estate developer that ceased mining operations in 1951. Ohio Mining was assigned five retired mine workers, only one of whom actually worked for the company, as well as fifteen dependents.

TABLE THREE
SELECTED REACHBACK CASE STUDIES

Company	Case Suttitibary
Carpentertown Coal & Cobe Co.	Curpentertown filed for bankruptcy protection in June 1989. It was assigned 225 beneficiaries
Tucson, AZ	at a cost of \$760,229 per year.
Bear Coal Co. Inc.	Bear Cost is a family-owned, union-operated coal mining butiness that was assigned 29
Somereet, CO	beneficiaries despite a 1984 collective burgaining agreement, and a \$1.1 million withdrawar
	peanity, which removed its obligation to the benefit trusts. Its assigned premium of \$91,896 per
	year translates into a liability over the next ten years equal to approximately 25 percent of its
	net worth.
Bolimeier Construction Co.	Misse-related construction and maintenance accounts for 80 percent of this family-run
Marissa, IL	company's business. Bolimeier's assigned premium is approximately \$38,000 per year.
CB&I Industries	CB&I Industries is a Portune 900 construction business that was assigned beneficiaries who
Oak Brook, IL	were employed as painters, laborers, and boilermakers for several weeks during the period 1950
	to 1980. Its assigned prezaivan is \$24,000 per year.
Princeton Mining Co.	Princeton Mining ceased mining cost in 1966. Its primary business is now growing, processing.
Terre Haute, IN	and wholesale distribution of popcorn. It was assigned 41 beneficiaries at a cost of \$419,325
	per year.
41 Liquors	This liquor store belongs to the widow of a man who once ran a construction business that
Madisonville, KY	performed work for union mines. 41 Liquors' assigned premium is approximately \$9,600 per
	Now.
Charbon Bridge	Charbon Bridge is a highway construction firm that was assigned five beneficiaries at a cost of
Madisosville, KY	\$18,000 per year. One of the assigned beneficiaries worked for the firm for 48 hours.
The Ohio Mining Co.	Onio Mining is a real estate development business that ceased mining operations in 1951. It
The Plains, OH	was assigned five retired miners, only one of whom worked for the company, and 15
1	dependents at an annual cost of \$67,326.
Bernes & Tucker Co.	Surnes & Tucker was assigned a premium of \$2.6 million annually, approximately twice its
Bdensburg, PA	annual gross reveaues.
Dantella Brothers	Dantella Brothers previously operated a coal-stripping business, but withdrew from the union
Kitanning, PA	is 1962. It is now a small earth-moving and construction company. It was assigned two
j	hemeficienies, one of whom operated a truck the company reated to a union coal operator in
	1948, at an annual premium of \$6,957 per year.
GAL Construction Inc.	GAL has receasily come out of bankruptcy and was assigned a premium of \$27,829 per year.
Belle Verson, PA	
Lanzendorfer Trucking Co. Inc.	Lazzendorfer Trucking is a family trucking business that formerly hauled union coal. In 1987,
Twin Rocks, PA	it withdrew from the union and paid a withdrawal penalty. Lamendorfer's assigned premium
1	of \$24,350 per year equals approximately twenty percent of its payroll, which forced the
}	company to file for bankruptcy.

TABLE THREE (CONTINUED) SELECTED REACHBACK CASE STUDIES

Сотрану	Case Summery
Morris Rue Coal Mining Co.	Morris Russ Coal Mining terminated deep mining more than 40 years ago, then produced coal
Wilkes-Barre, PA	under contract with a strip-mining operator until 1983. It is responsible for one retired miner,
ļ	who worked for them for approximately five months in 1952, as well as his five dependents.
New Shamet Mining Co.	New Shampit Milning exited the coal business and currently has no employees. It was assigned
Clearfield, PA	106 retired miners and 84 dependents at an annual cost of \$461,642 per year.
Seger Coal Co.	Segar Coal is a sole proprietorship construction business that was assigned 14 beneficiaries,
Belle Vernos, PA	with an assigned premium approximately double the firm's annual gross income. Sager Coal
	stopped mining in 1967 and signed its last UMWA contract in 1964. When Mr. Jeff Sager
	bought the business from his father in 1989, its assets consisted of the firm name and two
	pieces of real estate.
TASA Corp.	TASA was assigned seven beneficiaries at a cost of \$24,000 annually, or approximately 25
Fittaburgh, PA	percent of its income. TASA last mined cost more than 30 years ago.
Unity Real Estate Co.	Unity has exited the coal industry. Its annual assigned premium was \$266,000, which compares
Greensburg, PA	with its annual gross income of \$54,000.
Clinchfield Conl, Jewell Ridge	Clinchfield Coal and Jewell Ridge Coal are subsidiaries of Pittston, whose total Reachback
Coal	liability is \$12 million annually.
Lebanon, VA	
DO&W Coal Co., Inc.	DO&W conducts contract coal mining for the Pittston Coal Group. DO&W emerged from
Clincheo, VA	Chapter 11 reorganization in November 1993, and was assigned an annual premium of \$111,315.
Bik Horn Coal Corp.	Bik Horn Coal last mined coal with union labor in 1985 and now primarily lesses coal mining
Richmond, VA	rights. It was assigned 210 beneficiaries at a yearly premium of \$708,048.
KWC, Inc.	KWC is a small trucking and hauling business. It was assigned beneficiaries as a result of
Whitewood, VA	operations in the 1970s when it hauled refuse from a union mine. Its annual premium is
	\$6,957.
Mary Helen Coal Corp.	Mary Helen Coal last mined coal in 1962. It was assigned 84 beneficiaries at an assurat cost of
Blackstone, VA	3294,660 per year, which exceeds its annual royalty income by a factor of twelve.
Milburn Collieries	Milbura Collieries stopped mining coal approximately ten years ago. Its Reachback tax
Lynchburg, VA	assessment is \$212,000 annually. The company anticipates filling for bankruptcy within two
	years.
Palmer Coking Coni Co.	Palmer Coking was the last underground mine to operate in the state of Washington, so under
Black Diamond, WA	the "last employer" provision of the Coal Act, it was assigned many beneficiaries who apens
	most of their working years employed by other coal companies. The company ceased mining in
	1981 and paid a withdrawal penalty to UMWA. It is now a sand and gravel concern with an
	annual Reachback bill of \$185,599.
Mountain Lauret Resources	Mountain Laurel Resources filed for bankruptcy after being assigned more than 1,500
Mount Hope, WV	beneficiaries at an annual cost of \$5,217,378.

Several of these companies have either been forced into bankruptcy or face that outcome as an imminent prospect. These companies include: (1) Carpentertown Coal and Coke, which was actually in bankruptcy at the time it incurred an annual health care bill of approximately \$750,000; (2) Barnes & Tucker Co. which was assessed \$2.6 million annually, approximately twice its total annual revenues; (3) Lanzendorfer Trucking Co., a trucking company that formerly hauled union coal, whose annual assessment equals approximately twenty percent of its payroll; (4) \$&D Coal Co., which formerly hauled union coal; (5) Sager Coal Co., a construction company that ceased coal mining in 1967 but whose Reachback assessments are approximately twice its gross income; and (6) Mountain Laurel Resources, which filed for bankruptcy after being assigned more than 1,500 beneficiaries. In sum, as the examples from Table Three demonstrate, the effects of the Reachback tax have been both devastating in their effects and bizarre in their circumstances.

B. Precedent for Future Congressionally Mandated Takings

The Reachback tax is a classic example of a government taking. The precedent set here is that in alleged future instances of market failure or incomplete contracts, any company that ever produced anything related to the product in question will be subject to takings. In the extreme, a Congressional effort to clean up nuclear weapons sites would tap a firm like Colt Industries, which produced repeater firearms in 1915, because Colt was involved in the weapons industry and was a previous signatory to a labor agreement that later covered nuclear plant technicians. An even closer analogy would be if the Social Security Trust Fund were facing an underfunding crisis and Congress tapped companies and retired individuals who had previously made payments, using the justification that they now should contribute because they once had done so. The disincentives provided to existing firms by the expost adverse consequences of other actions consistent with this precedent are difficult to quantify but are obviously major and substantial.

A second adverse incentive provided by the Reachback provision is that firms active in an industry will be induced to underfund private benefit plans. The Reachback provision signals these firms that by causing funding crises, they can encourage Congress to tax unrelated entities to bail out the plans. Firms active in an industry can thereby transfer financial obligations to third-party entities having no legal or economic responsibilities for the artificially created funding crisis.

Indeed, it was recently proposed to finance health and pension costs for the auto industry through an excise tax on each car sold in the United States. The funds generated by this tax would establish an auto industry health and pension stabilization fund whose proceeds would be allocated by the fund administrators in such a way as to equalize these costs among domestic, U.S., and foreign auto manufacturers (Economic Strategic Institute. The Future of the Industry: It Can Compete, Can It Survive, 1992). This is a first step; but with the extension of the Reachback precedent, given a funding crisis deliberately induced by current members of the industry, past car manufacturers such as American Motors, International Harvester, or any discoverable corporate descendants could be required to pay for health benefits of past retirees.

The clear nature of the Reachback tax as a taking was confirmed in a January 1995 decision by the U.S. District Court (W.D. Penn, Unity Real Estate Company v. Marty D. Hudson, et al.) when it granted an injunction to restrain enforcement of the Coal Act against Unity Real Estate Company (*Unity*). Unity is a small family-owned business, whose predecessors included coal mining companies, notably South Union (West Virginia) and South Union (Pennsylvania). Their coal-mining predecessors operated during the period from 1922-1981, and were signatories to NBCWA contracts from 1950 through 1981. Unity was forced by the Coal Act to cover the health care of 78 beneficiaries in 1993, and 76 more in 1994. These beneficiaries were former employees (or survivors of former employees) of South Union (West Virginia) and South Union (Pennsylvania). The Reachback taxes imposed by the Coal Act for a single year (\$266,000) were so large as to eclipse Unity's total net worth (\$85,000). In fact, Unity did not even have sufficient cash on hand to be able to meet the first month's mandated premiums.

Facing certain bankruptcy, Unity brought suit against the Trustees of both the UMWA Combined Benefit Fund and the 1992 UMWA Benefit Plan in U.S. District Court. The Court concluded "that the Coal Act violates the Takings Clause of the constitution." Further, the Court found that "the Coal Act as applied to Unity is so palpably unconstitutional that a preliminary injunction should issue against the enforcement of the Act against it."

The Court was especially aggrieved that the Reachback provision of the Coal Act was able to stretch so far back into the past. Although defendants argued that Unity could have reasonably foreseen its future obligations to their predecessor's employers, the Court responded that if "the

possibility of a decade-later legislative solution to a crisis makes the imposition of liability on Unity on some basis chosen by Congress constitutionally foreseeable, then the expectations prong of the Takings Clause analysis ceases to exist, because legislation can always be foreseen. Specifically, "[t]o expand that reach to a period in excess of a decade goes far beyond any constitutional power of Congress."

To determine whether a taking has occurred is in the domain of the court system and not part of my expertise. Yet in the case of takings, the relevant issues at hand are fundamentally economic ones, and economic analysis can prove enlightening. Although some would argue that a taking impacts only the entity against whom regulations are promulgated, the effects of a taking clearly extend beyond the corporation itself. In the opinion of Baumol and Sidak, the confiscation of property without adequate compensation in the case of a corporation must be viewed in economic terms as the taking of the property of the stockholders (Harvard Journal of Law & Public Policy, Vol. 18). Thus, one method of economic analysis to determine whether an action constitutes a "taking" is to examine the stock prices of companies. Again, according to Baumol and Sidak:

If the price of the regulated firm's stocks had been moving for some considerable period in a manner that seems in line with the stock prices of fairly comparable enterprises, then a sharp drop in the relative price of the securities of the regulated firm in the wake of a substantial change in regulatory policy creates a strong presumption that the regulatory charge is confiscatory. In other words, if the securities price is driven out of line with the prices of similar securities of comparable firms, it is the market's verdict that confiscation has occurred.

Certainly, the imposition of a Reachback tax that forces a company such as Unity into bankruptcy is clear proof that the market believes that a taking has occurred. A burden as weighty as the Reachback tax is not likely to have been shouldered by Unity's competitors, who will now operate in a less competitive marketplace due to the loss of a rival. Society becomes the loser, because, as stated by Baumol and Sidak, "[w]hatever the means by which such regulatory restrictions on investor compensation are imposed, they confiscate from consumers and investors alike what is legitimately theirs — the benefits that they can expect in any competitive market, and which they are denied only by the caprice of the regulatory process."

C. Reachback Taxes Distort Prices in Non-Coal Markets

Mandatory contributions on Reachback firms are taxes on the operations of companies throughout the economy. Some of these companies currently mine other types of coal, e.g. lignite, while other firms have exited the coal industry altogether. These taxes distort prices in unrelated markets and reduce the ability of Reachback firms to compete in those markets against firms not subject to the Reachback provision. Some Reachback firms have been more than just competitively disadvantaged — they have been forced into bankruptcy as a result of the Act. Thus, in some instances the Reachback provision has resulted in taxes so confiscatory in nature that firms have been forced to disband their operations despite the fact that they were surviving in their respective marketplaces by providing valuable products at competitive prices. This means these now bankrupt firms were employing scarce factors of production in their highest-valued uses, thereby increasing the welfare of society, but the Reachback provision imposed such severe competitive disadvantages on them that they could not survive. This is an undesirable outcome: Efficient firms were effectively destroyed by the Reachback provision, resulting in a diminution of society's welfare.

D. Reachback Companies Had No Expectation They Were Liable for Future Contributions to Health Care Benefit Plans

Reachback companies had no expectation that they would be liable for future contributions to health benefit plans when they were no longer signatories to an NBCWA contract. If the companies believed they had such financial obligations, they would have disclosed those obligations in their 10K reports so as to prevent lawsuits by shareholders claiming the companies had not fully disclosed relevant information that could affect their future earnings. I have examined the 10K reports of all publicly traded, Reachback companies that no longer had an NBCWA contract in 1988 and found that none of these companies stated they had a continuing financial obligation to fund health benefit plans of UMWA workers. The decision by Congress in 1992 to impose contribution requirements on Reachback companies was a confiscatory tax which neither the companies nor the capital market had expected.

Despite the fact that none of the publicly traded, Reachback companies show any evidence of recognizing a continuing financial obligation to fund heath care benefit plans under the terms of their (prior to 1988) NBCWA contracts, Mr. Trumka in his 1993 statement concluded in no uncertain terms that the Reachback companies did have such continuing financial obligations. Mr. Trumka noted that Chairman Rostenkowski and others had suggested that "it might not be fair to impose retiree health care liabilities on former coal industry employers." However Mr. Trumka dismissed this opinion with the commitment that Reachback companies, as well as signatories to the 1988 NBCWA, "made the commitment to provide lifetime health care benefits to [their] employees [and so] would be liable for premiums under the [1992 Coal] Act. Mr. Trumka's statement is contradicted by two basic facts. First, the explicit terms of the 1988 NBCWA contract specified, under the guarantee clause, that health care benefit plans were in existence for the life of the contract — not the lifetime of the employees. Second, the 1988 NBCWA contract could not place health care liabilities on Reachback companies who, by definition, were not signatories to the contract. If it could have, obviously the Rockefeller Act would not have been required.

V. Conclusion

Federal intervention in the coal industry in the form of the 1992 Coal Act has no economic rationale. The Reachback provision was, and continues to be, an unjustifiable tax on other firms that lowers the cost of health care payments by coal companies that signed the 1988 NBCWA contract. The tax is unjustifiable because it solves neither a market failure nor a contractual incompleteness problem. The Act was passed to solve an alleged funding crisis which never existed and to fund the benefits of orphan retirees whose health care benefits were already contractually provided for in existing health benefit funds. In sum, Reachback provision of the Coal Act deserves no place on the rolls of required government interventions in the marketplace. Its potential for surviving as a model for arbitrary and confiscatory taxation throughout the economy is substantial. It should be repealed.

STATEMENT OF JONATHAN C. ROSE OF JONES, DAY, REAVIS AND POGUE ON BEHALF OF THE REACHBACK TAX RELIEF COALITION

WHO PROMISED WHAT TO WHOM WHEN?

AN ANALYSIS OF THE ACTUAL CONTRACTUAL OBLIGATIONS OF CURRENT AND FORMER SIGNATORIES UNDER THE COAL WAGE AGREEMENTS

The Coal Act of 1992, according to those who would preserve it from any amendment, is founded on the premise that "all companies which employed the retirees should not be allowed to escape paying for the promised retirement health benefits and dump their responsibilities on their competitors." The BCOA and other supporters of the Coal Act have remained necessarily vague and ambiguous, however, about the source of those claimed promises and responsibilities. To the extent they have not simply manufactured the claimed responsibilities, the supporters of the Act rely on several clauses inserted in the National Bituminous Coal Wage Agreement (NBCWA or Wage Agreement) and the UMWA plan documents in 1978. Clearly, whatever is contained in those clauses can have no application to those 158 Reachback companies that did not sign the 1978 NBCWA or a later agreement, as they never passed on, much less agreed to, those provisions. As set forth below, those clauses provide no greater warrant for concluding that the reachback signatories of the 1978 and later Wage Agreements made any promises that support the liability imposed by the Coal Act.

For more than forty years, health benefits in the unionized sector of the bituminous coal industry were provided through a multi-employer plan and funded on a pay-as-you-go basis through contributions from all current signatories of the Wage Agreement. Each employer contributed from day one, regardless of how many (or whether any) of the retirees drawing benefits had worked for it. The duty of any specific employer to contribute to the plan was always expressly limited to the term of the current agreement and ceased when that employer ceased to be a signatory. The promise to pay benefits to retirees in 1950 Plan was always the promise of the industry-wide plan, not of any individual employer. Even after the creation, prospectively, of single employer benefit plans in 1978 for current employees and post-1975 retirees, a multi-employer plan was retained to pay the benefits for those beneficiaries who otherwise would cease to receive benefits.

Sponsors of the Coal Act simply tore up the collective bargaining agreements underlying the multi-employer benefits system that had served the industry well since 1950 and reallocated the employers' and former employers' obligations by legislative fiat. Pre-1976 retirees and their beneficiaries, who had always been the responsibility of the 1950 UMWA Benefit Fund, funded by the signatories of the current NBCWA, were arbitrarily reassigned to former signatories, most of whom had been out of the bituminous coal business for years. Post-1975 retirees and their beneficiaries, whom the courts had unanimously determined to be the responsibility of the 1974 UMWA Benefit Fund, were similarly reassigned to their former employers, although the collective bargaining agreements those employers had signed clearly retained the 1974 Fund funded by current NBCWA signatories to provide their benefits. Through this mechanism, the BCOA managed to shift the liability for more than 25,000 beneficiaries onto companies that had legally and legitimately left the multi-employer system, and in

¹ Source: Peabody Coal Co., "Why the Coal Industry Retiree Health Benefit Act Should Not Be Amended." (Emphasis supplied.)

² As of March 31, 1995, the Coal Act had imposed liability for retiree health benefit premiums on a total of 257 signatories of NCBWAs prior to 1988 (the "Reachback companies"). Of these, 99 were signatories to the 1978 or later NBCWA, and 158 were signatories only to 1974 or earlier NBCWAs.

³ The temporal extent of the promise to pay benefits has been the subject of considerable confusion as the NBCWA plan documents contain contradictory references to "Health Services card for life" in some places and benefits granted only for "the term of the Agreement" in others.

most cases, the bituminous coal industry altogether, having paid all liabilities for which they were legally responsible.

The only companies that sought to escape their responsibilities under the NBCWAs are the members of the BCOA, who refused to fulfill their express, contractual guarantee of the health benefits of retired miners and their families, and sought relief from Congress when the guarantee clause was enforced against them in court. Unlike the phantom responsibilities and moral obligations the BCOA seeks to pin on former signatories of the NBCWAs who have long since left the bituminous coal industry, the BCOA's commitments to the retired miners were legally enforceable and were in fact legally enforced by the courts, until the BCOA succeeded in enacting the Coal Act to vititate their previous contractual commitments.

A. Former Signatories Have No Obligation to Provide or Pay For Benefits After the Expiration of the Wage Agreement

The BCOA and other supporters of the Coal Act have suggested that former signatories promised lifetime benefits to their employees and dependents and have somehow sought to avoid that responsibility now. To the extent that they identify any source at all, they claim that responsibility derives from several clauses in the 1978 and later NBCWAs and the plan documents. Each is analyzed below.

1. The Former Signatories Made No Promise of Lifetime Health Benefits

Proponents of the Coal Act have asserted that former signatories promised their employees lifetime benefits. That simply is not true. The only references to lifetime benefits in the Wage Agreements, first inserted in 1974, are found in a "General Description of the Health and Retirement Benefits," included in Article XX of the NBCWA. Several provisions state that a pensioner fitting in one of several categories will be entitled to retain his Health Services card for life. Upon his death, his widow will retain a Health Services card until her death or remarriage." Of course, this language at most indicates participation in the health benefits program, but does not require any particular level of benefits. Equally clearly, it imposes no obligation on individual companies. Any promise made is simply that of the coal producers as a whole to ensure pensioners' participation in the health benefits program.

The contractual obligation of any particular employer to provide benefits, however, is clearly limited to the life of the Wage Agreement. Article XX, § (c)(3)(i) states that the benefits provided by the single-employer benefit plans "shall be guaranteed during the term of this Agreement by each Employer at levels set forth in such plans." (Emphasis supplied.) A separate provision — the guarantee clause, discussed in more detail below — similarly provides that the signatory employers guarantee the level of benefits paid by both the UMWA plans and the single-employer plans only "during the term of this Agreement." Art. XX, § (h) (emphasis supplied). Similarly, the General Description expressly states that each employer guarantees benefits at the level of those provided by the UMWA plans only "during the term of this Agreement." (Emphasis supplied).

These provisions demonstrate that the parties were bound by the Wage Agreement only as long as they were effective signatories to it. Indeed, the courts have uniformly so held. Based on these contractual provisions, "it uniformly has been held that an employer is not legally responsible for the provision of retiree health benefits after the expiration of a wage agreement." In re Chateaugay Corp., 945 F.2d 1205, 1210 (2d Cir. 1991), cert. denied, 112 S.Ct. 1167 (1992) (emphasis supplied) (citing District 29, UMWA v. Royal Coal Co., 768 F.2d 588, 592 (4th Cir. 1985); District 29, UMWA v. United Mine Workers Benefit Plan & Trust, 826 F.2d 280, 282-83 (4th Cir. 1987), cert. denied, 485 U.S. 935 (1988); UMWA by Rabbit v. Nobel, 720 F.Supp. 1169, 1176-78 (W.D. Pa. 1989), affd, 902 F.2d 1558 (3d Cir. 1990), cert. denied, 111 S.Ct. 1102 (1991); Schifano v. UMWA 1974

⁴ See Doe v. Connors, 796 F.Supp. 21 (W.D. Va. 1985); UMWA 1950 Benefit Plan & Trust et al. v. Bituminous Coal Operators' Ass'n, 898 F.2d 177 (D.C. Cir. 1990).

Benefit Plan & Trust, 655 F.Supp. 200 (N.D. W.Va. 1987)). See also Box v. Coalite, 643 F.Supp. 709 (N.D. Ala. 1986). Indeed, the Wage Agreements contain "no intimation that the parties intended [a former signatory's] obligation to continue beyond the life of the Wage Agreement." In re Chateaugay Corp., 945 F.2d at 1208.

Because former signatories are not bound by expired Wage Agreements, they cannot be required to provide the benefits established under them. The courts have nevertheless accepted the proposition that the Wage Agreements do promise lifetime benefits to retired miners. The entity on which that promise is binding, however, is the 1974 UMWA Benefit Plan, supported by the contributions from current signatories as required by the Wage Agreement. "Without exception," the courts have interpreted the Wage Agreements and plan documents to impose the obligation, after expiration of the Wage Agreement, upon the 1974 UMWA Benefit Plan, rather than upon the former signatory company, to pay the promised "lifetime" retiree health benefits. Nobel, 720 F.Supp. at 1179-80.5 The courts placed liability on the 1974 Benefit Plan rather than the former signatories because "Iffrom its beginning this trust was intended as the safety net for 'orphaned' retired miners." District 29, UMWA, 826 F.2d at 283 (emphasis supplied).

The most recent decision on this issue also took note of the fact that the parties to the NBCWA made no changes to the relevant portions of the NBCWA after these cases were decided. The readoption in the 1988 agreement of the same language therefore serves to "confirm[] that the judicial interpretations correctly represented the intent of the parties." Nobel, 720 F.Supp. at 1180.

 The Guarantee Clause Places the Responsibility on Current Rather than Former Signatories to Ensure Adequate Funding for Current Health Benefits

Much is made by supporters of the Coal Act that the coal companies guaranteed the payment of benefits, which, they suggest, means that former signatories are continually liable. Examination of the guarantee clause demonstrates, however, that it is binding on individual employers only during the life of the Wage Agreement they signed.

The guarantee clause, Art. XX, § (h), first inserted in the 1978 NBCWA, provides:

Notwithstanding any other provisions of this Agreement the Employers hereby agree to fully guarantee the pension and health benefits provided by the 1950 Pension Fund, the 1950 Benefit Fund, the 1974 Pension Fund, the 1974 Benefit Fund and all other benefit plans described in Section (c) of this Article XX during the term of this Agreement. [Emphasis supplied.]

Moreover, the clause went on to explain that the guarantee would be satisfied by increased contributions, if necessary, that 'shall be made by all Employers signatory hereto during the term of this Agreement." (Emphasis supplied.) Clearly, this provision not only imposes no perpetual obligation on former signatories, but in fact affirmatively limits their obligations to contribute to the plans.

The multi-employer system, reinforced by the guarantee of benefits by the current signatories, was the result of vigorous collective bargaining. The courts have, at the instance of the Trustees, specifically enforced the guarantee clause against current signatories. In several cases brought against the BCOA, courts granted injunctions requiring the signatories to increase their contributions to make up a shortfall in the

⁵ To be sure, during the life of a particular agreement the 1974 Benefit Plan is to provide benefits only for beneficiaries of signatory employers that are "no longer in business." See 1978 NBCWA, Art. XX, § (c)(3)(iii). That provision thus defines the respective obligations of the Fund and the employer during the life of the agreement. See Nobel, 720 F.Supp. at 1179. After the agreement has expired, however, it imposes no legal obligation on the employer. See id.; District 29, UMWA, 826 F.2d at 283. Thus, it is irrelevant whether the former signatories are still "in business" or not.

UMWA funds, as required by the Wage Agreement. See McGlothlin v. Connors, 142 F.R.D. 626 (W.D. Va. 1992); Doe v. Connors, 796 F.Supp. 21 (W.D. Va. 1985); see also UMWA 1950 Benefit Plan & Trust et al. v. Bituminous Coal Operators' Ass'n, 898 F.2d 177 (D.C. Cir. 1990). In contrast, as discussed above the courts have repeatedly rebuffed the Trustees' attempt to force the Reachback companies to provide benefits for 'their' retirees beyond the life of the Wage Agreements they signed. Thus the benefits system established by the collective bargaining process wound up in difficulty only when the BCOA, after drastically cutting its contributions in the 1988 NBCWA over the UMWA's objection, fefused to increase the contributions to the needed level, as required by the guarantee clause in the 1988 NBCWA.

3. The So-Called "Evergreen Clause" Imposed No Perpetual Obligation to Contribute on Former Signatories

Most recently, the BCOA and the UMWA have sought to pin liability on former signatories through the so-called "evergreen clause," which was inserted in the pension and benefit plan documents shortly after the 1978 NBCWA was signed and ratified. Neither the language of the clause, past practice or other indicia of the intentions of the parties support the novel idea that the clause imposes any perpetual obligation. Even if it did, however, the obligation imposed would by its terms merely require contributions based on bituminous coal production, and so the clause, even if it is "evergreen," would unlike the Coal Act -- require no contribution from the overwhelming majority of Reachback companies which no longer mine bituminous coal.

The "evergreen clause" is found not in the Wage Agreements but in the pension and benefit plan documents. When the clause was added to the pension and benefit trusts in 1978, it was perceived as doing nothing to change the traditional allocation of responsibility for retiree benefits, under which signatory companies to the NBCWA jointly shared the current costs of providing health benefits to retirees and their dependents. The clause merely required employers whose employees participated in the pension or benefit plans to comply with the terms of the trusts, including "making the contributions required under the National Bituminous Coal Wage Agreement of 1978 [or the current NBCWA⁷], as amended from time to time, and any successor agreements thereto."

Because the clause merely refers to the "contributions required under" the NBCWA, it of course imposes no independent obligation to contribute beyond that set forth in the relevant section of the NBCWA. Section (d) of Article XX of the NBCWA specifies signatory employers' obligations to contribute. It contains several key limitations that are squarely contrary to any theory of "evergreen" or perpetual liability. First, Section (d) specifically requires contributions only by "each signatory Employer." (Emphasis supplied.) It makes no reference to former signatories. Second, by its terms the contribution requirement applies only "[d]uring the life of this Agreement." NBCWA Article XX, § (d)(1) (emphasis supplied). Third, the Wage Agreement later describes the contribution requirement in similar terms: "This obligation of each Employer signatory hereto, which is several and not joint, to so pay such sums shall be a direct and continuing obligation of said Employer during the life of this Agreement." Id., § (d)(7) (emphasis supplied). The Wage Agreement contains not the slightest hint that any of these obligations continued after the life of the agreement.

⁶ Although the UMWA recognized at the time that the specified contributions would be inadequate, it agreed to the reduced level only because it anticipated that the guarantee clause would assure the necessary level of funding.

⁷ The precise wording varied slightly among the various trust documents, and reflected revisions from time to time to refer explicitly to the current NBCWA. agreement.

⁸ Certain contributions were required for a shorter period of time, see, e.g., Section(d)(1)(i) - (iv), but none extended beyond the NBCWA's termination date, specified in Article XXIX.

Moreover, the Wage Agreement's termination clause clearly indicates that the contribution obligation does not survive the expiration of the agreement. Article XXIX, governing termination of the Wage Agreement, makes a specific exception — but only one — for the continuation of health benefits. The termination clause specifies that in the event of an economic strike, employers must continue benefits for 30 days, after which time they must be paid for by the employees. See Art. XXIX. It is inconceivable that the termination provision would not also make an exception for former signatories who must still contribute to the benefit plans, if there were such an obligation. Instead, the "strike" provision states only that "[t]his paragraph shall survive the termination of the remainder of this Agreement and shall continue in effect until the purpose for which it was established is satisfied." (Emphasis supplied.)

In addition, the most reliable extrinsic evidence of the parties' intentions -- their conduct for most of the time since the birth of the "evergreen clause" in 1978 demonstrates that no one understood the "evergreen clause" or any part of the NBCWA itself to impose a perpetual obligation beyond the particular NBCWA to which an employer was signatory. In 1981, the Trustees of the UMWA benefit plans ruled that an employer's contribution obligation ends when it ceases to be a signatory to the NBCWA. Indeed, the Trustees refused to accept any contributions from employers until they submitted proof that they had signed the current NBCWA or a "me-too" agreement that adopted its terms. Absent such proof, the Trustees returned all contributions for any period after the previous NBCWA had expired. If those companies continued to be liable for contributions based solely on the evergreen clause, refusing to accept the money would have been a blatant breach of the Trustees' fiduciary duty to retirees and their dependents. In fact, however, the Trustees correctly determined that the contributions were not required by the Wage Agreement or the benefit trust documents. Only much later, amid greater labor strife over health and pension benefits, did the Trustees formulate their novel evergreen theory, as a way to broaden their contribution hase.9

Because former signatories' obligations expired with expiration of the Wage Agreement to which they had been a signatory, no contributions would be required of them under succeeding Wage Agreements, regardless of the meaning of the "evergreen clause."

Even if the "evergreen clause" did impose an obligation to contribute to the funds in perpetuity, the Coal Act went far beyond that obligation by transforming a production-based contribution supporting a multi-employer system into one based on assignment of former employees to individual former employers. Under every NBCWA, contributions to the pension and benefit funds were based on bituminous coal production, measured either in tons produced or hours worked in production and related activities. There was no minimum or fixed contribution. As the federal government explained in a brief filed

⁹ The only decision upholding "evergreen" liability, UMWA 1974 Pension v. Pittston Company, 782 F. Supp. 658 (D.D.C. 1992), affd, 984 F. 2d 469 (D.C. Cir. 1993), did so against three companies still engaged in bituminous coal mining. Due to anomalous procedural circumstances in that case, the court initially decided it on cross motions for summary judgment with "virtually no evidence" from the defendants as to the meaning of the evergreen clause. Thus, for example, the court did not have before it the letters and policy statements showing the Trustees' longstanding practice of refusing to accept, let alone require, contributions from former signatories. The court also lacked affidavits which have now been submitted to it from the members of the BCOA Executive Committee, who reviewed and approved the terms of the 1978 NBCWA, which state that they never discussed, much less agreed to, an "evergreen" clause or any other perpetual obligation to contribute. This new evidence has now been submitted to the same district court in a number of subsequent "evergreen" liability cases consolidated before it. It is very questionable that the court can or will impose "evergreen" liability in these cases in the presence of a much more complete factual record on the history of the clause itself. In any event, all of the pending "evergreen" cases including the Pittston case have been referred by the court to mediation before a senior district judge.

against various former bituminous coal producers who were challenging the Coal Act Reachback:

The evergreen clauses did not create any obligation to contribute for companies—such as plaintiffs—that left the coal mining industry because the Wage Agreements generally required contributions to the benefit plans on a per-ton-of-coal-mined and coal-miner-hours-worked basis. Any party who had ceased coal mining operations, such as plaintiffs, thus would no longer be obligated to make contributions.

Brief for the Secretary of Health and Human Services at 6-7, n.*, LTV Steel Co. v. Shalala (In re Chateaugay Corp.), F.3d (2nd Cir. 1995) (No. 94-6024) (citations omitted). Thus, if the Coal Act merely applied the NBCWA contribution formula to all past signatories, virtually none would owe any contributions. Unfortunately, the Coal Act retroactively extended benefits liability to hundreds of companies that had left the bituminous coal industry.

B. The 1992 Coal Act Dramatically Rewrote the Obligations of Former Signatories, to the Direct Benefit of the BCOA Companies

As the preceding discussion makes clear, the Coal Act retroactively imposed obligations on the Reachback companies to finance the health benefits of tens of thousands of retired miners and their dependents. The contracts those former signatories had agreed to afforded no basis for the sweeping liability the Coal Act imposed.

As noted above, due to the unique nature of the coal industry retiree benefits were traditionally provided under a multi-employer system. As the federal court of appeals explained:

The continual discovery of new coal mines and exhaustion of old ones leads to a very high turnover of employers in the coal industry. Because of this and the mobility of employees, labor and management in the industry have since 1950 worked out a means for assuring worker retirement benefits without linking specific workers to specific employers. They have done this through national, multi-employer agreements between the [UMWA] and a multi-employer association of coal producers, [the BCOA]. All coal companies that join the agreements pay into the same health and benefit funds at a specified rate per ton of coal produced, and all eligible employees receive benefits from those funds without reference to the employers they happen to be working for at the time of their retirement.

Connors v. Link Coal Co., 970 F.2d 902, 903 (D.C. Cir. 1992) (emphasis supplied). In 1978, at the behest of the BCOA, the industry prospectively converted to a single-employer-plan system. Post-1975 retirees would be covered by benefit plans established by individual employers. The pre-1976 retirees, however, remained on the multi-employer system under the 1950 Benefit Plan. Even after 1978, therefore, the pre-1976 retirees were not assigned to any particular employer.

In fiscal year 1992, the beneficiaries under the 1950 Benefit Plan, who were the collective responsibility solely of the companies that had joined the 1988 Wage Agreement, comprised more than 85% of the total beneficiaries of the UMWA plans

¹⁰ The Trustees of the UMWA funds do not appear to dispute this position. They have pressed evergreen claims only against companies that still mine bituminous coal, such as Pittston and Massey.

Notwithstanding the BCOA's current posturing as protector of "orphan" retirees' benefits, in 1978 the BCOA wanted to rely exclusively on such plans for post-1975 retirees and leave "orphan" retirees entirely unprotected. The UMWA wisely insisted, however, that the 1974 Benefit Plan be retained to cover retirees of companies that left the bituminous coal business.

and accounted for 86% of the health benefit expenses. According to the June 22, 1995, Committee Print on the Coal Act, for fiscal 1992 the 1950 Fund had 97,599 beneficiaries and expenses of \$208.8 million, whereas the 1974 Fund had 16,021 beneficiaries and \$33.3 million in expenses. Because the beneficiaries of the 1950 Benefit Plan were not attributable to any particular employer, there could be no claim that any former signatory had "dumped" them on the 1950 Benefit Plan. Rather, they were, under the collective bargaining agreements since 1950, understood to be the responsibility of current signatories — until, that is, the Coal Act arbitrarily assigned tens of thousands of them to the Reachback companies.

With respect to those beneficiaries, Reachback companies that signed the 1978 or later NBCWA are in no different position than companies that did not. As demonstrated above, nothing in any of the NBCWAs or plan documents assigned any responsibility to individual employers for those beneficiaries. Their only obligation was to contribute the necessary amount to fund the benefits during the life of the Wage Agreement or Agreements that they had signed. Once they ceased to be signatory, their obligations came to an end.

Only with respect to the post-1975 retirees and their dependents is there any argument that the beneficiaries are attributable to specific employers, based on the switch to a single-employer system in 1978. Yet even in that case, as demonstrated above, the former employers had no legal obligation after termination of the last Wage Agreement they had signed. The collective bargaining process had created the 1974 Benefit Fund as a multi-employer plan specifically to ensure that orphaned miners did not lose their benefits. The Coal Act, of course, changed that entirely by placing liability for those beneficiaries back on the Reachback companies.

The relatively small proportion of beneficiaries of the 1974 Benefit Fund also demonstrates that the problem beneficiaries being "dumped" on the 1974 plan, to the extent there was any problem at all, could have been easily resolved – and in fact was—through collective bargaining without any need for legislation. By the time of the Coal Act, the BCOA and the UMWA had adopted the 1988 NBCWA, which for the first time imposed withdrawal liability for health benefits on companies that sought to withdraw from the NBCWA system. See Art. XX, § (i). That provision would eliminate any concern that the 1974 Benefit Plan would be placed in a disadvantageous position through some companies' departure from the bituminous coal industry and therefore the multi-employer system.

Reflecting the BCOA's confidence that the problem had been solved, at the same time that the withdrawal provision was adopted, the BCOA again voluntarily agreed to guarantee the specified health benefits, including those for the relatively few post-1975 retirees and dependents attributable to companies that had not signed the 1988 NBCWA. Of course, this contractual resolution of the withdrawal liability issue did not deter the BCOA from seeking millions of dollars in additional savings through retroactive imposition of the single-employer assignment and funding mechanism mandated by the Coal Act.

The most prevalent myth surrounding the 1992 Coal Act is that it did little more than hold former signatories of the national coal wage agreements to promises they made in the past. In fact, all of the Reachback companies complied with every contractual obligation with respect to health benefits when they chose not to sign further coal wage agreements. The Coal Act, however, dramatically rewrote those agreements retroactively to transfer the responsibility for tens of thousands of retirees from the current signatories to the NBCWA, especially the largest companies mining bituminous coal today, such as Peabody, Consolidation, and Cyprus Amax, to the Reachback companies. No act has shown less respect for freedom of contract and the collective bargaining process. These circumstances provide a compelling case for the complete repeal of the Reachback provisions of the 1992 Coal Act. At the very least, to the extent that a surplus exists in the Combined Fund, the Reachback companies should, as H.R. 1370 provides, be released from the legislative mandate of the Coal Act to subsidize the BCOA.

STATEMENT OF DAVID JAMISON PRESIDENT OF UNITY REAL ESTATE CO

My name is David Jamison. I am President of Unity Real Estate Company ("Unity"). Unity is a small Pennsylvania corporation that leases office space in a small building and operates a parking lot, both of which it owns. Unity employs two people: an officer (me) and a janitor.

In the Fall of 1993, the UMWA Combined Benefit Fund notified Unity that it was obligated to pay certain annual premiums as a consequence of the newly enacted Coal Industry Retiree Health Benefit Act of 1992 ("Coal Act"). The total premium, \$266,839.92, was to be paid in twelve monthly installments of \$22,236.66 each, with any delinquency subjecting Unity to penalty of over \$7,000.00 per day.

Unity could not possibly pay this astounding new liability. Unity's average annual gross revenue is only approximately \$55,000.00 per year. As a going concern, Unity's value would not exceed \$85,000.00. Thus, Unity did not have sufficient cash to pay the initial \$22,000.00 payment.

If it is enforced, the Coal Act will bankrupt Unity. There is no way Unity can pay the amounts assessed against it, and the Coal Act, as presently structured, permits no exception, even where, as here, it will destroy a Company.

This impact is particularly egregious given that Unity never engaged in the mining business, and the liability is premised solely on its affiliation with entities that legitimately ended their involvement in the mining industry decades ago.

Unity has two connections with the coal industry. In 1969, Unity merged with three inactive coal companies, one of which was South Union Coal Company, a Pennsylvania corporation incorporated in 1922 ("South Union-PA"). South Union-PA had operated coal mines in Pennsylvania between 1922 and 1940; and in West Virginia from 1943 to 1960. By 1961, however, all such operations were permanently terminated. Unity's only other contact with the coal industry was that in 1974, it incorporated a wholly owned subsidiary in West Virginia, also named South Union Coal Company ("South Union-WV"), to operate the mine formerly operated by South Union-PA. South Union-WV operated the mine until it filed for bankruptcy on June 26, 1981.

South Union-PA and South Union-WV were signatory to various National Bituminous Coal Wage Agreements while they were in operation. Ultimately, however, the Bankruptcy Court authorized South Union-WV to reject the last Agreement it signed (the 1981 Agreement) as of its effective date, approved an unrelated third-party's assumption of all of South Union-WV's assets and obligations.

Having had no contact with the coal industry since 1981, I was shocked to discover that the Coal Act, which was passed in 1992, required Unity to pay any amounts at all, let alone more than five times its annual gross revenue. Fortunately, the United States District Court for the Western District of Pennsylvania believes that the Coal Act is unconstitutional as applied to Unity, and issued a preliminary injunction restraining its enforcement.

Separate and apart from the legal arguments set forth in that decision, simple principles of fairness, equity, and justice demand some modification of the Coal Act by which Unity is relieved of these unbearable obligations. Even though entities that were affiliated with Unity formerly employed some UMWA miners that are continuing to receive health benefits, the undisputable fact of the matter is that the provision of such health benefits always has been, and still should be, part of the consideration for which a coal industry employer receives productive work from his employees. In that context, the cost of such health benefits reasonably can be passed on to the employer's customers, or otherwise accounted for in the trade-offs that go along with collective bargaining.

Unfortunately, Unity has no such options for dealing with these Coal Act obligations. Even assuming Unity could pay the initial payment, it could not pass these costs on to anyone else. Unity's office tenants and parking lot customers cannot reasonably be charged the exorbitant rates which would be required to pay for these Coal Act obligations. Likewise, Unity cannot reasonably reduce the wages and benefits of its two employees so as to enable it to pay these Coal Act obligations. Instead, the only option the Coal Act leaves Unity is to file for bankruptcy.

Fortunately, the District Court for the Western District of Pennsylvania has seen fit to prevent this from occurring. Hopefully, you too will recognize the injustice that is being done and modify the Coal Act in some way so as to allow Unity to remain a viable entity.

TAXPAYER COMPLIANCE MEASUREMENT PROGRAM

TUESDAY, JULY 18, 1995

House of Representatives, Committee on Ways and Means, Subcommittee on Oversight, Washington, D.C.

The subcommittee met, pursuant to notice, at 10 a.m., in room B-318, Rayburn House Office Building, Hon. Nancy L. Johnson (chairman of the subcommittee) presiding.
[The advisory announcing the hearing follows:]

ADVISORY

FROM THE COMMITTEE ON WAYS AND MEANS

SUBCOMMITTEE ON OVERSIGHT

FOR IMMEDIATE RELEASE July 10, 1995 OV-10 CONTACT: (202) 225-7601

Johnson Announces Oversight Hearing on the Internal Revenue Service's Taxpayer Compliance Measurement Program

Congresswoman Nancy L. Johnson (R-CT), Chairman of the Subcommittee on Oversight of the Committee on Ways and Means, today announced that the Subcommittee will conduct a hearing to examine the Internal Revenue Service's (IRS) plans to implement a study of 1994 income tax returns through its Taxpayer Compliance Measurement Program (TCMP). The hearing will take place on Tuesday, July 18, 1995, in room B-318 of the Rayburn House Office Building, beginning at 10:00 a.m.

This hearing will feature invited witnesses only. In view of the limited time available to hear witnesses, the Subcommittee will not be able to accommodate requests to testify other than from those who are invited. Those persons and organizations not scheduled for an oral appearance are welcome to submit written statements for the record of the hearing.

BACKGROUND:

Sound tax policy and administrative decisions depend on comprehensive, reliable, and timely information on the level of taxpayer compliance with existing tax laws. For 30 years, the TCMP has been the IRS's primary program for gathering such information. The IRS collects TCMP data by auditing a random sample of taxpayers' returns in which every line on the return is examined.

In addition to measuring compliance levels, the data is used for estimating the tax gap (i.e., the difference between the amount of income tax owed and the amount voluntarily paid), developing formulas for objectively selecting returns for audit, allocating the IRS's audit resources, analyzing specific compliance issues, and developing legislative proposals designed to improve taxpayer compliance. Congress and federal and state agencies also use TCMP data for policy analysis, revenue estimating, and research.

Beginning in November, the IRS plans to conduct TCMP audits of approximately 150,000 tax returns filed by individuals, small corporations, partnerships and S corporations for tax year 1994. Compliance characteristics will be analyzed and measured within three groupings of individual taxpayers and within 24 industry categories at both the national and smaller geographic levels.

Some believe that TCMP studies are too costly, too time consuming and too burdensome for the taxpayers involved. The IRS must use extensive resources to audit the tax returns selected for analysis. The length of time it takes to plan, implement, analyze and report on TCMP surveys results in a lack of timeliness in the availability of the information gathered. In addition, the burden placed on taxpayers who are the subject of these special audits is substantial. The need to present documentation on every item on a return is laborious and the necessity of discussing issues the taxpayer did not report or claim can be confusing. For those who hire a professional to assist them, there can be a substantial dollar cost involved. And finally, the audits are seen as unfair for those who have fully complied with the tax laws and would not otherwise be the subject of an audit.

WAYS AND MEANS SUBCOMMITTEE ON OVERSIGHT

SCOPE OF THE HEARING:

The purpose of the hearing is to assess the value of the TCMP program to effective tax administration and policy analysis, and to determine if there are less burdensome alternatives available to the IRS to achieve the program's primary goals. Testimony will be received on the uses of the data, its timeliness, its availability for policy analysis, and relevancy to fundamental tax reform. Testimony will also be gathered on the design, sample size, cost and implementation schedule for the current TCMP survey, as well as the IRS's readiness to meet that schedule. Of particular concern is the burden TCMP audits place on taxpayers and whether taxpayers whose returns are selected for analysis should be compensated for the costs they incur as a result of the audit.

In announcing the hearing, Chairman Johnson described the hearing as especially relevant because Congress has not yet received reports on the findings of overall compliance from the 1985, 1987 and 1988 TCMP surveys. "If this Subcommittee is to conduct effective oversight of the IRS, it must have access to the information that will allow it to evaluate the Service's allocation of its enforcement resources. The Committee on Ways and Means should have the most up-to-date compliance data available as it reviews the effectiveness of current law and proposals for legislative changes."

DETAILS FOR SUBMISSION OF WRITTEN COMMENTS:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement, with their address and date of hearing noted, by the close of business on Wednesday, August 2, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filling written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the

- All statements and any accompanying exhibits for printing must be typed in single space on legal-tire paper and may not exceed a total
 of 10 pages including attachments.
- Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and may by the Committee.
- A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting written comments in response to a published request for comments by the Committee, must include on his statement or submission a list of all clients, persons, or oranzizations on whose behalf the witness appears.
- 4. A supplemental shoot must accompany each etalement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public bearing may be submitted in other forms.

Note: All Committee advisories and news releases are now available over the Internet at 'GOPHER, HOUSE.GOV' under 'HOUSE COMMITTEE INFORMATION'.

Chairman JOHNSON. Good morning, the hearing will be convened. I welcome you to our hearing on the Taxpayer Compliance

Measurement Program.

For 30 years, TCMP, the Taxpayer Compliance Measurement Program, has been the Internal Revenue Service's primary program for gathering information on taxpayer compliance with existing tax law. The Service has used this information primarily to improve its selection of cases to be audited and on occasion to seek legislation to address specific problems. Tax policy and administration depend on comprehensive, reliable, and timely information on taxpayer compliance with existing tax law.

The IRS is now prepared to initiate a new taxpayer compliance program, the biggest one yet. Its purpose is to gather information, not only for audit selection but for better use of all of its resources, including taxpayer assistance and education. Today we look forward to testimony that will describe the comprehensiveness and re-

liability of the information that will be gathered.

But timeliness is an issue for which this subcommittee finds testimony unnecessary. The TCMP studies have been carried out in 1985 on individual and S corporation returns, and in 1988 on corporations, exempt organizations, delinquent returns, and again on individual returns. Seven years later, this subcommittee has yet to receive reports analyzing these findings.

There has to be some agreement on the timely delivery of information to the Ways and Means Committee so that it may be used by those who legislate tax policy and to the subcommittee so that

it can perform adequate oversight of the IRS.

We would also look forward to hearing comments from the witnesses on the imposition of a requirement that the IRS report to Congress a comprehensive analysis of its findings in a timely manner, and further that the data be made more easily available to independent researchers in order to achieve greater and more inde-

pendent analysis of the data.

TCMP studies have been described by some as too costly, too time consuming, and too burdensome. Certainly, the requirement that taxpayers document every item on their return is burdensome. I have been told that taxpayers are even required to provide their marriage certificates to prove they are married. If the information gathered through the TCMP is necessary to the development of good tax policy and good tax administration, it is appropriate to ask if there are more efficient and less burdensome means of gathering that information.

TCMP audits are costly to taxpayers whether it is the cost of the taxpayer's own time or whether that of a hired tax professional. In addition, the audits seem as unfair for those whose returns show no indication of a need for an audit. We have to ask ourselves, is it fair for government to place a burden and expense on innocent people in order to better identify those who may not be so inno-

cent?

Should taxpayers be compensated for their participation? If so, how would that best be accomplished?

I welcome the witnesses today and thank you for your willingness to testify on these issues. Let us start with Phil Brand, the Chief Compliance Officer of the IRS.

Mr. Brand.

STATEMENT OF PHIL BRAND, CHIEF COMPLIANCE OFFICER, INTERNAL REVENUE SERVICE

Mr. Brand. Madam Chairman and distinguished members of the subcommittee, I appreciate the opportunity to appear before the subcommittee to discuss IRS' Taxpayer Compliance Measurement Program in general; as well as our planned TCMP survey of the 1994 tax returns. I have a written statement I request to be entered into the record which I will now summarize.

Chairman Johnson. Without objection, Mr. Brand.

Mr. Brand. The first TCMP surveys were conducted in 1963 and 1964. One of these first surveys involved the examination of 1963 individual forms 1040 tax returns. Data from this survey was used to develop the sophisticated computerized system to select individual and small corporate returns for examination. This system is still in use today. It is called discriminant function or DIF.

DIF benefits taxpayers by significantly reducing the examinations resulting in no change to the tax liability purported by the taxpayer. In fiscal year 1969, prior to the use of DIF, 46 percent of the examinations that we conducted resulted in no change to the tax reported by the taxpayer. In 1994, only 15 percent of returns selected for examination using DIF resulted in no change to tax re-

turns.

This means that a significant number of taxpayers, who have correctly and accurately filed their returns, are not burdened with examinations.

Over the past 30 years, IRS has conducted 25 TCMP surveys of various types of returns. In all these surveys we have focused on specific segments of the taxpaying population—individuals, corporations, partnerships and S corporations—one segment at a time over a 7- to 8-year time period. These surveys were designed to provide statistically valid data on compliance levels by return type and by reported income and asset level at the national and regional level.

Since the data from these surveys is 7 to 14 years old, the IRS is selecting returns for examination and allocating resources based on data that is not current. New data that is statistically valid by market segment and geographical area is critical to enable us to focus our compliance efforts on the most noncompliant taxpayers.

The plan survey for 1994 tax returns will, for the first time, combine the four major return types-individuals, corporations, partnerships, and S corporations. In addition, for the first time, it will also include foreign-controlled corporations giving us much needed data on FCCs. We will randomly select and examine approximately 153,000 returns.

The 1994 TCMP is an integral part of the IRS' new approach to identify and address noncompliance. This approach involves analyzing data by market segments and geographical area, identifying compliance issues, causes for noncompliance, and recommending solutions to address the noncompliance.

Through analysis of TCMP data by market segment and geographical area, the IRS will use education, outreach, and focused enforcement activities in a way that maximizes our impact. In addition, the data will provide better information on noncompliance that can be corrected through legislation.

The 153,000 sample size represents a filing population of over 123.9 million returns—only about one-tenth of 1 percent of that total filing population. Most of the examination work will occur in fiscal years 1996 and 1997. Thus, we estimate that approximately 23.5 percent of our total revenue agent and tax auditor staffing will be devoted to TCMP examinations. In fiscal year 1997, this will decrease to 16.4 percent with a further decline in fiscal year 1998 to 7 percent of the total revenue agent and tax auditor staffing.

Although this TCMP survey does require a fair amount of examination resources, the GAO has stated that the concern that TCMP is too costly has little merit. The most effective allocation of enforcement resources and additional recommended tax law changes that data from TCMP will provide should generate millions more

in revenue than the cost of the TCMP survey.

TCMP audits carefully review all aspects of the tax return and the extent to which it reflects the taxpayer's true tax situation. However, our examiners do have flexibility as to the depth that this review must take and small dollar amounts are not assessed. Thus, we balance the need for accurate data with the burden this places on the taxpayer.

The IRS has considered alternative ways to capture the data that we need to administer the system, including gathering enforcement data from operational programs, conducting numerous specific studies, and conducting opinion surveys. While these alternatives would provide some measure of compliance, there are a number of

shortcomings to such data.

The alternatives we have investigated and tried have not proven up to the task of supporting accurate, verifiable compliance measures. The IRS uses TCMP data to develop DIF formulas to identify and select returns for examination that have the highest potential for tax change, to identify emerging noncompliance trends, to identify compliance problems which can be corrected through legislative change, to assign resources to areas with the highest noncompli-

ance, and to develop tax gap estimates.

Earlier in my testimony, I shared with this subcommittee the impact that TCMP has had on reducing returns that are examined and result in no change to the reported tax liability. In my written testimony I discuss three examples of how TCMP results have uncovered compliance problems which were addressed through legislative change. These examples involved a problem with the number of dependents being claimed, the overstating of child care credits, and taxpayers not fully reporting their State tax refunds. In all three examples, the legislative changes resulted in substantial additional tax revenues.

TCMP data is also used by other agencies and the executive and legislative branches of government to adjust national income and products accounts, and to estimate potential revenue gains from tax proposals intended or expected to affect noncompliance. In ad-

dition, States use relevant portions of our data files for studies of

compliance with their income tax laws.

In conclusion, our goal is to improve our detection of noncompliance, to more effectively assign our resources to the areas with the highest noncompliance, and to identify compliance problems which can be corrected through legislative change. To achieve this goal, the IRS needs data that is statistically valid within market segments and on a geographical basis. The best method we have identified to date for securing this data is TCMP.

The IRS is on target to implement the upcoming survey on time. I assure you we will meet the challenges of conducting the examinations in a timely manner and with the least possible burden to

taxpayers.

Madam Chairman, this concludes my prepared remarks. I will be happy to answer any questions you or the other members may have.

[The prepared statement follows:]

STATEMENT OF PHIL BRAND CHIEF COMPLIANCE OFFICER INTERNAL REVENUE SERVICE

JULY 18, 1995

Madame Chairman and Distinguished Members of the Subcommittee:

I appreciate the opportunity to appear before this Subcommittee today to discuss IRS' Taxpayer Compliance Measurement Program (TCMP) in general, as well as our planned TCMP survey of 1994 tax returns.

Background

For over 30 years, the IRS has relied upon the information obtained from TCMP to collect the proper amount of tax dollars due and owing. Statistically valid data on compliance behavior enables the IRS to focus its compliance efforts on the most noncompliant taxpayers. TCMP is the primary data source for determining, measuring, and tracking taxpayer compliance levels. Thus, TCMP is one of IRS' most important tools to improve compliance.

To determine compliance levels across a filing population, TCMP selects and examines a randomly selected sample of tax returns. TCMP audits are designed to review all aspects of the return and, thus, to determine whether the return reflects the taxpayer's true tax situation. From these audits, detailed data on taxpayers' reporting behaviors is captured and analyzed. From this data analysis, we can determine the extent to which taxpayers correctly report their federal income tax liability.

The first TCMP surveys were conducted in 1963 and 1964. One of these first surveys involved the examination of 1963 individual (Form 1040) tax returns. Data from this survey was used to develop a sophisticated, computerized system to select individual and small business returns for examination. This system, still in use today, is called Discriminant Function (DIF). DIF has significantly improved our ability to identify and select the returns for audit with the highest potential for change. DIF benefits taxpayers by significantly reducing the number of examinations resulting in no change to the tax liability reported by the taxpayer. In FY 1969 (prior to IRS' use of DIF), 46 percent of the examinations resulted in no change to the tax reported by the taxpayer. In FY 1973 (after implementing DIF), examinations that resulted in no change to the tax return had dropped to 30 percent. In FY 1994, only 19 percent of returns selected for examination using DIF resulted in no change to the tax return. This means that a significant number of taxpayers who have correctly and accurately filed their returns are not burdened with an examination.

Over the past 30 years, the IRS has conducted 25 TCMP surveys of various types of returns. In all of these surveys, we have focused on specific segments of the taxpaying population — individuals, corporations, partnerships, and S corporations — one segment at a time. Four separate surveys of these four types of returns were conducted over a 7-8 year time period. The most recent surveys conducted of each of the types of tax returns and the sample size of each survey follows:

Total Samı	111,000 returns	
Partnerships (Form 1065)	1981 returns	27,000 returns
S Corporations (Form 1120S)	1984 returns	10,000 returns
Corporations (Form 1120)	1987 returns	19,000 returns
Individuals (Form 1040)	1988 returns	55,000 returns

These surveys were designed to provide statistically valid data on compliance levels by return type (Form 1040, 1120, etc.) and by reported income/asset levels at the national and regional level. Since the data from these surveys is 7-14 years old, the IRS is selecting returns for examination and allocating resources based on data that is not current. For this reason, the planned survey of 1994 tax returns is an IRS priority.

Planned Survey of 1994 Tax Returns

The planned survey of 1994 tax returns will, for the first time, combine the four major return types -- individuals, corporations, partnerships, and S corporations. In addition, for the first time, it will also include Foreign Controlled Corporations (FCCs); giving us much needed data on FCCs. We will randomly select and examine approximately 153,000 returns. These returns will be examined over a 30-month period beginning in October 1995 and ending in March 1998. Data analysis from this TCMP will provide better DIF formulas to select 1999 returns for examination.

The 1994 TCMP is an integral part of the IRS' new approach to identifying and addressing noncompliance. This approach involves analyzing data by market segments and geographic area; identifying compliance issues and causes of the noncompliance; and recommending solutions to address the noncompliance. Through analysis of TCMP data by market segment and geographic area, the IRS will use education, outreach and focused enforcement activities in a way that maximizes the impact on noncompliance. In addition, the data will provide better information on noncompliance that can be corrected through legislation.

To implement this new approach, the sample design had to accommodate:

- The need for statistically valid data by market segment and by geographic area.
- The need to trend newly gathered market segment data to past reported income/asset level data.

The planned survey also incorporates different types of returns that had previously been handled in separate surveys. The sample was designed to take into account all of the following factors:

- 6 Return Types (Non-business Individual Returns, Sole Proprietor Individual Returns, Corporate Returns, S Corporate Returns, Partnerships, and Foreign Controlled Corporations);
- 30 Geographic Areas;
- 10 Reported Income Level Categories for Individual Returns:
- 5 Reported Asset Level Categories for Corporate Returns; and
- 27 Market/Industry Groupings.

Considering these factors, the 153,000 sample is only slightly larger than the 111,000 sample size for the previous surveys conducted. The 153,000 sample size represents a filing population of over 123.9 million returns -- only about one-tenth of one percent of the total filing population.

In recent months, to ensure that the planned TCMP audits are of the highest quality, the IRS has improved two of its examination tools — case building and market segment specialization program. Through the use of technology, the IRS has greatly enhanced its capability for case building. To improve the efficiency of our auditors and reduce the time it takes to perform an audit, before an examination is started, we now build a more complete case file, including prior and subsequent year tax return data, copies of related information returns, and copies of currency transaction documents. In the past, due to the limitations of our computer systems, taxpayers were asked to provide copies of the prior and subsequent year returns for the examiner to review. Because the examiner is better equipped and more familiar with the taxpayer's overall tax situation, the taxpayer's time and cost of the examination are minimized.

Also, to the extent possible, TCMP examinations will be assigned to market segment specialists, examiners trained in the unique operating procedures, issues, and applicable tax law specifically related to a particular business, group, industry or profession. The market segment specialists are trained to identify and develop industry specific issues. Also, because the specialists will perform audits of certain groups there will be a high degree of consistency and uniformity in the treatment of issues. Of equal importance, MSSP reduces burden, time and cost on the part of taxpayers as a result of the examiner's increased understanding and knowledge of the taxpayer's business and accounting procedures.

The examination phase of the upcoming survey is 30 months with examinations beginning October 1995 and all examinations to be completed before

April 1998. Since most of the examination work will occur in Fiscal Years 1996 and 1997, our costs will be greater in those fiscal years. In Fiscal Year 1996, we estimate that approximately 23.5 percent of our total revenue agent and tax auditor staffing will be devoted to TCMP examinations. In Fiscal Year 1997, this will decrease to 16.4 percent with a further decline in Fiscal Year 1998 to 7 percent of the total revenue agent and tax auditor staffing.

Although this TCMP survey does require a fair amount of examination resources, GAO has stated that the concern that TCMP is too costly has little merit. The more effective allocation of enforcement resources and additional recommended tax law changes that data from TCMP will provide should generate millions more in revenues than the cost of the TCMP survey.

TCMP audits carefully review all aspects of the tax return and the extent to which it reflects the taxpayer's true tax situation. However, our examiners do have flexibility as to the depth that this review must take. Thus, we balance the need for accurate data with the burden this places on the taxpayer.

The IRS has considered alternative ways to capture the data we need to administer the tax system, including gathering enforcement data from operational programs; conducting numerous, specific studies; and conducting opinion surveys.

While these alternatives would provide some measure of compliance, there are a number of shortcomings to such data. The alternatives we have investigated -- and tried -- have not proven up to the task of supporting accurate, verifiable compliance measures.

Uses of TCMP Data by the IRS

New data that is statistically valid by market segment and geographic area is critical to enabling us to focus our compliance efforts on the most non-compliant taxpayers. With this new information, IRS resources will be applied more effectively and consistently -- geographically, within market segments and by issue.

The IRS uses TCMP data to:

- Develop DIF formulas to identify and select returns for examination that have the highest potential for tax change;
- Identify emerging noncompliance trends;
- Identify compliance problems which can be corrected through legislative change;
- Assign resources to the areas with the highest noncompliance; and
- Develop tax gap estimates.

Earlier in my testimony, I shared with this Subcommittee the impact that TCMP has had with respect to the development of DIF formulas -- a significant reduction in the percentage of returns that are examined and result in no change to the reported tax liability.

Now, I would like to share three examples of how TCMP results have uncovered compliance problems which were addressed through legislative changes. First, through data compiled by TCMP, the IRS identified a problem with the number of dependents being claimed. This discovery resulted in legislation that required a Social Security Number for dependents claimed as exemptions. This legislative change, effective for tax year 1987 returns, resulted in 7 million fewer dependents being claimed in 1987 -- an estimated \$2.9 billion in additional revenue.

Another compliance problem identified using TCMP data was the overstating of the child care credit. Again, legislation was enacted requiring the taxpayer claiming the credit to provide a taxpayer identification number for the child care provider. In tax year 1989 (the effective date for the legislation), 2.7 million fewer taxpayers claimed the credit yielding \$1.2 billion in additional revenues. Also, 252,000 new taxpayers began filing Schedule Cs as child care providers which resulted in \$343 million in additional setf-employment and income taxes.

Finally, by using TCMP data, we discovered that taxpayers were not fully reporting their state tax refunds. Through a legislative change requiring the states to file an information return (Form 1099G) with the taxpayer and the IRS, tax year 1989 returns reported additional income from state refunds resulting in \$144 million in additional tax revenues.

These examples represent the importance of TCMP data to IRS' compliance

activities. We believe that the information from the planned survey will have even far more reaching results in terms of our effectiveness in increasing tax collections through a combination of voluntary payments and IRS collection efforts.

Uses of TCMP Data by Others

TCMP data is also used by other agencies in the Executive and Legislative Branches of government, such as:

- The Bureau of Economic Analysis (BEA) uses tabulations of TCMP data in conjunction with other data to adjust national income and products accounts:
- The Joint Committee on Taxation uses TCMP data to estimate potential revenue gains from tax proposals intended or expected to affect compliance:
- The Department of the Treasury uses TCMP as a tool in developing tax policy proposals and in estimating revenue effects of proposals to improve taxpayer compliance; and
- The GAO uses TCMP data for a variety of studies.

In addition, two states have obtained the relevant portions of our TCMP data files for studies of compliance with their income tax laws.

Conclusion

In conclusion, our goal is to improve our detection of noncompliance; to more effectively assign our resources to the areas with the highest noncompliance; and to identify compliance problems which can be corrected through legislative change. To achieve this goal, the IRS needs data that is statistically valid within market segments and on a geographic basis. The best methodology that we have identified for securing this data is TCMP.

The IRS is on target to implement the upcoming survey on time. I assure you that we will meet the challenge of conducting these examinations in a timely manner with the least possible burden to taxpayers.

Madame Chairman, this concludes my prepared remarks. I would be happy to answer any questions you or other Subcommittee members may have.

Chairman JOHNSON. Thank you, Mr. Brand. Ms. Stathis.

STATEMENT OF JENNIE S. STATHIS, DIRECTOR, TAX POLICY AND ADMINISTRATION ISSUES, GENERAL GOVERNMENT DIVISION, U.S. GENERAL ACCOUNTING OFFICE

Ms. STATHIS. Thank you, Madam Chairman.

We are pleased to be here today, Madam Chairman, and members of the subcommittee. To my left is Ralph Block. He is an Assistant Director in our San Francisco office, who is our person responsible for doing most of our studies of TCMP.

I will summarize my statement and submit it for the record if

I might.

Sound tax policy and administration decisions depend on comprehensive, reliable, and timely information on taxpayer compliance. For about 30 years the Taxpayer Compliance Measurement Program has been IRS' primary program for gathering such information. TCMP is unique. Of all the various methodologies that IRS has, it is the only one that gives a statistically reliable indication of nationwide compliance with the Federal Tax Code.

IRS also uses TCMP data to estimate the tax gap, to identify compliance issues, to develop formulas for objectively selecting returns to audit, and to allocate audit resources. Congress and Federal and State agencies rely on this data for policy analysis, for

revenue estimating, and for research.

In 1991 IRS proposed a much smaller TCMP because of criticisms that it was too costly, too intrusive, and too untimely. We reported in 1993 that the proposed changes would reduce the TCMP's usefulness and that the criticisms did not justify such a major modification.

We concluded that the additional revenues generated because of tax law and administrative changes resulting from TCMP analyses had far exceeded the costs. TCMP audits may be intrusive but they affect relatively few taxpayers and they help many others avoid an IRS audit. While timeliness is of concern, we concluded that IRS could speed up its analysis of TCMP data if, for example, it validated data earlier in the process.

IRS is getting ready to conduct the most comprehensive TCMP ever undertaken. Currently planned to begin in November, it will include about 153,000 returns of individuals, partnerships, S cor-

porations, and small corporations.

In comparison to past surveys, the upcoming TCMP should provide IRS auditors with more information and better tools with which to perform more efficient, more effective audits. IRS hopes to collect data for the first time on the reasons for noncompliance and on the particular tax issues involved.

Some of the steps most critical to the success of this TCMP are scheduled to occur within the next several months. These include testing a computerized data collection system and training the auditors who will do the TCMP audits. If the planned data collection system does not work, IRS has developed a backup system but it has fewer capabilities. Even if the planned system does work, IRS currently does not have enough computers for all of the auditors to use the system. That problem needs to be resolved to make the results more useful for compliance research.

IRS also needs to modify the TCMP data base to make available all of the data that the data collection system can provide and to work on computerizing the audit workpapers so that they will be

more readily available to researchers.

With that, I will conclude my oral statement and be pleased to answer your questions.

[The prepared statement and attachments follow:]

TAXPAYER COMPLIANCE MEASUREMENT PROGRAM

SUMMARY OF STATEMENT OF
JENNIE S. STATHIS
DIRECTOR, TAX POLICY AND ADMINISTRATION ISSUES
GENERAL GOVERNMENT DIVISION
U.S. GENERAL ACCOUNTING OFFICE

Sound tax policy and administration decisions depend on comprehensive, reliable, and timely information on taxpayer compliance. For about 30 years, the Taxpayer Compliance Measurement Program (TCMP) has been the Internal Revenue Service's (IRS) primary program for gathering such information. IRS uses the data for measuring compliance levels, estimating the tax gap (i.e., the difference between the amount of income tax owed and the amount voluntarily paid in a year), identifying compliance issues, developing formulas for objectively selecting returns to audit, and allocating audit resources. Congress and federal and state agencies use TCMP data for policy analysis, revenue estimating, and research purposes.

In 1991, IRS proposed a much smaller TCMP because of criticisms that it was too costly, too intrusive, and too untimely. GAO reported in 1993 that IRS' proposed changes would reduce the TCMP's usefulness and that the criticisms did not justify such a major modification. GAO concluded that the additional revenues generated because of tax law and administrative changes resulting from TCMP analyses have far exceeded the cost. And while TCMP audits may be intrusive, they affect relatively few taxpayers but help many others avoid an IRS audit. While timeliness is of concern, GAO concluded that IRS could speed up its analysis of TCMP data if, for example, it validated data earlier in the process.

IRS is getting ready to conduct the most comprehensive TCMP ever undertaken. Currently planned to begin in November 1995, it will include about 153,000 individual and business taxpayers. In comparison to past TCMP surveys, this one should provide auditors with more information and give them better tools with which to perform more efficient, more effective audits. IRS hopes to collect data for the first time on the reasons for noncompliance and on the specific tax issues involved.

Some of the steps most critical to the success of this TCMP are scheduled to occur within the next several months. These include testing the computerized data collection system and training the auditors. If the planned computerized data collection system does not work, a backup system may be used that has fewer capabilities. However, even if the system does work, IRS does not currently have enough computers for all of its auditors to use it. To make the results most useful for compliance research, IRS also needs to modify the TCMP database to make available all the data the system can provide and computerize the audit workpapers.

Madam Chairman and Members of the Subcommittee:

We are pleased to be here to assist the Subcommittee in its inquiry into the Internal Revenue Service's (IRS) Taxpayer Compliance Measurement Program (TCMP). TCMP is a key component of IRS' overall compliance strategy, providing both baseline compliance measurements and data to help IRS improve its compliance programs. IRS collects TCMP data by performing audits on a random sample of taxpayer returns in which every line of every return is examined.

My statement today covers the importance of the TCMP, our conclusions on criticisms of the TCMP, and features and status of the planned TCMP of 1994 tax returns.

I would like to begin with a brief description of TCMP.

TCMP AND ITS USES

TCMP began in 1962 when IRS recognized the increased importance of measuring compliance with the tax laws. Since then, TCMP audits have covered 11 different types of returns. TCMP audits of individual returns have been the most frequently employed, generally being conducted every 3 years. TCMP audits have also been conducted on the returns of corporations, partnerships, and S-corporations, but less frequently than on those submitted by individuals. It has taken IRS more than 4 1/2 years to complete a TCMP. This time frame covers the planning phase (which occurs before tax returns are filed) to final data analysis, which includes estimating compliance levels and developing formulas for selecting returns to audit in succeeding years.

TCMP is a unique tool in IRS' array of strategies to measure and correct noncompliance. It is the only tool that allows IRS to make statistically reliable estimates of compliance nationwide. TCMP data are also important to non-IRS users in congressional and executive branch agencies and academia for policy formulation, research, and revenue estimation purposes.

IRS uses TCMP data to develop objective, mathematical formulas, which it then uses to score returns for audit selection. In this way, IRS can make more efficient use of its audit resources and avoid burdening compliant taxpayers. For example, in 1968, the year before IRS started using this scoring system, about 43 percent of IRS' audits resulted in no change to an individual's tax liability. By using TCMP-based formulas, IRS has been able to more accurately select tax returns requiring changes, thus reducing the no-change rate to less than 15 percent in 1994.

Also, given TCMP's statistical validity and comprehensiveness, it is useful for identifying compliance trends for specific issues and groups of taxpayers. For example, by analyzing 1979 and 1982

TCMP data, IRS identified a significant compliance problem with the number of dependents claimed on tax returns. IRS reasoned that this problem could be mitigated if dependents' Social Security Numbers were required to be entered on tax returns. The 1986 Tax Reform Act required this entry for most dependents claimed. The Joint Committee on Taxation estimated that this change would generate an additional \$300 million in tax revenues annually. IRS has estimated that, as a result of this requirement, taxpayers claimed 7 million fewer dependents on their 1987 tax returns than they did the year before.

TCMP data also allow IRS to estimate the tax gap and its components. The tax gap is the difference between the amount of taxes owed and the amount of taxes voluntarily paid in a year. TCMP data are used to identify the compliance levels with all types of income and deductions and these are the data from which tax gap estimates are constructed.

TCMP data are also used outside IRS to (1) estimate the revenue impact of proposed legislation; (2) adjust the national income accounts, such as the gross domestic product; and (3) conduct research on tax compliance. We have made extensive use of TCMP data in our own analyses of tax administration issues. For example, we used TCMP to identify problems with the Earned Income Tax Credit and erroneous dependent and filing status claims. (A summary of reports in which we made use of TCMP data can be found in appendix I to this statement.)

CRITICISMS OF TCMP

In 1991, IRS decided that, despite its many benefits, TCMP had to be changed to make it less costly, less intrusive on compliant taxpayers, and more timely in producing results. IRS officials believed that these concerns were significant enough for them to undertake a major effort to redesign TCMP. By September of 1992, IRS officials had proposed cutting the sample size by half-to about 25,000 returns for individual taxpayers. IRS officials also proposed modifying TCMP procedures so that not all tax return lines would be audited. In addition, IRS began developing other programs to replace TCMP data, including proposals to use data from operational audits and non-IRS databases to identify noncompliance.

In an April 1993 report, we noted that while these concerns had some validity and TCMP could probably be improved, our analysis of TCMP cases and IRS' support for its concerns led us to believe that these problems were not as significant as IRS asserted. We reported that TCMP was not too costly because past TCMP

¹Tax Administration: IRS' Plans to Measure Tax Compliance Can Be Improved (GAO/GGD-93-52, April 5, 1993).

results had been used to more efficiently allocate billions of dollars in enforcement resources and to recommend tax law changes that generated millions of dollars of revenue a year. We also noted that the burden was small compared with the benefits derived from the TCMP audits. We pointed out that TCMP audits actually reduced the audit burden on taxpayers not included in TCMP to the extent that the use of TCMP data reduced the number of compliant taxpayers selected for other IRS audits. We also noted that IRS could speed up its analysis of TCMP data if, for example, it validated data earlier in the process.

We concluded that the proposed changes to the size and scope of TCMP would undercut its significant benefits. Moreover, IRS itself recognized the value of TCMP as an important source for objective compliance data. Out of this recognition came a new TCMP covering tax year 1994 returns that is larger than previous surveys and for which audits are slated to begin in late 1995.

1994 TCMP--A COMPREHENSIVE EFFORT

The 1994 TCMP will be the most comprehensive TCMP effort ever undertaken. With a sample of about 153,000 income tax returns, this TCMP is designed to obtain compliance information for individuals, small corporations (i.e., those with assets of \$10 million or less), partnerships, and S corporations.² Previously, IRS had done separate TCMP surveys for each of these entity types.

IRS estimates that the TCMP will cost about \$559 million in direct costs over the next 3 fiscal years (1996-1998)—about 16 percent of IRS' estimated \$3.4 billion examination budget—and about \$1.5 billion in opportunity costs, which are the revenues that will not be realized from conducting regular audits. While the primary purpose of TCMP audits is not to produce revenues, IRS also estimates that the revenue yield from these cases will be about \$685 million. The 153,000 taxpayers that will be audited represent about 1/10 of 1 percent (0.1 percent) of the 125 million individual and business taxpayers covered by this TCMP. Thus, relatively few taxpayers will be burdened by TCMP audits. These audits are scheduled to begin in November 1995 and be concluded by May 1998.

The 1994 TCMP sample will stratify tax returns by market segment. A market segment represents a group of taxpayers with similar characteristics, such as those in manufacturing, regardless of

²An S corporation is one taxed similarly to a partnership. A qualifying corporation may choose to be generally exempt from federal income tax. Its shareholders then include in their income their share of the corporation's separately stated items of income, deduction, loss, and credit.

the type of return they file. IRS plans to stratify the sampled returns into 24 business (including one on foreign controlled corporations) and 3 nonbusiness (individual) market segments. IRS believes that stratifying the sample in this manner will allow it to more effectively use TCMP data for identifying noncompliance trends and selecting cases for audit. To ensure comparability with previous TCMP surveys, the sample can also be analyzed in the groupings used in prior TCMP surveys (i.e., by return type, assets, and income). (Appendix II shows the number of sampled cases and estimated number of taxpayers in each market segment.)

IRS also plans to provide its auditors more information on each sample case than in the past. Auditors are to receive 3 years of tax returns (1994 and the two prior years), third-party information returns, and other taxpayer-specific data. Also, District Office Research and Analysis sites are to provide industry-specific profiles for each market segment in their geographical areas. IRS believes that this additional information will help auditors better plan their audits and reduce taxpayer burden by requesting only those taxpayer records that are needed for the audit. This additional information should also improve the results, and thus the value, of TCMP audits.

Unlike in prior surveys, in the 1994 TCMP auditors will try to identify and record the cause of noncompliance and the related tax issues. Knowing the specific tax issues involved and understanding the reasons for noncompliance will help IRS develop cost-effective ways to improve compliance.

IRS is emphasizing quality audits in this TCMP and is training auditors on how to spot potential noncompliant behavior in specific market segments. IRS has also modified its quality review program to help ensure quality audits. In past TCMP surveys, quality control was left largely to line supervisors. For the 1994 survey, IRS plans to have a three-tier quality control program, in addition to supervisory review. In the first tier, an "in-process" review team will review audit workpapers on a sample basis while the audits are still under way to help ensure that auditors are doing quality audits. For the second tier, audit managers will review each case prior to closure. Finally, IRS' audit quality review group will review a sample of closed cases. In addition, the District Office Research and Analysis sites plan to review data entered onto the TCMP database for input accuracy.

In past TCMP surveys, IRS concentrated primarily on income tax issues. In the 1994 survey, employment taxes will receive more attention. Examiners will be told to refer businesses that appear to be in violation of employment tax regulations to employment tax auditors. Information from these audits will also

be part of the TCMP database. This effort should provide much needed information on employment tax compliance as well as data on the treatment of workers as independent contractors—an issue that has suffered from the lack of statistical data and has been the subject of extensive controversy.

Finally, IRS hopes to improve the data collection process. In past TCMP surveys, auditors manually recorded audit adjustments on a checksheet, which was later transcribed into the TCMP database by district or regional office clerical staff. IRS officials have long had a concern about errors that occurred during this data entry process and were not detected until long after the audits were complete. In the 1994 TCMP, for the first time, all case data will be entered directly into computers. To help ensure accurate data, IRS plans to have computer software to do consistency checks that will alert the auditor to correct errors while the audit workpapers are still available for reference. Using such computerized input should reduce the potential for transcription errors and improve the quality of the data transmitted to the TCMP database maintained at IRS' Detroit Computing Center.

STATUS OF THE 1994 TCMP

The 1994 TCMP offers IRS an opportunity to obtain information on the compliance characteristics of a broad segment of the taxpaying population. It is important that TCMP proceed on a timely basis because IRS' compliance data are becoming quite old. The longer the interval between TCMP surveys, the less useful is TCMP, given changes in the economy and the tax law. The latest TCMP surveys were made of 1988 individual returns, 1987 small corporation returns, 1984 S corporation returns, and 1981 partnership returns. The 1994 TCMP, however, is not progressing as smoothly as IRS expected.³

IRS has not met some of its key milestones, including testing of the data collection system to be used for gathering data and development of training materials. Consequently, the first audits will be delayed at least one month, to November 1995.

IRS is developing two electronic checksheets or data collection systems for TCMP. The Totally Integrated Examination System (TIES), under development for use in the regular audit program, is being modified to meet TCMP specifications. Because IRS officials are not sure whether TIES will meet the TCMP data requirements, IRS is also

³In December 1994, we issued a status report on the progress IRS was making on planning for TCMP entitled <u>Tax Compliance: Status of the Tax Year 1994 Compliance Measurement Program</u> (GAO/GGD-95-39, Dec. 30, 1994).

developing a backup system specifically for TCMP. IRS had planned to test these systems in June 1995; but at that time neither was ready. IRS now hopes to have these tests completed by August 31, 1995.

-- IRS had planned to have training materials available by March 1995 and to complete training of the auditors by September 1995. As of July 12, 1995, the training materials were not complete. Auditor training is now planned to begin in October 1995, with most auditors trained by the end of November 1995.

It is important to have a fully functional data collection system as soon as possible because other steps in the planning process, such as auditor training and development of TCMP procedures, depend on it. IRS is counting on TIES to work, but is also developing a backup system in case TIES fails. TIES has the capability to do more audit routines better and faster than the backup system. For example, TIES can automatically produce the Revenue Agent Report that taxpayers receive on the results of their audits. TIES also has the capability to perform on-line data validity and consistency checks, helping ensure that TCMP data are accurate. The backup system does not have these capabilities. Therefore, if TIES cannot be used for TCMP, it may take auditors longer to complete each audit; and TCMP data will be more prone to error.

IRS officials are confident that TIES will pass the August tests, but do not have the same level of confidence that TIES can be used for all TCMP audits. They told us that all revenue agents who will conduct audits at a taxpayer's place of business are scheduled to have portable computers that can handle TIES. These agents are scheduled to conduct about 57,000 of the 93,000 Form 1040 TCMP audits. The remaining 36,000 Form 1040 audits are supposed to be done by tax auditors in IRS field offices. However, all tax auditors do not have access to computers that can use TIES.

According to IRS officials, only 29 of the 63 district offices have computers with TIES capability that tax auditors can use. IRS estimates that about 21,000 TCMP returns will have to be audited either by having tax auditors use the backup data collection system or having revenue agents who have adequate computers conduct the audits. Using the backup data collection system could delay audits and adversely affect the quality of the TCMP data. Having revenue agents audit the returns would increase program costs.

⁴IRS estimated that having revenue agents conduct the audits would reduce examination yield by \$394 million over fiscal years 1996 through 1998.

IRS has estimated that it would cost about \$1.7 million to provide the additional 425 computers and related furniture needed to properly equip tax auditors. IRS officials said that funds are not available to make these purchases. IRS has thus encouraged the districts where tax auditors do not have computers with TIES capability to canvas their districts for computers that can be given to tax auditors doing TCMP audits.

We are concerned that the districts may not find enough computers and will therefore use either more costly revenue agents to conduct the audits or have tax auditors use the less efficient backup collection system.

We are also concerned that IRS will not be taking full advantage of all TIES features for TCMP purposes. IRS officials told us that the "other expenses" and the "other income" lines on business returns are often adjusted during audits, sometimes relating to more than one type of expense or income. Using TIES, auditors may assign codes that identify the specific reason and related tax issue for each type of adjustment made to these lines. However, only one adjustment code will be put on the TCMP database at the Detroit Computing Center.

We were told that the TCMP database would have to be modified to accommodate more than one code and that it would be too costly to do so. However, it may be possible to create a subsidiary file that could be attached to the database that would allow additional codes to be captured. IRS may want to consider this option so that these data can be used for compliance research purposes.

Similarly, TIES allows for computerized workpapers, with detailed information on reasons for noncompliance and audit techniques used. However, according to IRS officials, while auditors are required to use the TIES data collection feature, IRS cannot require auditors to use the TIES workpaper feature because the union contract gives auditors the option of generating workpapers by hand. In our 1994 TCMP status report, we suggested that IRS find ways to make workpapers available through electronic media so that the workpapers would be readily available for compliance research.

IRS agreed to explore the feasibility of at least retaining the disks in cases where auditors use computerized workpapers. We are not aware of any action that IRS has taken on this issue. Better, more efficient compliance research could be done if all audit workpapers were computerized and readily accessible to researchers.

In concluding my testimony, I would like to again take this opportunity to indicate our support for TCMP. IRS' 1994 TCMP plans, if effectively implemented, should go a long way towards improving its collection of compliance data. Better data provide the foundation for better compliance programs as well as the capability to avoid auditing compliant taxpayers. While the start of audits will be delayed at least 1 month, it appears that TCMP audits can still be completed on time. This can only be done, however, if IRS makes a concerted effort to finish development and testing of its data collection system, as well as ensure that all auditors are adequately equipped and trained by the end of 1995.

This concludes my testimony. We will be pleased to answer any questions you may have.

GAO REPORTS THAT USED TCMP DATA

Erroneous Dependent and Filing Status Claims (GAO/GGD-93-60, Mar. 19, 1993)

We found that the dependent support test was too complex and burdensome for many taxpayers to voluntarily comply with; about 73 percent of dependent claims failed to meet the dependent support test. We recommended that Congress consider enacting legislation that would substitute a residency test for the support test and consider eliminating the household maintenance test from the head-of-household filing status. We recommended that IRS correct the problems in its limited matching program and implement a 100-percent computer matching program to identify erroneous dependent claims. We used a sample of 1988 TCMP cases to determine the sources of erroneous dependent and filing status claims.

Many Benefits and Few Costs to Reporting Net Operating Loss Carryover (GAO/GGD-93-131, Sept. 23, 1993)

We found that IRS instructions on the amounts that corporations should report on the net operating loss deduction line were incomplete and confusing. We also found that it was profitable to audit NOLD returns. We recommended that IRS revise its instructions on reporting the deduction to clarify amounts that can be deducted, clearly define net operating loss carryover, require corporations to annually report their carryovers, and use the reported amounts to track corporate deductions of these losses. IRS has implemented our recommendations. We used the 1987 corporate TCMP to identify taxpayers who claimed the NOLD incorrectly.

Computer Matching Could Identify Overstated Business Deductions (GAO/GGD-93-133, August 13, 1993)

Small business tax noncompliance is a serious problem. TCMP audits showed that small corporations in 1987 and sole proprietors in 1988 overstated their deductions by an estimated \$40 billion and did not file required information returns on at least \$19 billion in payments to individual taxpayers. Our analysis of TCMP databases showed reverse matching could have identified overstated deductions and unreported wages. We recommended that IRS do a limited test of a reverse matching program on wages while it addresses the limitations to an expanded program for other deductions, such as for services and bad debts.

Earned Income Tax Credit Design and Administration Could Be Improved (GAO/GGD-93-145, Sept. 24, 1993)

We found that EITC appears to be achieving its goals. Those workers who receive the credit and are below the poverty line have their overall federal tax burden substantially reduced, while those qualified workers who are above the poverty line have their taxes reduced somewhat. Also, work incentives for some workers appear to be enhanced by the credit. However, we also found that one-third of the taxpayers who received the credit were not entitled to it. This occurred primarily because tax filers claimed the wrong filing status. We recommended that IRS modify the tax return to capture all the requisite qualifications information. We used TCMP data to determine the magnitude and types of erroneous EIC claims that IRS' processing procedures could not detect.

IRS Can Better Pursue Noncompliant Sole Proprietors (GAO/GGD-94-175, August 2, 1994)

Sole proprietors account for a disproportionate share of noncompliance. Although only 13 percent of individual taxpayers, they account for an estimated 40 percent of the noncompliance. We found that IRS did not have a comprehensive compliance strategy for sole proprietors. We noted that IRS could better use existing TCMP data to identify root causes of noncompliance. We demonstrated this by using TCMP data to look at the causes of noncompliance for truckers and automobile body repair shops. We recommended that IRS develop pro forma recordkeeping for truckers and ensure that insurance companies provided information returns on payments to automobile repair shops.

Estimates of the Tax Gap for Service Providers (GAO/GGD-95-59, December 28, 1994)

Using the 1988 TCMP and the broadest definition of service provider, we estimated that between 0.2 million and 1.6 million of the 11.5 million service providers may be misclassified employees. The estimate of the 1992 income tax gap for these service providers ranged from \$21 billion to over \$30 billion. If those misclassified workers were reclassified as employees, a significant amount of the taxes owed would likely have been withheld by the employers. IRS studies have indicated that taxpayers subject to withholding were substantially more compliant.

MARKET SEGMENTS AND SAMPLE SIZES FOR IRS' 1994 TCMP

(268676)

Chairman Johnson. Thank you, very much.

There are a number of questions that we would like to pursue and the first of them focuses on this issue of whether the IRS is on target in implementing the upcoming survey. The GAO reports that the Service did not meet its June milestone of testing the data collection, nor did it meet its March expectation of having training materials available.

Mr. Brand, would you like to comment? Mr. Brand. Yes, I would, Madam Chairman.

We will have the training materials developed by August 1. The training is scheduled for September and October and we do not anticipate any problems with that. I do not recall the milestone being

earlier, but if it was, it was.

In terms of the data collection and gathering process, we have developed something we call TIES which is our automated system for revenue agents. We have been concerned because of a lack of computers in all of our offices, so we did design a backup system. That backup system is in place and we will be able to gather the data.

So I believe we have met the GAO concerns. We did work with them on the audit. We have been responsive to the audit recommendations and I believe we are on target to commence.

Chairman Johnson. Would you like to comment, Ms. Stathis?

Ms. Stathls. We are hopeful that TIES will work for TCMP because it does online data consistency and validity checks as the

data is being entered.

It also automatically generates the audit report, so the taxpayer will have it immediately at the end of the audit and know what the results are. Because of their automatic generation, the amount of work that the auditors have to put into doing the reports will be reduced. So we are really hopeful that TIES will work for the TCMP and that IRS will not have to use the backup system for any of the audits.

I think this is one of the issues with having enough computers. Having enough will allow TIES to be used for all of the TCMP audits.

Chairman JOHNSON. But is it true that you have not tested your system of collecting this information, and so while you have a backup system, you do not know whether your planned system is even going to work and you have not tested the backup system?

Mr. BRAND. We believe we have tested it sufficiently to know that it will, in fact, work. The issue is, can we get enough computers to some of our front-line employees? We are looking now for re-

direction of computers from other areas.

What we will probably end up with is a mix with our most difficult cases being done by the TIES system. We will use some of the other cases that are not as complex. We may need to use those. But in both instances, again, the data gathered will be the same, it will be loaded in an automated manner, it will be analyzed in an automated manner. The real difference is the generation of the examination reports we will be able to do electronically through TIES. If we do not have TIES, we will have to generate the examination reports manually; that is the difference.

Chairman JOHNSON. But is there not a difference in the ability

of the different systems to collect information?

Mr. BRAND. No. Both systems will gather the same amount of data collected from the TCMP. It is the ease with which you complete the examination and the ease with which you issue the revenue agent's report, that is the difference between the two systems.

Chairman JOHNSON. Are you satisfied that they will be able to

do this?

Ms. Stathis. We are very hopeful that it is going to work.

Chairman JOHNSON. You mentioned, Ms. Stathis, in your comments that the criticism of the surveys has been, in part, that they have not identified the underlying reasons for taxpayer errors. Do you think that this new TCMP effort will do a better job of identify-

ing the reasons for taxpayer noncompliance?

Ms. Stathis. It should. In the past, information on the reasons for noncompliance was not routinely collected in any kind of checksheet fashion. Often the auditor would put a reason in the workpapers but those were not computerized, so you had to do a lot of research and work to find the reasons. This year the auditors are going to be asked to enter codes into the system to record what they think the reason is and to identify the tax issue. The information should be very helpful to Congress as it considers what changes should be made to the Tax Code. You will be able to know which particular issues are giving taxpayers the most problems.

Chairman JOHNSON. Do you think that the degree to which they are pursuing the issue of the status of various employees is ade-

quately addressed in their plans?

Ms. Stathis. IRS is going to be doing some followup work on employment issues and if it is carried out as currently planned, more information on employment issues will be available than was ever available before.

Chairman JOHNSON. One last question and then I will yield to

my colleagues.

One of the things that concerns me about the amount of resources that we are putting into this effort is that it is very big money, and probably the biggest problem in the Tax Code is the underground economy. This seems to be totally irrelevant to the people who do not pay their taxes.

Now, is there any aspect of this program that tries to reach to

that problem of the underground economy?

Mr. Brand. This TCMP program is focusing primarily on the fact that the largest portion of the estimated tax gap is unreported income. Now, we have only estimated the legal sector income. We have tried various different times in the past to estimate the tax gap from the illegal sector. We have never been successful in coming up with a figure as far as legal sector income is concerned.

I would just say, however, that we do estimate that in the legal sector, as far as unreported income, that you are talking approxi-

mately \$62 or \$62.5 billion.

Chairman JOHNSON. That has been discovered in past report studies?

Mr. BRAND. In the past, we used two—I am sorry, Madam Chairman, I may have cut you off. We used two processes to basically estimate the tax gap. It is based on the TCMP but the TCMP data

then is revitalized and brought forward with a series of economic indicators that we get from different places. From these sources, we are able to do an estimate. It is an estimate of the tax gap on those factors.

Chairman JOHNSON. How much unreported income have you ac-

tually found in your last series of this sort?

Mr. Brand. Using the last TCMP audit results for tax year 1992, we have estimated a tax gap for individuals of basically \$62.5 billion from unreported income.

Chairman JOHNSON. What proposals did you make to change the law so that we would better get at that unreported income in the

Mr. Brand. There has been a series of proposals over the years. I can give you three or four examples.

Chairman Johnson, OK.

Mr. Brand. One of the things that we uncovered in a previous TCMP was the fact that, by law, you are required, if you claim a deduction for your State income tax refund in one year, you are required to report any refund in the following year as income.

A recommendation was made and the law was changed requiring information reporting on that. The initial year that was worth \$144 million in additional tax revenue. We also know, through TCMP and other research methodologies, that TCMP statistically confirms areas that we have concerns about but we are not able to statistically confirm it.

In 1986, my recollection is that we asked for legislation, and Treasury asked for legislation that would require the listing of Social Security numbers to claim dependents. Almost 7 million dependents disappeared in the following tax year as a result of that change.

There are a number of instances where, in fact, we felt there may have been noncompliance and we were basically able to statistically prove it through the sampling process. It has resulted in

revenues and tax law changes.

Chairman Johnson. So what I am gathering is you really are deriving information that has to do with compliance, and through noncompliance avoidance of taxes. But you are not finding ways to identify cash transactions that expand the income of many but do not then become reportable and taxable?

Mr. Brand. Our process of examination does require probes for unreported income and that is a major part of the methodology that we use in examinations to verify income reported. The difference is that we do not attempt to use TCMP and we have not been successful with other methodologies to develop tax gap estimates of illegal sector income. We do not estimate the tax gap from

narcotics, prostitution, or activities that are illegal.

Chairman Johnson. I understand that. I am not looking so much at illegal income. I understand the problems with that. I am looking at, in a sense, the whole cash economy that moves without accountability to the Federal Government for taxes due. The kinds of things you are describing to me are enforcement and compliance with existing tax law by taxpayers who are complying in general, but not adequately.

In doing those audits, have you been able to find any ways to get

at other sources of income that are not being reported?

Mr. BRAND. Well, the audit techniques that we do will, in fact, allow us to make various judgments as to additional unreported income. As you go into the examination process, basically when you do the preanalysis of the income tax return, you begin to look at various different reasons that there may be unreported income and there are various different audit techniques that you apply that will, in fact, reveal unreported income.

Then you have to determine-

Chairman JOHNSON. Considering the dimensions of this problem, I do not hear your citing examples of changes in the law that have been made to better reach this income. But this is kind of a tangential issue and I am going to yield to my colleagues so that we can move along.

Mr. Zimmer.

Mr. ZIMMER. Thank you, Madam Chairman.

Mr. Brand, I would like to know some of the practical impact of your program. In a hypothetical situation, if a working couple with two children and a combined income of between \$30,000 and \$50,000 is selected for the TCMP, how long will it take them, on

average, to complete the audit?

Mr. BRAND. That is going to be dependent, of course, on what records they have available and so forth. If you are assuming that they are wage earners, and that their deductions are basically either standard deductions with some dependents or else it is a schedule A that has relatively small amounts of deductions and so forth. An audit like that with the records available should take on average 1½ hours to complete.

It gets more complex, obviously, as you get into other areas.

Mr. ZIMMER. Well, how often are the records not available in your experience?

Mr. BRAND. It depends on the individual taxpayer and their rec-

ordkeeping.

Mr. ZIMMER. Well, we are talking about the average. For instance, I do not know if I could find my marriage license and—

Mr. Brand. I cannot give you that estimate, Mr. Zimmer.

Ms. STATHIS. I do know that from the last TCMP the average amount of time that the IRS auditors spent on an individual's return was 13 hours. But that—

Mr. ZIMMER. Is that with the individual?

Ms. Stathis [continuing]. That is the auditor's entire time, beginning with preparation. The amount of time they would spend

with the taxpayer would be a subset of that.

Mr. BRAND. From a scheduling standpoint for interviews, an examination of a nonbusiness individual return most likely would be done within the office. From a scheduling standpoint, we are normally scheduling four to five examinations a day; three to four in a situation if TCMP is what we are trying to do.

That allows our examiners to complete workpapers, an audit re-

port, and the TCMP checksheet.

Mr. ZIMMER. Now, does the audit take place during normal business hours?

Mr. BRAND. Yes, sir.

Mr. ZIMMER. In the hypothetical situation both the husband and

wife are working; do they both have to attend the audit?

Mr. BRAND. No. They would not have to both attend the audit. They could, depending on what the nature of the situation is, but one or the other is generally fine.

Mr. ZIMMER. What sorts of questions would they be asked?

Mr. Brand. Basically we would ask for verification of income. We would, in fact, go through the tax return on a line-by-line basis in terms of what was reported so we would want to look at the W-2s that reflect the information on the tax return in terms of income. We would look at the 1099 forms. We would compare that, obviously, with the information that we have in the files in those particular areas. We would ask the question, is there other unreported income? We would look at the dependents.

The depth is up to the individual examiner. As you start the audit and, in fact, you start through the first 10 lines—and let us say there are 5 entries on the first 10 lines—you basically begin

to develop a pattern that this is a compliant taxpayer.

Then the examiner has the ability to limit the scope of what they would accept for proof and what they would basically require the taxpayer to provide. It is partially judgment, but we do require them to make an entry, to make a comment on each line item. Because this is, in fact, a research examination as opposed to an examination strictly for tax.

Mr. ZIMMER. But, for example, how frequently would a married

couple be asked for a marriage license?

Mr. BRAND. It would depend in many instances, but we would frequently ask for that. We would ask to prove marital status. One of the things we would want to prove is that there is a marital deduction.

If you have a situation where this was primarily a compliant taxpayer and all the other items were verified, then the judgment of the auditor could, in fact, say, I will accept the proof of what I have got. Part of it is based on oral testimony and other types of proof.

Mr. ZIMMER. Are they given a checklist of things to bring with

them, including their marriage license, before they attend?

Mr. BRAND. As we send the letter out, we inform the taxpayer of the items that are under consideration and since all items are under consideration, we try to ask people to bring in what we think is needed for verification. Bring in some type of verification of marital status.

Mr. ZIMMER. How frequently do they have to come back? For

what percentage of the audits?

Mr. BRAND. Let me provide that for the record. I do not have that with me, but I will be glad to provide that for the record.

Mr. ZIMMER. Does the IRS ask people in these circumstances extraneous questions such as income from nontaxable municipal bonds that do not relate to any line-by-line analysis of the tax return?

Mr. BRAND. We do attempt to get a picture of the taxpayer's financial situation and their economic situation. This goes back to the issue that the chair asked about unreported income, how do you probe for unreported income? So we are looking for indicators

of unreported income to see if, in fact, the tax return is reflective of the individual's financial situation.

But we should not be into an area that is not related to that tax return and is not related to verifying income or assuring that the right amount has been reported.

Mr. ZIMMER. Would the IRS ask about noninterest bearing check-

ing accounts?

Mr. BRAND. We could, yes, sir.

Mr. ZIMMER. About gifts that the taxpayer has received?

Mr. BRAND. The way you would get into discussions in this particular area, Mr. Zimmer, would be if there were indications during the examination that there was income in excess of what had been reported, or there were expenditures in excess of the income that is reported. At that particular point in time, we are trying to determine the source of that additional income. There could be a legitimate source, such as gifts being received or expenditures from gifts, or outlays that might be subject to discussion.

Because what we are trying, again, to determine is the financial picture. Is there a reality as far as the tax return is concerned? Does that tax return represent the financial picture of the tax-

payer?

Mr. ZIMMER. So the only questions that you ask are questions that relate to the validity of that tax return, not to other research objectives or data collection interests that you have?

Mr. Brand. In terms of the research, it is related to the tax re-

turn and the financial issues involving that tax return.

Mr. ZIMMER. Well, let us say that the couple refuses to divulge information about a noninterest bearing checking account, would

you subpoen that information?

Mr. BRAND. It would depend on the extent of what we felt other noncompliance is. IRS has the ability to summons that but again, I do not know what the situations are. But not with a small income-tax payer in a situation like that, depending on what the other circumstances were. If this largely appeared to be a compliant taxpayer, I doubt we would do that, but, yes, sir, it could happen. It depends on the individual situation.

Mr. ZIMMER. But if your interest was only to develop a data base

for your research purposes——

Mr. Brand. Well, again, I think what we may be doing is two things. The TCMP audit is only slightly different than a regular examination. From the standpoint of the Taxpayer Compliance Measurement Program examination, examiners are expected to exercise the same judgment about the level of proof and need for information as in a regular examination.

Mr. ZIMMER [continuing]. So for TCMP, you are only looking at—

might you have a broader scope?

Mr. BRAND. We would only broaden the scope if we felt that there was unreported income on that particular examination. Absent unreported income, there would not be any reason for us to go into it.

Mr. ZIMMER. All right, thank you, very much.

Chairman JOHNSON. Mr. Laughlin.

Mr. LAUGHLIN. Thank you, Madam Chairman.

Ms. Stathis, in your testimony, you state that the additional revenues for the TCMP analysis far exceeded the costs. You gave the example of requiring dependent Social Security numbers to be included and that caused, in 1 year's time, 7 million dependents to be dropped from the claim.

How much revenue did that produce by the dropping of these 7 million dependents, and can you tell us how that related to the cost

of the TCMP?

Ms. Stathis. In our 1993 report, we show that the individual TCMP, the last one that was done, cost \$88 million. The Joint Committee on Taxation had estimated that the dependent SSN change would bring in \$300 million a year. I believe that estimate was before the actual number of 7 million dependents was realized, however. I have seen different estimates on the 7 million, ranging from \$1 billion up to \$3 billion a year. So I am not quite sure what the right number is but I think it is probably the billion dollar figure.

Mr. LAUGHLIN. A billion dollars in additional revenues resulting from this 7 million dependents being dropped from the tax returns?

Ms. STATHIS. That is right.

Mr. LAUGHLIN. Now, what other examples—first before I go there, did those 7 million dependents that were dropped show up as taxpayers somewhere else or did the TCMP indicate what hap-

pened to the 7 million that got dropped?

Ms. Stathis. No, the TCMP was what led to requiring taxpayers to report dependent SSNs. The numbers that were dropped, the 7 million, come from a comparison of the number of dependents who were reported on 1986 tax returns versus the numbers who were reported on 1987 tax returns.

Mr. LAUGHLIN. Can you give us any other examples of changes that resulted in additional revenues? Again, give us the relationship the change caused by way of increased revenues and cost to

the TCMP.

Ms. Stathis. Well, for example, real estate gains are now required to be reported——

Mr. LAUGHLIN. Real estate what?

Ms. STATHIS. Real estate transactions. IRS now gets some form 1099 reporting on real estate transactions because, through TCMP, IRS determined that there was a tax gap in that area approaching \$8 billion. Stock transactions are now reported because that had been found to be about a \$2 billion tax gap issue.

Generally, when additional reporting on a tax return or through a form 1099 information return is required, IRS expects it to increase voluntary compliance and, thus, more of that type of income

will be reported.

Going back to Chairman Johnson's question earlier about unreported income, one of the proposals that the Service offered up a year or so ago was something called SINC. I have forgotten what the acronym stood for but SINC, too, was a proposal to have more information reporting on this type of cash income.

Information reporting generally has proven to increase compli-

ance levels and bring in greater revenues.

Mr. Brand. Mr. Laughlin, if I might, I might be able to give you a couple of more examples if you are interested.

Mr. LAUGHLIN. Yes, sir.

Mr. BRAND. Alimony income was going unreported. That is a \$316 million gain in revenue as a result of requiring information reporting in that area. There were also excessive exemptions for people claiming the additional exemption for being 65 or older. Child care credit was going unreported and being overreported in one instance, and being underreported by the providers of child care. There are a number of examples like that that show billions of dollars of additional revenue.

Mr. LAUGHLIN. You anticipate by doing another TCMP audit that you will uncover other areas where legislation will bring forward

additional revenues?

Mr. Brand. I think the thing to realize about the TCMP is that the primary purpose is to improve the selection process for tax returns. There is the ancillary benefit that we sometimes walk in and find these particular trends. Oftentimes, we confirm the trends statistically that we believe are occurring through our normal examination program, but it provides statistical validity to the problem.

Mr. LAUGHLIN. Ms. Stathis, I have one other area of inquiry and that is that you have stated that the IRS could speed up its analysis of the TCMP data. Did that also include a discovery that the IRS could speed up the time the taxpayer spends going through the audit, and if you could give us some examples of specific recommendations you had in mind when you said they could speed up

their analysis?

Mr. BLOCK. I would like to answer that question. IRS is doing a couple of things in this TCMP audit that should reduce the amount of time auditors have to spend with taxpayers. Before the audit begins, each auditor will be supplied with 3 years' worth of taxpayer information. They will have information return data on taxpayers and a number of other types of taxpayer related information. With this information, the auditors should be able to plan their audits and know exactly what questions they will have for taxpayers.

When they visit taxpayers, they should not have to burden them for copies of data they, the auditors, already have. For example, if the auditor already has a W-2, there is no need to ask the tax-

payer for the same W-2.

We believe IRS will be able to use the data faster under this TCMP because it will all be entered electronically by auditors. Although IRS will not be able to update its audit selection formulas until all of the data is in, IRS can still use the data as it is being entered to look at trends in noncompliance by geographical area. This should help IRS see some potential problems long before the data from all TCMP cases is analyzed, and it then could start to work on those problems.

That is how we believe IRS should be able to reduce taxpayer burden and speed up use of the data. We do not know for certain that IRS will do that, but we have hopes that it will, and we will

be monitoring this process.

Mr. LAUGHLIN. Your response has prompted a second question and that is, you stated the IRS agent will prepare his or her questions for the taxpayer as they come in. It occurred to me that it would also speed up the whole time involved in the audit if the

agent were to give the taxpayer the questions or the areas of inquiry so that they might come prepared rather than feeling like they are going to get sandbagged. I wonder if the IRS or the GAO has given consideration to a decision of having the agent tell the taxpayer what the area of inquiry is going to be?

Mr. BLOCK. Well, the auditors do that in an oblique way when

they ask taxpayers to provide various information.

Mr. LAUGHLIN. Is this preliminary to the taxpayer showing up at the audit?

Mr. BLOCK. Yes.

Ms. STATHIS. The letter they receive informing them of the audit should give them that information.

Mr. LAUGHLIN. The information of the areas of inquiry that the

agent intends to go into?

Ms. Stathis. That is right.

Mr. LAUGHLIN. OK. Thank you, Madam Chairman.

Chairman JOHNSON. Thank you.

Mr. Hancock.

Mr. HANCOCK. Thank you, Madam Chairman.

Ms. Stathis, I notice in your testimony you say that it has taken IRS more than 4½ years to complete a TCMP. I am assuming that because of the changes in the income tax law that you have got something after you complete it. Because you are making an analysis of what the law was at least 4 years ago, is that correct?

Ms. Stathis. That is correct.

Mr. HANCOCK. So you have made an analysis that is already 4 years old?

Ms. Stathis. That is right.

Mr. HANCOCK. So you still do not know. You just know what it

was 4 years ago?

Ms. Stathis. That is right. Timeliness is an issue. It always is, there is always a lag. Not only are there tax law changes, there are other kinds of economic changes.

Mr. HANCOCK. So we know now then that your last compliance report is at least 4 years old, so you do not really know what the compliance is going to be for last year? You only know what it was

in 1990 based on the law in 1990.

Ms. Stathis. Right. Actually some TCMPs are a lot older than that. The last TCMP that was done of partnerships used 1981 tax returns. For S corporations, I believe it was 1984 returns. For small corporations, it was 1987 returns, and for individuals it was 1988 returns.

So the data available right now is very dated.

Mr. HANCOCK. I just want it in the record that this is another indication that we ought to leave the tax law alone for a while until people can figure out what we are doing, because we are already outdated even on your compliance reports. You are spending millions of dollars to make these reports, but by the time you get them completed, it is 5 years old, so you really do not know. You just know what it was 5 years ago. Historical data is all we are talking about.

Ms. Stathis. That is correct. That is why the point Mr. Block was making is important. For the first time, if IRS is able to enter the TCMP data in the computerized system and have it available

on a more real time basis, there is hope that some of it will be more immediately useable. It will not be valid until all of it is put into the computerized system. But, if sufficient amounts of data are put into the system fast enough, some early indications can be obtained. I think that is the real hope with having the computerized data entry system. That is why we think it is very important.

Mr. HANCOCK. In your compliance investigations, Mr. Brand, do you find that where you get into some particular area that the tax preparers are involved from the standpoint of merely giving incor-

rect advice to the income-tax payer?

Mr. BRAND. It is one of the things that we will attempt to determine with this particular TCMP. In response to a question of the chair earlier, Ms. Stathis has referenced that we are looking at the causes of noncompliance as we go through the examination process. That is one of the areas we want to look at.

We do know from our compliance programs that you tend to find more changes in returns where the taxpayers are represented. However, those returns also tend to be more complex and there is more tax planning, so it is hard to read a conclusion. I would not want to draw the conclusion that there is a cause and effect. I suspect you would find it in some instances. It is going to be dependent on the individual practitioners, but I believe the complexity of tax returns also enters into it.

Mr. HANCOCK. Thank you.

Chairman JOHNSON. Mr. Brand, just to follow up briefly, you expressed some concern earlier, as did Ms. Stathis, as to whether or not all of your revenue agents would have adequate computer capability as they move forward in this audit. My understanding is that you need about \$1.7 million to provide the necessary equipment. In the context of a \$550 million program, and considering that the success of the computer aspects of the program will determine the timeliness of the information, are you going to be able to find the \$1.7 million?

Mr. BRAND. Whether we find the \$1.7 million or whether we divert computers from other parts of our operation, we will do this in an automated manner.

Chairman JOHNSON. So you have no question in your mind but that all of the agents participating in this audit program will have good solid computer capability?

Mr. BRAND. We will have the ability to load this data in auto-

mated format and be able to analyze in an automated way.

Chairman Johnson. Given that fact, can you tell us when this

subcommittee could expect a broad outline of your findings?

Mr. Brand. I believe that you have asked—as I recall, there has been some discussion, Madam Chairman—about us providing reports to you on a periodic basis. We will be more than happy to provide reports as we go through the process of TCMP as to its progress and what we find preliminarily as we go through the process.

The thing that I want to say, though, is that what we are driving for is statistical validity so we can use this for the basis of selection of work and for recommended changes. So what we want to make sure is, whatever we provide, we are going to provide with the right cautionary note that it may not be valid at this particular

point in time.

Chairman JOHNSON. At this time, in looking at the plan that you have laid out, would you estimate that we could have a pretty solid report before us in 3 years?

Mr. BRAND. Yes, ma'am.

Chairman Johnson. So we do not have to think in terms of the

5 years of the past?

Mr. Brand. Again, when we talk about the analysis of the report, I think we may be talking about two things. There is the TCMP data itself. I believe the reports you may be referring to are the estimates that we do on the tax gap which is based on TCMP, but then annually refreshed or refreshed when we do reports with other economic data. We can provide those on a timely basis.

Chairman JOHNSON. We certainly will be interested in those, but we will be more interested in the specific conclusions of the TCMP and their policy implications. Ms. Stathis, do you have any concerns about the ability to provide us with a substantial report in

3 years?

Ms. Stathis. Not on the TCMP results. One of the things to keep in mind is that the results of the TCMP are used long before the tax gap studies are released. The TCMP results are going to be used to update the selection formulas for identifying returns to audit in the regular audit program. That has already been done using 1988 TCMP results. In fact, updated formulas were used for 1993 tax returns. There are a variety of other uses made of TCMP data long before the tax gap estimates are released.

Chairman JOHNSON. Is that data from which you can draw policy

implications that would be available earlier than 3 years?

Ms. Stathis. Yes.

Chairman JOHNSON. My understanding is that you will not finish the audits for the first 2 years, it will take them 2 years to go

through this.

Ms. Staths. Well, at the end of 3 years, IRS definitely should have valid data. There will be points along the process when there will be a sufficient sample of particular returns that will be valid earlier than 3 years. Data may not be valid for other types of returns until all results are put into the system, which may take 3 years.

If IRS were to get down to one line item on the return and there were only a certain number of those returns filed, a very large sample would have to be examined in order to obtain valid results. But if the sample was stratified in certain ways, some kind of nationwide sense of compliance problems could be obtained earlier.

We have done a variety of studies for Congress in which we have been asked to study a particular issue. In doing them, IRS has allowed us to use the old TCMP data. So, on a number of our studies, we have gone back in and used the 1988 TCMP workpapers and data in order to analyze—

Chairman JOHNSON. Some of it is very old.

Ms. Stathis. That is true but the point is the data is useable way before IRS issues the tax gap report.

Chairman JOHNSON. Mr. Portman. Mr. PORTMAN. I thank the chair.

I thank you all for being here this morning to bring us up to speed on TCMP. I have a number of questions that were really echoed by some of my colleagues already, but I wanted to focus a little more on them.

The two concerns I have are taxpayer burden and the cost of the program. I do not question the value of the previous TCMPs. I wonder if this one is overbroad, whether it is timely, and whether there

are ways to make it more efficient.

In terms of the cost to the government, I have heard various numbers this morning and there are various numbers in the testimony that I have looked at. I have seen anywhere from \$200 to \$500-plus million. I guess all I can say is unless someone has some comment on that that gives us a more precise number, that is sort of the range that I would be thinking, \$200 to \$500 million in cost to the IRS to conduct this.

Mr. BRAND. Mr. Portman, I think there are a number of ways to look at cost. The fact is that we will have the employees on board and we will be paying the salaries of the employees, whether they are involved in TCMP examinations or other examination work. So to basically look at the staff years, FTEs and moneys applied, there is one way to estimate it.

The way that I prefer to estimate it is the opportunity cost that is lost. We know by working TCMP examinations that we will suffer a decline in the amount of penalty and interest or the amount of tax and penalties that are recommended, because this is a random sample, and by its very nature, a no change rate is high.

I believe a correct way of estimating cost is to look at revenue projections had we not done the TCMP and applied these FTEs in that manner. My recollection is that that is about \$1.5 billion that we would have received from these particular resources. We know the results. We estimate the results of the TCMP to be about half that, so your opportunity costs are really in terms of revenue over the life of this. The cost of the employees, and so forth, are expended by the——

Mr. PORTMAN. Let us focus a little more on that, if we can. I was not planning to get into this area, but you raise an interesting question and that is what the projected savings are over time really to the system through increased compliance and what are the

opportunity costs that would be missed without doing this.

We are talking seriously in this subcommittee and it is a national debate now about fundamental change in the tax system. We are talking about a flat tax, we are talking about a consumption tax. There are various proposals, but all of them are, in essence, replacing the current system with a new one, a radical overhaul of

our existing system.

I would think that the TCMP results might well not be generating that kind of savings over time, if indeed we go ahead with this. I think the projections are based on our current system, which I think is unlikely to survive at least past 1997. I think to go ahead with such a massive undertaking of 153,000 individuals and all of the time and effort that the IRS is going to put into this, where otherwise IRS would be focused on making the current system work better over the short term, is questionable, given where we are in terms of major tax reform.

The second issue I have generally is on the burden on the taxpayer. Now, we can make that less, and I think that is in the interest of all of us. Mr. Brand, as you indicated in your response to Mr. Zimmer, it might take about 1 hour for a person in the \$30,000 to \$50,000 range to respond to the audit. I think that is quite optimis-

tic, from my point of view.

I note that, based on some other testimony I have just read through, that up to 60,000 of these returns may well be business returns. I assume that is S corporations, partnerships, sole proprietors, and so on. I cannot imagine that it is going to take 1 hour. I cannot imagine it is going to take 20 hours. I cannot imagine it is going to take anything less than something like 20 to 100 hours for those kinds of taxpayers to pull this information together and to be responsive to all this information.

I have looked through your indirect methods worksheet that I guess all the agents will have. I have looked through the components of so-called economic reality, including club memberships, including hobbies and toys and weddings, including level of sophistication, cultural background, education and work experience, and so on, alimony—there is a lot of information to be compiled and it is a very intrusive process. I think we ought to be realistic about

it and not talk about taking 1 hour of the taxpayer's time.

Mr. Brand. Mr. Portman, I certainly would not want to have indicated, though I believe that is the time that it would take for most of the nonbusiness individuals involved in the TCMP. That would be a mischaracterization on my part.

Mr. PORTMAN. What would you say the average is?

Mr. Brand. Again, it depends on the type of tax return that is involved-corporate, individual, business, schedule C. We can provide that information for the record and would be more than glad to do that. I think that is an important issue. Again, I would not want to leave this subcommittee with the fact that we do not understand that there is a degree of difficulty that this requires of

taxpayers, especially those involved in the no change.

The key here to remember, one thing I would ask you to remember, as you think about this process, is that it does have long-range implications of fairness, because it does provide us with a basis of selecting tax returns on some methodology that is developed and understood, as opposed to us simply shopping for those who we might think within our experience might be noncompliant. This drives our methodology of scoring the selection of tax returns for examination.

The second point that I would ask you to remember is that with this system in the past, with the development of it, we have been able to drive the no-change rate on millions and millions of other taxpayers down to the point that we have been less intrusive. So

it is a tradeoff, no question about it.

Mr. PORTMAN. I would just make three comments. No. 1, if we are talking about a 3-year or a 4-year life as we had in 1988, I wonder whether it is going to be relevant. No. 2, I think there have got to be ways, Mr. Brand, for us to make this more efficient than what we are seeing here. It is sort of like a huge focus group. With the current technology and the probability statistics of information that we now have available to us. I find it hard to believe we need 153,000 people in this focus group, so I would think there might

be a way to just make it work better, work more efficiently.

Finally, I would say that I think any time we get into these kinds of audits—and I know this is only 153,000 Americans and the benefits could potentially accrue to millions of Americans in terms of less audits in the future—I think we have to look carefully at who is doing these audits, whose word is taken.

You said earlier there will be a lot of discretion with the auditor. Who are these auditors? Are these the junior auditors who often go out on these audits to cut their teeth? Are these people who are

going to have some experience, some background?

I think we need to be very careful about doing this, if we are going to do what I perceive to be perhaps an overly broad approach, to do it in a way that gives the taxpayer the ability to have an appeal process or to come back with information that, although it might not be all the documentation lined up as the IRS agent would like, it is something that the IRS can accept and then move on.

Mr. Brand. One of the things we have done this year to increase quality and to speed up the process is that we have required specific levels of experience before an auditor can be assigned to a TCMP audit. That level of experience obviously will vary dependent

on the complexity of the tax return.

Just one other point, too, in terms of the size of the sample. What the TCMP gives us that we have never had before, with the construct of this TCMP, are really two very important items that we have not had before, from a tax compliance standpoint. The first is for the first time in our history we will have compliance rates by 30 geographical areas across the United States which are analogous to our district operations. We will be able to determine what the compliance rate is within a much tighter geographical area.

Before, everything we did was national in its estimation and national in its scope. We know from the prototype work that we have done, that there is substantial difference in compliance in various

geographic areas, and so that helps us allocate resources.

The second item is that this will give us compliance by market segment. In the past, someone could be involved in retail, either at the corporate level or the individual level or subchapter S, and that all got buried more or less in the same type of situation. What we believe now is that there are different compliance levels, depending on the market segment, whether it is retail, wholesale, mining, or manufacturing. Again, the purpose of the expanded examinations is to give us compliance rates that are both geographically sensitive and also by market segment.

Mr. PORTMAN. I thank you for that.

One final question and then a comment. Has there been thought given to compensating individuals who go through this process, who expend these hours that we will be learning about from the information Mr. Brand is going to provide us? I would think the subcommittee could also benefit from some analysis of what the cost might be to the taxpayer, given the realities. If you are looking to people who have business income, I think it is going to require professional assistance and there will be tremendous cost to that.

But after someone has gone through all of this process, is there any talk about compensating people who in the end are found to have been fully in compliance and have cooperated with the IRS in this effort?

Mr. Brand. Mr. Portman, the discussion has been external. There has not been internal discussion. We have done some estimates based on the fact that we know the issue has been raised and is a question. Really, it is a question more appropriately answered by Treasury, as opposed to IRS, I believe, because I believe

it enters into the realm of tax policy.

Mr. Portman. That is fine. I guess my final comment would be that we would appreciate, certainly I would, any information you have on just the average time you think this will entail based on previous audits. Although I know there have not been audits of this type of looking at the economic realities, and then the cost, the cost to taxpayers, just so we know that up front and we can deal with that issue.

I appreciate your testimony this morning.

Ms. STATHIS. Mr. Portman, it will not make the person who is involved in a TCMP audit feel any better, but if the IRS auditors were not doing a TCMP audit, they would be doing more of other kinds of audits. So, in a way, the burden may not be that different in total. It just is distributed differently and the people who are involved in the TCMP audits are going to bear more of that burden

than they would otherwise.

Chairman Johnson. Before I recognize Mr. Herger, let me just comment that this subcommittee will be looking at compensation and we do hope that you will get your opinions back to us, because the people who are the object of ordinary audits, in a sense, have done something to trigger that. It does not mean that they are wrong, but there is something about their return that triggers the attention of the professional in the IRS. These folks are selected at random and may be in substantial compliance, and for the majority there is no change. I think there is an equity issue here and we do want to look at that, and I appreciate the gentleman from Ohio raising it.

Ms. Stathis. There is a committee of the Commissioner's advisory group that has explored this issue and you may want to chat

with some of them.

Chairman JOHNSON. We will check with them. Thank you for that comment. I was not aware they were doing that.

Mr. Herger.

Mr. HERGER. Thank you, Madam Chair.

Mr. Brand, GAO has raised a concern that no effort has been made to retain auditors' workpapers in an accessible format for purposes of more detailed research. I am just wondering, is such data useful and, if so, are any steps being taken to make the data available?

Mr. BRAND. We are hopeful that the electronic gathering of information will do that and we will be able to more readily use those workpapers and gather them. That is a fairly awesome task, as you can imagine, because the electronic gathering of information is a summary of changes, data, and information, while the workpapers

themselves are often paper files. In fact, they are workpapers and it becomes more difficult to extract that.

What we want to do, and this is the whole heart of this process, what we are after is a methodology that would help us measure compliance and select workload in a way that is the least intrusive to the taxpayer and is the most efficient in revenue yield for us and for the government. Whatever we can do, we are open to suggestions on anything that we can basically do that will help us balance this particular process. So we accept the suggestions of the GAO and will try to act on them, yes, sir.

Mr. HERGER. Thank you.

You indicated that you will be including samples of partnership and S corporation returns in the sample. Will the issues be followed through to the partner and stockholder returns to measure the tax impact?

Mr. Brand. Yes, we do what we call pickups on various examinations. In fact, dependent again on what we find, we may go through and do the pickups and follow up with adjustments. We do those on regular examinations, too, if we get into a partnership return.

Mr. HERGER. Ms. Stathis, if we could return to an earlier question of how far back we would be going. I think we are shooting for 3 years, but I believe I heard you mention 1988 and back to 1981. Would you mind commenting on that?

Ms. Stathis. Mr. Hancock's point is that the data is old by the time they are available, 3 or 4 years out of date, and I was explaining to him that because the TCMP of partnerships, for example, has not been done since the 1981 tax returns, the data currently available is old.

We are in 1995, so the partnership data is 14 years old. We know that enormous changes have taken place in partnerships over that many years. So the TCMP data that is available to think about alternative changes to the tax system and how that might affect partnerships are very unreliable at this point.

Mr. HERGER. Very good. Thank you.

Chairman JOHNSON. Thank you. Mr. Levin.

Mr. LEVIN. Thank you.

I am sure I missed the earlier part of the hearing and your opening statements. As I went over the materials yesterday, I really was not clear, is the purpose of the hearing this morning kind of a traditional oversight hearing, or is there some contemplation of legislation that would alter the planned reinstitution of the program? I am not quite sure what our purpose is here this morning.

Chairman JOHNSON. Our purpose is to hear in more detail the IRS' plans for this audit. There has been some significant criticism of the TCMP, and were we to determine that that criticism was overwhelming, that the program ought to be canceled, we might want to do that.

The initial materials and testimony raised those questions, but certainly no one on the subcommittee to my knowledge has made any judgment that that might be the right thing to do. I think, more importantly, there are some ways in which the burden on the taxpayer might be alleviated. There are some ways in which the data might be gathered in a more timely fashion and reported to

us in a more timely fashion, so that we could make better use of it.

Some of us are interested in whether or not we are looking in the right place. This does not look at the underground economy, and that is of concern. So there is a variety of issues that are appropriate to this hearing. If the hearing material is overwhelmingly critical and can demonstrate that there is no value to this program, then this subcommittee would be forced to recommend to the full committee that the program be dropped. I do not see that that is the evidence of the hearing, but there will be people who will testify who believe that is the case.

So I would say that this was an oversight hearing in the best tradition of oversight. On the other hand, it is a hearing from which we would have to act promptly if we wanted to alter the course

planned by the executive branch.

Mr. LEVIN. At this point, there is no plan or—

Chairman JOHNSON. There is no preconceived plan of either legislation or action that might come out of this hearing.

Mr. LEVIN [continuing]. In simple terms—and you probably have already stated this—why have you done what you are doing? Why the reinstitution of the plan? Why is this now being recommenced?

Mr. Brand. We are concerned about the age of the data and also the fact that over a period of time, as your data gets old, your nochange rate starts to climb because of the fact that there is a change in law, et cetera. It also helps us allocate our resources in the areas where we can be most productive. It also helps us confirm what we believe from our examiners' experience in the field. Statistically, it helps us confirm that there are particular areas that need legislative change. We would normally be doing TCMP surveys on a more regular cycle.

The Service did enter into a policy debate around this with previous Commissioners over what should be the size of TCMP surveys, what should be the TCMP process. I think Ms. Stathis has testified previously to some of that particular debate. We reached the point within the Service that we felt it was time to go ahead with another TCMP. We wish to gain some additional information as I talked about in terms of market segments and geographical

area sensitivity, and felt the time was right to do that.

Mr. LEVIN. So you think that this step is important in terms of

your audit program?

Mr. Brand. It is important beyond the audit program, Mr. Levin. The Service for the last 20 years has, through a combination of enforcement and voluntary compliance, collected about 87.5 percent of what we estimate the annual tax base to be. We have been challenged, partially because of the economic situation of government, to improve our collection of that tax base to at least 90 percent, a 3.5-percent increase.

We believe that moving toward understanding market segments, being able to deal with market segments in a wholesale methodology, information, education, negotiations, is a better methodology than what we have done in the past, which have been specific one-on-one examinations to deal with areas of noncompliance. We think this is one of the most vital things we have, understanding compliance, where the noncompliance issues are, if we are going to reach our goal of increasing collection of that revenue base.

Mr. LEVIN. Thank you. I think between your comments in that response, I think it helps one understand why we are here today, and I am glad we are.

Thank you.

Chairman JOHNSON. For the record, I would note that this is the largest TCMP ever proposed. It is about three times as large as any program they have ever done. It is also structured differently and I think will give us better information. It is also going to go on over 24 to 30 months, and all of us on this side of the table are going to hear about it as a result of that.

There are a couple of questions that I want to complete for the record. There are then two votes on the floor, so we will recess between this panel and the next panel until the second vote is con-

cluded.

There are three matters that I think did not get sufficiently clarified. First of all, would the IRS have any objection to a sanitized data base being prepared and made available to qualified researchers outside the Service?

Mr. BRAND. I believe that that is a Treasury tax policy question, Madam Chairman, but we would be glad to provide the answer for the record.

Chairman JOHNSON. If you would do that, I would appreciate it. Also, if you would include in that how long you think that would take. That would be useful to us. At the same time, if you could be specific about when you expect you could get information back to this subcommittee and over what sort of schedule, that would be useful to us, too.

[The information requested was not available at the time of

printing.]

Chairman JOHNSON. Then there is the issue of the other expense line that GAO raised, and I do not believe we discussed adequately. The other expense line covers a multitude of problems, and it is one of the reasons why there is too little detail in that area, the lack of detail under other expenses will make it hard for us to indee issues like the misclassification of workers.

judge issues like the misclassification of workers.

Could you comment, Ms. Stathis, on why you think more information ought to be available under other. Mr. Brand, if you want to comment on any problems for the IRS in further detailing that section, I would be interested. To me, this is more important than workpaper issues. The workpapers I can appreciate researchers might like, but that is going to be a horrendous amount of information.

The other line it seems to me is very important, particularly in terms of spotting patterns of problems or patterns of noncompliance. We are dealing with some of the issues that frankly this subcommittee is really concerned with.

Ms. Staths. That is right. The parallel issues with other expenses and other income, it is sort of a catchall line where people put a lot of things. Unless there is enough information to separate out exactly what all was put there, it can be misleading as to what is really being observed.

The point we were making is that the TIES system IRS is hoping to use provides a lot of information on those details, and we are just hopeful that IRS will figure out a way to include that information in the TCMP data base. Otherwise, it will only be in the workpapers and somebody will have to go back and search through them. Even if the information is computerized, searching will still be necessary to find it. So I think it is really important in understanding the total picture to be able to have that information in the TCMP data base.

Chairman JOHNSON. Mr. Brand.

Mr. Brand. I would echo that, and it is our intention to make

sure we understand that area.

Chairman JOHNSON. There are two programs that you have developed, your primary computer program and your backup computer program. Did they allow for further detail being included in the other category?

Mr. BRAND. I would like to provide that for the record to make

sure of that answer.

Chairman JOHNSON. Thank you.

Last, the issue of appeals, what is the average number of appeals under the normal audit program, and in what percentage of those appeals is the taxpayer's liability reduced?

Mr. BRAND. I would like to provide that for the record, too,

Madam Chairman.

[The following was subsequently received:]

Responses to Questions from the Subcommittee on Oversight

A. MEASUREMENT OF TAXPAYER BURDEN

Background: There is no historical measure of taxpayer burden addressing the taxpayer's time, number of contacts and appointments, and out-of-pocket costs incurred in the course of compliance with a TCMP examination. The following information is estimated based upon Auditing Standards and Process Measures data compiled beginning April 1995. The Process Measures data have been accumulated from general program examinations in three of the seven IRS regions and capture the time and the number of contacts with the taxpayer and/or representative in the following four stages of the examination: Pre-audit Analysis, Inspection of Books and Records, Issue Resolution, and Closing. Contact with the taxpayer and/or representative takes place during Inspection of the Books and Records, and Issue Resolution stages. The time estimates are reflective of the actual hours the revenue agents and tax auditors allocated to the case in those stages when taxpayer contact takes place and assumes that taxpayers were active participants during these stages.

The number of times a taxpayer will need to meet with an examiner and the total time spent by the taxpayer in any examination (including TCMP) is dependent on many factors, such as the complexity of the return and the condition and availability of the taxpayer's books and records.

Question 1: An estimate of the average amount of time taxpayers must spend in meetings with IRS personnel when responding to a TCMP audit.

Answer: The process analysis data from the general program cases can be projected to TCMP cases using historical TCMP rates of increase in examination time as follows:

	General Program	TCMP Increase Rate	TCMP Examination
Revenue Agents	30	53%	46
Tax Auditors	7	88%	13

It is important to note that, for business audits, it is not customary for the taxpayer to be present for the entire process of the examiner's inspection of the books and records. Therefore, we would expect taxpayers or their representatives to participate in less than the 46 hours of examiner activities indicated above.

Questions 2: The percentage of the audits in which taxpayers must be seen more than once, more than twice.

Answer: Nearly 70 percent of individual returns examined in office examination are closed after the first appointment; an additional 20 percent are closed after the second appointment. Only 10 percent of all office examination cases require more than two visits with tax auditors. For returns examined by revenue agents, 24 percent of cases are closed after the second appointment, and 48 percent are closed after the fourth appointment.

Question 3: An estimate of the average amount of time taxpayers expend on all activities encompassed in their response to a TCMP audit, or in the alternative, a number of representative case studies.

Answer: There is no direct measure of the total amount of time taxpayers expend in the course of a general program or TCMP examination. The estimates computed in the answer to Question 1 reflect the total time expended by revenue agents and tax auditors during stages of the examination where taxpayer contact takes place.

Question 4: The estimated out-of-pocket cost to taxpayers.

Answer: The data from general program process measures indicates that 80 percent of the taxpayers examined by tax auditors in office examination did not have representation. Of the business returns examined by revenue agents in the field, nearly 60 percent were closed without representation. It is not possible to accurately estimate the out-of-pocket costs expended by taxpayers in the course of a TCMP examination.

B. APPEALS

Question 1: In the normal audit program, what is the average number and percentage of general program cases that are forwarded to Appeals?

Answer: For the period beginning October 1994 and ending June 1995, eight percent of general program cases were forwarded to Appeals.

General Program Cases	Cases Forwarded to Appeals	Total Cases Closed	Percentage of Total
Individual	14,931	239,145	6%
Corporate & Other	13,094	100,420	13%
Coordinated Exam Program	1,101	4,817	23%
Training	160	22,822	1%
Total	29,286	367,204	8%

Question 2: What percentage of those cases result in a reduction of the taxpayer's liability?

Answer: The Appeals function accounts for reduction in the taxpayer's liability using the total tax deficiency and does not maintain statistics by the number of cases. Of the eight (8) percent of cases forwarded to Appeals from October 1994 through June 1995, the total deficiency was reduced by 71%.

(dollars in thousands)	Total Cases	Revenue Agent	Tax Auditor
Proposed Deficiency	\$5,586,499	\$5,404,264	\$182,235
Revised Deficiency	\$1,622,141	\$1,556,271	\$ 65,870
Percentage Reduced Deficiency	71%	71%	64%

Question 3: How many individual and corporate returns included in the last TCMP surveys were forwarded to Appeals?

Answer: In the most recent TCMP survey of individuals (Form 1040 filers) 863 of the 54,088 taxpayers, or **1.6**%, appealed the results of their audit. In the most recent TCMP survey of corporations (Form 1120 filers) 746 of the 18,138 taxpayers, or **4.1**%, appealed the results of their audit.

TCMP Survey	Cases Forwarded to Appeals	Total Cases Closed	Percentage of Total
1988 Survey of Individuals	863	54,088	1.6%
1987 Survey of Businesses	746	18,138	4.1%

Question 4: What percentage of those cases resulted in a reduction of the taxpayer's liability?

Answer: The Appeals follow-up information has not been perfected. Therefore, we cannot directly measure the appeals sustension rate. However, since the appeal rates for the last two TCMP surveys are very low, we feel that the sustension rate is not a significant issue.

C. ADDRESSING TAXPAYER BURDEN

Question 1: Given the number of issues and the higher standard of documentation that taxpayers must meet in responding to a TCMP audit, how can the resulting inequity in adjustments between TCMP audits and non-TCMP audits be addressed?

Answer: The TCMP process does not increase the depth of the audit. As is normal operations, examiners are directed to use good judgement in investigating issues. In the TCMP process, examiners are directed to "consider" each line item. That does not mean that each line item must be investigated, and an adjustment resulting in additional tax does not have to be made if the adjustment is a small dollar amount. This is the same expectation as in other audits. However, in a TCMP audit, the adjustment is recorded on a checksheet regardless of whether the adjustment is made to the taxpayer. TCMP results often point to the fact that small dollar value compliance issues, if widespread enough, can amount to large compliance problems.

Question 2: What are the recommendations of the Commissioner's Advisory Group committee that studies the issue of taxpayer compensation for participation in TCMP audits?

Answer: The following is excerpted from the meeting minutes of the Compliance Subgroup of the Commissioner's Advisory Group for February 1, 1994:

"...reducing unnecessary burdens on taxpayers should be an important priority. There is a high level of no-change audits under TCMP because of the random selection of returns. These taxpayers are participating in a research project that has substantial benefits for the tax system as a whole. Many of the people the Subgroup members spoke to, both inside and outside the Service, felt that there should be a clear recognition of this in the way that the TCMP audits are handled. The Subgroup heard a complete spectrum of views on this -- (i) treating TCMP audits like any other audit, even for compliant taxpayers, (ii) reimbursing compliant taxpayers for some portion of the cost of the audit, (iii) giving participating

taxpayers a "hotline" number to assist them in handling tax problems that occur for the next couple of years, (iv) waiving certain penalties or interest, or even tax, and (v) granting even more extreme waivers to cooperative non-compliant taxpayers. The Subgroup is not endorsing any of these suggestions at this time but remains concerned about the burden that TCMP imposes on taxpayers, especially those who are found to have substantially complied with the law. The Service should continue to study this issue."

D. THE TCMP PROCESS

Question 1: Do both TIES and the backup data collection systems collect detailed information on the "other" categories of income and expenses?

Answer: No. The new TCMP checksheet portion of TIES is designed to allow for one issue to be captured per line item with a causal code and Uniform Issue Listing (UIL) code to be attributed to the largest issue, if multiple issues are present. The backup data collection system, Electronic Data Gathering for Examination (EDGE), is similarly designed. The TIES workcenter, however, normally allows for writing a Revenue Agent Report (RAR) that accounts for multiple issues related to a single line item.

Question 2: Will the detailed information on the "other" categories of income and expenses be recorded in the TCMP database for purposes of analysis?

Answer: No. The database that will capture and archive the TCMP results is not designed to display multiple adjustments per line item. The file transfer, data diskette creation, and data accumulation programs are likewise not designed to address multiple adjustments per line item. It is our intent to capture the causal code and UIL code for the largest adjustment to an "other" line item. It is important to note that this capture methodology is a vast improvement over prior TCMP surveys. In prior surveys, no information on causal codes or UIL codes was captured.

If there is interest in analyzing instances where multiple adjustments occur on an "other" line item on a return, we will be able to determine when multiple adjustments were made to a line item by analyzing the comments section of the TCMP file which will be available in computer sensible format on the TCMP file at the conclusion of the survey.

Question 3: If this is not to be done, how will compliance on the specific issues be measured and matched across the various types of returns?

Answer: It has always been our contention that there are relatively few times that multiple adjustments will need to be made to a single line item. Until GAO's report, no other internal or external stakeholders had requested sub-line-item, breakdown of information. Further contact with GAO revealed that in the cases with an adjustment of an "other" line item, multiple adjustments were present only three (3) percent of the time. Since cases where "other" line items are adjusted are, in turn, a subset of the total sample, the percentage of the cases in the upcoming TCMP where multiple adjustments would need to be made to an "other" line item would be expected to be substantially below three percent.

Comparison of compliance measures across form types does not depend upon multiple adjustments per line item. Rather, effective comparison depend upon consistent treatment and capture of information across form types. Regardless of the data capture mechanism the Service ultimately uses for TCMP, consistent treatment and capture of compliance information has been our utmost concern.

Source: IRS

Chief Compliance Officer September 14, 1995 Chairman JOHNSON. I would like you to respond to the criticism of the TCMP that auditors are given little leeway to make the kinds of judgments that IRS reviewers commonly make and that tends to increase the number of adjustments made on appeal in the taxpayer's favor.

Mr. Brand. The issue here is that we do require our examiners to, in fact, look at the line items. Again, the depth of that verification is the judgment that the auditor can exercise. As you understand, we are trying to determine compliance on a line-by-line basis so we can then use this to develop our discriminate function activities so we can select those tax returns that are most in need of change in future situations. So I believe it is a valid statement. Whether it is a criticism or not—

Chairman JOHNSON. I wish you would give some thought, Mr. Brand and Ms. Stathis, to this issue. I can understand that for research purposes you might want to draw a very hard line. But I think in fairness to taxpayers, they at least be given the information that under this program we do draw harder lines and the likelihood of success on appeal is very great, since the judgment that IRS officers could normally exercise would probably read this differently.

We have to do something to make sure that, in a sense, subjects or victims of these audits are not unduly punished. For many, the matter of going to appeal is a formidable challenge and many just may be simply discouraged from doing that because it is formidable. I think this issue of the different and harder standard that tax-payers are held to under the TCMP is a matter of equity that we need to think through, and we would like your recommendations as to how to handle that.

Mr. BRAND. Just one quick response in terms of the standard. The standard that is the same is that we do not assess de minimis amounts. So even though there is an adjustment as a result of a TCMP audit, it still would not result in additional tax. We would record that information and it would help us select returns. But we are not interested in assessing de minimis amounts. Again, we maintain those assessment levels as confidential, but we would not assess a small amount of tax, even though we would record it.

Chairman JOHNSON. Thank you very much. I thank the panel.

The next panel, we will use the lights both for those who are testifying and for the members. I always feel it is important that we have as much time as we want to get the professional administrators' side of these issues.

[Recess.]

Chairman JOHNSON. The subcommittee will reconvene. I regret that I do have another obligation at 12:15 that requires that I excuse myself, so I will not be able to hear all of the testimony, although I intend to return. But I am very anxious to hear as much as possible, and so I am going to start with Mr. Goldberg and move to you, Mr. Gibbs, and Mr. Sparrow. If you will adhere as closely as possible to the 5-minute rule, I would appreciate it.

Mr. Goldberg.

STATEMENT OF FRED T. GOLDBERG, JR., PARTNER, SKADDEN, ARPS, SLATE, MEAGHER & FLOM; AND FORMER COMMISSIONER, INTERNAL REVENUE SERVICE

Mr. GOLDBERG. Thank you, Madam Chairman, for the opportunity to appear before you today. I would like to submit my written statement for the record. I will keep my remarks brief.

It seems to me the place to start in thinking about the proposed 1994 TCMP is with what we know. What we know is that it will cost the government more than \$550 million. While there are no precise measures, I believe it will cost taxpayer citizens of this country well more than \$1 billion in out-of-pocket costs. I believe that it will consume hundreds of millions of hours of their time.

Second, we know that what we are measuring or at least what we have historically measured is not whether the taxpayers pay the proper amount of tax. What we are measuring is the revenue agent's views as to the law, the revenue agent's views as to whether the taxpayer has complied with applicable recordkeeping requirements, and whether the taxpayer has satisfied the revenue agent with respect to factual issues in dispute. Finally, we know that this will take 4 years or more to complete.

What we do not know are the benefits that have been claimed for the proposed 1994 TCMP, nor do we know whether there are better ways to accomplish the stated objectives. In very brief terms, five benefits have been cited for TCMP. The first is the historically intended use of TCMP, which was to permit the IRS to score and

better select returns for audit.

It is often claimed that the result of TCMP is a decline in nochange audits of more than 40 percent to less than 15 percent, and to an increase in yield from examinations that are conducted. While TCMP has performed an important function in this regard, I believe that the primary factors causing that decline have little to do with either TCMP or the formula. I believe those declines are largely attributable to the IRS information returns program, which was nonexistent in the late sixties, to a dramatic decline in audit coverage of more than a sixfold decline, and to a more effective targeting of the special examination programs.

The question is—and I believe this is the question that should always be asked—is it worth \$550 million in taxpayer dollars, is it worth what I believe to be \$1 billion-plus of citizens' money, is it worth hundreds of millions of dollars of citizens' time to achieve whatever improvements might be achieved in the current IRS procedure for scoring returns? My own judgment is that the answer is no. I believe that improvements in scoring could be accomplished, but I believe they could be accomplished far less expen-

sively and far less intrusively.

A second argument is that TCMP helps to identify compliance trends. I believe that any study that takes more than 4 years to complete calls into question on its face that assertion. Beyond that, I would suggest by way of example the most single important noncompliance trend of the late seventies and early eighties was tax shelters. I believe that TCMP played no role in identifying that trend. I believe the TCMP, if anything, inhibited the agency's ability to respond.

A third point is that the TCMP data facilitates the development of compliance legislation. Others have cited examples ranging from toys for tots to alimony reporting to State income tax refund reporting. I believe that in each and every one of those instances, the same results could have been accomplished at a tiny fraction of the cost and far more rapidly, if folks had sat around and thought carefully about the tax system, and the process of thought, reflection, contemplation would have led to those results far more effectively. TCMP was useful as a revenue estimating device, but I think that is the end of it.

Tax cap studies, again I question their value. I also question whether \$550 million of the taxpayers' money, more than \$1 billion of our citizens' out-of-pocket costs and hundreds of millions of hours, is worth whatever improvements could be achieved.

I think it is time to start over. TCMP served an invaluable purpose 25 years ago, but we are trying to retrofit a battleship and turn it into a speed boat. That effort is doomed, in my judgment,

to fail.

I believe if I could commend you to one piece of testimony, it is not my own, it is Dr. Scheuren's testimony. I have known Fritz for years. I was unaware that he was going to testify today. I believe that he provides a practical, workable alternative that is far less expensive, far less intrusive, and will provide far more valuable results.

Thank you very much.

[The prepared statement follows:]

JOINT STATEMENTS OF FRED T. GOLDBERG, JR., MICHAEL J. GRAETZ, AND THOMAS M. GOLDSTEIN AS PRESENTED BY FRED T. GOLDBERG, JR.

Madam Chairman and Members of the Subcommittee:

We appreciate the opportunity to submit this statement on the subject of the IRS' proposed Taxpayer Compliance Measurement Program for the tax year 1994 (the "1994 TCMP"). We are submitting this statement solely in our individual capacities and not on behalf of any client or organization.

In brief, our views are as follows: (1) It is universally acknowledged that the 1994 TCMP will be expensive and intrusive, and will take a long time to complete and evaluate. (2) The case has not been made that the reasonably anticipated benefits from the 1994 TCMP will justify either its cost to the government or its burden on taxpayers. (3) The benefits likely to result from the 1994 TCMP could be achieved more effectively and efficiently through other IRS research and enforcement strategies.

- I. What We Know About TCMP We should begin with what we know about the proposed 1994 TCMP. It is a major investment of resources by the IRS; it will impose a substantial burden (without compensation) on taxpayers unlucky enough to be selected for TCMP audits; and it will take years before we learn anything from the effort.
- A. Cost to the Government The IRS estimates that the 1994 TCMP will cost approximately \$550 million over three years, more than six times greater than the cost of the 1988 TCMP. To put this number in perspective, it represents more than 30% of what the IRS would like to spend over the next three years on the supplemental revenue initiative that was approved by

Mr. Goldberg is currently a partner with the law firm of Skadden, Arps, Slate Meagher & Flom. He has served as IRS Commissioner (1989-1991) and as Assistant Secretary Tax Policy (1992). Professor Graetz is currently the Justus S. Hotchkiss Professor of Law at Yale Law School. He has served as Deputy Assistant Secretary (Tax Policy) (1989-1991) and Assistant to the Secretary and Special Counsel (1992). Mr. Goldstein is currently a student at Yale Law School and a summer associate with Skadden, Arps, Slate, Meagher & Flom.

In the interest of full disclosure, Mr. Goldberg notes the following: (1) Mr. Goldberg's comments during the hearing itself reflect solely his own views, and may not necessarily reflect the views of Professor Graetz or Mr. Goldstein. (2) While Mr. Goldberg is testifying in his individual capacity, the concerns expressed in the written statement and his testimony are the same as those he raised as IRS Commissioner and as Assistant Secretary (Tax Policy). (3) Mr. Goldberg was the "Commissioner" who was referenced in the 1993 and 1994 General Accounting Office ("GAO") reports on TCMP. Tax Administration: IRS' Plans to Measure Tax Compliance Can Be Improved (GAO/GGD-93-52, Apr. 5, 1993), and Tax Compliance: Status of the Tax Year 1994 Compliance Measurement Program (GAO/GGD-95-39, Dec. 30, 1994).

Congress in 1993. It also represents more than 25% of what the IRS will probably spend on Tax Systems Modernization over the next three years. It is more than three times greater than the 3-year budgets for both the IRS Statistics of Income and Research Division functions.

B. Burden on Taxpayers Beginning in October of this year, more than 150,000 individuals, families and small businesses will be subject to TCMP audits. While there are no reliable estimates of the time that these taxpayers will spend or their out-of-pocket costs, no one doubts that TCMP audits are intrusive, burdensome, and expensive. Taxpayers must justify—to the satisfaction of IRS agents—every item on every line of their 1994 returns. If you claimed the right to file a joint return, you have to show the agent your marriage certificate. If you claimed dependents, you better have birth certificates available for the agent. Forget about simply reconciling reported income by matching W-2's and 1099's. You must explain every bank deposit and every investment to show that you had no unreported income. If it appears to the IRS agent that you are living beyond your means, there will be more explaining to do. Your "word" and some reconstructed notes will be worth little; contemporaneous documents and the affidavits of third parties are often required.

More than 60,000 1994 TCMP audits will involve business enterprises (corporations and partnerships), and most individual TCMP audits will involve taxpayers with complex returns. In the absence of any hard data, it seems reasonable to speculate that out-of-pocket costs (including employee and preparer time) will be in the range of \$5,000 to \$10,000, and that the average individual will spend at least 20 hours preparing for and dealing with a TCMP audit. On this basis, the 1994 TCMP would impose between 750 million and 1.5 billion dollars in unreimbursed, private out-of-pocket costs on American citizens, and consume more than three million hours of their time. Coupled with the IRS's costs, the 1994 TCMP is an undertaking that will cost more than one billion dollars and could well cost several billion dollars.

What do we learn from imposing this burden? For the moment, consider these results from the 1988 TCMP: (a) more than 50 percent of those audited owed no additional tax; (b) about 7.5 percent of those audited were entitled to refunds, averaging \$284; and (c) the average proposed adjustment for the 40 percent regarded by the agents as owing additional tax was \$780.

C. Time To Completion The IRS expects to complete the 1994 TCMP by the end of 1998. The December 1994 GAO report expressed doubt that the IRS would start as scheduled, and concluded that: "Even with this start date, the TCMP results cannot be used to fully

In light of stated concerns over the burden imposed by TCMP, and the IRS' stated objective of reducing taxpayer compliance costs, it is somewhat surprising that the IRS does not plan to gather data on the time and money that taxpayers spend on TCMP audits (much less, gather data on compliance burdens faced by taxpayers in filing their original returns).

measure compliance levels or develop audit selection formulas until the end of 1998. By this time, the data will already be 4 years old." At that point, it should be noted, we may have a substantially different tax system.

II. What We Don't Know About TCMP Consider next what we don't know about TCMP. What is TCMP measuring? What will TCMP teach us? What will we do with what we learn?

A. What Does TCMP Measure? As the name implies, TCMP is intended to measure taxpayer compliance. Proper "compliance" means paying the proper amount of tax. But far too often that may be an uncertain number. Historically, TCMP has told us the amount of adjustments proposed by the revenue agents conducting the TCMP audits. TCMP data has never reflected final determinations of liability. TCMP measurements therefore turned on a particular revenue agent's view of the law, the revenue agent's conclusions in light of the taxpayer's record-keeping habits, and ultimately the revenue agent's factual determination when factual matters were in dispute.

While there is no reliable data addressing these issues, IRS sustention rates in other areas are often less than forty or fifty percent. This raises a yellow caution flag in taking literally the conclusions drawn from TCMP data. The IRS has indicated that it will be able to track the results of 1994 TCMP audits through any subsequent administrative appeals or litigation. However, it is unclear whether the IRS intends to base the 1994 TCMP data on the final resolution of these cases.

³ GAO/GGD-95-39, at 3.

While erroneous or controversial revenue agent interpretations of the law confound some TCMP data, record-keeping and "standard of proof" issues are far more troublesome. For example, taxpayers filing joint returns, and claiming several dependents, will be subject to numerous adjustments during a TCMP audit if they do not produce marriage and birth (or adoption) certificates, and cannot demonstrate that they have provided more than one-half the dependents' support (as required by Code § 152(a)). Many of these taxpayers would prevail during the administrative appeals process or in litigation.

Similar situations may arise in many other areas, e.g., disallowed deductions or the assertion of additional earned income based on the agent's determination regarding "unreasonable compensation"; disallowed deductions and the assertion of additional income based on the agent's determination that a company has failed to adequately document expenses as business-related (rather than personal); increased capital gains tax liability based on the agent's determination that a taxpayer has failed to establish basis and/or holding periods; worker classification disputes over employee versus independent contractor status.

Moreover, many people will no doubt have exhausted their taste for dealing with the IRS after experiencing a TCMP audit. As a result, they may be less inclined than taxpayers undergoing regular audits to pursue those issues through appeals, particularly if the dollar amounts are not substantial. Indeed, some taxpayers may make this kind of cost-benefit calculation during the TCMP audit itself (choosing, for example, not to spend \$2,000 and a lot of time documenting and challenging a potential adjustment of \$1,500).

- B. What Will TCMP Teach Us; What Will We Do With What We Learn? TCMP is supposed to accomplish four objectives: (1) improving the selection of returns for examination; (2) measuring the overall tax gap and its primary components; (3) permitting the IRS, and perhaps Congress to design and implement improved compliance strategies; and (4) providing useful statistical information to other users (e.g., the Commerce Department and private researchers).
- 1. Selecting returns for audit. Originally, TCMP's sole purpose was to help the IRS select returns for audit. The application of various statistical techniques to TCMP data permitted the IRS to "score" returns based on their anticipated audit yield. In this respect, TCMP has made an important contribution to tax administration. Indeed, the most frequently cited data in defense of TCMP is that "no change" audits have declined from more than 43% in 1968 to less than 15% for 1991, and that examination yields per return audited during that period have increased.

Having said as much, however, it grossly overstates the case to ascribe such results entirely to TCMP. The decline in no change audits and increased yields have resulted largely from the following (particularly since the late 1970's): (1) the development and implementation of a comprehensive information returns reporting and matching program; (2) the dramatic decline in audit coverage (to about one-sixth its level in the 1960's); and (3) the improved focus of special program audits.

In this context, two points are worth emphasizing. First, we do not quarrel with the notion that the IRS should minimize no change audits and maximize yields. However, we are not convinced that this objective justifies the 1994 TCMP.

- It is far from clear that the proposed TCMP would improve materially the "scoring" techniques that the IRS currently has in place and regularly modifies in light of other information it receives (including information from other audit and enforcement activities).
- The "general audit" program is currently at a minimal level of less than one percent of returns filed; it has been at that level for some time; it seems very unlikely to expand in the years ahead. With coverage at such low levels, IRS has many more potential high yield returns than it can audit. Any improvements due to the 1994 TCMP would be likely to have little practical value.

Improvements in sampling and statistical techniques suggest that the IRS' "scoring" objectives could be satisfied with samples that are both much smaller and more narrowly targeted than the proposed TCMP universe (particularly if such studies were conducted more frequently and completed more quickly).

Stated differently, the key question that must be asked is: Given current IRS "scoring" techniques, alternative ways to improve those techniques, and the projected level of audit coverage, do the reasonably anticipated benefits of the 1994 TCMP justify the costs to the government and the costs and other burdens to be imposed on taxpayers, taking into account the time it will take to complete and evaluate the effort? Maybe that case can be made, but based on information provided by the IRS and others to date, we believe the answer is no.

Even if that question were answered "yes," and the proposed 1994 TCMP were the most cost effective way to improve the general audit program, a second question still requires an affirmative answer. Budget realities force the IRS to make hard choices and set priorities. In light of all the other efforts that the IRS could pursue to improve voluntary compliance and/or reduce taxpayer burden, is the 1994 TCMP the best place to allocate scarce resources? Once again, it may be possible to make a case for the 1994 TCMP. But once again, on the information provided to date by the IRS and others, we believe that the answer is no.

- 2. <u>Measuring the tax gap and its components</u>. While TCMP was not originally intended for this purpose, it has been used for some time as a basis for estimating the overall tax gap and its components. Here again, TCMP may have a useful purpose. We now know that:
 - In absolute dollar terms, the aggregate tax gap is quite large.
 - Most noncompliance involves the underreporting of income.
 - Compliance levels are extremely high in circumstances where there is withholding, and relatively high when there is effective information reporting and matching.
 - Compliance levels are low in circumstances where there is the opportunity to understate tax, such as where there is no withholding and no effective information reporting. It is even lower when the medium of payment is cash and the payor has no need for any record to substantiate payment for purposes of a tax deduction or a reimbursement claim.

For example, Professor Bradley Efron, Department of Statistics, Stanford University, has suggested that sample sizes as small as 1,000 might be sufficient for most purposes.

While much of this "learning" seems like common sense, various TCMP studies have provided useful order-of-magnitude measures and may have told us something about trends over time.

Nevertheless, there seems to be little real benefit to be gained from a new study of the tax gap based on the 1994 TCMP. In particular:

- From a qualitative standpoint, we are likely to learn nothing new about the overall tax gap and its major components.
- From a quantitative standpoint, the tax gap estimates are very crude measures. In absolute dollars, they are probably too high -- or too low -- by many tens of billions of dollars. Given the limitations on other researchers' development and use of individual taxpayer-level data, we probably will never know how far off the mark these estimates are, and never even know the direction of the error.
- From a quantitative standpoint, the 1994 TCMP will provide little reliable data regarding changes in voluntary compliance levels, much less the magnitude of any such changes.
- From a quantitative standpoint, it is not clear that estimates derived from the 1994 TCMP will be materially different, or more accurate, than projections made from other data sources.

It has been suggested that the 1994 TCMP will provide far more accurate tax gap estimates, and will provide a useful baseline for determining whether the IRS achieves its stated goal of increasing voluntary compliance levels from "about 84%" to over 90% by the year 2000.7 This rationale is not persuasive for several reasons: (1) it suggests far higher reliability in the estimates than is warranted; (2) there are other, far less costly and intrusive ways to develop estimates of at least equal reliability; and (3) the resources in question could be better used to help achieve the stated objective.

In this context, we also question the underlying justification for ongoing estimates of the overall tax gap. What will happen differently if, based on the 1994 TCMP, the IRS estimates a tax gap of \$75 billion

There are may reasons to question whether the 1994 TCMP will permit a reliable analysis of compliance trends. For example, the IRS has made substantial changes in audit techniques, training programs, and the information provided to its auditors. It has also made substantial changes in its data collection and retrieval systems. See generally, GAO/GGD-95-39. Margins of error are quite large (particularly where unreported income is at issue), and there is no reason to believe the bias is the same for all TCMP studies.

GAO/GGD-93-52, at 12.

....\$150 billion\$300 billion? What will Congress or the IRS do differently if the 1994 TCMP produces estimates that voluntary compliance levels have gone up 2% have stayed the same ... have declined 2%? Will the Administration and Congress seek different levels of funding for the IRS? Will the IRS change its allocation of resources? The tax gap estimates, whatever they may be, seem likely to have little discernable impact on policies pursued by Congress and the Administration. Moreover, we find it difficult to imagine any different impact, whether the estimates are derived from the 1994 TCMP or from other data sources.

3. <u>Improving voluntary compliance</u>. Another justification for TCMP is that it improves voluntary compliance by helping the IRS identify trends in noncompliance and by leading to specific legislative initiatives. We believe these particular claims are also overstated.

(a) Trends in Noncompliance. Since it will take until the end of 1998 to complete the 1994 TCMP, claims regarding the ability of this exercise to identify new trends in noncompliance are somewhat suspect. The tax law, tax planning, and the context in which those activities take place are all in flux. In an environment characterized by frequent change, a study that takes four years to complete can at best be of limited use in identifying emerging trends.

One practical illustration of this point is provided by tax shelters and the 1976, 1979, and 1982 individual TCMP studies. During the late 1970's and early 1980's the retail marketing of tax shelters was easily the most important compliance problem of that period -- yet the TCMP studies did nothing to help identify the trend as it emerged. If anything, the IRS commitment to its "scoring" and return selection techniques distracted the IRS and delayed and distorted its response. The tax shelter phenomenon could have been identified and responded to far more rapidly through observation and reflection in a work environment that encouraged employees to "think" about the tax system, to communicate with each other, and to focus on events in the "outside" world.

(b) Specific Legislative Initiatives. Despite recent IRS claims, TCMP is no key to specific legislative initiatives. The critical elements are an appropriate analytical framework, observation and reflection, sound research and sampling, common sense, and creative thinking. On occasion, TCMP data has been used in recent years to test hypotheses and estimate potential revenue gains from proposed compliance legislation. In this context, however, TCMP data is expensive and often unsuited to the task. There are more efficient and effective ways to identify areas of noncompliance, and to assess the potential impact of various compliance measures.

Two examples illustrate this point: legislation requiring taxpayers to obtain and list Social Security numbers for their claimed dependents ("TIN's for tots"), and the current debate over compliance with the Earned Income Tax Credit ("EITC").

TIN's for tots. One of the success stories frequently attributed to TCMP involves the TIN's for tots legislation enacted during the 1980's. Myth has it that TCMP caused IRS to figure out that taxpayers were overstating the number of dependents and that the problem might be solved by requiring taxpayers to obtain and list Social Security numbers for their children. Some have suggested that the revenue gains from just this one change more than cover the costs of TCMP.

In reality, the process was, as it should be, far different. The starting point was the recognition that voluntary compliance improves when the taxpayer has the information necessary to comply with the law and knows that the IRS has independent means to verify such compliance. The TIN's for tots proposal was the logical outgrowth of this analytical framework. Common sense suggested that, with no means for IRS to easily verify claims, taxpayers could overstate their dependents with no real fear of challenge. Requiring taxpayers to obtain and list Social Security numbers seemed like an obvious, relatively unintrusive way to improve compliance. TCMP data verified the hypothesis and provided a revenue estimate for purposes of scoring the legislation. All of the **thought** that prompted the TIN's for tots legislation could and should have been accomplished without TCMP. The hypothesis could have been tested, and revenues estimated, through a targeted research effort that would have been inexpensive, unintrusive, and completed in several months.

EITC reforms. The 1988 TCMP data has been cited frequently in Congress and by the media for the proposition that the EITC is rife with fraud and noncompliance. This assertion is misleading for several reasons. First, as noted above, the 1988 TCMP measured a revenue agent's judgement as to whether a taxpayer had complied with the law and applicable record-keeping requirements. We believe that many of the adjustments proposed during the 1988 TCMP audits would not have been sustained on administrative appeal or in litigation. The fact that a low income family cannot produce marriage and birth certificates and detailed information regarding family budgets -- to satisfy the demands of an IRS agent -- proves very little. To be perfectly frank, while EITC changes may be warranted, we would not base any policy decisions on the noncompliance estimates provided by the 1988 TCMP.

Second, the 1994 version of the EITC is far different from the 1988 version of the EITC. Moreover, the IRS is now taking numerous steps to improve compliance with the law as amended. The simplifying changes since 1988, together with ongoing IRS efforts in this

As a preliminary matter, while the 1988 TCMP data suggested high levels of noncompliance, it did not suggest that the noncompliance was intentional or fraudulent.

area, should have greatly reduced levels of noncompliance. 9

The important point is that the 1988 TCMP has hindered, not helped, thoughtful analysis of the EITC. The 1994 TCMP will come far too late to affect the EITC reform discussions currently under way. Given the currency and importance of this issue, all concerned would be better served by a well-designed and properly executed research program that might be completed this fall.¹⁰

4. Meeting the needs of other users. Another argument often advanced in support of the 1994 TCMP is that it will serve the needs of other users, such as the General Accounting Office, the Joint Committee on Taxation, the Treasury Department's Office of Tax Policy, the Commerce Department's Bureau of Economic Analysis, various state governments, and private sector researchers.

As a preliminary matter, of course, anyone who relies on data always wants more. The question is whether the benefits of additional data justify the costs of collection. With respect to uses directly related to the tax system, we do not believe that the either IRS or these other potential users have made the case. We believe that the principal objectives to be served by the 1994 TCMP could be achieved more effectively and efficiently, at less cost to the government and with less burden on citizens.

One way to attempt a "cost-benefit" analysis as it relates to other potential users of the 1994 TCMP data would be to ask them the following question: how much would you be willing to compensate the IRS and taxpayers for costs they incur due to the 1994 TCMP?

believe the IRS, taxpayers and tax administration would be better served by abandoning plans for the 1994 TCMP. Quite simply, we are not persuaded that the likely benefits will offset the certain costs to the government and taxpayers.

While TCMP has served a useful function for many years, it was designed in a different era to meet very different needs. During the past 25 years, research techniques, technology, and the tax system itself have all changed dramatically. Efforts to "improve" TCMP are

We are aware of the January 1994 study showing that noncompliance levels are improving but remain rather high. In our view, that study suffers from the same flaw as all TCMP data -- it reflects the IRS position on audit, not a final determination. It also illustrates the danger of targeted "research" studies that are neither well designed nor well executed (e.g., a small sample of returns filed during two weeks in January). Compliance research projects should not be a hasty response to external pressure; they should be the result of well-conceived research strategies.

See, note 9, supra.

a little like trying to reconfigure a battleship into a speed boat. It is better to start over. Among the steps that the IRS should consider are the following:

- More frequent (perhaps annual) audits that rely on far smaller sample sizes and different audit techniques to facilitate the scoring of returns and tax gap estimates.
- The emphasis should be on thinking about compliance issues. IRS needs to do compliance research -- far more than it does today -- but it needs to design targeted research programs to test hypotheses and provide data that can be used in formulating legislative, regulatory and administrative initiatives.
- Recognize that "compliance" is not the only (or necessarily most important) issue to address in designing research programs. Consider, for example, studying taxpayer compliance burdens and whether various tax laws are achieving their stated policy objectives.
- Develop and implement a long-term research strategy, but place a premium on reasonably quick responses and flexibility. Most research efforts should be completed in less than a year. IRS must accept the fact that projects on the drawing boards will often be replaced by new initiatives in response to changing conditions.

IV. A Word of Caution We believe that the IRS should not go forward with the 1994 TCMP for two reasons: (1) the anticipated benefits do not justify the costs; and (2) the IRS should revise its research strategies to meet the current needs of tax administration. But we are far less confident that the Congress should preclude the IRS from going forward.

It is certainly appropriate and important for this Committee to ask hard questions and impose a strict standard of accountability. However, the final decision regarding administration of the tax laws generally should be left to the IRS. In our experience, efforts to "micromanage" tax administration through specific legislation or the appropriations process often have been counter-productive. We are not suggesting that Congress should never intervene in administrative matters; rather, we urge this Committee and the Congress to exercise great care when deciding whether to take that step.

Chairman JOHNSON. Thank you very much, Mr. Goldberg. Mr. Gibbs.

STATEMENT OF LAWRENCE B. GIBBS, PARTNER, MILLER & CHEVALIER; AND FORMER COMMISSIONER, INTERNAL REVENUE SERVICE

Mr. GIBBS. Madam Chairman, it is also a pleasure for me to be here with you today.

I will get right to the point. I rarely disagree with my good friend Fred Goldberg. On this issue, however, we are in disagreement. I

would like to pinpoint, though, where we disagree.

I think the function that these hearings will perform is a good function. I think it is time that we take a hard look at TCMP. It has grown and changed over the last 30 years, and I think it is appropriate that it continue to do so. I would not suggest that we abandon TCMP, but I would suggest—and I agree with Fred in this regard—that there are problems, there are deficiencies, there are shortcomings.

The only thing that I would say is this. I would put it to you this way: While I was Commissioner from 1986 to 1989, there were two questions that I was asked by taxpayers, the media, and the Congress: No. 1, I was asked what is the level of taxpayer compliance with our tax law in this country? No. 2, how much are we losing in taxpayer noncompliance? I felt I had to have credible answers based on something that taxpayers and others would feel is credi-

ble in order to respond to those questions.

My point is that, with all of its faults and all of its shortcomings, TCMP is better than anything that has been suggested to replace it as an alternative. I would simply say that, in addition to Commissioners being asked those questions, I suspect you are asked those questions by your constituents. I know I was asked those questions by your predecessors, and it is important to have not only answers, but credible answers, answers that come from a comprehensive overall credible methodology to provide answers.

If we can change that methodology, if we can make it better, fine. But we had better not abandon the methodology until we have something else in place. To suggest that we do so before we have something else in place I think is inviting trouble that can lead to disrespect and lack of confidence—even more than is reported that

we have at the present time.

So, for that reason, I would say improve TCMP and change it, change it drastically, but, for goodness sake, do not abandon it until we have an overall comprehensive credible system that will provide the results that TCMP is presently providing to the folks that are using those results.

Thank you.

[The prepared statement follows:]

STATEMENT OF HON. LAWRENCE B. GIBBS PARTNER, MILLER & CHEVALIER

Madam Chairman and Members of the Subcommittee:

I appreciate the opportunity to submit this statement in connection with this hearing to examine the Taxpayer Compliance Measurement Program of the Internal Revenue Service. I served as Commissioner of Internal Revenue from 1986 until 1989, and I presently am a member of the law firm of Miller & Chevalier in Washington, D.C.

I add my congratulations to those of others on your decision to hold this hearing to examine the IRS' TCMP because I believe that it is timely and important to examine this program at the present time. Good questions are being asked about the program, and suggestions are being made to improve its effectiveness. In this process I believe the TCMP, taxpayer compliance, and our overall tax system will benefit.

The TCMP has been in effect for over thirty years. During that time it has grown and changed to accommodate the needs of the IRS, Treasury, Congress and others who have had an interest in improving tax administration and the compliance with our tax laws. Although TCMP has its drawbacks and its limitations, it is the only comprehensive and reliable method to determine taxpayer compliance that has been devised and has been able to withstand the test of time over the last thirty years. I urge you to encourage the IRS to continue to make improvements in TCMP where such are appropriate. But I also urge you not to abandon TCMP when no viable alternative has been suggested, tested and agreed upon by all of the interested parties who use its results.

When I served as Commissioner, I was asked repeatedly two questions by taxpayers, the media, and the Congress: (1) what is the level of taxpayer compliance with our tax laws, and (2) how much money are we losing to noncompliance? The ability to provide credible answers to these two questions, in my opinion, is a key to taxpayer confidence in our tax system, and that confidence is essential to the continued viability of our tax system.

For all their faults, the TCMP results permitted me to provide credible answers to those two questions. For one thing, taxpayers could identify with the method for obtaining those results, an IRS audit. The TCMP method was not some abstract statistical, economic or social science theory. Taxpayers could understand the idea of using a statistical sample of in-depth IRS audits to determine the levels of reported and unreported income, of appropriate and inappropriate deductions and credits. Taxpayers also could understand the concept of using the TCMP results to set standards for future selection of returns for audit and to estimate the dollar amount of tax noncompliance by individual taxpayers.

There are many shortcomings of the TCMP. They have been detailed in other testimony and will not be repeated by me here. However, no one has come up with a better overall, comprehensive, credible approach to provide answers to the above two important questions that everyone wants to know about our tax system. And make no mistake abut it, your constituents will want answers to these questions, just as you and your colleagues in Congress will want answers.

From personal experience I can tell you that your predecessors wanted answers to these two questions from me while I was Commissioner. And your predecessors were not satisfied with anecdotal responses, partial results from new and unproven tests, theories about how to improve tax compliance, or promises about what new long-term research studies would eventually provide.

Also make no mistake in believing that your predecessors were unaware of the defects in the TCMP results. On the contrary, the defects were pointed out, often painfully so for me and others at IRS. Promises were made to improve the TCMP, and steps were taken to do so. However, we did not propose to abandon the "known devil" in favor of some "unknown devil."

Yes, the 1994 TCMP will be expensive for the government. In part, however, that is a function of the fact that the new TCMP will provide baseline data for the new approach to the new IRS compliance program called Market Segment Specialization Program, which I believe is the right approach for IRS to be taking in the compliance area. As I understand it, future TCMP-type data will be gathered less expensively.

In part the increased cost of the 1994 TCMP results from an attempt by the IRS to develop data to provide better answers to important questions previously raised by this Subcommittee and others in Congress about the extent of tax compliance under our present system. For example, this Subcommittee over the last several years has held several hearings to discuss the extent of compliance, or noncompliance, by subsidiaries of foreign corporations doing business in the United States. Part of the 1994 TCMP is designed to develop meaningful data to provide better answers to the important questions previously raised by the Subcommittee in that regard.

Yes, TCMP audits involve some additional taxpayer burden. But as a taxpayer who has undergone a TCMP audit previously, I believe the taxpayer burden arguments are overdone, particularly for compliant, well organized taxpayers. IRS takes steps at the beginning of a TCMP audit to minimize the cost and pain of the actual TCMP audit if taxpayers will prepare for the audit by initially organizing their tax information to permit them to more readily answer the auditor's questions. If taxpayers do not do so, or do not have the necessary data to support their income and deductions, then the process can be long and painful, as is usually the case in the normal audit for the same reasons.

Yes, TCMP results are imperfect in determining taxpayer compliance levels and the amount of tax being lost to noncompliance. TCMP certainly does not answer all of the important questions about how to improve taxpayer compliance and minimize noncompliance, and I continue to support the IRS requests for additional appropriated funds (or even the reallocation of existing compliance funds) to support more compliance research. Without a doubt, there is room for continued improvement in all of these areas.

Unless and until a better overall, comprehensive, and credible method to determine and measure tax compliance and the tax gap is developed and tested, I believe it would be a mistake to abandon the TCMP. We can, and should, use the current criticisms to improve the TCMP, but we ought not to abandon it. It may be fashionable at present to simply decide to "start over" when something does not meet our expectations. In the case of the TCMP, I believe to do so would be unwise.

Thank you for inviting me to testify. I will be happy to answer any questions.

Chairman JOHNSON. Thank you, Mr. Gibbs. Dr. Sparrow, welcome.

STATEMENT OF MALCOLM K. SPARROW, PH.D., LECTURER, PUBLIC POLICY, JOHN F. KENNEDY SCHOOL OF GOVERN-MENT, HARVARD UNIVERSITY, CAMBRIDGE, MASS.

Mr. Sparrow. Thank you.

Madam Chairman and members of the subcommittee. I thank you for letting me be a part of this discussion this morning. In some ways, this discussion is part of a broader discussion about the policies of regulatory agencies, and the broader question would be should regulatory agencies be allowed to do random inspections of any kind? Should Customs be allowed to select passengers at random as they come through the airport in their attempts to understand patterns and methods of drug smuggling? Should OSHA inspectors be allowed to show up unannounced at a construction site where there has been no report of hazards, but they go on a random basis just to find out what kind of hazards are there?

I believe that regulatory agencies should be allowed to do random inspections and that it is vital, if they are going to understand patterns of noncompliance. For the last 6 years, I have been studying and writing about some of the changes in the strategies of American regulatory agencies, and there is a very significant move-

ment under way and the IRS is party to that movement.

The movement I think is an attempt to discover a more intelligent, a more analytical approach to identifying patterns of noncompliance and then picking them apart, understanding where they come from and bringing a broad range of different tools to

bear on identified patterns of noncompliance.

At its heart, this strategy is designed to be less coercive, to rely much less on traditional enforcement approaches and to consider, instead, a much broader range of intervention tools, including education, legislative changes, simplification, education programs of various kinds, as well as the normal ragbag of audit and enforcement tools.

Police departments call this problem-solving policing. Environmental protection agencies call it managing for environmental results. OSHA is now calling it the problem-solving approach to hazard mitigation. The IRS calls it their Compliance 2000 strategy.

Now, what is at the heart of the Compliance 2000 strategy, if I understand it correctly, is an intention to develop the capacity to identify important areas of tax noncompliance and then produce tailor-made surgical interventions aimed at producing higher levels of compliance, and to do that problem-area by problem-area. That is the heart of the strategy and it is still under development. It is certainly not fully implemented. It is a much more analytical, more intelligent, and less enforcement oriented approach to taxpayer compliance, which I think we should all recognize and welcome.

But such a strategy depends absolutely on the agency's ability to see clearly patterns of noncompliance and to recognize when they change, and to recognize it sooner, rather than later. An important question to ask is what apparatus is there available to the IRS to enable it to see changing or shifting patterns of noncompliance? I believe that the TCMP instrument itself forms a vital and perhaps indispensable or irreplaceable part of that monitoring apparatus.

The danger the TCMP helps IRS avoid is one that is common to regulatory agencies and to intelligence agencies. Once you start focusing on a particular thing, your belief that that subject area, that problem area is important can become a self-fulfilling prophecy. If you are an intelligence agency and you believe that a particular individual is central in an organization, you then focus more surveillance on that individual. As you do so, you learn more and more about them, and the more you learn about them, the more they appear central in your thinking. It is a self-fulfilling and circular way of doing business.

The danger in regulation or compliance agencies is similar, that you can delude yourself into thinking that you know exactly what these noncompliance problems are, and if you have an idea about what they are, that is what you focus on. Those would be the audits and the examinations that the IRS would conduct. It is quite conceivable that over here on one side, far away from where your sights happen to be trained, new patterns of noncompliance are

emerging of which you are completely oblivious.

Random audits are as unpopular within regulatory agencies as they are outside. Auditors will always tell you that they prefer to be allowed to focus and target their efforts, because they could raise more revenue that way. They are right, they certainly would raise more revenue that way.

But that is not the point. The whole purpose of random audits is that it gives you important information which allows you to do long-range planning and to adjust and redirect your resources over the long term. That is exactly the purpose of the TCMP data. It allows the IRS to adjust their audit selection formulas and target examination and audit resources, and to select enforcement actions that have the greatest impact.

Perhaps one way of looking at this is to remember that the IRS does more than 1 million audits per year which are focused. The critical question is whether those 1 million audits per year are well focused. If they are going to be well focused, what instrumentation and what data is that focusing based on? This is a relatively small number of random audits which helps to ensure that the bulk of the audits are in fact focused on the right people and the right patterns of behavior.

Thank you.

[The prepared statement follows:]

Testimony of:

Dr. Malcolm K. Sparrow

John F. Kennedy School of Government

79 John F. Kennedy Street Cambridge, MA 02138 (Tel: 617-495-8359)

Before:

House Committee on Ways and Means

Subcommittee on Oversight

Date:

Tuesday July 18th 1995

Thank you for the opportunity to address you this morning on the importance of the Taxpayer Compliance Monitoring Program.

For the last six years I have been studying and writing about some very significant changes in the way American regulatory and enforcement agencies approach their business. Many such agencies are rejecting their traditional dependence on predictable processes, procedures, and "coverage", and are developing new capacities for analyzing important patterns of noncompliance, prioritizing risks, and designing intelligent interventions using a much broader range of tools than traditional enforcement actions alone. Police Departments call this emerging strategy "problem-solving policing". Environmental agencies calls it "managing for environmental recults". OSHA now calls it "the problem-solving approach to hazard mitigation". The IRS calls it "compliance 2000".

Under "Compliance 2000" the IRS proposes to develop its capacity for identifying important patterns of tax non-compliance and designing tailor-made, surgical interventions aimed at producing higher levels of compliance, problem area by problem area. That is the heart of their "Compliance 2000" strategy, which is still under development. It is a more analytical, more intelligent, less enforcement-oriented approach to taxpayer compliance; which I think we should all recognize and welcome.

Such a strategy relies absolutely on the agency's ability to recognize quickly, and to see clearly, new patterns of non-compliance as they emerge from time to time. The TCMP forms a vital and, I believe, indispensable part of the monitoring apparatus.

The danger that TCMP helps the IRS avoid is a common one, facing The danger that TCMP helps the IRS avoid is a common one, facing all "compliance" or "regulatory" agencies: namely the risk of assuming that you know about, and can see, all the important patterns of non-compliance. The way these agencies can delude themselves goes something like this. You focus on what you think are the central problems. As you do so, you learn more and more about those problems, and they become yet more central in your thinking. As time passes, you work on the non-compliance problems you know about; and you learn yet more about the non-compliance problems you work on. You can easily get caught in the circularity of this, focusing more and more carefully on things you always focused on before, just because those are the problems that happen to be in your sights. You fish in the are the problems that happen to be in your sights. You fish in the same place, year after year, because that's where you caught fish

before.

Meanwhile new patterns of non-compliance emerge, some geographically concentrated, some peculiar to particular industries, some particular to certain tax-provisions; but all potentially out of your sights. If you have no system or machinery to help you spot new problems, you may not notice them for many years. TCMP is a piece of machinery designed specifically to help identify new areas of non-compliance, which the IRS might otherwise remain oblivious to.

TCMP's strength, I believe, lies in its random selection. (The IRS uses a stratified random sampling technique to make sure that the sample sizes in each area and industry segment are large enough to support proper statistical inferences). The whole point is that the selection is not focused on any existing problem, nor based on any existing IRS biases about where the important problems might be. It is designed as a statistically valid, scientific method of scanning the horizon for new problems. It reveals to the IRS what they don't currently know about patterns of non-compliance.

Random audits are usually as unpopular within a regulatory agency as they are outside. Auditors often think random audits (or "studies") are a waste of time, saying they could raise a lot more revenue if only they were allowed to focus on known problem areas. Which is true; they would raise more revenue that way.

But that argument misses the whole point. The principal value of random audits by the IRS (or--for that matter--random inspections by Customs, or random audits of health care claims) is that they provide information about types of non-compliance which existing targeting strategies might be missing. They provide the opportunity, over the long term, to redirect resources; to adjust audit selection formulas; to target examination and audit resources more effectively; and to select enforcement actions that have the greatest impact on significant areas of non-compliance.

Any cost-benefit analysis of such a program has to weigh the importance of the information about non-compliance trends, which will act as a basis for longer term planning and resource allocation, rather than focusing on the immediate and direct revenue implications.

I understand that undergoing a thorough, line-by-line IRS audit takes some time. I just went through one myself. The IRS plans, I believe, to audit roughly 92,000 individual returns in the proposed TCMP. Given that there are more than 100 million individual filers, and that TCMP comes around no more often than once every three years, this represents a risk of facing a random audit, per taxpayer, per year, of less than 1 in 3,000. This, I believe, is a very small price for taxpayers to pay in exchange for the assurance that the IRS will be able to devote its considerable public resources to the most important non-compliance issues.

I regard TCMP as an essential instrument for monitoring the shifting patterns of non-compliance. Taking it away would blind the IRS to changing patterns of non-compliance.

Chairman JOHNSON. Thank you.

Dr. Sparrow, those 1 million audits that the IRS does, what in-

formation did they turn up about deductions?

Mr. Sparrow. The focused audits do continually provide feedback to the IRS about different forms of noncompliance, as does any focused inspection by a regulatory agency. Whenever you go to delve into one matter believing that you knew what the problem was, you come away a little better educated, and sometimes you will see things that you were not looking for.

But the danger is that, in massive systems such as the IRS, you can completely miss some patterns of noncompliance. There is a feature of tax noncompliance and it is a feature shared with all kinds of other compliance areas that the problems do not reveal

themselves automatically, unless somebody goes—

Chairman JOHNSON. I appreciate that, but I should think the problems like alimony reporting, like the deductions for children, it seems that those might have raised their heads in the million annual audits.

Mr. Sparrow. Yes.

Chairman JOHNSON. Why do they require such an extraordinary effort? First of all, do you know whether they did or did not?

Mr. Sparrow. They do undoubtedly.

Chairman JOHNSON. They come to the agency's attention through

the normal audit course?

Mr. Sparrow. I think it is most unlikely that TCMP would show a form of noncompliance which was totally new and that nobody had ever seen. But I think perhaps its value is in helping you to understand the magnitude and relative importance of different problems.

I can provide an example of an issue that the IRS was well aware of, but did not really understand the magnitude of. I did some work for them on the electronic filing program and the frequency of fraud in that program. They knew that that was a problem and they were detecting a fair number of fraudulent returns coming through that system. But it was not until the 1994 filing season when they actually did a scientifically constructed and statistically valid random sample from which they were able to extrapolate to the whole population that they discovered the size of the problem.

Chairman JOHNSON. So your study of EITC, the earned income tax credit, would be an example of a targeted study that developed

from the normal compliance process, would it not?

Mr. SPARROW. It was different from the TCMP in that it was fo-

cused on one particular kind of return.

Chairman JOHNSON. Last, so I do not keep my colleagues waiting too long, what is your response to the fact that the TCMP did not indicate the widespread abuse occurring under the shelter law?

Mr. SPARROW. I am not familiar with that particular form of non-

compliance.

Chairman JOHNSON. Mr. Gibbs, would you like to comment on

Mr. GIBBS. I guess I would comment this way: I have said before that there are certainly shortcomings and there are certainly deficiencies in any process or procedure. But, Madam Chairman, it is

the best form that we have and I think it is credible.

One of the things that I said in my testimony that I would like to reiterate here, one of the things about the TCMP type approach is that taxpayers across the country can at least understand it. It is not an abstract statistical, it is not an abstract economic, it is not an abstract social science type of theory.

At least at the bottom of it, people can understand and relate to an audit. They can understand and relate to using a bunch of audits as statistical samples on a periodic basis to measure compliance and see how much we are losing. I think that is really important in terms of people understanding and, therefore, having a

method that seems credible across the country.

So almost anything you come up with is going to have short-comings. You can criticize various aspects of it. But if it has a basic ring of truth, until we come up with something that is better, my reaction is it is something that we ought to continue to refine and improve, but we ought not to abandon it. So I would respond to you by saying you may be able to pick at it and show one place where it did not work, one thing that is wrong with it or those types of things. But overall it is better than anything that anyone has proposed as an alternative.

Chairman JOHNSON. Mr. Goldberg.

Mr. GOLDBERG. I am tempted just to rest my case. Madam Chairman, I think that the problem we are having here is TCMP, to the extent what you are saying is random sampling is important, I absolutely agree. To the extent you are saying measures of the tax gap are important, I am not quite as convinced, but that is an OK

thing to do.

My testimony is directed toward the proposed 1994 TCMP. I do not believe that the additional reliability, if any, with respect to tax gap estimates that will come out of that program is worth anything like \$550 million in taxpayer money, more than \$1 billion of out-of-pocket expenses by our citizens, and hundreds of millions of hours of time and torment. I do not think it is worth it. I believe that you can get approximately accurate tax gap estimates far more efficiently and far more effectively in other ways.

Dr. Sparrow referred to circularity. I believe he is describing an important phenomenon, but I believe the circularity is that the IRS for 35 years has been taking these enormous samples and running these so-called TCMP audits on intervals ranging from 3 to 10 years. The circularity is that the IRS is afraid to let go. We have always done this, so we know this is the only way to do it. That

is the circularity.

The IRS, I am absolutely convinced, could accomplish its objectives, could deal with tax gap measures, could deal with detecting trends of noncompliance, could deal with coming up with responsive answers to Members of Congress who are considering anything from EITC compliance legislation to fundamental tax reform through a system that was designed in a fundamentally different fashion. At the end of the day, it will rely on random selection, but you can do a lot better for a lot less. Why not?

Chairman JOHNSON. Certainly the benefit of targeted studies is demonstrated by Dr. Sparrow's really excellent work on the EITC.

I understand the overall logic of the IRS' taxpayer compliance program. It is instructive that it does not touch on the biggest revenue

loss area and that is unreported income.

Is there a program that the IRS could and should be developing to find out how they could better track all the cash economy that the current system is incapable of reaching? This is probably the most important issue that we face right now, because we are about to change our entire Tax Code in part to reach the unreported income.

One does have to question spending \$550 million to refine the structure we have, when one of the reasons for totally changing it is that so many are not complying, and this will not reach them. Now, is there any way we can design a program that might find out how people are avoiding reporting and what can we do about it?

Mr. GOLDBERG. Madam Chairman, with all due respect, I believe that you are going through exactly the process that the Internal Revenue Service should be going through. You have stated a hypothesis. It is correct, in my judgment. Unreported income is the

biggest single problem in the system.

The next question, can we design a research program that will allow us, No. 1, to understand the magnitude of that problem, and, No. 2, design the research program in a way that will give you answers you care about, give you answers that you can do something with. I believe the answer to that question is unambiguously yes, I believe that could be accomplished. I believe it could be both accomplished and educated in a fraction of the time required for TCMP, and I believe that the information you would derive would be far more reliable.

Mr. GIBBONS. Madam Chairman, I would like to respond. It is interesting that you raise that. You are going to have another witness later on in this testimony, Dr. Kent Smith, that was responsible for the largest study I know of on noncompliance in the tax

area. It was sponsored by the American Bar Association.

There have been proposals. There have been a lot of proposals over the last 20 years as to how we detect, what we do to measure, and how we prevent the problems that are going on in the cash economy. This gets back to my fundamental point: To tell me that you will promise me that if I will agree to give up something, you will find something for me that will do this, my reaction is why not give it to me now and let me compare it against what I have before I give it up. Because for the last 20 years, we have not done a very good job. We have known the problem was out there, it has been studied and we still do not have something that people can agree on a broad basis will be appropriate to measure, detect, and prevent the problems in the cash economy.

Mr. GOLDBERG. Madam Chairman, I would just like to point out—and I have not discussed this with Dr. Smith, and I could be mischaracterizing his testimony—I believe his recommendations in essence, at least as I read it, that it may well be prudent to move to far smaller sample sizes and to conduct TCMP examinations on an annual basis. I believe that is also Dr. Scheuren's recommenda-

tion, and it is my recommendation, as well.

Chairman JOHNSON. Thank you.

Mr. GIBBS. Again, Madam Chairman, I just want to make the point that if we can get a consensus, a broad-based consensus about something that is comprehensive and credible, fine. But until we have that, we should not abandon what we have in favor of the pig in the poke.

Chairman JOHNSON. I appreciate your comments, Mr. Gibbs.

Dr. Sparrow.

Mr. Sparrow. Madam Chairman, I think you raise a very important question on the subject of the cash-based businesses, the underground economy, and particularly nonfilers. Central to the Compliance 2000 philosophy is certainly the idea that every kind of noncompliance would be systematically and intelligently studied and then remedies sought. So certainly the IRS should be paying an awful lot of attention to problems that they cannot see through their own internal data.

Now, the specific area that you raise is a very peculiar kind of noncompliance problem. I think nonfilers have always been for many years the IRS' No. 1 compliance problem. If the IRS asked itself what program do we have in place to deal with nonfilers, the answers for many years has been "virtually nothing" because we deal with what comes to us. What data do we have about nonfilers in our data base? Absolutely nothing, not one bit or byte, because they did not file. So this particular problem is an extremely difficult one to get at and to study and requires you to go to outside sources, rather than inside sources.

In looking for signs of concentrations of a cash economy or undeclared income, divide that into two categories: undeclared income and unreported income for people that file and undeclared income for nonfilers. The nonfilers really does require the IRS to go to outside sources of data, just as they would, for instance, have to look at the Yellow Pages of the telephone directory and see which of these businesses that are advertising have not filed and compare that with their own records.

The TCMP data in some sense could help with that form of analysis, though. Suppose you are interested to know what proportion of the jewelry trade in the Los Angeles area did not appear to file tax returns. One way of doing that is to have a representative sample of the ones that did file, to be able to extrapolate by some guess as to how many of them you think there are, and to compare that with external economic indications as to how much revenue this business generates. But it would necessarily have to involve the comparison of internal TCMP data to some other external source which is less traditional for IRS to rely on.

With respect to filers who do not declare their revenue, I just went through a line-by-line IRS audit and was actually quite impressed with the way that it was approached. I had my pile of records on the table, and for at least the first 1½ hours the examiner was not the least bit interested in those. Instead, it was an asset-based approach. She was asking me what I earned, would I show her and tell her about any houses or cars. Then she worked back from that to see whether it appeared to match the income that I had reported.

Even though what she ended up doing was a line-by-line—she wanted to know how I arrived at every figure—there was also room

in the audit for her to notice that my living style might not match what I had declared, and there is that possibility, I believe, even

within the line-by-line direction of the TCMP audits.

Chairman JOHNSON. Thank you. I am sorry that I must excuse myself. I am going to recognize Mr. Laughlin and turn over the gavel to my colleague, Mr. Hancock.

Mr. HANCOCK [presiding]. Mr. Laughlin. Mr. LAUGHLIN. Thank you, Mr. Chairman.

Mr. Goldberg, in your testimony here today, you said there were other far less costly and intrusive ways to develop estimates of at least equal reliability. I first want to ask you what are the intrusive ways that concern you about the TCMP?

Mr. Goldberg. Mr. Laughlin, we are selecting 153,000 citizens, taxpayers, businesses and asking them to provide a line-by-line justification of every item on their return. I can tell you, as a former IRS Commissioner, I can tell you as a practicing attorney, and I can tell you as a citizen, I guarantee you that is very intrusive. That is a miserable experience.

I think that because the government does not have to pay the

freight-

Mr. LAUGHLIN. Because the government does not have to what? Mr. GOLDBERG. Because the government does not have to pay the freight, it is pretty easy to forget what we are doing to the citizen, and that bothers me. It is an intrusive process and I do not think anyone would dispute that.

Mr. LAUGHLIN. I want to ask you from that same testimony if you could identify some less costly methods and intrusive methods

for obtaining the information that is sought.

Mr. GOLDBERG. It depends on which objective. If you are talking about tax gap estimates, people can make tax gap estimates relying on many different data sources. TCMP is a piece of that, but there

are other ways to make those estimates.

I am not a statistician, but, as I mentioned, Dr. Scheuren is, I believe that Dr. Smith is. The experts I talked to when I was the Commissioner led me to conclude that on an all-in basis, the system would be far better served through far smaller samples, orders of magnitude smaller with annual kinds of examinations being conducted. I believe that would be a far more effective approach. The \$550 million of taxpayers' money is a lot, and I am not convinced that the additional accuracy of any TCMP tax gap estimate is worth the cost.

Mr. LAUGHLIN. The reason I ask about the intrusive ways, I have those concerns, too. You stated that you estimate out-of-pocket cost to the taxpayer to be in the \$5,000 to \$10,000 range. My question is what expenses were used in reaching these estimates that you

made?

Mr. GOLDBERG. It was like that. There is no data. All I can tell you is that 60,000 of these audits are going to involve partnerships and corporations, another 50,000 to 60,000 are going to involve taxpayers with schedules C, F, D, and at least in my—I believe those numbers are probably low. But one of the things that I find rather striking is that, in light of all this discussion, I do not believe that the TCMP audit itself even gets information on how much taxpayers spend in the process.

Mr. LAUGHLIN. Certainly, if it gets beyond \$1,000 or so, it certainly takes on the approach of an unfunded mandate that has been on the minds of a lot of Americans the last few years in just dealing with their real property and other activities, so I share the concern that you mention there.

Would you have such a concern on the intrusion to obtain the information, if the IRS were paying the taxpayer for his or her time to come and sit through the compliance audit to determine where

the gaps are?

Mr. GOLDBERG. Well, that would recompense the taxpayer for the out-of-pocket costs. I am not sure it recompenses the taxpayer for the time, the pain, and the suffering But I think that that would

be an important first step to take.

Mr. LAUGHLIN. You have also indicated that nothing new would be learned about the overall tax gap and its major components. The TCMP design calls for measurement of the compliance by market segments. Do you not think that a knowledge of which groups of taxpayers are contributing to the tax gap would be valuable?

Mr. GOLDBERG. I believe that the market segment approach to tax administration is the single most promising development in a decade. I think Dr. Sparrow's reference to Compliance 2000 was an issue I had some involvement with. I think that is breakthrough

progress in tax administration.

What I am saying is that the 1994 TCMP as designed in my judgment is trying to retrofit something to deal with these new issues. I believe you could deal with those new issues far more effectively if you simply say I want to design a program to deal with those new issues. I think we are trying to make something that used to be useful serve a very different purpose, and I do not think they are going to get there as well as they should get there. I agree with market segments, absolutely.

Mr. LAUGHLIN. Thank you very much. Thank you, Mr. Chairman. Mr. HANCOCK. That was an interesting comment you made, compensating the taxpayer for the pain and suffering. I do not know

whether that could be done or not.

Is it possible—and I would like to ask all three this question—we were seriously considering major changes in the tax law in this country, the possibility of a consumption tax or a flat tax. Can we justify the TCMP on a basis of what we do maybe here in the U.S. Congress in the 105th Congress for at least data information, the compliance information on how the existing tax law ought to be changed, or what we need to do if in fact we change it?

Mr. SPARROW. Certainly, if there is a looming and major change in the tax law, then it makes this less attractive at this time right

now, but I would make two qualifying points.

Even if change is coming, then somebody is going to be doing an awful lot of thinking about sensible changes in tax policy, what are the areas of tax administration that cause taxpayers difficulty, which are the areas that are poorly understood, what are the principal forms of noncompliance under the existing system. I do not believe that the IRS, having not done a TCMP survey since 1988, really has up-to-date information of that kind on which it could soundly base recommendations as to tax policy changes.

On the other hand, if there is any doubt at all that major tax changes are coming, if there is a possibility that the tax system remains much as it is for a few more years, then TCMP is urgent. It has not been done since 1988. It is long overdue. It was canceled in 1991, I understand, because of a variety of internal and external objections to it, the normal objections that come any time any regulatory agency does a random inspection of any kind.

All such inspections are intrusive by their nature. Regulatory agencies depend on them absolutely. The fundamental issue here is should regulatory agencies be required to compensate individuals for that necessary intrusion, and should random basis be permitted

as a basis of selection.

Mr. GOLDBERG. Mr. Hancock, as the unnamed Commissioner who was responsible for that heinous act in 1991, I would like to comment, since I was the one responsible for the decision to allegedly cancel the TCMP.

Once again, I believe that random selection of individuals and enterprise for a thorough examination is a necessary component of the tax system. You have got to do it, if you are going to get the

right answers. So I do not dispute that point.

It was not a question of canceling TCMP, shoving our heads in the sand and making light know-nothings. It was saying you can redesign the system, late 20th century statistical techniques, sampling techniques, research techniques, saying that we can do a better job of getting done what we need to get done at the IRS, and

it was not a question of doing nothing.

It was saying go rethink the system, come up with a better design and get it done. I believe the suggestions again of Dr. Scheuren and others who have said far smaller, far more frequent TCMP-like examinations will be less intrusive at the end of the day and provide the government with far more reliable and far more useful information. This program, by its own design, is not going to be materially finished until 1998. If the Congress goes forward with tax reform in 1997, it is a day late and a dollar short.

To the extent, for example, the chairman suggests, issues of cash economy and the underground economy are relevant and that maybe some type of national sales tax or some other low rate of tax would improve compliance, those are important questions. You can only answer those questions through well-designed research programs. Those research programs will necessarily entail as a component some random selection of taxpayer for examination.

But it is not a one-shot 153,000 returns that you are going to do starting for tax year 1994. They are going to be done in 1999, at which point somebody is going to say are we going to do another TCMP, and we are going to say, well, we do not have anything better, we do not know what to do yet, we are dealing with a different system now, we had better do a TCMP, and I suggest that more annual, more focused, far smaller efforts at the end of the day are a better use of the taxpayer's dollar, and by definition less intrusive.

Mr. GIBBS. Mr. Hancock, I would like to respond to this one. For 30 years, we have measured taxpayer noncompliance and compliance in this country and we have estimated the tax gap based on a methodology. That methodology is TCMP. It has grown, it has

changed, it has evolved over that 30-year period. I believe generally, as a methodology for those two purposes, it is accepted by the American public. They understand it and they accept the results.

Now, there are a lot of criticisms that you can raise, and here is my point. My point is, if you are going to postpone it, then before you start saying what we are going to do, we should come up with an alternative. Let us get the alternative and be sure that we have the buy-in from the various constituencies out there that this is going to be as good as or better than what it is that we are aban-

doning.

I think your tie between tax reform that is going to be discussed and this program is an interesting one, because, in effect, what I am suggesting is that we should do the very thing that I applaud the Congress for doing at the present time. We are going to be discussing what the alternative tax systems are. We have proposals up on the table. People are going to know what they are, and then we will see in the final analysis, whether the country agrees to abandon what we have and go to something else or modify it in some way.

If I could answer that, I guess I could answer your question with respect to the cost benefit of the current TCMP. I would make just a practical suggestion to you. I would suggest to you that as we go about talking about something that is going to be far more complex than TCMP, namely a potentially alternative tax system, if we get an awful lot of things held up, not right now, but since 1991, and you put those chips on the table, you are putting an awful lot of pressure on yourselves and on the system in terms of making what seems to me to be a more important choice.

Some have said if you want to drive tax reform, let the TCMP go forward. With all the media publicity and the wailing over the 153,000 taxpayers, maybe that will drive tax reform. My reaction is I would do it for another reason. I would let the system go forward until we make the conscious decision in this country to

change it. That would be my response.

Mr. HANCOCK. Mr. Gibbs, I agree that the principle of the TCMP has probably operated for about 30 years. Thirty years ago, we did not have anything close to the gray areas that we have got now in compliance. When you read in Money Magazine that 50 accountants came up with 50 different conclusions and nobody got it right, you have got a real problem of compliance with the law. Even people who want to comply with it have a problem. What do you do, say I will not take the gray area? Well, you are nuts if you do not take the gray area. Frankly, I think that there are a lot of changes to be made in the internal revenue law without having to completely redo it. However, I am in favor of getting rid of it completely.

Mr. GIBBS. I would simply comment to you that 30 years ago I think this same discussion was held and that was the reason they came up with TCMP. It does give us good data about what we do know. Maybe there are other methods that we should use for things we do not know. But I would not abandon the method for measuring what we do know simply because it is not fulfilling all

of the purposes. Change it, adapt it, make it better, but I would not abandon it.

Mr. HANCOCK. But is it not true that the TCMP only deals with filed returns? It does not take care of the question of nonfilers, and we do not even know what that is. We do not have the vaguest idea of what that is.

Mr. GIBBS. My point 1 minute ago was that we have known about the nonfiling problem for 20 years. What we have not been able to get is a consensus about what type of system is right to measure it, detect it, and then try to do something about it. There have been folks outside the Internal Revenue Service, as well as inside the Internal Revenue Service, working on it.

My only point is do not abandon something that is working for filed returns until you tell me what it is you are going to come up with to deal with the unfiled returns or the unreported income.

Mr. SPARROW. I share your concern about the nonfilers and the failure of TCMP to get at that issue. But nonfilers are at the end of the day only one of scores of identified noncompliance issues, and disbanding with TCMP loses your instrumentation on all of those others. It would be a mistake to do that simply because it did not address one. Rather, I would raise the question, if we have TCMP and that does not address the nonfiler issue, what else do we need to make sure that that particular critical noncompliance area is not forgotten and is properly addressed?

Mr. HANCOCK. Does any witness have any other comment you would like to make?

Mr. Sparrow. It has been very interesting for me to hear Mr. Goldberg's objections to this. He has stated repeatedly that there are alternatives to the random methodology for scanning the horizon for problems that you do not know about. It is true, there are. You can use focus groups and surveys and you can guarantee people anonymity. A lot of researchers at different times have tried to use those tools to get valid and unbiased views of taxpayer behavior. They are notoriously unreliable.

So I am relieved when my friend acknowledges that there is no substitute for randomly selected returns, and that is a fundamental piece of measurement machinery that all regulatory agencies have to have available to them, if they are going to see clearly what issues they are dealing with. That does leave open, though, the question of how big, how often, and whether now is the right time. I understand that those are important critical issues and they are separate from the underlying question of should we allow random audits.

On the question of how big and how often, I would just say in terms of having a sensible data base from which to work, there is now an accumulated deficit of 7 years, with no randomly generated data, and it is urgent that that gap be filled.

Thank you.

Mr. HANCOCK. We just got a call for two 15-minute votes, so we are going to recess this panel and invite the next panel back at 1 o'clock or thereabouts.

Recess

Mr. HANCOCK. Welcome to the subcommittee. Thank you for appearing to testify to the subcommittee on a very important subject.

We will dispense with the preliminaries and get right on to Ms. Smith.

STATEMENT OF VERENDA SMITH, ALEXANDRIA, VA.

Ms. SMITH. Mr. Hancock and subcommittee members, my name is Verenda Smith and I live in Alexandria, Va. I have been asked to share my experience with what I now know is called a TCMP audit.

I have developed a personal definition of adventure. It is something that you wonder if you are going to survive. A TCMP audit is unquestionably an adventure. To understand how the audit affected my life, you have to know about my circumstances at the time.

In the early eighties, I was working as a sports columnist at the Jackson Clarion-Ledger in Jackson, Miss. I earned around \$25,000. I had a few stocks, and I owned a house. My tax situation was fairly simple, but I used a CPA to prepare my return because he had helped me in the year that I had sold a house.

In 1982 I was transferred to Virginia to help launch a new publication called USA Today. I was moving into a 400-square-foot apartment, so most of my belongings went into a storage shed in Jackson.

Now we jump ahead to January 28, 1983. I remember the date clearly, because that was my birthday. Among my birthday cards was a letter from the Internal Revenue Service telling me that I had been selected for an audit which would be at my house in Jackson in about 10 days time.

At that point, I did not know anything about the nature of the audit. I thought all audits were the same, and that if your return was chosen, everything was scrutinized. I thought it was strange that they would want to look at a simple return like mine, especially since I was anything but rich. One thing was clear, though, this was a very extensive audit.

The letter told me that I would need bank statements, documentation to show the source of all my bank deposits, documents to back up every item on the return, and, if I could, would I please

supply a copy of the return itself.

Thankfully, the letter also supplied the name and phone number of my IRS auditor. I called immediately. I am pleased to report that the auditor was great. He seemed to anticipate that I would be confused, surprised and facing difficulties, and he was prepared to help. The reason I can tell this story today and smile is because he understood that I would need my hand held. He used humor and judgment, and he did not treat me like a tax cheat, but, rather, like a taxpayer.

He filled out his questionnaire while we were on the phone, and there were dozens of questions, like what kind of car did I drive and how much cash do I typically carry, questions that seem geared toward determining whether my lifestyle fit my \$25,000 salary. None of the questions were very personal, but some of them

were humorous.

We rescheduled the audit and arranged to have it at his office. My employer invented a business trip to Jackson so I could gather my papers. Had my company been less helpful, that would have

been a most painful expense.

I clearly remember standing outside that storage room looking at a floor-to-ceiling collection of boxes, and I think every one of them was labeled "household stuff." I dug in and eventually toward the back found the box with my old personal records.

That was the easy part. My W-2 and interest statements and so forth were there with the return. But I cannot estimate how many hours I spent pulling together the bank records. I remember the IRS wanted more than 12 months of bank statements. I recall it

covered at least parts of 3 years.

So I had to sort through my checking account records to see how many statements I had in hand. Then I had to go to the bank and order reprints of those I was missing. I had to pay a small fee for each of the statements. Then I had to go through the bank statements and make sure I could defend or explain each deposit. I did not worry over the small \$5 ones, but my travel reimbursements were sometimes substantial. Also, sportswriters often freelance, and I knew I had to show that I declared all my earnings.

I spent at least one afternoon at the newspaper getting copies of my reimbursement records. Eventually, I had everything explained except for one \$1,500 deposit. I could not find any record of where the money had come from. I finally told my accountant that I was worried about it, and he pointed out that it was my tax refund

from the previous year.

I did not have to go to the audit myself. The auditor said my accountant could probably answer all his questions, and this saved me a trip to Jackson. I do not believe I paid the accountant extra. I had paid him to prepare the return, and also I had done all the work in gathering the documentation. But I would have paid him, if necessary, just so I would not have to sit and watch while my financial life was strip-searched.

My accountant called later that day to say that the auditor had seemed pleased with all the documentation and did not think there would be any change to my return. My accountant said this was probably the best audit he had ever participated in. He said the auditor was professional and pleasant and covered the ground

quickly.

A few weeks later, I received this letter in the mail. It said: "We are pleased to tell you that our examination of your tax returns for the above periods shows no change is necessary in your reported tax." Suddenly the whole experience was worth the trouble. I had survived the adventure. But more importantly to me, I had done my part as a citizen of this country. I had filed my return, I had paid the lawful amount of tax and I could prove it.

There have to be audits, and this means that citizens get singled out even if they have done nothing wrong, not unlike jury duty. I hope I never have to do it again. It cost me quite a bit of time and a small amount of money. But I have never been sorry that the

computer spit out my name.

Thank you.

Mr. HANCOCK. Thank you.

Mr. Lane.

STATEMENT OF JOSEPH F. LANE, ENROLLED AGENT, ON BEHALF OF THE NATIONAL ASSOCIATION OF ENROLLED AGENTS

Mr. Lane. Mr. Chairman, my name is Joseph Lane and I am an

enrolled agent in private practice in Menlo Park, Calif.

Thank you for inviting me to testify here today on behalf of the National Association of Enrolled Agents. We have a written statement which we have submitted and I assume it will be in the record. A lot of information has been given already about the historical basis for TCMP, and I will not bother going over that again.

I will go over another taxpayer's reaction to the TCMP which was a little different than Ms. Smith's here today. I had a medical doctor who was a client who went through the last TCMP in 1988. His definition of the process was "an autopsy without benefit of dying." He had his personal income tax returns, his corporate income tax returns, his pension plan returns, and the returns of his

children's trust all examined as part of the TCMP.

He was still amazed about the sheer volume of data that the auditor required and the cost of having representation through the process well exceeded his annual costs. The result of his audit was that all the returns were accepted as filed, but that is scant solace for his lost income for the time away from his practice, the months of responding to ever-increasing demands for more and different information, the stress of being subjected to an IRS probe into all of his financial affairs, and the necessity of having to explain many nontax related transactions to the satisfaction of the examining agent. That last point was particularly vexing to him.

He questioned why he had to explain to the examiner why he refinanced his ski house. He had never deducted any portion of the ski house for his business. It was for the sole use and enjoyment of his family and he felt that it was none of the agent's business.

My explanation that the agent had to account for all deposits into his bank accounts during the period under examination to ensure all income was properly reported merely served to further enrage him that his honesty should be questioned about reporting his business income.

When I recently told him the IRS would be conducting another TCMP this fall his reaction was, in the words of the old Irish bal-

lad, "in the language that the clergy does not know."

I think basically what you have at issue today, is should we conduct TCMPs the way they have been done for the last 30 years or is there a better way? IRS has made a big point over the last 4 or 5 years of reinventing the IRS, and they have reevaluated a lot of the processes they have used over the years and they have modified a substantial number of them.

Our argument is that it might be time to take a look at a different way of looking at this data. There is a cultural change underway within the Service. They have begun to reemphasize traditional methods of auditing with their recent training programs, focusing on economic reality, and they have begun to question the income more than the deductions on tax returns.

While there are legitimate concerns that have been voiced about the wholesale implementation of this economic reality program, you can hardly fault tax administrators for trying to find undisclosed income. It is precisely with respect to identifying undisclosed in-

come where we see the greatest weakness in TCMP.

In a rudimentary sense, conducting a TCMP is akin to "preaching to the choir." It provides data about what taxpayers are deducting. It provides little in the way of identifying income never reflected on the return, and it provides nothing about taxpayers who never file. It is precisely the problem of underreporting and non-reporting of income that so fuels the average taxpayers' frustrations with the current tax system.

Any voluntary compliance system depends on the perception that everyone is paying their fair share. When it becomes common knowledge that there are many members of society not participating, it undermines the support for the system among those who do

comply.

The Service has begun to focus on those segments who are not complying through the use of the market segment specialization program. We believe this approach is a wise one and believe that compliance will result from approaching taxpayers on an industry-

specific basis.

Using a market-driven approach also permits taxpayer education when appropriate, and identifies legislative changes which could increase compliance. The Service clearly recognizes these factors and more and more returns are being selected based on market segment data and not the DIF score.

We think the DIF score will continue to decline as a primary selection mode for the Service, so we question why they have to go

through the traditional way of running a TCMP.

There are many commercial data bases now available which will permit the Service to develop profiles of specific industries and will allow them to target taxpayers who do not meet industry ratios for examination. These external data sources contain management, tax, and financial data which could be factored into a model developed by local DORAs, the District Office Research and Analysis, and lead to more productive audit leads than random selection.

Another example of technology appeared in last Monday's Wall Street Journal where they report that a Halifax, Nova Scotia, accounting professor used something called Benford's Law to identify fraudulent financial transactions by scoring the deviation from a random selection of when numbers appear in a given sequence. The story in the Wall Street Journal indicated that the District Attorney's Office in New York has used this to prosecute fraud. We are not recommending that the IRS adopt this, but it is just an example of where they could take another technique and apply technology a little more efficiently to the process.

We would like to see a cost benefit analysis done of this whole program. I heard today that this is going to cost \$2.1 billion and some 30 or 40 percent of the people selected are going to be innocent bystanders. I think \$2.1 billion could be spent in a much more effective way.

We also would like to see taxpayers compensated for the amount of time it takes and for the cost of representation. I think Mr. Goldberg's projection of \$5,000 to \$10,000 is on the low side for the cost of representation if you are a corporation or a partnership going through this, this type of audit this year.

We would be happy to take any additional questions you have. [The prepared statement follows:]

STATEMENT OF JOSEPH F. LANE, ENROLLED AGENT ON BEHALF OF THE NATIONAL ASSOCIATION OF ENROLLED AGENTS

Madam Chair Johnson, Ranking Member Matsui, members of the Subcommittee on Oversight, my name is Joseph F. Lane and I am an Enrolled Agent in private practice in Menlo Park, California. I thank you for your invitation to testify on behalf of the National Association of Enrolled Agents regarding the Taxpayer Compliance Measurement Programs conducted by the Internal Revenue Service.

I am testifying today on behalf of the 9,000 plus Members of the National Association of Enrolled Agents (NAEA). As the members of the Subcommittee well know, Enrolled Agents are the only tax professionals possessing a Federal license to represent taxpayers before the Internal Revenue Service and our Members represent more than four million (4,000,000) individual and small business taxpayers annually. NAEA is especially appreciative of the interest this Subcommittee has taken in the matter of Internal Revenue Service practices and procedures, and their impact on taxpayers and we pledge our support to further assist the Subcommittee in the future on issues which affect the general taxpaying public.

TCMP: The Historical Perspective

The historical justification for the conduct of Taxpayer Compliance Measurement Programs has been to permit the Internal Revenue Service to hone its selection criteria for tax returns in need of examination. Decades ago when the TCMP was first employed there was ample proof it was needed - the IRS was experiencing a non-change rate between 30% and 40% of returns audited. This, all agreed, was a waste of both the taxpayer's and the Service's time and resources. Over the years the repeated cycle of TCMPs has enabled the Service to increase its ability to forecast which tax returns are more likely to produce a change if examined and they now achieve a no-change rate of approximately 11%.

In addition to reducing non-productive audits another result of using the data gleaned from TCMPs was the fact that the Service could insure some degree of uniformity in the application of enforcement efforts across the country. I remember sitting in the peanut gallery in this very room some twenty-three years ago when I was working at the IRS National Office and listening to then Assistant Commissioner for Examination, Singleton B. Wolfe, state to the Ways and Means Committee that it didn't matter if the taxpayer lived in Augusta, Maine or Augusta, Georgia; they had the same chance of getting audited because of the DIF score process. At that time it was important to reassure taxpayers, and their elected representatives, that there was a uniform application of enforcement across the nation.

It also was a recognition of the fact that there was no other way of approaching the task. The technology to permit more sophisticated data searches was still in its nascent stage. Alternative data bases did not exist to permit the Service to consider other means of devising an audit selection criteria. The computing power of the Service even then was woefully deficient. In short, there was no means other than an intensive, line by line probe into tax returns selected at random. This entailed a great expenditure of staff years on the part of the Service and an uncalculable amount of time, cost and lost opportunities on the part of the taxpayers unlucky enough to get swept up in the TCMP net.

Taxpaver Reaction

Ask any taxpayer who has ever been subjected to a TCMP examination about their experience. I had one client, a medical doctor, define it as "an autopsy without the benefit of dying." He had his personal income tax returns, his corporate income tax returns, his pension plan returns, and the returns of his children's trusts all examined as a part of the last TCMP. He is still amazed about the sheer volume of data the auditor required and the cost of having representation throughout the process well exceeded his usual annual costs for tax and accounting assistance. The result of his audit was that all returns were accepted as filed. But that is scant solace for his lost income for the time away from his practice, the months of responding to ever increasing demands for more and different

information, the stress of being subjected to an IRS probe into all of his financial affairs and the necessity of having to explain many non-tax related transactions to the satisfaction of the examining agent. That last point was particul: 'Iy vexing to my client. He questioned why he had to explain to the examiner why he refinanced his ski house. He never deducted any portion of the ski house for his business. It was for the sole use and enjoyment of his family and he felt it was none of the agent's business. My explanation that the agent had to account for all deposits into his bank accounts during the period under examination to insure that all income was properly reported merely served to further enrage him that his honesty should be questioned about reporting his business income. When I recently told him that the IRS will be conducting another TCMP this Fall his reaction was, in the words of an old Irish ballad, "in a language that the clergy does not know."

The Issue Before Us Today

The issue before us today is to consider if the traditional means of conducting TCMPs are necessary in today's business environment. Do we really need to single out 153,000 taxpayers later this year and subject them to such an invasive process? Are we certain that we can't "reinvent" the TCMP process like so many other processes the IRS has overhauled in the past few years?

There is a cultural change underway within the Internal Revenue Service. They have begun to re-emphasize the traditional methods of auditing with their recent training programs focusing on the economic reality of the taxpayer's lifestyle if it is inconsistent with the income level reflected on the tax return. This reflects the effort to question not only deductions the taxpayer has taken but the income received and reported. While there have been legitimate concerns raised about any wholesale implementation of this approach, one can hardly fault tax administrators for attempting to identify taxpayers with undisclosed income.

It is precisely with respect to this last point, identifying undisclosed income, where we see the greatest weakness of the TCMP process. In a rudimentary sense, conducting a TCMP is akin to "preaching to the choir." It provides data about what compliant taxpayers are deducting. It provides little in the way of identifying income never reflected on the return and it provides nothing about taxpayers who never file. It is precisely the problem of under-reporting and non-reporting of income that so fuels the average taxpayer's frustration with the current tax system. Any voluntary compliance system depends on the perception that everyone is paying their fair share. When it becomes common knowledge that there are many members of the society not participating in the system, it undermines the support for the system among those who do comply.

The Service has begun to focus on those segments who are not complying through the use of the Market Segment Specialization Program. We believe this approach is a wise one and believe that compliance will result from approaching taxpayers on an industry specific basis. Using a market driven approach also permits taxpayer education when appropriate and identifies legislative changes which could increase compliance. The Service clearly recognizes these factors and therefore an increasing number of returns selected for examination are not being selected based on DIF formulas but because the taxpayer is in a particular industry or fits a market segment profile. The Service has seen the dramatic results of many of these market segment audit programs in the form of higher deficiency amounts and increasing market sector compliance levels.

We believe that the DIF score will continue to decline as the primary selection mode as the Service develops more market segment data and begins to reprogram its resources into more productive examination areas. It is less and less important to maintain consistency in examination approaches throughout the country as our business environment and enterprises are increasingly specialized and dispersed geographically. For example, what does it matter to the Gulf States District headquartered in New Orleans if the Los Angeles District has a team assigned to the entertainment industry?

There are many commercial data bases now available which would permit the Service to develop macro-economic profiles of specific industries for purposes of targeting taxpayers who do not meet industry ratios for examination. These external data sources contain management, tax and financial data which could be factored into a model developed by the local District Office Research and Analysis (DORA) teams and lead to much more productive audit leads than random selection. In addition, the benefit of not putting taxpayers who are complying through the agony of the process needlessly would accrue to the Service's credit.

We believe that additional focus should be given to using technology in identifying targets for examination. By way of illustration, an article appeared in the Wall Street Journal on July 10, 1995 (page B1) which discussed the process an accounting professor in Halifax, Nova Scotia is using to help identify tax cheating and other financial fraud. He uses an obscure numerology theory known as Benford's Law, which lays out the statistical frequency with which the numbers 1 through 9 appear in any set of random numbers. The law is applied to suspicious checks or tax returns to see if the numbers are truly random or invented. This process has been employed by the District Attorney in Brooklyn, NY in prosecuting check fraud in seven companies and the professor consults with Canadian and other taxing authorities. I discussed the applicability of this law to tax auditing with an accounting professor colleague this past week and he agreed that for certain tax schedules, like Schedules C or F or E, the theory should be predictive. He pointed out however, that wage data and charitable contributions would not work because one is more likely to find numbers ending in 0 or 5 in these two categories than a random sample would have predicted. We are not recommending that the Service adopt this procedure but use it merely to illustrate that there are alternative ways of approaching issues we used to depend on manual processes to accomplish.

Recommendations

We would like to see a true cost benefit analysis of the current plan for the upcoming TCMP. It should include some approximation of the cost to taxpayers to participate in this statistical-gathering exercise as well as the staff years and resources of the Service. The true cost should then be compared with alternative ways of gathering data using commercially available business resources, such as Dun & Bradstreet, SRIs Values and Lifestyles Studies, etc.

We would like to see taxpayers who are subjected to a TCMP compensated for the cost of their participation. We are aware that this has been discussed before and that some Service officials have expressed some support for compensating taxpayers who emerge from the process with a no-change. We are concerned that this would provide incentive for agents to find some issue to disagree on just to escape the reimbursement process. In principle, we would like to see all taxpayers receive some compensation for their involvement since their inclusion was based on a random selection and not the result of any indication that they deserved to be audited. Of course, we can understand the Service's position that this would have to balanced against the results of the examination. We can well imagine the Service balking at the prospect of compensating someone who they are in the process of criminally prosecuting. Perhaps the remedy is to compensate up to a certain level of proposed deficiency only. We would like to see further study of this proposal.

Closing

We appreciate the opportunity to offer our comments about the Taxpayer Compliance Measurement Program. We offer our assistance to provide any additional information raised by these comments or other areas of concern.

Mr. HANCOCK. Thank you for your testimony. All three of your written statements will be entered into the record.
Mr. Keating.

STATEMENT OF DAVID L. KEATING, PRESIDENT, NATIONAL TAXPAYERS UNION FOUNDATION

Mr. KEATING. I appreciate the opportunity to testify today. I represent the National Taxpayers Union Foundation. My name is David Keating. I would like to touch on something not yet heard in today's hearing that I picked up from our advisors when I canvassed them for suggestions about this program. That is, does the TCMP have a garbage-in/garbage-out problem, and how serious is it?

A recent article in Tax Notes, by George Guttman—who I believe is in the audience—says TCMP data reflects selected audit results only, and no subsequent change is made when a taxpayer successfully contests an adjustment with the IRS appeals office or through litigation. Overall, the maintenance rate for issues that go to appeals and litigation is no more than 50 cents on the dollar.

Something else that I learned that was quite disturbing to me is that the people in the appeals office have, I think, different standards that they are held to than the tax auditors. If you look at rule one, governing practice before the appeals office, it says, "It shall be his or her duty"—meaning an appeals officer—"to determine the correct amount of tax with strict impartiality as between the tax-payer and the government and without favoritism or discrimination as between taxpayers."

Now, given the enormous amount of criticism of tax auditors by GAO and others, and the discrepancy between findings at the auditing level and the appeals level, I wonder how much statistical noise we are introducing into the TCMP data by not holding these auditors to the guidelines or professional standards we expect for

employees of the appeals office.

I also picked up concerns about the timing of this TCMP. You would have to have your head buried in the sand not to realize that politically a lot of changes have happened in the last few months, and I think there is probably the best chance we have ever seen since the adoption of the income tax, over 80 years ago, to actually replace it with something brand new.

The IRS is essentially proposing to put all its statistical eggs in one basket, meaning the 1994 return, which may be one of the last returns under the current income tax law. I would think they

would want to put their eggs in more baskets.

Another thing that is very important to our members and others is that it can be extremely expensive to face a TCMP audit. For a small businessperson, the cost can be quite punitive. I notice that in some of the stratifications of the samples, it would not be uncommon for 1 in 100 or even 1 in 200 taxpayers in some small business areas to be selected for audit under TCMP. That is a rather large number of people, especially when you compare it to other auditing rates in the population.

Now, the IRS in designing this TCMP project is pretending there is no cost for the taxpayer's time and expense in hiring a professional. That is uneconomic for the country. The IRS has little in-

centive to make the TCMP process more efficient because it has ignored the value of the taxpayer's time and expense in designing

this program.

It should be of little surprise that the IRS has not given proper weight to those costs in designing this particular TCMP. When public opinion pollsters, when they want to go into a lengthy examination—and one of the big problems public opinion pollsters are finding today is getting people to cooperate—where they want to do more detailed multihour focus group they have to pay people in order to get them to attend.

What we have here is the IRS is going to conduct the Nation's most tedious and expensive focus group, but instead of paying the people to participate they are actually going to force them to pay hundreds or thousands or tens of thousands of dollars for the ordeal, and that does not even count the potential tax that may be

collected.

We believe that if the IRS thinks that gathering this data is so important, then it should pay taxpayers for the time and expense of submitting to such a TCMP audit. This will give the agency an incentive to design a TCMP survey that efficiently considers the use of all national resources, not just the agency funds.

I would also like to briefly express some concern about the use of the TCMP data by the IRS and the Congress. We cannot think of a single instance since 1986 where the IRS has made a single

legislative proposal based on the last TCMP survey.

Even though everyone knows there is a problem with EITC, the IRS actually sent out EITC refunds to taxpayers who did not even

qualify for the program.

In conclusion, we think that before undertaking another TCMP, especially the one that is going to be the largest ever, the IRS should be required to study other less intrusive alternatives. The TCMP, as it presently exists, is overly burdensome on taxpayers and arbitrary in the selection process.

By the time meaningful results can be derived from this program, the information that will be gathered may well be obsolete

or irrelevant by the passage of comprehensive tax reform.

Thank you very much.

[The prepared statement follows:]

Statement of

David L. Keating
President
National Taxpayers Union Foundation

on the

Taxpayer Compliance Measurement Program

before the

Subcommittee on Oversight Committee on Ways & Means U.S. House of Representatives

July 18, 1995

Thank you for the opportunity to testify on the Taxpaye: Compliance Measurement Program (TCMP). National Taxpayers Union Foundation represents 300,000 members who are concerned about the fairness of the tax audit and collection process.

Representative Johnson, we commend you for scheduling this hearing to examine the proposed 1994 Taxpayer Compliance Measurement Program. As you know, the upcoming TCMP is scheduled to review 153,000 returns, substantially more than previous TCMP surveys.

As I worked to prepare this statement, I sought comments from several professional tax practitioners who are informal advisors to our organization. I am especially indebted to Kip Dellinger, who is a partner at Dellinger & O'Connell, a Los Angeles based CPA firm.

Writing in the June 5, 1995 <u>Tax Notes</u>, George Guttman reports that the next "TCMP is expected to cost approximately \$280 million in FY 1996 and require 4,388 staff years. This will break down to 4,248 revenue agent staff years, or 26 percent of agent resources, and 140 tax auditor staff years, or 5 percent of auditor resources." Not counted in the IRS' cost estimates, of course, is the value of the time spent by taxpayers and their tax professionals. Given the rigorous nature of a TCMP audit, these costs are likely to be even larger for the taxpayer.

Please keep in mind how arduous a TCMP audit is. How many of the married members of this subcommittee can quickly locate their marriage license? Remember, that is just the first item on the tax return, and is one of the easiest to document. If the IRS reviews all the deposits made in your various banking, checking, or mutual fund accounts, how easy would it be for you to document the source of all funds deposited and transferred?

Does TCMP have a garbage-in, garbage-out problem?

Guttman notes that "TCMP data reflects selected audit results only. No subsequent TCMP change is made when a taxpayer successfully contests an adjustment with the IRS Appeals Office or through litigation. Overall, the sustension rate for issues that go to Appeals or Litigation is no more than 50 cents or less on the dollar."

Essentially this means that the TCMP data can be used to flag tax returns where the IRS can claim a tax adjustment, not whether it can win such an adjustment. Given recent GAO criticisms of the knowledge of tax laws by tax auditors, this would seem to call into question the reliability of the raw TCMP data.

A recent paper by Dan Pilla for the Cato Institute notes the different standards between the auditing process and the cases reviewed by the Appeals Division. He notes that "of the cases received by the Appeals Division in 1993, nearly 97 percent were settled by agreement. That is to say, while the taxpayer was unable to reach a satisfactory settlement with the tax auditor, he could with an Appeals officer 97 percent of the time." Pilla says the reason why taxpayers often come to an agreement with an Appeals officer "is found in the rules governing practice before the Appeals office." Pilla quotes the language of Rule 1:

"An exaction by the U.S. Government which is not based upon law, statutory or otherwise, is a taking of property without due process of law, in violation of the Fifth Amendment to the U.S. Constitution.

Accordingly, an Appeals representative in his conclusion of fact or supplications of the law, shall hew to the law and the recognized standards of legal construction. It shall be his or her duty to determine the correct amount of the tax, with strict impartiality as between the taxpayer and the Government, and without favoritism or discrimination as between taxpayers."

Pilla notes that "incredibly, no similar guidelines exist for tax auditors." In other words, the people who will be compiling data for the TCMP are not operating under rules requiring the type of strict impartiality that is the standard for the Appeals Division.

The timing of this TCMP is poor.

We believe that there is a very good chance that the next Congress will pass fundamental reform of the current income tax law. The current income tax may be replaced altogether by a national sales or flat rate tax. Both the House Majority and Minority leaders have proposed a fundamental restructuring of the tax laws as have the chairmen of the Ways & Means and Senate Budget committees. With the likelihood that the tax laws will be fundamentally restructured, and soon, the timing of this TCMP is questionable at best.

TCMP is overly burdensome on and costly for arbitrarily selected taxpayers.

As described by the IRS, taxpayers are selected for TCMP audits on a random basis within stratified taxpayer filing groups. Yet these taxpayers are subjected to what can become an enormously time consuming and costly audit process. It takes an enormous amount of time to assemble the documentation of every line item on a tax return. In many cases, it is necessary for the taxpayer to retain a professional for representation. In other instances, taxpayers do so simply out of fear, or in response to the overwhelming and intimidating information requests that accompany TCMP examinations.

Because of the nature and extent of TCMP examinations, professional fees can be extremely expensive and will generally exceed the cost of preparation of the returns themselves several fold. While a \$280 million program is, by federal government standards, a paltry expense — the costs of a TCMP to individual taxpayers or small businesses can become almost punitive.

When so many other methods, resource, and tools are available in the IRS arsenal of weapons to be used against errant taxpayers, it is patently unfair to put a random group of taxpayers through the rigorous, sometimes ridiculous and very expensive process that TCMP entails for statistical purposes.

TCMP design should account for all costs, and taxpayers should be compensated.

To the extent that the IRS is allowed to proceed with the presently contemplated TCMP program — the government should be required to compensate both taxpayers and any professional representatives they engage for their time and effort. Care should be taken to advise taxpayers selected for a TCMP that they will be compensated for their time and that if they choose to retain a professional representative they will be reimbursed for reasonable professional advisors' fees.

In designing this TCMP and projecting its cost, the IRS is pretending that there is no cost for the taxpayer's time and the expense of hiring a professional. That is unwise and uneconomic for the country.

Guttman's article notes that statistician Amir Aczel "contends that the DIF [discriminate function] analysis has been superseded by more powerful statistical methods, such as 'logistic regression,' which requires less data. Aczel claims 20,000 audits can provide the same type of information that the IRS will get from the 153,000 plan for the 1994 TCMP." Guttman reports that "Aczel says the IRS' plan for the next TCMP is like doing exploratory surgery with stone-age tools."

Guttman also cites "Don Rubin, chairman of the Statistics Department at Harvard University [who] argues that nobody knows whether Aczel is right." He writes that Rubin believes "the best that an outside statistician can say is that the IRS approach can be made more efficient."

Yet the IRS has little incentive to make the process more efficient because it has ignored the value of taxpayers' time and expense. It should come as no surprise that the IRS has developed a TCMP that statisticians think can be made more efficient, since most of the expense would be borne by the unlucky taxpayers who will be selected for this arduous audit.

When public opinion pollsters wish to conduct a lengthy examination of public attitudes, they rely on focus groups. In order to get people to attend focus groups they pay them. This enables the public opinion professional to secure a representative sample of people who are willing to give up several hours of their time to answer questions and react to proposals.

The IRS is proposing to conduct perhaps the nation's most tedious and expensive focus group. But instead of the IRS paying the survey participants, the subject must participate at no charge. Indeed most will probably pay a tax professional hundreds or thousands of dollars for assistance with this ordeal. And don't forget that the taxpayer may have to fork over even more taxes or spend thousands of dollars to appeal a decision by a tax auditor who is unfamiliar with the tax law and has recommended an incorrect claim for additional tax.

If the IRS believes gathering this data is so important, it should pay taxpayers for their time and expense of submitting to the audit. This will give the agency an incentive to design a TCMP survey that efficiently considers the use of all national resources, not just agency funds.

Reimbursement should not be based on the results of the examination; it should be based on some multiple of the hours spent by the IRS in completing the TCMP exam (including pre-audit, review and supervisory time). For example, for every hour spent by the IRS, the taxpayer and representative should be reimbursed for two hours. The "rate" of reimbursement could be based on the prevailing rate in the local area for professional representation.

While some may argue that taxpayers whose exams render a sizable deficiency and substantial non-compliance should bear the cost of their examinations, this will only serve to encourage some at the IRS to assume overly aggressive positions with respect to potential adjustments.

The Service's Arsenal of Weapons has vastly expanded.

When originally conceived, the TCMP was likely the only method realistically available to determine the level of taxpayer compliance that the program was designed to assess. At the time it was initially developed and implemented, the collective resources available to the Internal Revenue Service to obtain the type of information with respect to various categories of taxpayers and their varying degrees of compliance with our income tax laws were far more limited than the resources available today. Moreover, compliance with the overwhelming technical and mechanical requirements of the tax law was far less burdensome than that faced by taxpayers today and, consequently, the time and effort — as well as likely professional fees — were less than what faces potential TCMP targets today.

Today, the IRS has access to a wealth of information -- over a billion information documents per year -- that can lend itself to the kind of statistical analysis that is developed by the TCMP. This includes the ability to more thoroughly analyze (both quantitatively and qualitatively) the results of the ongoing, regular examination process. And it becomes readily apparent when one examines the characteristics, methods and objectives of the IRS's "economic reality" audit approach.

We have previously expressed our concern about privacy issues related to the "economic reality" examination approach. Nonetheless, the mere fact this information is available, that the IRS has access to data bases and taxpayer information infinitely greater than when the TCMP was conceived, should have reduced the need for an arbitrary examination process as intrusive as TCMP. In addition, the IRS has and can continue to focus on particular types of deductions or other tax information on a targeted basis. This information is often developed by region and income level and probably provides more significant and timely information than what results following the years of accumulation and interpretation of TCMP results.

We also call the Committee's attention to the increased specialized knowledge that the IRS has developed largely without use of TCMP results as evidenced by the Market Segment Specialization and Industry Specialization Programs.

Relevance of the data obtained in TCMP is questionable.

We cannot think of a single instance since 1986 where the IRS has made a legislative proposal based on the most recent TCMP survey. There is clearly an enormous problem with earned income tax credit (EITC) compliance, yet after the latest TCMP, the IRS sent out EITC refunds to taxpayers who didn't qualify for the program! The IRS made no attempt to recover this money. EITC has also been an area rife with fraud.

The Administration and the IRS have failed to identify legislative initiatives to improve EITC compliance, and the Administration pushed through legislative changes in 1993 to make the program more generous.

IRS spokesman, Steve Pyrek, has stated that the TCMP is "... only done sporadically because it's very expensive and time-consuming People are doing things now and living in ways they weren't five years ago As economic life changes we need to keep up with those changes and with what's going on in society."

Mr. Pyrek has a point. But based on experience, we doubt that the TCMP will accomplish what he describes as the IRS goals and objectives for the TCMP.

First, the economic and lifestyle changes that Mr. Pyrek describes — particularly with regard to monetary matters — are accelerating as electronic information technology plays a more important role in our economic system.

This Committee's own Press Release announcing this Hearing highlights the fact that Congress has not yet received reports on the findings of overall compliance from the 1985 and 1988 TCMP surveys. Clearly, delays of any measurable time period in obtaining whatever results derive from the proposed 1994 TCMP audits would render those results, at best, of diminished usefulness and, perhaps ... meaningless. This is further magnified by the obvious overwhelming public support and Congressional interest in a very significant revision of our national tax structure. To arbitrarily subject 153,000 taxpayers or entities to the costs and burdens of this program seems on the whole, misplaced.

Second, the use of 280 million dollars of IRS resources to derive detailed information from a population of Americans that do — in fact — file income tax returns when much of that information is available by other means appears to be a colossal misuse of taxpayer dollars.

Third, before undertaking another TCMP, the IRS should be required to study other, less intrusive, alternatives that will provide more timely information. There remains the unanswered question whether yet another TCMP is underway because of a bureaucratic mindset that says — "that's the way we've always done things." For example, the IRS should consider looking at fewer items on more returns, rather than every single item on every return selected for a TCMP audit. By looking at fewer items on more returns, this would at least spread out the burden somewhat so that the TCMP compliance burden is allocated somewhat more fairly.

Also, some members of the practitioner community believe that the IRS sees the TCMP program and its attendant publicity as a form of deterrent. We do not believe that to be the case.

Conclusion

The TCMP program, as it presently exists, is overly burdensome on taxpayers and arbitrary in the selection process. Much of the information the program attempts to garner can be secured by alternative means. Moreover, by the time meaningful results can be derived from the program, the information will almost surely be rendered obsolete or irrelevant by today's rapidly changing information society or passage of comprehensive tax reform. We hope that the IRS uses its resources on projects more likely to improve taxpayer service.

Mr. HANCOCK. Thank you all for your testimony. There are a few questions that we would like to get in the record, and I have got a lot of questions about this. But in the interest of time, Ms. Smith, from your testimony I kind of get the impression that you feel that this just basically is the price of citizenship.

Ms. SMITH. Very much so. That is how I was raised and it is a theory that I have come to embrace myself. That is not to say that I did not think it was the audit from hell or that I want to do it

again. [Laughter.]

Mr. HANCOCK. Kind of like a root canal?

Ms. SMITH. I, given a choice between this and a root canal, I

would take the root canal, I think. I have had one of each.

But, yes, it is important to me to pay my taxes, to do it correctly as best I can and to participate in the system. It was not my judgment and nobody asked me in 1981 if this was the best way for the IRS to do its business, they just said this is what we are doing and you are in it, and I was glad to participate.

Mr. HANCOCK. Well, do you think that you should have been re-

imbursed for your expenses?

Ms. SMITH. I do not think there is enough money to reimburse anybody for the kind of time and stress that it puts you through. But having thought about this question in the past week, I think it would have been nice if I had had, for instance, a voucher that would have given me one-half hour of some CPA's time for a consultation, something like that. Perhaps, even something to show appreciation like a method of filing electronically for free for the next 5 years, would have been nice. Not unlike what Nielsen did when they asked me to write down a television log for a week.

Mr. HANCOCK. Well, what would have been your attitude if, in fact, they had said, yes, you got a trip back to Jackson for this

audit.

Ms. SMITH. I do not believe I was given any choice. The records were my responsibility and it had been my decision to leave the records. I never thought about going into an audit. I just was moving and left the records behind because I did not think I would ever need them again. I did have the forethought to keep them, thank goodness.

If I had had to make some arrangements to go back and get them I would probably have had friends of mine dig out the boxes

and try to do something that I could afford to do.

Mr. HANCOCK. It could have been a little bit different, though,

if, in fact, you had been out several thousand dollars?

Ms. SMITH. Oh, yes. Everybody's circumstances would be different. If this had happened to my mother it would have been a disaster.

Mr. HANCOCK. Mr. Lane, you indicate, in your testimony, that there is value in focusing on the economic reality of the taxpayer's lifestyle if it is inconsistent with the income, the level reflected on the return.

Does this not raise your concern that the TCMP process does lit-

tle to identify income not reflected on the return?

Mr. LANE. Yes. It does address our concern. We are concerned that since TCMP just applys to taxpayers who file, there ought to be better systems devised to identify taxpayers who are not filing

at all. There are data bases out there that the Service could access, commercial data bases which would give them participants in given industries.

For example, what they are doing in the market segments approach is a much more realistic and much more profitable approach in terms of the use of their resources than to go out and spend \$2.1 billion on this TCMP that is going to drag 40 percent of taxpayers

in and result in refunds, or no changes.

In addition, the cost to the taxpayers and small businesspeople to comply with this TCMP is just enormous. The testimony we had this morning by Mr. Brand of about 1 hour or 1½ hours per audit, that may be what the national office thinks happens, but in reality what happens in the field is different. The taxpayer that Mr. Zimmer described that would be assigned to a fairly low-graded auditor and the fact that the TCMP is given such an emphasis within the Service—plus the fact that they have all gone through this economic reality training this year, that taxpayer who walked in and refused to turn over the records of a noninterest bearing account would be treated like Al Capone.

There is no question that the auditor would get a summons issued for the checking account data and there is no way, under any circumstances, that it would be a 1½-hour audit. I can assure you

of that.

It would turn into a major controversy with that taxpayer. There is no way, in a TCMP especially that you are going to tell some tax auditor you are not going to give him the information on the bank account. The first request the taxpayer got notifying him would have told him to bring in all of his bank statements for the year.

That is just the reality. So I do not know what the national office thinks is happening out there, but what is actually happening on the street is that they would treat that a lot differently. It would be a much more thorough audit if the taxpayer did not provide all of the data that was requested in the information document re-

auest.

Mr. Hancock. Well, do you think that even on the TCMP you did not get the idea of assumption there, the assumption of guilt, something being wrong. But in your judgment, especially with the way some of these audits have been handled that you are familiar with, that there is an assumption on the part of the auditor that, in fact, there has been something wrong, rather than just saying, look we are running a compliance check here.

Mr. Lane. TCMP gets two reactions in the field. The experienced revenue agents generally consider it a nuisance because it is a random sample and they know, therefore, that some of these people are going to be refunds or no changes. Their attitude is it is a waste of time. We ought to audit people that we know we can identify through some other vehicle that are a lot more likely to result

in audit changes, higher DIF scores for example.

Newer agents, and there are a lot of new agents out there, have not been through a TCMP before and they see the emphasis the Service gives it. They see things like congressional hearings and newspaper articles on it and they take away a frame of reference that this is a really hot issue. They get special reports they have to fill out and there are special detailed forms, so the impression it creates for the newer agents is that this is a very highly rated and important program. So they tend to approach it much less flexibly than a normal audit.

They are given marching orders by their superiors that they have to audit every single line on the return and if there are any related entities, they have to consider which related entities will also be opened for exam. This is a much different environment than a normal audit where a fair amount is left to their discretion.

So it signals to the employees that this is a fairly important program and so they are less flexible with the taxpayer as a result.

Mr. HANCOCK. In the preparation of the cost benefit analysis. how would you recommend that they can reduce the cost to the tax-

payers for a TCMP audit?

Mr. LANE. Well, one of our recommendations is that IRS take notice that there are a lot of commercial data bases available. Just to name a few, the Stanford Research Institute has a program called the Values and Lifestyle Study. They have been gathering data for 30 years now. If I am Procter & Gamble and I want to know households that have \$100,000 and more in income, and have a Cadillac in the garage that is less than 2 years old, I can buy a list of people that fit the criterion. I can custom design these lists for marketing.

Our analysis is that before we'd go and spend \$2.1 billion of the taxpayers' money which is the true cost of this TCMP—the lost opportunity costs of those agents in the field and \$559 million of the program, itself—I would want to take a look at whether there is alternative data that is already existing out there in Dun and Bradstreet, and every place else in the world that you can buy.

I think there is no argument from the Service officials, if there are any left in the room or the ones that were here this morning, that the market segment approach is one of the best things they have come up with in tax administration in the last 25 years.

They can prove it by two trends. No. 1, the average deficiency on a market-segment audit is significantly higher than the average deficiency in a general program audit. No. 2, statistics reflect increasing compliance levels in given market segments once they have

So why not focus your efforts, your money, and your resources on market segments and identify more and more of those people who are not complying and get those market segments into compliance.

I would try to buy these commercially available data bases. Now, someone earlier, when we were talking on the break, indicated that some of these companies would not sell the data to the IRS, and that may be the case, I do not know. I am not a statistician; nor do I go out and try to purchase these things. But I know they are available.

Mr. HANCOCK. Thank you.

Mr. Keating, you expressed in your testimony that the timing of this TCMP is poor as a result of possible major changes in the current income tax law. Do you believe that there are aspects of the current laws that may be important for the administration of future laws under tax reform, for instance the reporting of income or the timely payment of taxes?

Mr. KEATING. Well, I suppose it depends on what we ultimately come up with as a part of tax reform. But certainly it is quite possible, especially on the definition of income including how much income is reported and whether it is accurately reported, that the TCMP can provide information that is applicable for current or future tax administration.

Mr. HANCOCK. How would you recommend that this information be gathered on the current behavior pattern of taxpayers relevant

to the existing law?

Mr. KEATING. I do not know enough about the statistical development of TCMP to say for sure, but I am sure of one thing. When you prepare your tax return or when someone is auditing the tax return, the law as it exists now is so complicated that there is a huge potential variation in what an expert would say is the proper amount of tax that is actually due.

You referred, earlier in the hearing, to the Money Magazine report, where they had 50 professionals look at the same theoretical tax return and they came up with 50 different answers. Those are the kinds of problems we are facing with the Tax Code today—an incredibly complex tax law that is difficult not only for the tax-

payer to comply with but the Service to administer.

Those are problems that I would imagine the TCMP process has

a great deal of difficulty with as well.

Mr. HANCOCK. Well, you spoke about the IRS having access to all kinds of information, data bases, Mr. Lane mentioned it, Dun and Bradstreet reports, and all that type of taxpayer information.

Do you support the idea of IRS using these external data bases,

as Mr. Lane suggested? Would you support that?

Mr. KEATING. I doubt it. I think it is probably a nonissue anyway because the firms that compile these data bases, much of them are direct marketing oriented firms and they are not going to want this data being used for tax administration. If they do allow IRS access to the data, the people that compile it probably think that a lot of the data that they are able to get now on a voluntary basis from people will not be forthcoming, because they think it might be used for tax administration or auditing.

So I do not think the direct marketing community or industry would ever allow this data to be sold to the IRS. In fact, in previous times when the IRS tried to obtain samples of demographic data from the industry, I recall a great deal of resistance to this.

I think the industry will continue to resist and do so successfully.

Mr. HANCOCK. Thank you.

Mr. Portman.

Mr. PORTMAN. Thank you, Mr. Chairman.

First of all I want to apologize for not being here through your testimony. As our chairman has probably explained, our schedule is crazy these days. We have a lot of conflicting scheduling items, and I just apologize to those who are here today that we all cannot be here more.

I have read through the testimony. I have not read every word of it, but I have skimmed all the testimony that I received and I appreciated all of your views. Mr. Lane, it is good to have you back before the subcommittee again.

Mr. LANE. Thank you.

Mr. PORTMAN. I like your candid approach to this. I would agree with you on the market segment data, not just because Procter & Gamble is in my district, but because, in fact, as I tried to articulate earlier, I think there is a lot of new technology and new techniques to get at some of the same information the IRS is rightfully looking for in this latest program.

So I would hope, too, that perhaps we could utilize some of that

private sector data that is already out there.

Let me ask you another question in your role as representing the enrolled agents. Perhaps it is something that the IRS officially must address, but do you understand how the burden of proof is going to work? Let us say that someone, like Ms. Smith, makes a claim about her lifestyle in connection with the economic reality approach. It cannot be sustained. Either you have lost your marriage license or you know you do not have a title for the riding lawnmower that you bought 2 years ago, or you got from a friend or traded with your neighbor, or whatever it is.

How does the burden of proof change, if at all, as compared to a normal audit? Do you understand how that is going to work?

Mr. LANE. Yes, I do. There is no change in the burden of proof in this instance because it is a civil examination and the burden

of proof is with the taxpayer not with the Service.

Mr. PORTMAN. OK. So she has to prove that she did not do something, even if she does not have the information on hand. That sort of is a transition to the appeals process and you talked a little in your testimony, I think, about the fact that 97 percent of the cases that go to appeal are resolved. What happens to those? Are the adjustments made pursuant to the IRS or their estimate? When you say they are resolved, what is the typical outcome, do you know?

Mr. KEATING. Well, according to George Guttman's article in Tax Notes, the overall sustention rate for issues that go to appeals or litigation is more than 50 cents on the dollar. The taxpayers and the IRS are able to reach agreement in 97 percent of the cases that

go to an appeals officer.

I think that is probably because No. 1, the level of standards and professionalism at the appeals process is probably higher than at the auditing process. No. 2, there is probably also better knowledge of the tax law and better understanding of the hazards of litigation, both for the IRS and the taxpayer at the appeals level.

But, certainly, from GAO reports and from what I have heard from our members who are tax professionals is that at the auditing level there is often a lack of knowledge about the proper amount due. There are positions taken. It is almost like a negotiation strategy rather than trying to figure out what is actually——

Mr. PORTMAN. Starting out high and ending up lower?

Mr. KEATING. Right, exactly. Now, I hope in the training for the TCMP that the auditors will not be dealing with these types of audits in the same way. They have to take a view that if the IRS is going to have accurate data, the TCMP audit is not something that is a negotiating technique with the taxpayer to find the highest amount that they think they can squeeze out of the taxpayer, but something that is the actual correct amount due.

Mr. PORTMAN. The inference I draw from what you said earlier about the 97 percent is that a great many of those cases are re-

solved in a sense, in the taxpayer's favor and that the auditor's adjustment is not the final figure. In fact, it is a figure that is a compromise between where the taxpayer might have been and where the auditor was. Is that what you are saying?

Mr. KEATING. Yes.

Mr. PORTMAN. In other words, the fact that 97 percent of them are worked out I suppose would indicate that folks understand the litigation costs, as you said, or they can understand the cost benefit analysis and they are willing to work on resolving it by going to another level than where the audit had been?

Mr. KEATING. Well, certainly that is a factor but also I have heard a number of reports from our members that it is simply that there is a better level of understanding at the appeals process and more willingness to consider things that you do not see considered at the auditing level.

Mr. LANE. Could I add something here?

Mr. PORTMAN. Sure, please.

Mr. LANE. I do a fair amount of appeals work myself. I do not know how valid that number is.

Mr. PORTMAN. The 97-percent number or the——

Mr. Lane. Oh, I believe 97 percent settle, but I do not think it is all settled at less than the tax auditor or the revenue agent proposed. There are a number of ways that cases get to appeals. The important difference with appeals as opposed to a tax auditor in the office or a revenue agent in the field is that the Service has

given the appeals office settlement authority in cases.

The people on the street do not have settlement authority. Their job is to make the substantially correct tax liability based on their understanding of the law. They are not allowed to consider the hazards of litigation and for good reason. You would not want to have 25,000 employees across the United States all having their own view of what is the hazard of litigation. It is a lot easier to control 1,900 appeals officers.

Because settlement authority is not provided to those employees and it is provided to the appeals office, they have more flexibility

in resolving cases.

An awful lot of stuff that goes to appeals gets there by default. For example, the taxpayer may have moved and did not get the audit notice and the next thing they know they get a statutory notice of deficiency, or they have a deficiency assessment and they go in and say, well, I really have got proof of my home mortgage interest and my charitable contributions, so appeals opens that case up and resolves it.

Other appeals cases may be Tax Court cases never really intended to go to Tax Court. They are filed to preserve the taxpayer's ability to appeal the audit process. So a lot of "junk," that is, substantiation and documentation cases, get into appeals for resolution

which should have been closed further down in the process.

Clearly, the better people in IRS, in terms of their technical knowledge, are in the appeals function. For one thing the grades are higher, the work is better. You do not have an inventory to carry that is the size of the field inventories, and it is a nicer environment to work in. So the better people that have settlement in mind tend to gravitate toward that work.

Mr. PORTMAN. The question, I guess, for us today is what does all this mean for TCMP? Will it be any different? I do not understand what the differences might be. I think you are still going to have a number of these kinds of cases. Although I suppose change of address would not be as big a problem because someone will have sat down face to face with an auditor.

Mr. LANE. Yes. I do not know that anybody keeps separate data on what percentage of TCMPs settle out in appeals. I would imagine that it is going to be fairly consistent with regular audits.

Mr. PORTMAN. Ms. Smith, a couple of quick questions for you since you have been through the process, I understand. I am sorry I missed hearing your testimony firsthand, but you said that you had pretty good records when you went through this process and you were able to provide the information perhaps better than some

of us who are not as good at recordkeeping.

If you had come upon a situation where you did know factually that you had properly done something and yet, you did not have the marriage license or you did not have the title to the riding lawnmower or whatever it was. You had the choice of fighting it, meaning going out and hiring a professional advisor, probably an accountant, or just going along with it. What would have gone through your mind?

I mean what I am trying to get at is the problem I think which would occur in many cases where someone would say, do I go out and hire an accountant for \$500 or \$1,000 to try to resolve this

thing, or do I just pay the \$700 or \$800?

Ms. SMITH. I went through much that same process a few months ago when I got a speeding ticket and I had to decide how much I wanted to spend. Whether I wanted to just pay the fine, it was not a big speeding ticket, or hire a lawyer and go to court

and try to get the record erased or reduced in some way.

I think I would use the same standards for this. It would depend upon the circumstances and I think it would come down to a dollar amount, in large part. I am a stubborn person and if I knew I was right and if I thought I had some way of showing I was right, I would probably go forward more than a lot of people would choose to do.

If there were very much money involved, I would feel the need to go forward. If it were a minor point, like the argument I am having with an insurance company now for \$58, the stress is not worth

it. I am going to give up after about 1 hour.

Mr. PORTMAN. You might throw in the towel. Well, that is something that is an interesting part of the whole calculation of what the cost is and the burden is on the taxpayer. I appreciate your tes-

timony.

I have one final question for Mr. Lane. This just goes to a projection of what the total cost to the taxpayer would be, by that, I mean the Federal Government. I had heard some figures earlier, and I think I had mentioned in my questioning that it seemed like it was \$300 to \$500 million. You have talked about \$2.1 billion which includes kind of the lost opportunity costs, plus the actual costs. Is that something that there is a consensus on among your colleagues and those who understand the system pretty well?

Mr. LANE. I took that from the testimony, the printed transcripts of Mr. Brand's testimony today.

Mr. PORTMAN. Just adding it up?

Mr. LANE. He said it is \$559 million direct costs and \$1.5 lost opportunity costs. That adds up to about \$2.1 billion. There are some interesting things in the testimony this morning, and that

was one of them that just caught my eye.

Mr. Portman. It is a big number when you compare that to other things we are trying to do with tax modernization or any of the other programs we have ongoing to try to make the system work better and more efficiently. That is a substantial part of what we have available to try to make ours work better. So that is interesting.

Mr. LANE. I guess I look at that and look at the success they have gotten from the market segment program and think boy, the \$2.1 billion could be better spent on other things in the market seg-

ment area in terms of taxpayer compliance.

I think the key thing with any of these things we try to do in tax administration—and having spent 10 years in the Service in the beginning of my career and now 15 years in private practice—I feel qualified to comment that I think the key thing the Service needs to focus on is the impact. In an ideal environment they would only be working cases that deserve to be audited, enforcing against people who deserve to be seized, and the taxpayers who

complied basically would be left alone.

That would be an ideal environment. The taxpayer who never needed to be audited, never got audited. There are imperfections in the system—as Fred Goldberg talked about; for example, the circularity issue. Just to keep doing it because we have always done it that way, when we have got new tools available is wrong. I mean what have we spent on technology in the last 5 years in IRS? We should be able to come up with a better way of constructing a method of sorting tax returns than to go back to a model of something we used in 1963.

I am also concerned about some of the assumptions that IRS draws from the data. For example, in Mr. Brand's testimony today, there is an assumption about what impact they had in compliance

as a result of the child care issue.

You have a chance to review that. Our take on that is 180 degrees the other way. I do not believe, as he points out in his testimony, that they identified a problem with people overstating the credit and so they required the tax ID number of the child care provider. As a result, 2.7 million taxpayers stopped claiming the credit which gave them an additional \$1.2 billion in revenues, and credits that to the TCMP process.

I do tax returns, folks. There is no way that 2.7 million people were claiming a fraudulent credit and stopped taking it because now they had to put the tax ID number of the child care provider down. That is not what happened here. Rather, what happened is because they had to put the tax ID number of the child care provider down, they had to make a decision: "Was it worth turning

grandma in for the \$480 credit?"

The 2.7 million people made the decision that for \$40 a month, it was not worth disrupting their baby sitting situation. That is

what happened. I do not draw the same conclusion IRS does—I draw a conclusion that says the credit is too low. If the credit were \$2,500, they all would have thrown grandma from the train. [Laughter.]

But for \$40 a month, it is not worth it.

Mr. PORTMAN. Are they not throwing themselves from the train, too? Because it raises the whole issue of the Social Security tax.

Mr. Lane. Well, no, they may not even have grandma doing the baby sitting in the house. They may be taking them to a next door neighbor. But for \$40 a month, if you talk to most working couples, the biggest problem they have is this child care hassle and the last thing they are going to do is disrupt one that is working for a \$40 a month tax credit to play "rat fink" on the baby sitter. So the bottom line is that the credit was too low and a lot of people looked at that and said, no, I am not going to do that. I had people say, "I am not going to give you that number, just take the credit off the return."

So to turn around and draw the conclusion afterward that oh, our great TCMP provided this dramatic \$1.2 billion additional revenue because we got all of these tax cheaters off the rolls, is absolute nonsense.

I am not accusing them of being disingenuous with the subcommittee. I am just saying, this is an example of the myopia the organization has. They take these backward looks at situations and

say, oh, well, our TCMP suggested this is a problem.

The primary reason they wanted this tax law change for the TIN was that they only had 260,000 people in the country file tax returns indicating they derived income from child care. There are probably 260,000 in the city of Washington that are making child care income. So they knew they had a problem and they knew that they would get better compliance if you asked for the tax ID number. I do not think that it had anything to do with TCMP.

Mr. PORTMAN. Well, that just goes to the difficulty of making some of these estimates, not just looking back but looking forward, which is even more problematic as Mr. Keating has said, 3 years from now when we have the data available we may well have an

entirely different tax system to be working with.

Thank you, Mr. Chairman, I appreciate the testimony.

Mr. HANCOCK. Thank you.

Well, thank you, very much, to the panel. We most likely have another vote on so we will recess temporarily and the next panel will be seated and we will be back in about 15 minutes.

[Recess.]

Mr. HANCOCK. I want to welcome the next panel. I am not going to make formal introductions. Your written testimony will be made a part of the record. I would appreciate it if you would try to be as concise as possible and maybe we can wind this up by about 3 p.m., and maybe before we get another vote over there.

Would you please proceed, Dr. Scheuren.

STATEMENT OF FREDERICK (FRITZ) SCHEUREN, PH.D., VISITING PROFESSOR OF STATISTICS, GEORGE WASHINGTON UNIVERSITY, WASHINGTON, D.C.; AND FORMER DIRECTOR, STATISTICS OF INCOME DIVISION, NTERNAL REVENUE SERVICE

Mr. Scheuren. I am a former IRS employee, but I have been out of the Service now for a few months and I am teaching at George Washington University. I am not going to cover my testimony in any depth, except I would like to talk about possible alternatives to the specific 1994 proposal that you heard about this morning.

I feel that there are a number of issues around that proposal, organizational issues around the way the Service is planning to do

it—considering the way it has done it traditionally.

There are also some operational concerns with such a large endeavor, and I have recommended in the testimony that the Service conduct a "dress rehearsal" this year, instead of a full-scale study. This is a very large undertaking and dress rehearsals are typical in large statistical efforts. The Census Bureau, for example, typically conducts one or more dress rehearsals before each census. We are talking about something that is on that order of magnitude. This is a very large undertaking, and I think it deserves a dress rehearsal, especially given the things I heard this morning about the computer system.

I also want to comment about the sample design, since that is my business. In general, the work done on the sample design was extremely good, although it is constrained by some assumptions that were made. I think that there are some issues around the data available to do the sampling with—given the antiquated nature of

the IRS processing system.

I would recommend a change in the way that the sampling is going to be carried out for 1994, if a pilot or a dress rehearsal were taken. My approach would be quite simple. Just take the existing sample that has been drawn, which as I say is quite good, given the constraints, and subsample it to deal with some of the burden issues and with some of the targeting issues and with the point that we really need a dress rehearsal. Then field a sample of, perhaps, 15,000.

Now, admittedly 15,000 is a number that I pulled out of the air; but it is a significantly smaller number, an order of magnitude smaller than 150,000. You cannot settle these questions, at least in my business, without doing some empirical work. I am not sitting here saying I have done this empirical work. It requires a lot of study. But I think a small, but not too small, version of what is

planned is what is appropriate.

I think there are some issues about sample estimation and Fred Goldberg made some of these points this morning in a general way and I will make them again. I think things have moved, in my profession, in the last 30 years a great deal, and I think there are ways that we can more efficiently make estimates from a sample. That efficiency could lead to a smaller sample.

I do not want to overpromise here. I know a great many of these new methods are worth trying and some of them have actually worked. A TCMP study that I was slightly involved in (form

990-T) was one in which an efficient estimation procedure really

made some big payoffs.

I am concerned about the study analysis issues. But I think I will pass over that right now. A lot of people have talked about those issues already and others that are sitting here with me may as well.

So what am I proposing? For the immediate short run, first, one thing that I have not said here but that is in my testimony—I think the TCMP is irreplaceable and there must be a TCMP. I am not saying anything to disagree with that.

On the other hand, I think a smaller, targeted, better planned, more carefully developed TCMP, in terms of the dress rehearsal

idea, is essential for the fall.

What would I recommend that we do afterward? Again, I have seen it in the testimony of others today. I would recommend that TCMP become an annual study, that it be smaller annually. Certainly a lot smaller annually than it is for 1994. It could become more efficient over time. One of the things that we need to learn from the Japanese is "just-in-time" procedures and short cycle times. If we do TCMP the right way, we can learn how to do it better and better; reduce the burden on the taxpayer by making TCMP smaller and smaller; and the burden on the resources of IRS would be a lot less as well.

That's my recommendation. Since many of you here are in the political world, you understand the nature of rolling samples, of tracking polls. This is the way to do business—quite different than doing a measurement every few years. I think this approach should be taken in TCMP. Furthermore, I think it is consistent with the Service's desire to modernize itself.

Thank you.

[The prepared statement follows:]

Testimony

To

Committee on Ways and Means U.S. House of Representatives Subcommittee on Oversight

By Frederick (Fritz) J. Scheuren Visiting Professor of Statistics The George Washington University

Tuesday, July 18, 1995

My statement today on the Taxpayer Compliance Measurement Program (TCMP) will cover --

- How TCMP data differ from data produced in the Statistics of Income (SOI) program.
- The value and use of TCMP data, and
- The benefits and shortcomings of the current TCMP design.

In addition, I would like to discuss some alternatives to the current approach that the IRS is intending to take.

Disclaimer and General Perspective

First, a disclaimer may be in order. I am here solely as a private citizen. However, at present I am a part-time consultant to the Treasury Task Force on Tax Refund Fraud; also, I have travelled to Russia for the Treasury Department to consult on tax matters. Indeed, I'll be going to Moscow again next week; this is partly under Treasury auspices and partly for The George Washington University, where I am employed full-time as a visiting professor of statistics.

Second, my overall perspective may be worth noting. Over the years my involvement with TCMP has been both professional and personal. In fact, I worked as an apprentice statistician to help draw the first TCMP samples back in the 1960's -- just after I came to Washington to "serve my country" as an IRS employee. My recent knowledge of TCMP is nothing like as detailed now as it was then. I will, therefore, speak quite generally, posing questions more than offering answers. Much of what I have to say is very supportive of what TCMP is all about. On the other hand, I have some questions on the approach being taken. In my view, there are places where a wiser course may be open to the IRS.

TCMP and SOI Data

Let me begin now with a discussion contrasting TCMP and SOI data -- the kind of data each program collects, with what frequency and focus:

- Large-scale, usually annual studies are mounted of tax returns and information
 documents as part of the Statistics of Income (SOI) program. This is the program,
 incidentally, which I led for many years when I was at the IRS. These SOI data are
 taken from the <u>unaudited</u> reports of taxpayers and third party filers.
- Taxpayer Compliance Measurement Program (TCMP) data, in contrast, have historically been periodic in nature, rather than annual. Furthermore, the data collected have been <u>audited</u>.

In no real sense are TCMP and SOI data substitutes for one another. Both are needed. For some 80 years, SOI data have been made available to study who pays the taxes, to benchmark measures of the National economy (like GDP), and to study the effect on reported taxpayer behavior of changes in tax laws. TCMP data, available periodically over the last 30 years, obviously have always had a compliance focus.

The main uses of TCMP in connection with SOI have been to provide correction factors for the underreporting of SOI income amounts and the overreporting of SOI deductions. What has not happened is to develop a unified design embracing both of these important IRS statistical programs. The usually much larger (and considerably less expensive) SOI samples could improve TCMP estimates — perhaps greatly. I will return to this point later.

Value and Uses of TCMP Data

There are many others whom you will or have heard from on the value and uses of

TCMP data; therefore, I will be brief.

Unquestionably, TCMP data have considerable value -- notably for policy makers and for the economists who maintain the U.S. National Income and Product Accounts. Uses, of course, by the IRS over the years have been many, including such statistical measures as the tax gap; even so, the operational application of TCMP data can be frustrating. Among the reasons I have heard for this are --

- TCMP's (perceived) lateness and the fact that, in the meantime,
- Legislative or other changes may have intervened -- making it hard to know how to
 employ the results.

Documentation issues may exist too, as I have learned personally, if one wishes to make comparisons over prior TCMP studies on topics not looked at earlier.

A strength of TCMP is that it is comprehensive in scope. This makes it possible to rank by importance the compliance issues IRS faces — even to use the rankings to help the agency set priorities for employing its scarce resources. On the flip side, sample sizes for some compliance areas of concern may be insufficient to provide enough detail to inform action. Even when the samples are large enough, they may not be frequent enough to decide whether legislative or administrative changes had the desired effect. The alternatives implicitly here are either more frequent TCMP studies or a series of single issue studies. Both probably are needed — I will return to this point later.

Benefits and Shortcomings of Current Design

The complexity of mounting such a large statistical effort as TCMP within an operating environment is daunting. That it has been done and done well over the years is a real achievement. Nothing I have to say below should be interpreted as contradicting this; nonetheless, many improvements may be possible. I will mention a few here.

Organizational Issues. -- Historically, each TCMP has had an ad hoc structure, with many new individuals involved in a temporary endeavor. Though carefully trained, each study's workers have mainly been first-timers. It is, moreover, a commonplace within the IRS that TCMP is seen as interfering with the real work of the agency. Issues of organizational learning, therefore, exist in this environment; the process of trying to make continuous improvements may have slowed (even suffered) as a consequence.

Operational Concerns -- The upcoming TCMP is particularly vulnerable to concerns about the likely quality of the work to be done, given the long time between studies. Typically, in statistical projects of this size a full scale "dress rehearsal" would be carried out before fielding such an ambitious effort. I have not seen all the extra management controls IRS will put in place to carry out its ambitious goals. Maybe if I had, I would not feel the way I do; but at this point I strongly recommend the IRS not go forward as planned with a full study. A sizable pilot makes sense instead (perhaps on the order of 10% or so of the current planned effort).

Sample Design.— Some time ago, I saw the TCMP sample design and talked to the statisticians who developed it. Incidentally, I was still an IRS employee at that point; my "need to know" involved work I was then doing to manage the statistical aspects of the 1993 EITC Studies (which you have heard about at various points over the last year). While I questioned then, and still question, some of the 1994 TCMP planning assumptions, my impressions of the sample design work done are that it is of an exceedingly high calibre. My recommendation above that a pilot be conducted would allow time to test some of these design assumptions. The idea of market segment stratification, for example, is an inspired one but not fully tested—more a hunch than a scientific conclusion.

Sample Selection. -- Because of the antiquated nature of IRS computer processing, the TCMP sample, as well done as it is, still may not be adequately targeted. A two-stage design might be a better approach:

- The current TCMP sample would continue to be selected as now. Once drawn, case files would be built (adding information documents, etc.) -- again as is now underway.
- From this initial large sample a subsample would be selected, presumably better targeted because more information could be employed in its selection. (This subsample might be the pilot sample mentioned earlier.)

Sample Estimation -- Issues have been raised about the size of the TCMP sample. Does it need to be so large? My answer to this is I do not know, but I suspect that more looking at modern ways to make survey estimates could pay off in (at least somewhat) reduced sample

sizes. Work which I initiated some years ago on a TCMP sample of Form 990-T filers showed some of this promise from improved estimation methods. This too would be something to study, if a pilot were conducted.

Study Analysis. — At one point the upcoming 1994 TCMP was supposed to be the last traditional TCMP. New measures based on operational data were to replace the program. Frankly I have not followed this particular possibility, since it was discussed some years ago. If this is still seriously being considered, it raises many concerns. What is needed is not a TCMP effort divorced from these operational measures but a blend of the two over several years. Under such a proposed scenario, it is conceivable that TCMP could be reduced in scope as the newer methods are seen to be working. It is unlikely, though, that TCMP should end altogether, even then.

Summary and Possible Alternatives

Let me summarize my comments about TCMP briefly and then look at some possible alternatives. So far I have made two main points:

- First, TCMP is an irreplaceable technique for understanding a whole host of economic and tax compliance issues.
- Second, I have raised a number of specific questions about the 1994 TCMP that
 may be worth further study. My main point throughout is that the current 1994
 plans be scaled down to be simply a "dress rehearsal."

Implicit in my discussion has been the idea that everything be done to reduce the burden on individual taxpayers of TCMP. This should be a major consideration in framing alternatives.

What about possible alternatives, then? A key question not addressed by me is what should happen after the 1994 "rehearsal" that I have recommended Basically, I would suggest --

- TCMP become a continuous program,
- Much smaller annually than the 1994 sample,
- Carried out by a permanent cadre of employees,
- With an adaptive statistical design that could be responsive to new conditions and to what was being learned from previous studies.

To give TCMP some completely new thinking, the IRS should seek help from the National Academy of Sciences — a practice it has followed with some success in the past. One issue for the National Academy to look at would be how to integrate the SOI and TCMP designs so each can be strengthened; also the Academy might be asked to consider how to integrate special compliance studies into a general framework, like that provided by TCMP.

Concluding Comments

Allow me two last comments and then I will be happy to answer any questions that the Committee may have:

- First, I have tried to express some very technical ideas in non-technical language.
 My apologies for what I fear are the many points at which I may have failed.
- Second, I hesitate to use this analogy but it may fit. Alvin and Heidi Toffler have been talking about building third wave systems to replace second wave ones. My criticisms of the current TCMP plans are consistent with the Tofflers' ideas. What I am recommending is a third wave approach to TCMP. At present, the IRS has taken largely a second wave one.

I am done now. My thanks to the Subcommittee for inviting me to participate. Also, I wish my former colleagues at the IRS the very best in their work on TCMP. However much we may differ on approach, the work IRS is trying to do is important and valuable; I have no doubt it will be carried out with professionalism throughout.

Mr. HANCOCK. Thank you, and now we will hear from Ms. Long.

STATEMENT OF SUSAN B. LONG, PH.D., DIRECTOR, CENTER FOR TAX STUDIES, SYRACUSE UNIVERSITY, SYRACUSE, N.Y.

Ms. Long. I will summarize my statement that I have submitted. I basically have three points. No. 1, that I think TCMP is tremendously important and should be continued.

No. 2, that I think we could get a lot more mileage out of TCMP if we had broader public access to the data, and hence, more people

looking at it.

No. 3, I have some specific suggestions as to how we might use

TCMP creatively to reduce overall taxpayer burdens.

My acquaintance with TCMP goes back a lot longer than I would like to remember. When I was a graduate student 25 years ago, I first sought access to TCMP data from the IRS for my research on taxpayer compliance and IRS operations. At that time, no TCMP information was made available publicly by the IRS and indeed, the GAO complained because it could not get aggregate statistics from TCMP.

Because IRS did not voluntarily release it, my husband and I ultimately filed suit in 1975 under the Freedom of Information Act and we were, after very lengthy litigation, ultimately successful and forced the release of over 1 million pages of TCMP statistics

reports as well as some microdata files.

My first point is that I really think that after all of this time, while I have often been viewed as a critic of IRS, I think TCMP is a tremendously important program and should be continued. I go into this, in some depth, in my written testimony and many of those points were already covered and I will not emphasize them here. But basically the bottom line is we really do not have a substitute yet for the idea of random selection. TCMP may be able to be improved but the basic concept of TCMP remains and should be continued.

I also want to point up something that was not in my written testimony but came up in earlier questions in other panels as to the underground economy. The TCMP that these hearings are focusing on concerns individual and corporate returns that are filed. But TCMP has also been used to go after the nonfiler program. The last survey on that topic was in 1988. So it is possible for this mechanism of random selection to be used to examine the problem of nonfilers.

Now, the second point that I want to make is how we might get more out of TCMP. While I view TCMP as an essential tool for good government, one question must be examined, Have we gotten the most mileage from it? I do not think we have. It would be surprising if there was not room for improvement in any government

program.

One very simple, but obvious point, is that for the information to have value it must be distributed and used. Because IRS, for far too long, sought to restrict access to this data, society has not reaped the benefits from TCMP that are possible. Even within the agency, itself, the insights provided by TCMP data have not been sufficiently exploited.

In these tight budgetary times, I believe that one way that more could be gotten out of TCMP is by making TCMP microdata files available for analysis outside the agency. This would in no way im-

pinge on individual taxpayer privacy.

For many years IRS has sanitized microdata files from its statistics of income programs and made them publicly available. Although IRS has argued that access to TCMP microdata would somehow impair its collections strategies, these fears are largely misplaced.

There is no reason not to release historical files. For more current data there are numerous approaches that could be adopted to

meet IRS concerns while still allowing broad access.

The third and final point I wanted to turn to is the issue of taxpayer burdens. It has been suggested in some quarters that TCMP is a burden for the taxpayers that are selected for this special audit. Of course, this is true. In a similar way serving on a jury is a burden, sometimes a big one, but being judged by a jury of one's peers improves the chances of a fair system for all. So it is with TCMP, the existence of which can lead to a more equitable and efficient tax system for all.

Historically TCMP has been used mostly for identifying ways to modify the behavior of taxpayers. An equally important but underutilized purpose should be to identify ways that the tax system can be modified to help taxpayers meet their obligations with

the minimum administrative hassle.

Let us face it, a great deal of burden is imposed by our tax system on all taxpayers. We should think creatively as to how we could use information to eliminate some of these unnecessary hassles.

Two of these areas that occur to me are in the area of complexity of tax laws. First, we could use TCMP to assess just how much complexity leads to noncompliance. My written testimony goes into that, and hopefully would allow Congress to better confront that

problem with real figures.

Second, we could use TCMP to provide us a window on IRS audits and, therefore, to pinpoint areas where IRS auditors are raising inconsistent or unnecessary claims. I have a number of suggestions as to how that might be achieved and, thereby, get the maximum leverage out of TCMP and in the long run reduce taxpayer burdens.

Thank you.

[The prepared statement follows:]

STATEMENT OF SUSAN B. LONG DIRECTOR, CENTER FOR TAX STUDIES SYRACUSE UNIVERSITY, SYRACUSE, N.Y.

Madam Chair and members of the subcommittee, thank you for requesting my testimony. The fair and efficient operation of our federal tax laws is a matter of central concern to every American. I very much appreciate the opportunity to present my views on what I consider a vital component in this system: the Internal Revenue Service's Taxpayer Compliance Measurement Program (TCMP). My testimony is divided into three areas: (1) the fundamental importance of TCMP in efforts to improve the fairness and efficiency of the federal tax system, (2) the need for improved access to TCMP data in reaching these goals, and (3) specific suggestions for how TCMP could be used to help reduce unnecessary taxpayer burdens.

My acquaintance with TCMP goes back longer than I like to remember. Twenty-five years ago, when I was a graduate student at the University of Washington, I first sought access to TCMP data from the Internal Revenue Service for my research on taxpayer compliance and IRS operations. At that time, no TCMP information was publicly released by the IRS. Indeed, the General Accounting Office complained that it could not obtain access to even aggregate TCMP statistics. Because IRS did not voluntarily release TCMP data when I requested it, my husband and I ultimately filed suit in 1975 against the IRS under the Freedom of Information Act. This suit eventually was successful in forcing the public release of over a million pages of TCMP statistics, agency internal reports and analyses, details on the sample designs, and computer tapes containing the underlying checksheets (after deleting taxpayer identities) made out by IRS auditors on many of the returns covered by TCMP studies.

While I have long been viewed as a critic of the IRS, after years of research I remain convinced that TCMP is one of the most important government initiatives aimed at making our tax system work in a more efficient, fair and less intrusive manner.

WHY IS TCMP SO IMPORTANT

The Taxpayer Compliance Measurement Program is essential because without it the IRS, Congress, and the public would be flying blind about the operation of the government's central function -- tax collection.

"The revenue of the state is the state," wrote Edmund Burke, the eighteenth-century statesman and historian. Put another way, without the legal authority to collect taxes and the compliance of citizenry to these laws, government is a sham. It is this fact—that taxes are profoundly essential to the existence of all successful states—that makes information about the functioning of our tax system essential. Without reliable and valid information, tax collectors actions may be misguided and ineffective, citizens may be unduly burdened or unfairly treated, and the citizens' elected representatives will be hampered in their attempts to correct these failings. Without the continued and systematic monitoring of how our tax system is working, we will not recognize problems until they have become festering social and economic problems. Without solid grounding in the facts, actions designed to improve our tax system and its administration are less likely to produce their intended results.

How can we obtain reliable and valid information about the true functioning of our tax system? Congress has long recognized the need for such information. Encountering difficulties in getting the information it desired out of the Treasury Department after federal income tax laws were instituted following approval of the Sixteenth Amendment to the Constitution in 1913, Congress mandated that government prepare and publish annual statistics about the operations of the federal income tax laws. The Statistics of Income (SOI) program was born in response to this

mandate, and the "Tax Model" files and related SOI reports which continue to this day are relied upon by IRS, the Treasury Department, Congress, scholars, and the public at large.

The SOI data, however, reflect the information that is reported on tax returns. Not all taxpayers file required returns, and the information reported on returns that are filed is often incorrect. This is where TCMP comes in. It examines the tax compliance behavior of 120 million business and nonbusiness taxpayers by looking at the behavior of a relatively small scientifically valid "random sample." This program and its predecessors dates back to at least the 1940s -- almost fifty years.

There are countless examples of how TCMP has provided indispensable information that could not be obtained in any other way. Specific legislative and administrative improvements taken as a result of TCMP findings are well-known and have saved taxpayers many, many times the cost of the program.²

The plain fact is that there are no known substitutes for this approach that will produce comparable information. In the late 70s, for example, the Justice Department commissioned a comprehensive study on measuring white collar crime. This study, which I worked on, singled out IRS's TCMP program as the model which offered the only generic approach for measuring most regulatory and white collar offenses. I am unaware of any magic breakthrough that changes this assessment today which would offer a substitute for the TCMP approach.

GETTING THE MOST OUT OF TCMP

While I view TCMP as an essential tool for good government, one question must be examined: Have we gotten the most mileage from it? In my opinion, the answer is no. It would be a surprising government program, of course, where there was no room for improvement. One very simple but obvious point is that for information to have value it has to be distributed and used. Because IRS for far too long sought to restrict access to these data, society has not reaped the benefits from TCMP that are possible. Even within the agency itself, the insights provided by TCMP data have not been sufficiently exploited.

I believe TCMP data are as essential to the nation as Commerce and Labor Department information on the economy and even Census data on the population. This is because TCMP provides powerful facts and insights that could lead to improvements in the tax law and its administration. The potential impact here is hard

¹ The Bureau of Internal Revenue (as the IRS was then called) launched the Audit Control Program right after World War II using audits of random samples of taxpayers to measure taxpayer compliance. TCMP as we know it was formally launched in 1962.

For examples of TCMP uses see Internal Revenue Service, Taxpayer Compliance Measurement Program: Sample Design Documentation, Document 9293 (Volume I (1993) and Volume II (1994); Internal Revenue Service, Taxpayer Compliance Measurement Program Handbook, Document 6457 (Revised Edition, 1989); General Accounting Office, Taxpayer Compliance: Status of the Tax Year 1994 Compliance Measurement Program, GAO/GGD-95-39 (December 1994); George Guttman, "Taxpayer Compliance Measurement Program: Is It Necessary?" Tax Notes, June 5, 1995, pp. 1282-1288.

³ Susan B. Long, <u>The Internal Revenue Service: Measuring Tax Offenses and Enforcement Response</u>. Washington, D.C.: U.S. Government Printing Office (1980).

to exaggerate. Because taxes are a vital component in our economy, improvements necessarily will have wide ramifications for everyone's pocketbook. Beyond the immediate functioning of the economy, the way taxes are collected strongly influence public attitudes towards government and our laws.

Since my FOIA litigation, IRS has taken some steps to make TCMP more accessible to the public. They now routinely release tabulations and analyses they prepare from TCMP. For a time the IRS had a program which allowed researchers, with IRS assistance, to undertake their own studies. The agency also sponsored annual conferences where IRS staff, tax professionals and academics shared research findings. This cross-fertilization reduced the insularity that had long plagued IRS. In recent years, however, agency TCMP analyses have sharply declined and collaborative research has diminished.

In these tight budgetary times I believe that one way that TCMP research can be increased is by making TCMP micro-data files available for analysis outside the agency. This would no way impinge on individual taxpayer privacy. For many years, IRS has sanitized micro-data files from its Statistics of Income program and made them publicly available. Although IRS has argued that access to TCMP micro-data would somehow impair its collection strategies, these fears are largely misplaced. There is no reason not to release historical files. For more current data, there are numerous approaches that could be adopted to meet IRS concerns while still allowing broad access.

REDUCING TAXPAYER BURDENS

It has been suggested in some quarters that TCMP is a burden for the taxpayers who are selected for this special audit. Of course this is true. In a similar way, serving on a jury is a burden -- sometimes a big one. But being judged by a jury of one's peers improves the chances of a fairer system for all. So it is with TCMP, the existence of which can lead to a more equitable and efficient tax system for all.

Historically, TCMP has been mostly used for identifying ways to modify the behavior of taxpayers. An equally important, but under-utilized purpose, should be to identify ways the tax system can be modified to help taxpayers meet their obligations with the minimum administrative hassle. I am not limiting this to only changing IRS procedures. It is also essential that TCMP be used to identify problems in the way Congress has written the tax laws that impose unwarranted complexity or regulatory burdens. Two examples of what I am talking about come to mind.

Everyone bemoans the many burdens imposed by the complexity of tax requirements. But partly because the costs of these burdens have not been quantified and the specific problem areas identified, we have failed to confront this very grave problem. This did not have to be the case. Past TCMP data, if properly analyzed, could have provided detailed information about components of noncompliance arising from unnecessarily complex tax provisions. 4

⁴ The Center for Tax Studies at Syracuse University has pioneered additional ways of measuring components of tax complexity keyed to line items on tax returns filed by individuals. Research studies show that tax complexity appears to be a major cause of the differences between taxpayer reports and IRS TCMP auditor findings. See Susan B. Long and Judyth A. Swingen, "The Impact of the Tax Reform Act of 1986 on Compliance Burdens: National Survey Results," in The Impact of the Tax Reform Act of 1986: Did It Improve Fairness and Simplicity? Internal Revenue Service Publication 7302 (1989); Susan B. Long and Judyth A. Swingen, "The

In response in part to suggestions from Congress and the academic community, the current TCMP survey has added specific questions designed to help identify trouble-spots where complexity is the primary source of audit adjustments, along with very detailed issue coding to pinpoint specific sections of the tax law where this occurs. More attention needs to be focused upon pretesting this part of the survey, the selection of categories, and the proper training and instruction of the auditors. Although I thus have some reservations about aspects of TCMP's planned implementation, the potential of identifying problem laws and measuring their compliance costs could be enormous. Armed with detailed information about the true costs of complexity, Congress, tax professionals, and the IRS could mount genuine reform. With the better understanding of the actual costs of compliance, Congress could confront and debate these issues before it passes new tax legislation.

Second, TCMP could also play a vital role in identifying correctable administrative failures which make taxpayers' lives difficult. TCMP provides a unique window on IRS auditor behavior. There is a variety of evidence suggesting that there are gross inconsistencies in how individual auditors, Service Center personnel and collection officers treat taxpayers. Data analyses at my center have repeatedly shown enormous and inexplicable variation in audit and collection practices from one district to the next.⁵ Internal IRS studies, backed by GAO reports, have discovered that inappropriate advice and collection claims occur all too often. When contested, initial IRS auditor findings are frequently abandoned. A recent GAO study, for example, showed that only 22 percent of taxes recommended by IRS's audits under the Coordinated Examination Program between fiscal years 1983 and 1991 were eventually collected after any appeals or litigation.⁶ My analyses using TCMP data matched with IRS Master File records showed significant differences between TCMP noncompliance estimates and final assessments after a taxpayer appeal.⁷ Studies by other tax authorities have found striking inconsistencies in auditor judgments on the same return.⁸

Role of Legal Complexity in Shaping Taxpayer Compliance," in Van Koppen, Hessing, and Van Den Heuvel (eds.), <u>Lawvers on Psychology and Psychologists on Law</u>. ⁸ See, for example, Henk Elffers, <u>Income Tax Evasion: Theory and Measurement</u>. Denventer: Kluwer (1991); Henk Elffers, Henry S. J. Robben, and Dick J. Hessing, "Under-Reporting Income: Who Is the Best Judge--Taxpayer or Tax Inspector?" 154 <u>Journal of the Royal Statistical Society</u> (1991 Ser. A), Part 1, 125; Henk Elffers, Henry S. J. Robben, and Dick J. Hessing, "Reliability and Validity of Tax Audits: Can We Have Confidence in the Opinion of the Dutch IRS on Noncompliance?" Working Paper, Erasmus Centre for

These unwarranted inconsistencies impose a hidden and vast burden on millions of taxpayers each year. This burden is unnecessary. With the proper design of TCMP research and its sincere application to problems not only of taxpayers but tax administrators, a large step could be taken in reducing these destructive enforcement deficiencies.

How could this be achieved? First, TCMP surveys should not stop with the initial finding of the auditor. While these can continue to provide valuable information, TCMP noncompliance estimates should include the revisions that occur in tax assessments after taxpayer appeals.

Studies have found, however, that taxpayers frequently do not contest auditor claims they disagree with because such appeals are costly and painful. 9 This fact means that more is required to obtain a comprehensive picture of wrongful auditor claims. TCMP should be used directly to assess the consistency of auditor judgments. In pretesting the TCMP survey auditor judgments on the same hypothetical taxpayer situation should be compared to identify and correct inconsistency problems. Further, during the TCMP audits themselves, the consistency of auditor judgments should be continually monitored. This approach has been successfully used by the Dutch tax authorities. (See footnote 8 above.)

This would not only provide a truer picture of tax compliance, but help pinpoint those areas where IRS training and supervision needs to be improved so that taxpayers do not face unfounded auditor claims as often occurs during routine tax examinations. While it is impossible to estimate the proportion of taxpayers who confront wrongful government claims, there is fairly persuasive evidence that they represent a lot of people.

CONCLUSION

In conclusion, TCMP is an extraordinarily valuable resource that needs to be continued. Second, while TCMP is admittedly a burden on the few, its product is an essential tool for reducing the considerable burdens on all of the nation's taxpayers. Third, although TCMP is valuable now, it can be improved. A key to such improvement, in my view, is to provide much wider access to TCMP data so that a much larger community can contribute to the essential task of identifying and correcting the shortcomings in our tax system.

Mr. HANCOCK. Thank you, Ms. Long. Mr. Feinstein.

STATEMENT OF JONATHAN S. FEINSTEIN, PH.D., PROFESSOR OF ECONOMICS, YALE SCHOOL OF MANAGEMENT, NEW HAVEN, CONN.

Mr. FEINSTEIN. Thank you, very much. I would like to also loosely follow my written comments, omitting some things that have already been discussed today and adding a few remarks that might be useful.

I am a professor of economics at the Yale School of Management and I have studied noncompliance and tax enforcement for the past 8 years, working with both TCMP data and ordinary IRS audit data and I will say a little bit about both of those. I have written a series of research papers during that time, served on committees overseeing IRS research programs, and worked with several State tax authorities.

I am going to talk a little bit about my own experience with TCMP and then comment on the usefulness of TCMP. I have worked extensively with both the 1982 and 1985 TCMPs. I have found TCMP data to be very clean with few, if any, missing values or obvious miscodings, and I say that by way of contrast with some

other government data sets I might have worked with.

I have used TCMP to study three issues. First, I have investigated the relationship between household characteristics such as marital status and self-employment, and the underpayment of taxes. Second, I have calculated detection rates for individual IRS tax examiners, demonstrating how TCMP can be used to help the IRS evaluate the performance of its examiners. Third, I have estimated the tax gap. If you extrapolate forward, my estimates would suggest that the tax gap presently is at least \$120 billion. I would consider that to be a conservative estimate. I would not be surprised if it was quite a bit more than that.

The magnitude of the tax gap, I think, illustrates the importance of IRS audit programs. I wanted to make one further comment about that. If you look at other countries, the proportion of taxes unpaid, that is the tax gap, compared to government revenues is substantially higher. One important difference between those countries and the United States is that the IRS has a TCMP, I believe.

Now, the primary reason for conducting a TCMP is to help the IRS develop audit selection guidelines. In the remainder of my testimony I would just like to address whether TCMP is essential for these audit programs or whether it could be replaced by cheaper alternatives. I would like to say a bit about if it is essential, how large should it be?

I just wanted to also begin by noting that IRS audit selection is of a very high quality. IRS audit productivity, as measured by the average audit assessment, has increased fourfold during the past 30 years controlling both for inflation and for the increase in tax burden that has occurred during this time period. That is a very high level of productivity increase.

If the IRS simply selected household returns for audit at random, it would collect far less than \$1,000 on each audit. Because it has sophisticated methods to select households for audit, it currently

collects, on average, well more than \$5,000 on each audit. Those numbers are useful in saying something about what the costs of the TCMP are in terms of the opportunity costs to examiners. Every time a TCMP audit is done, at least \$4,000 is given up because some more productive audit could have been done.

So, for example, if 50,000 households are selected for TCMP audit, that would be approximately \$200 million given up of Fed-

eral revenues to do those TCMP audits.

IRS audit programs not only generate direct audit assessments but also generate additional indirect revenues to the deterrent effect they exert on potential cheaters. Although indirect audit revenues are difficult to measure, most experts agree that they are sub-

stantially larger than direct assessments.

Now, in my view, a considerable body of evidence indicates that TCMP is critical for the design and implementation of IRS audit selection guidelines. One of the most important uses of TCMP is in the development of DIF. During the past 3 years, Brian Erard, who is at Carlton University, and I have investigated IRS audit programs in the Oregon district in considerable detail. Our analysis is based on a large data set we have assembled and includes most of IRS audits of Oregon households for tax year 1987.

What we find when we look at the data is that nearly one-half of all IRS audits are based on DIF. Further, we find that these DIF audits generate significantly larger assessments, on average, than are generated by the remaining non-DIF audits. These findings, I think, strongly suggest that DIF and, hence, TCMP is, in indeed,

a critical factor in audit selection.

I wanted to remark parenthetically, by the way, that Brian has also helped the IRS on a recent study of nonfilers, an issue that came up earlier today. I just wanted the subcommittee to know that there has been a recent study of nonfilers which you might want to take a look at, although, in fact, nonfilers are a pretty small amount of the total noncompliance tax gap that we have in the country.

TCMP is also useful in helping IRS researchers discover patterns of noncompliance that have been overlooked by existing audit programs. A good example of this is the discovery a few years ago, based on an analysis of TCMP data, of the fictitious dependents problem which has already been discussed today, so I will not talk

about it further.

What are the main alternatives to TCMP? I think probably the clearest alternative would be to rely on ordinary audit data instead of TCMP data to come up with audit selection guidelines. In fact, ordinary audit data is not an adequate substitute for TCMP data. TCMP is a random sample and provides an accurate picture of the entire taxpayer population. Ordinary audit data does not and we could talk about that further if we need to, but I have worked with both kinds of data and see some clear differences between them.

A second alternative would be survey data. Unfortunately, survey data is extremely unreliable in this area. The third alternative would be to abandon statistical analyses and instead rely on examiner expert judgments. I did want to note that currently the examiner judgments are used in combination with DIF very effectively, but I do not think that they could serve as an adequate substitute

for DIF. I think they are better in combination with something like DIF.

I do think TCMP is essential for the IRS in some form. I think a question still remains as to how big TCMP should be. I just wanted to say a bit about the household component. In the past, TCMP sampled about 50,000 households. The proposed TCMP

would sample 90,000 households.

Expanding the sample would surely allow the IRS to get greater sampling densities in certain subpopulations. It is my experience that some population subgroups are very thin in existing TCMPs down to say a few dozen taxpayers which can make it difficult to determine what kind of tax audit systems to use. I do not think I would want to reduce that very far. But I have to say that based on what I know, I am not convinced that the substantial cost involved in expanding the TCMP would be worth the benefits to be gained, which seem to me to be uncertain.

I will say I have not seen all the evidence about that, but I am

not convinced at the moment of what the benefits would be.

Thank you for the invitation to testify, and I hope my testimony is useful for you.

[The prepared statement follows:]

TESTIMONY

To Committee on Ways and Means U.S. House of Representatives Subcommittee on Oversight

By Jonathan S. Feinstein Professor of Economics Yale School of Management

Tuesday, July 18, 1995

I have studied tax noncompliance and tax enforcement for the past eight years. I will begin my testimony by briefly describing my own experience with TCMP. In the remainder of my testimony I will comment on the usefulness of TCMP for IRS audit programs, first reviewing some facts about IRS audit programs, and then discussing the way TCMP is currently used, possible alternatives to TCMP, and the proposed expansion of TCMP.

I have worked extensively with both the 1982 and 1985 TCMPs (Exhibits 1, 2, and 3). I have found TCMP data to be very clean, with few if any missing values or obvious miscodings. I have used TCMP to study three issues. First, I have investigated the relationship between household characteristics, such as marital status and self-employment, and the underpayment of taxes. Second, I have calculated detection rates for individual IRS tax examiners, demonstrating how TCMP can be used to help the IRS evaluate the performance of its examiners. Third, I have constructed estimates of the tax gap for 1982 and 1985. My estimates suggest that the tax gap is presently \$120 billion or more. The magnitude of the tax gap illustrates the importance of maintaining and improving IRS audit programs. A number of other economic researchers have also made use of TCMP, including Daniel Nagin (Carnegie-Mellon University), James Poterba (Massachusetts Institute of Technology), and Joel Slemrod (University of Michigan).

The primary reason for conducting a TCMP is to help the IRS develop audit selection guidelines. Is TCMP essential for IRS audit programs, or could it be replaced by cheaper alternatives? If TCMP is essential, how large should it be? In the remainder of my testimony I will address these questions.

Let me begin by noting that IRS audit selection is of high quality and has a significant impact on federal tax collections. IRS audit productivity, as measured by the average audit assessment, has increased fourfold during the past 30 years, controlling both for inflation and the increase in tax burden that has occurred over this time period. That is a level of productivity increase matched by few other Government programs. If the IRS simply selected household returns for audit randomly, its examiners would assess on average less than \$1,000 on each audit. Instead, the IRS relies on sophisticated methods to select households for audit, and its examiners currently assess on average approximately \$5,000 on each audit. The large difference between these numbers shows how good the IRS has become at audit selection. IRS audit programs not only generate direct audit assessments, but also generate additional indirect revenues through the deterrent effect they exert on potential cheaters. Although indirect audit revenues are difficult to measure, most experts agree that they are substantially larger than direct assessments. Currently, IRS examiners annually recommend approximately \$7 billion in direct assessments based on audits of households. Including indirect revenues, the total impact of the IRS's household audit program on federal tax collections is likely to be substantially more than \$15 billion per year.

Most observers are likely to agree that IRS audit programs play an important role in safeguarding federal tax collections. There may be less consensus, however, about the importance of TCMP for these programs. In fact, a considerable body of evidence indicates that TCMP is critical for the design and implementation of IRS audit selection guidelines. I will discuss two ways in which TCMP is useful for audit selection.

First, one of the most important uses of TCMP is in the development of DIF, a computer-based rating system that assigns a number to each return, predicting the likely yield from auditing the household that filed the return. During the past three years Brian Erard (Carleton University) and I have investigated IRS audit programs in the Oregon district (Exhibit 4). Our analysis is based on a large dataset we have assembled that includes most IRS audits of Oregon households for tax year 1987. In our data we find that nearly one-half of all IRS audits are based on DIF.

Further, we find that these DIF audits generate significantly larger assessments on average than are generated by the remaining non-DIF audits. Our findings strongly suggest that DIF, and hence TCMP, is indeed a critical factor in audit selection.

Second, TCMP is also useful in helping IRS researchers discover patterns of noncompliance that have been overlooked by existing audit programs. A good example of this is the discovery a few years ago, based on an analysis of TCMP data, that households were claiming millions of fictitious dependents. The elimination of this tax scam has saved the federal government billions of dollars.

I will now discuss what I consider to be the three main alternatives to TCMP. One alternative is to rely on ordinary IRS audit data instead of TCMP data in the development of audit selection guidelines. In fact ordinary audit data is not an adequate substitute for TCMP data. TCMP is a random sample and therefore provides an accurate picture of the entire taxpayer population. In contrast, ordinary audit data includes information only about households whose returns looked sufficiently suspicious, according to existing audit selection criteria, to trigger an audit. Households that discover a new way to evade taxes and elude existing selection criteria are not represented in ordinary audit data. As a result, the analysis of ordinary audit data cannot readily detect such new forms of evasion, whereas an analysis based on TCMP might.

The discovery of the fictitious dependents scam is a good example of the difference between TCMP and ordinary audit data and shows how important TCMP is for discovering new or previously neglected forms of evasion. The problem of fictitious dependents was never apparent in ordinary audit data, because existing audit selection criteria ignored this issue, and, because of this, few of the households selected for an ordinary audit were found to have claimed an excessive number of dependents. The problem only became apparent after a careful analysis of TCMP data, which revealed that a significant fraction of households were claiming too many dependents. Of course, once the problem of fictitious dependents was dicovered, audit selection guidelines were modified to address the problem. Let me summarize my view of the uses of ordinary audit data. Ordinary audit data is good for evaluating existing audit programs, as Brian Erard and I have done. It is not well-suited, however, to the development of new audit selection criteria, because it does not keep the IRS abreast of changing evasion patterns.

A second alternative to TCMP is survey data. Unfortunately, survey data is extremely unreliable. Typically, 70% or more of respondents on surveys claim that they pay their full tax obligation, even though the hard facts from TCMP show that in most years more than half of all households underpay their taxes to some degree.

Finally, a third alternative is to abandon statistical analyses based on TCMP and instead rely solely on examiner expert judgments in the development of audit selection guidelines. While such expert judgments are currently used effectively in combination with DIF, they are unlikely to be a good substitute for DIF. Further, even if expert systems are used more in the future than they are at present, TCMP is likely to provide a good training ground for experts, exposing them to the full range of cheating strategies.

Supposing that TCMP is essential for IRS audit programs, a question still remains as to how big TCMP should be. I will conclude my testimony by briefly addressing this issue, confining my remarks to the household component of TCMP, which I know best. Previous TCMPs sampled approximately 50,000 households, whereas the proposed TCMP would sample 90,000 households. In my experience the previous TCMPs are thin in their coverage of certain taxpayer groups and locales, so I do not think it would be wise to shrink the sample below 50,000. Enlarging the sample would allow the IRS to increase its sample size for some of these groups, which might lead to a substantial payoff in the long run. However, these benefits are uncertain and might turn out to be relatively modest. I am not familiar with all of the arguments being made in support of enlarging the TCMP. Based on what I do know, however, I am not convinced that the benefits to be earned from expanding the program are worth the substantial cost involved.

In conclusion, based on my extensive study of tax compliance and tax enforcement programs, I believe that TCMP is important and productive and should continue. I am not convinced, however, that it needs to be expanded.

I thank you for the invitation to testify. I hope my testimony is useful to you.

Mr. HANCOCK. Thank you, Dr. Feinstein. Mr. Smith.

STATEMENT OF KENT W. SMITH, PH.D., SENIOR RESEARCH FELLOW, AMERICAN BAR FOUNDATION, CHICAGO, ILL.; AND FORMER MEMBER, COMMISSIONER'S ADVISORY GROUP, INTERNAL REVENUE SERVICE

Mr. SMITH. Mr. Chairman, and members of the subcommittee, first let me note that I am speaking as an individual social scientist researcher and my comments do not necessarily reflect the views of the American Bar Foundation.

In my research on tax compliance administration since 1983, I have used the TCMP data in both tabular form and by special runs that the IRS research staff did for me. My comments are also informed by other research we have done on taxpayers' views and on research on State individual income tax audits that my colleagues and I have done in cooperation with the Oregon Department of Revenue, but at the State level this time.

Let me summarize most of my comments that are in the written testimony and highlight a few of the points. First, as others have argued, the TCMP detailed line item data for a statistically representative sample of tax returns has permitted a wide range of analyses by the Service, by many other administrative and legislative offices that have not been represented in the testimony today and by academic social scientists. As others have said, many of these analyses could not have been done with other types of data.

Two essential characteristics of the TCMP are that it, No. 1, includes a statistically sound sampling of returns that is at some level of stratification independent of the expected levels of noncompliance.

In the current form, there is an oversampling of the strata of taxpayers where there is the highest amount of noncompliance so there is a weighting toward an expectation of primarily picking up noncompliance or a heavier amount of that. It is not just simply a random sampling of the entire population of taxpayers.

No. 2, the other essential characteristic is that the audits are broad ones, examining all relevant aspects of the taxpayer's financial and tax situations. Without those characteristics, the data from the TCMP would be statistically biased and the conclusions could

very well be misleading.

Several issues are frequently raised about the design efficiency and burden of the TCMP. About timeliness. For several reasons I believe it is probably unavoidable that it will take 2½ to 3 years, at a minimum, from the end of a tax year to a time when one can have clean data and compliance estimates from an accurate high-quality, TCMP data cycle. That is built into the nature of the tax filing process and the timing of when taxpayers file and the auditing process. One has to be concerned about the taxpayers and the time and social and business obligations they have. You cannot rush an audit because that increases the burden on the taxpayers. If she had not had the time, if Ms. Smith had not had the time to get her records together, it would have been much more burdensome for her, for instance.

So a 3-year lag may be an inevitable consequence of this process. What concerns me more is the amount of time between the TCMP cycles. If there is, say, 4 years between samples of a particular type of return, then the tax policy and administrative analyses and audit selection models have a rely on data that is up to 7 years

old, given that unavoidable 3-year lag.

Before I make comments about burden, let me note that many returns selected through the sampling process end up with taxes owed, even though there was no indication ahead of time that there would be noncompliance. The TCMP audits are better at discovering unreported income than what would appear by just looking at the returns. Also many taxpayers end up with refunds that they

did not expect to be getting because they had overcomplied.

Audits undertaken, for whatever reason, are burdensome and anxious experiences which taxpayers would like to avoid. Is the burden, in principle, excessive or unreasonable? Here I think my analyses of Oregon State audits is relevant. Most of the audits I studied were general audits that were not unlike TCMP audits by the IRS. The taxpayers in Oregon considered them to be burdensome, yes, but the vast majority we interviewed did not consider them unreasonably burdensome, and by and large the taxpayers came out of the audits feeling satisfied with the process and satisfied with the outcomes. If we focus on the fairness of the procedures and the quality of the audits, many of the concerns about burden, I think, will be met.

As has been anecdotally noted, many auditors, at least in the past, resent doing TCMP audits. The normal criteria for evaluating performance and allocating work in the examinations reinforces the feeling that TCMP audits are an unreasonable burden on both

auditors and taxpayers.

In improving TCMP, attention needs to be placed on assuring that auditors are positively motivated to produce quality audits and quality data. They are the linchpin of the program and they have to be committed team members. The Service, I think, is for

the next round taking solid steps in this direction.

Some suggestions have been made by others, including a National Academy of Sciences Panel, as to how to improve the TCMP. First, I think there should be an increasing of the capability for analyzing TCMP data within the Service, probably through the DORA sites. Second, we need to develop a team of TCMP audit specialists which may overcome some of the problems of the alienation of the auditors from the process.

Third, we should seriously consider conducting annual TCMP audits with smaller samples. Doing so would allow new patterns of compliance to be identified and analyzed sooner and the data would be available on a more timely basis. You could still group the annual audit data into 3- and 4-year groups for the more detailed

kinds of analyses.

Whether or not one should do that now, this round, I am not entirely convinced because we have a lot of catchup, for instance, since 1981 for partnerships, and can we afford a small sample at

this point?

Finally, even if fundamental tax reform occurs, there will still be a need to monitor and analyze compliance with something like a TCMP involving statistical samples of taxpayers and general audits. I also think current TCMP data could be used far more than what it currently is to evaluate the compliance implications of the various reform proposals.

That concludes my statement, and I will be happy to answer any

questions.

[The prepared statement follows:]

Hearing on The Taxpayer Compliance Measurement Program

Subcommittee on Oversight Committee on Ways and Means House of Representative

Statement of Kent W. Smith American Bar Foundation July 18, 1995

Madam Chairman and Members of the Subcommittee:

I am pleased to be here today to discuss the Internal Revenue Service's Taxpayer Compliance Measurement Program (TCMP). I am speaking as an individual social science researcher, and my comments do not necessarily reflect the views of the American Bar Foundation. In my research on tax compliance and administration, I have used TCMP data both in the tabular form made publicly available by the Service and through special computer analyses prepared for me by the staff of the IRS Research Division. My comments are also informed by research on state individual income tax audits that I and my colleagues at the American Bar Foundation and Oregon State University have done in cooperation with the Oregon Department of Revenue (DOR). Many of the audits conducted by the Oregon DOR are general audits whose coverage and thoroughness is similar to that for TCMP audits. For a sample of these audits I have read hundreds of the auditors' working papers, and we have interviewed taxpayers about their responses to the audit process. ¹

The TCMP is an invaluable tool for identifying and analyzing patterns of noncompliance and for evaluating administrative and legislative responses. While I will later outline some of the ways that I think TCMP could be improved, I begin by providing some examples of how the TCMP data have been successfully used in analyses of tax compliance. I will then detail some of the essential characteristics of the TCMP that contribute to its utility. My examples are illustrative rather than exhaustive, and others testifying today have extensively used TCMP data and can provide additional examples of the utility and limitations of the data. In his recent article on the TCMP, George Guttman has described several other successful uses of the TCMP data by the Service and other government offices.²

Some Examples of TCMP Analyses

One of the particular strengths of TCMP data is that they provide a detailed picture of patterns of compliance and noncompliance within a return. Rather than characterizing tax-payers as simply compliant or noncompliant, the detail reveals on which aspects of the tax return various types of taxpayers are more or less compliant. For instance, in our research for the American Bar Association's Commission on Taxpayer Compliance, we used TCMP data to obtain distributional information about compliance with line items. What aspects of tax reporting are particularly problematic? For a particular line item, are there many taxpayers in noncompliance by small amounts, or are there a few with large levels of noncompliance? Either a lot of little fish or a few big ones could produce the same aggregate level of dollar noncompliance, but the difference between the two patterns has large implications for resource allocation and compliance strategies. As Susan Long has also pointed out, the detailed picture of over-compliance also provides a very useful window into the level of unintentional

(1995), "The Cultural Grounding of Tax Issues: Insights from Tax Audits," Law & Society Review 29: 201-38.

^{2.} Guttman, George (1995), "Taxpayer Compliance Measurement Program: Is it Necessary?" Tax Notes, June 5, pages 1282-88.

noncompliance. No other source can provide this key distributional information as accurately as can the TCMP.³

Steven Klepper and Daniel Nagin at Carnegie Mellon University have also used compliance patterns at the line-item level to analyze how the likelihood of detection and the severity of penalties affect compliance levels.⁴ Moreover, because the TCMP data allowed them to compare line items, they could explore the possibility of substitutions effects. Do taxpayers with opportunity for noncompliance on some aspects of their returns tend to be noncompliant in other areas, or does the opportunity for noncompliance, for instance on income reporting, "substitute" for noncompliance in other aspects, for instance the overstating of deductions? Interestingly, they found evidence for such substitutions effects, an analysis that could best be done with TCMP data. In general, there is not a high positive correlation between compliance on one part of a return and compliance on other unrelated parts. As they note, "We believe our analysis demonstrates that disaggregating noncompliance to the level of the line item on the tax return can be very revealing." ⁵

Several researchers have also used TCMP data to explore the roles various types of tax preparers and practitioners play in tax compliance patterns. Klepper and Nagin again used the detailed line-item patterns of compliance to determine that practitioners tend to increase compliance with relatively unambiguous aspects of returns where noncompliance is likely to be detected and adjusted by the IRS, while they seem to increase the likelihood of more aggressive positions in ambiguous areas with low likelihoods of detection. In our own analyses we found that the apparent relationship between practitioners and overall noncompliance is misleading. Individuals with complex financial and tax situations are both more likely to be noncompliant (either intentionally or unintentionally) and more likely to use tax practitioners. When one uses the detailed data in the TCMP to control for the complexity of the tax situation, one finds that the net effect of practitioners is to decrease overall noncompliance. In far more detailed and sophisticated analyses, Michael Udell has found similar patterns.

The Research Division of the IRS and the General Accounting Office have occasionally used the working papers from TCMP audits to obtain a fuller understanding of the problems with areas of high noncompliance. For instance, the working papers have been used to trace why exemptions for dependents were being disallowed (e.g., generally inadequate documentation and record-keeping or misinterpretation of the law) and to examine the problems with capital gains and losses (e.g., inadequate documentation for the basis, incorrect calculation of the basis, misinterpretation of the laws for carry forwards and carry backs, etc.). Such analyses can be extremely valuable in planning administrative and legislative responses to problems, but drawing the information from working papers is inefficient and labor intensive. From my work with Oregon state auditors, I know that similar information can be obtained much more efficiently through check sheets completed by the auditors for targeted issues—if the analysts and auditors cooperate in designing the check sheets and if the auditors understand and are committed to the utility of the information. This is an extension of the TCMP audits that I think should be used more often.

(1988), "Tax Practitioners and Taxpayer Compliance: A View from Intensive Tax Audits," at the Annual Conference of the Socio-Legal Group, Oxford, England, March 23.

These are just some of the many examples of the valuable analyses that can be done with TCMP's detailed data on a statistically sound sample of taxpayers—analyses that could not be done as well with other types of data. The TCMP potentially offers answers to far more questions than the IRS's Research Division can explore. But the analyses can now be distributed more widely within with Service. During the first 20 years of the TCMP, analysis involved specialized programming on a mainframe computer, and the primary emphasis was on producing a general purpose set of tables. The output literally stood several feet, and retrieval experts were needed to find the relevant information in the tables, and then the general purpose tables often did not provide direct answers to one's questions. With today's powerful micro computers and statistical programs, analyses tailored to specific questions take just a matter of minutes. They can be done by staff members with training in data analysis and the special problems of working with audit data. With the promising development of DORA sites, I hope that the Service will distribute more widely the facility for analyzing the data and thereby take much fuller of advantage of the rich TCMP data than it has been able to in the past. For this distributed analysis to be effective and efficient, however, researchers in the National Office will have to expand their functions to also be consultants on TCMP analyses, and there will need to be some mechanism for sharing analysis plans and results among DORA sites.

Two Essential Characteristics of with TCMP

The plans for the 1994 TCMP involve many improvements over previous cycles, and the program can be improved even more. However, in evaluating and modifying the TCMP, I think there are two essential characteristics that must be retained if it is to remain a useful tool for identifying and analyzing compliance patterns. These same characteristics are probably also critical for an efficient and accurate data base for developing statistical models for audit selection, such as DIF; but my focus is on the other administrative and legislative uses of TCMP.

- 1. Probability Sample of Taxpayers. To draw valid inferences about noncompliance, the TCMP data must include a statistically representative and sufficiently large sample of taxpayers who are compliant on a particular item so that their characteristics can be contrasted with those of a sample of taxpayers who are not compliant. Therefore, the program must involve a probability sampling of taxpayers that at some level of stratification is independent of the likelihood of noncompliance.
- 2. General Audits of Taxpayers' Finances. The starting point for TCMP audits must be the total financial and tax situations of the taxpayers during the tax year being audited. The TCMP auditors should not be given the latitude to focus on just those items that they think may be relevant. If they do, there will be a selection bias at the level of the line item even though it may be a statistical unbiased sample of returns.

There are several interrelated reasons why these essential characteristics should be retained

- First, adequate pictures of the incidence of noncompliance and of the factors related to noncompliance have to be based on the contrast between statistically sound samples of cases of noncompliance and of cases of compliance. One cannot determine how noncompliance differs from compliance by only or primarily looking at cases of noncompliance. Without a probability sampling and general audits, TCMP would provide a biased and misleading picture, both of the relative amount of noncompliance and, perhaps more importantly, of the factors affecting the noncompliance.
- Not all under and over compliance is reflected in the returns as filed and in third-party reports. Using only this information to select returns and issues will give an incomplete and misleading picture. To give some examples, evidence from TCMP and survey data indicates that there are appreciable numbers of individuals with small business on the side but who file 1040s without Schedule C and even 1040As or 1040EZs. Understatements of income by amounts too small to show up in expenses or living standards is widespread and, in the aggregate, a significant source of noncompliance. Individuals and businesses, for one reason or another, often do not list relevant expenses, but an accurate picture of compliance patterns should include such over compliance.

- Patterns of noncompliance are continuing changing, and basing TCMP selection and
 auditing on past auditing experience is likely to miss some of these changing patterns,
 at least in a timely manner. As someone once observed, tax compliance is like a leaky
 hose. As soon as one hole is patched, another one springs out, often in direct response. Looking where the old leaks were is not the best way to find the new ones:
 the entire hose must be inspected.
- There is also an important compliance reason for probability samples and general audits. Because opportunities for noncompliance come and go, all taxpayers should have the perception that there is some probability, however small, that their returns might be audited, even if they think they have prepared them so that they will be beyond suspicion. That audit presence for everyone is a deterrent factor, but I and others feel that it is also a important contributor to the normative support for trying to comply with tax laws. "If the government doesn't take my compliance seriously enough to be concerned about it, why should I?" Even though the TCMP sample is a minuscule percentage of returns, it helps to provide this deterrence and normative underpinning for compliance.

Concerns about TCMP Audits: Some Observations

Several issues are frequently raised about the design, efficiency, and burden of the TCMP. My comments about these issues are based on my own experience with TCMP data, discussions with IRS staff, and my analyses of Oregon state individual income tax audits.

Timeliness. For several reasons it is probably unavoidable that it will take two and a half to three years from the end of the tax year to obtain clean data and compliance estimates from an accurate, high quality TCMP cycle. Taxpayers who file late have different financial situations and taxpaying orientations than those who file early. The TCMP sampling must include both, so it cannot be completed until at least 6 months after the filing date. Once an audit begins, it often takes considerable time to obtain documents from third parties, and good auditors need to respect the many other business and personal obligations of the taxpayers being audited. Even with perfectly clean data, it still takes time to create the data base, double check for inconsistencies, and conduct the initial analyses. Thus, a 3-year lag may be an inevitable consequence of the nature of tax filing and auditing.

The data entry and checking procedures planned for the 1994 TCMP should decrease the time needed for cleaning and organizing the data, but I suspect more could be done to speed up this part of the process, especially by improving the accuracy of the initial data input by the auditors—"getting it right the first time" in the parlance of Total Quality Management. What concerns me more, however, is the amount of time between TCMP cycles. If there are three years between samples of a particular type of return, then tax policy and administrative analyses and audit selection models have to rely on data that are up to 6 years old, given the unavoidable 3-year lag.

Sample Size. Others today can address the issue of sample size more authoritatively than I can, but I doubt that the sample can be decreased very much if we are still to have statistically sound data. The stratified sampling design, especially as improved for the 1994 TCMP, is already allowing considerably smaller samples than would an unstratified random sample of audits. As I noted before, compliance on one line item is generally not highly correlated with compliance on other line items, so an adequate sample of compliance and noncompliance on each line item requires quite large overall samples. Also, some types of important noncompliance are rare and unpredictable from available data: large samples are needed to increase the probability of including these often large but rare cases of noncompliance. Moreover, the factors related to various types of noncompliance vary considerable across categories of tax-

^{7.} Lest the analogy be misunderstood, let me note that the primary reason why the compliance hose is leaky is not that the tax system is old or brittle. More fundamentally, the leaks occur because the financial and social situations of tax entities are complex and forever changing, resulting in both intentional and unintentional noncompliance; because some entities will try to take a "free ride" when the opportunity exists; and because for some the utility and satisfaction of keeping a dollar away from the government is worth more than a dollar.

payers. As a consequence, we must have adequate samples within these categories to permit stable estimates at the level of detail needed for audit selection models and other types of analyses. The added focus on geographically specific analyses by the DORA sites is in many respects a significant improvement, but it does add another cross-cutting dimension for stratifying the population of returns and may increase the total sample size needed.

Burden on Taxpayers. Audits, undertaken for whatever reasons, are burdensome and anxious experiences which taxpayers would like to avoid. TCMP audits differ from other general audits because there is a higher probability that the audit will result in no change or a refund. On the other hand, many returns selected through the sampling process end up with taxes owed even though there was no indication ahead of time that there would be noncompliance. In that respect, all TCMP audits are enforcement audits.

Is the burden in principle excessive or unreasonable? Here I think my analysis of Oregon state audits is relevant. Most of the audits I studied were general audits that routinely included deposit analyses or other indirect methods for checking income. In many cases, tax-payers were also asked to complete a form with estimates of their annual personal and household expenses. Audits that began with one focus frequently expanded to other issues and to other years' returns. Not unlike TCMP audits by the IRS. Did taxpayers in Oregon consider them to be burdensome? Yes. But the vast majority we interviewed did not consider them unreasonably burdensome and, by and large, the taxpayers came out of the audits feeling satisfied with the process and how they were treated and satisfied with the outcomes.

From this analysis and other research on citizens' responses to enforcement experiences, I am convinced that the primary focus in improving taxpayers' responses to TCMP audits should be on assuring that the auditors appear competent, efficient, and reasonable; treat the taxpayers with respect and dignity; keep the taxpayers informed on the progress of the audit; and explain both the process and the decisions in clear and understandable terms. Without assuring the quality of these fundamental fairness aspects of the process, some taxpayers are going to continue to be alienated and resentful, even if they are paid. In short, I am not persuaded that paying taxpayers is necessary, and I am concerned that payment without assuring quality may have unexpected and not necessarily beneficial consequences.

Yes, there are cases of excessive and unreasonable requests from auditors doing TCMP audits. For instance, even in a general audit focusing on all relevant aspects of a taxpayer's financial situation, there seldom is a need for a wedding certificate to verify that a couple with children and grandchildren can be filing a joint return. But I think thoroughness and a focus on the finances of a taxpayer, not just on what appears problematic on the return, is reasonable in any audit—provided the audit is done responsibly and with respect and consideration for the taxpayer.

As is well known at least anecdotally, many auditors resent doing TCMP audits, and the normal criteria for evaluating performance and allocating work in Examinations reinforce the feeling that TCMP audits are also an unreasonable burden on auditors. I suspect that many of the horror stories about taxpayers' experiences can be traced to what can be called "over-conformity" and excessively going by the book on the part of resentful and alienated auditors. In social science and medical research, there is always a concern about the quality of data one can obtain from "hired-hand help" who do not understand and are not committed to the goals and procedures of the research. In improving TCMP, more attention needs to be placed on assuring that auditors are not alienated, hired-hand help. They are the lynchpin of the program and have to be committed team participants.

Some Suggestions for Possible Improvements

In light of these observations about the issues surrounding TCMP, let me briefly suggest some possible improvements. All have been suggested before by experts inside and outside the Service, and I think they are worthy of a serious and open-minded appraisal of their possible advantages and disadvantages.

Specialists in TCMP Audits. Examinations is increasingly moving toward various types of specialists and specifically focused teams. These specialists often become resources for oth-

ers within Examination. Given the specialized nature of TCMP audits and their dual purposes of enforcement and research, there perhaps should also be TCMP specialists. These specialists could be affiliated with the DORA sites while still funcitoning within Examination, and they could serve as liaisons and research resources within Examination at the district or post-of-duty level Correspondingly, the criteria for evaluating their performance and for advancement would have to be broader and somewhat different from the criteria for normal Examination staff. In the funding for these specialists, there probably should also be some recognition of their dual affiliation and multiple roles so that Examination would not, quite reasonably, feel it was paying out of its budget for services to other areas of the IRS and to other government offices. Without some such organizational change, there are going to be continuing structural and incentive pressures toward alienated, hired-hand work on TCMP audits.

Smaller Annual Samples. There are several arguments for moving from large samples drawn every few years to smaller samples drawn every year. The work loads of the TCMP specialists I just suggested would be evened, and there would be other efficiencies in avoiding cycles of starting up and closing down. Moreover, new patterns of noncompliance could be identified and analyzed sooner, and the data would be available on a more timely basis. For some broad stoke analyses and early warning systems, the annual data could be used. For audit selection models and most other detailed analyses, the annual data could be grouped into 3- or 4-year moving clusters. One difficulty with this design is that the data from some years would have to be adjusted for tax law changes before the analyses were performed, and there would inevitably be some additional estimation involved. However, under current procedures, the audit selection models are having to be adjusted after the fact for tax law changes, also with estimations, but with no data on how taxpayers are actually responding to the changes. With annual samples we would at least have some early evidence on these response changes.

TCMP and Basic Tax Reform

Finally, questions have been raised about how TCMP relates to some of the fundamental changes in our federal tax system that are currently be developed and debated. Regardless of the tax system, there will always be a need to monitor compliance, to analyze the factors affecting it, and to evaluate administrative and legislative changes in light of the compliance data. As many of us have argued, measuring and analyzing compliance effectively and accurately will require some sort of probability sampling that is independent of the expected level of compliance and general audits covering the relevant aspects of taxpayers' financial situation: In short, there will always be sound administrative and legislative need for something like TCMP.

Many of the tax reforms being suggested still involve the reporting of income. Currently, most noncompliance, both in terms of the number of taxpayers and the number of dollars, is on the income side, not on the subtraction side. These compliance problems will not completely disappear by eliminating the subtractions and simplifying the returns. Analyses of the current TCMP data about under reporting various types of income and the factors affecting it could be used to evaluate the compliance implications of the alternative reforms.

Those reforms focusing on consumption, especially those involving a VAT or other sales and transaction taxes, will rely upon the accurate reporting and collection of taxes by some sectors of the economy that are now among the least compliant (again, in many cases unintentionally so) and with some of the worst record keeping relative to business needs. Careful analyses with TCMP and other data about possible compliance problems with the reporting and collection of consumption and transaction taxes should be done before the federal government decides to rely primarily on such sources of revenue.

In summary, regardless of the shape of future tax reform, the concern with TCMP now and for the foreseeable future should be on how to improve the program and how to utilize its data more fully in planning and evaluating legislative and administrative reforms. The focus should not be on abandoning the program or its essential characteristics.

This concludes my prepared statement. I would be pleased to respond to any questions.

Mr. HANCOCK. Thank you, Dr. Smith.

The gentleman from Texas.

Mr. LAUGHLIN. Thank you, Mr. Chairman.

Mr. Scheuren, in your testimony you contended that the market segment stratification is a good idea, but not fully tested. Has there not been some market segment analysis of data from prior TCMP studies that supports the value of such data from a larger sample?

Mr. Scheuren. I think the market segment is a very good idea. The problem is at the point of sampling, how good a classification of the taxpayer can you do in terms of market segments? There are some real data quality problems on the tax returns that are being used to do the sampling.

It is a well-known problem. A problem I actually worked on when I was in the Service. At the point of sampling, there is a lot of pos-

sibility for misclassification.

That is one of the reasons why I recommended the additional

work of drawing a subsample.

Mr. LAUGHLIN. Ms. Long, you have indicated that there are numerous approaches to address IRS concerns about the release of current TCMP microdata. Could you give some samples of the issues and the means of addressing them?

Ms. Long. Well, for example, IRS does release TCMP to outsiders under contract with the IRS. You sign a disclosure agreement with some restrictions. They might consider, in the short run, such a proposal so that they could release data for purposes of research. Their concerns, as I understand them, which I think are somewhat misplaced, are that if you had the data you could recreate their discriminant function formulas.

I think if you gave the data to 10 statisticians, you would get 10 different sets of formulas. I do not think this is a real concern, but if that was a concern they could have contractual arrangements so

that people agreed not to do certain things.

I also think that there are some statistical ways that the data could be sanitized that could provide protection against those kinds of concerns with some of the new modern techniques that are available. Right now, TCMP, although we invest a lot of money in it, the actual use of TCMP is disappointing. Also, IRS tends to be rather insular in its approach. We need, I think, a wider commu-

nity looking at it.

Mr. LAUGHLIN. Dr. Long, and Dr. Scheuren, I apologize for not acknowledging your academic achievement. Dr. Feinstein, in your testimony you question the need to expand the household component of the TCMP. Yet, you describe prior TCMP as thin for certain groups and locales. Are there any differences in compliance based on different parts of the country and, if so, are you saying that the differences are not substantial enough to warrant the additional audits, or that the past number of audits provide reliable data for the selection of returns at the local level?

Mr. FEINSTEIN. In my experience, looking at the past data, you would find in narrow cells of taxpayers, for example, farmers in a particular State or lawyers in a particular State, perhaps 1 dozen

or 2 dozen TCMP audits.

I would say that that is, as a statistician would tell you, just about at the level at which you can have some reliability in what

you do. I would never want to go below that but I would not necessarily see that the value of going above that would be as great

as maintaining at that level.

Mr. LAUGHLIN. Dr. Smith, you indicated that the TCMP covers answers to more questions than the IRS research division can explore. Would you recommend that sanitized data be made available to outside researchers as well as to the district office research sites?

Mr. SMITH. I am an outside researcher, I would love to have the data, but I think that the initial focus probably is on getting up to speed more of the sites at the district level within the Service for taking advantage of the data.

I would say that institutionally that should be the focus because

getting more people—

Mr. LAUGHLIN. Well, let me just interrupt you and ask on that point. You stated more needs to be done to get up to speed and I take it you are talking about the TCMP process. What are your rec-

ommendations, specific recommendations for doing that?

Mr. SMITH. I am thinking about the analysis of it. At the DORA level, the analyses could now be done with modern computers with a reasonable level of training and data analysis. Even more critical, perhaps, is also an understanding of the technical problems of analyzing data from audits. Presumably, IRS personnel have some of that sensitivity.

Getting that ability out, at the district level in the new DORA sites, could increase the understanding of approaching problems in an analytical way throughout the Service. That would have a major

advantage.

Yes, there would be considerable advantage in getting more outside researchers interested in studying patterns of compliance and noncompliance by giving out sanitized data. To extend just a bit on what Dr. Long said, a recent study in last year's Research Bulletin from the IRS showed that a great deal of the ability of the DIF process to identify targeted taxpayers for auditing is on how the Service manipulates and prepares the data for the analyses. Outside researchers are not going to have that same skill. That skill is based upon decades of working with the data.

Mr. LAUGHLIN. Well, I certainly thank this distinguished panel

of doctors for their appearance.

I yield back to the gentleman from Missouri, the chairman.

Mr. HANCOCK. The chairman would exercise his prerogative on this and that is, Mr. Feinstein, were you stating in your statement that the average return without the DIF assessment was \$1,000 or whether it was \$5,000? I do not know if that is a statement on how good the auditors are or how bad the tax law is. But this hearing is adjourned, thank you.

[Whereupon, at 2:52 p.m., the hearing was adjourned.]

[Submissions for the record follow:]

WRITTEN STATEMENT OF ERIC J. TODER DEPUTY ASSISTANT SECRETARY (TAX ANALYSIS) DEPARTMENT OF THE TREASURY SUBMITTED TO THE WAYS AND MEANS OVERSIGHT SUBCOMMITTEE IN CONNECTION WITH HEARING ON IRS'S TAXPAYER COMPLIANCE MEASUREMENT PROGRAM JULY 18, 1995

Dear Madame Chairman and Members of the Subcommittee:

I am happy to submit this statement at your request regarding the ways in which Treasury's Office of Tax Policy (OTP) relies on the data compiled in the Internal Revenue Service's (IRS's) Taxpayer Compliance Measurement Program (TCMP) audits. The principal purpose of the TCMP audits is to develop information that will enable the IRS to administer the tax laws more effectively. IRS is solely responsible for the timing, scope, and design of the TCMP audits. But the information the audits produce is also helpful to OTP for both policy analysis and revenue estimation.

From a policy perspective, TCMP audits provide OTP with valuable information on those aspects of the Federal tax system that create the greatest problems of compliance for taxpayers and administrative problems for the IRS. TCMP audits indicate which items of income, expense, deduction, or credit generate the greatest numbers of errors per response. Such errors can occur either because the specific tax provisions associated with those items are unduly complex and confusing for taxpayers, because they are difficult for the IRS to verify, or both. The TCMP data can thus be very helpful to OTP in suggesting policy changes that reduce taxpayer burden and improve compliance. From an estimating perspective, TCMP audits provide useful information on how proposed changes in information reporting or in the level of resources devoted to tax administration would affect future tax receipts.

Treasury's Office of Tax Analysis (OTA) evaluates numerous proposals to improve taxpayer compliance and the ability of IRS to enforce the tax laws. In estimating the revenue impact of these proposals, it is first necessary to establish a "baseline" of the level of non-compliance. The TCMP is the only source of data that provides sufficiently detailed information on the level of compliance associated with specific tax provisions. For example, the Energy Act of 1992 required buyers who deduct seller-financed mortgage interest to report the name and social security number of the seller. The revenue estimate for this proposal required two key pieces of information: (1) the degree of non-compliance in reporting home mortgage interest deductions associated with seller-financed mortgages and (2) the extent to which the IRS could expect to close this gap by requiring the additional information. TCMP data on the level of non-compliance for seller-financed mortgages and on the level of compliance for mortgages financed through financial institutions that currently required information reporting were used to estimate the revenue gain from the proposed increase in reporting requirements.

Another example of the use of the TCMP data in estimating the revenue effect of tax compliance initiatives is the provision of the Omnibus Budget Reconciliation Act of 1993 which required donors to obtain substantiation from donee organizations for charitable contributions of \$250 or more. The provision required a charitable organization to state the

size of the contribution made by the donor and provide a good faith estimate of any goods and services rendered in exchange for the contribution. Before this change in the tax law, the taxpayer needed only to have a cancelled check as validation for a charitable contribution deduction. The TCMP data showed that charitable contribution deductions are frequently and substantially overstated, and showed how the overstatement of charitable contribution deductions was distributed by size of contributions. These data proved crucial in estimating the effects of alternative proposals to detect overstatement of charitable contribution deductions, including the specific one that became law.

The TCMP data also were very helpful in estimating the revenue effects of requiring mortgage brokers to file information reports to the IRS on the proportion of property taxes paid by the buyer and the seller in the course of a home sale. Previously, it was possible for both the buyer and the seller of the house to claim a deduction for the entire amount of property taxes paid on the house in the year of the sale. While the TCMP data did not directly measure compliance for this specific type of deduction, compliance under this proposal could be inferred from examination of compliance in the reporting of the home mortgage interest deduction, an item whose compliance is measured by the TCMP. Thus, even if the revenue effects of a compliance proposal cannot be estimated directly from the TCMP data, it may be indirectly estimated by using a closely related TCMP compliance-measured income or deduction item.

These are just a few examples of how OTP uses TCMP audit data to determine where additional information reporting would be particularly helpful and in estimating the revenue consequences of such changes. To the extent the quality of the TCMP data is maintained at a level consistent with the primary objectives of the program -- the determination of taxpayer compliance levels, the appropriate allocation of IRS audit resources, and the selection by the IRS of specific tax returns for audit -- the TCMP data will continue to meet OTP's requirements. Conversely, if the TCMP program were reduced or compromised to the point where it no longer accomplishes these objectives of the IRS, OTP's ability to rely on the data would also be adversely affected. Were that to happen, our ability to propose improvements to the tax system and provide accurate revenue estimates would be reduced.

(202) 225-3621

AUG 0 1 1995

Honorable Nancy Johnson U.S. House of Representatives Washington, DC 20515

Dear Mrs. Johnson:

You have requested information relating to how the Joint Committee on Taxation ("Joint Committee") uses the Taxpayer Measurement Compliance Program ("TCMP") files of the Internal Revenue Service ("IRS") in preparing revenue estimates for many tax compliance proposals. This letter contains a brief description of the 1988 TCMP file followed by some examples of how the Joint Committee has used the TCMP data.

The 1988 Individual TCMP contains approximately 54,000 individual tax returns for 1988 that have been extensively audited. These returns were chosen to be a statistically representative sample of the 107 million individual returns filed for tax year 1988. The TCMP examination covers every line item of the tax return. In contrast, routine IRS examinations focus on specific, and generally predetermined, items on tax returns.

The resulting TCMP data set contains both the taxpayer-reported amounts and the IRS examination-recommended amounts. The data are particularly well suited to the analysis of information reporting proposals because amounts reported on information documents can be compared with amounts reported by taxpayers to measure taxpayer reporting compliance. Moreover, the data include verified occupation categories for each tax return. Taxpayer-reported occupation categories are accurately reported on only about one third of individual income tax returns. Verified occupation categories are quite useful for proposals that target specific types of taxpayers, such as independent contractors.

The IRS uses the TCMP information as a planning tool to determine its workload, to understand areas in which taxpayers do not accurately report amounts that the Service believes should be reported and to estimate how much individual income tax should have been paid. TCMP data are also used to develop the system that selects returns for audit. One result of the TCMP-developed audit selection system has been a dramatic decrease in the percentage of audited returns for which no change in tax liability was found.

CENNETY J. CES DOEF OF STAFF MANY IN SCHOOLT DEPUTY ONES OF STAF

BERNARD & SCHOOL DEPUTY CHIEF CF STA

Congress of the United States

JOINT COMMITTEE ON TAXATION SELASHINGTON, DC 20515-6453

AUG 0 1 1995

Honorable Nancy Johnson U.S. House of Representatives

The Joint Committee uses the TCMP data in preparing revenue estimates. Some examples of these include:

- To segregate the "Other Income" line item into the sources of income reported. The General Accounting Office performed this analysis for the Joint Committee and provided results that were used to estimate gambling reporting proposals.
- To estimate excessive claims of charitable contributions for various information reporting proposals. In particular, TCMP data was used to estimate the charitable contribution substantiation and disclosure requirements included in OBRA 1993.
- To analyze estimated tax payment relief proposals for individuals in disaster areas.
- To estimate the reporting of disability income payments.
- 5) To estimate the reporting of unemployment income payments.
- 6) To estimate real estate and property tax reporting proposals.
- 7) To analyze information reporting of sole proprietor gross receipts, and sources of sole proprietor noncompliance, by line item and occupational category. This information was very useful in estimating both the Administration's Service Industry Noncompliance ("SINC") proposal in 1993 and, more recently, various independent contractor proposals.
- 8) To analyze the relative compliance of different classes of taxpayers for various tax reform proposals.

I hope that this information is helpful to you. If we can be of further assistance in this matter, please let me know.

August 1, 1995

Members of the House Ways and Means Oversight Subcommittee United States House of Representatives 1136 Longworth House Office Building Washington, DC 20515

Dear Sir/Madame:

The AICPA appreciates the opportunity to comment on the value of the Taxpayer Compliance Measurement Program (TCMP). We believe that the TCMP is an essential element in the Internal Revenue Service's audit program and should be continued. A TCMP audit is a time-consuming process, both for the taxpayer and the agent, but its benefits outweigh the costs through more efficient tax administration. While these audits impose substantial added burdens on those taxpayers selected, they should help countless other taxpayers avoid an audit completely through the accumulation of statistically valid baseline data.

As you are aware, it has been six years since the last TCMP survey. The TCMP is one of the cornerstones of the voluntary compliance system. In a tax system that requires the filing of a return, and when less than 1% of those returns are audited, the enforcement authority (the IRS) must have a method by which to measure compliance and target enforcement efforts. The TCMP aids the IRS in this goal. With the data provided by detailed "random" audits of a statistical sampling of returns filed, the IRS can hone its enforcement efforts to select those returns for an audit which are most likely to be in noncompliance.

Any cost-benefit analysis of the TCMP audit is speculative, at best. The TCMP began with the examination of 92,000 individual tax returns from tax year 1963. The TCMP survey planned for the 1994 tax year is projected to examine 153,000 returns. For the first time, the sample will be drawn from 28 major market segments, enabling the IRS for the first time, to look at compliance within each market segment, regardless of the type of tax return filed. Of the 153,000 returns selected for an audit, 92,000 are intended to be individual tax returns and 61,000 are intended to be corporate and partnership tax returns. These 92,000 individual tax returns represent fewer than .03% of nonbusiness individual returns and fewer than 1% of business individual returns. Nonetheless, the IRS must take steps to ensure that taxpayer inconvenience is minimized for those selected and ensure that taxpayer selection is truly random. While the taxpaying public at large benefits, the incremental inconvenience to the audited taxpayer is severe, as can be the incremental costs.

Members of the House Ways and Means Oversight Subcommittee

August 1, 1995

One subject of potential concern to us, as practitioners and tax representatives, is the role of "economic reality" or "financial status" questions to be used in the forthcoming round of TCMP audits. We have been in oral and written discussion with the IRS National Office about the potential conflict between information needed for an audit of a tax return and taxpayers' rights of privacy. Questions involving "financial status" that extend outside the four corners of the tax return are appropriate only when an examining agent has reason to believe that there may be unreported income on a return. In the absence of such belief or suspicion, we believe it appropriate to challenge when this line of questioning turns from being an audit tool to an improper invasion of taxpayer privacy. We acknowledge the IRS's need to probe for unreported income, but would urge that taxpayers not have to respond to questions that have at best only a tangential connection to that subject.

If you have any questions or wish to discuss the contents of this letter, please do not hesitate to contact one of the following:

STATEMENT OF DANIEL J. PILLA ST. PAUL, MINN.

Madam Chairman and Members of the Subcommittee:

My name is Daniel J. Pilla. I am a tax litigation consultant from St. Paul, Minnesota. For nearly 20 years, I have been actively engaged in the defense of taxpayers' rights. My work focuses in the areas of IRS abuse prevention and cure, taxpayers' rights issues, and problems resolution. Over the years, I have been involved, directly or indirectly, with thousands of cases. I have seen every kind of tax case imaginable, and some that are not imaginable.

I am the author of eight (8) IRS self-help defense books. In addition, I am the editor of two nationally circulated newsletters. One is addressed to the general public. The other to tax professionals. In connection with my work as an author, I have appeared as a guest on more than 3,000 radio and TV talk shows, and currently conduct more than 500 interviews per year. In that capacity, coupled with my consulting work, I talk to about one hundred people per week who face difficulty with the IRS.

At present, I am the executive director of an organization known as the Tax Freedom Institute (TFI). TFI is a national association of tax professionals, including attorneys, accountants and enrolled agents who have dedicated a portion of their practice to defending taxpayers rights against abusive IRS practices. As the executive director of TFI, I am responsible for developing continuing professional education materials to train these tax pros in matters of tax law and procedure. I have taught courses in tax law and procedure having to do with taxpayers rights for numerous professional associations, including the prestigious Penn State Tax Institute.

This statement is submitted on behalf of myself in my individual capacity, on behalf of the Tax Freedom Institute, and on behalf of every American business and individual taxpayer.

One question before this subcommittee is whether the IRS' Taxpayer Compliance Measurement Program (TCMP) provides sufficient research value to the IRS and Congress in the areas of tax administration, taxpayer compliance with the tax laws, and policy analysis as to warrant continuation of the program. Another question is whether the program is overly burdensome to taxpayers selected for such audits.

For reasons I shall elaborate upon in detail, I submit the program should be discontinued. First, the program does not provide adequate, accurate or reliable data to either the IRS or Congress in any of the areas of concern. Second, even if the IRS were able to gather accurate data, history has shown the agency is unable to assimilate or utilize the data it has. And third, the program is so invasive and subject to abuse, taxpayers cannot be adequately compensated for being forced to participate in such a program.

1. The results of TCMP Audits are Unreliable.

The TCMP audit is a grueling line by line examination of the tax return selected. Taxpayers are called upon to prove their names, social security numbers, the names and births of their dependent children, and so on throughout the entire return.

The results of the audits are complied into a sophisticated data base which has many uses. Results are used to determine patterns of non-compliance, to evaluate the IRS' policy and enforcement needs, and to assist Congress in the areas of legislative policy. Another primary use of TCMP data is to formulate the data base used in the Discriminate Function System (DIF).

DIF is a computer program which compares every line of one's tax return with national and regional statistical averages for a person in a given income bracket and profession. Such averages were previously ascertained through TCMP audits. If one's return is out of sync with those tolerances, that return is flagged for a potential face-to-face audit by a revenue agent.

TCMP data are unreliable simply because they are only as good as the audits themselves. The reality is the results of IRS audits are often wrong. For a number of reasons, when IRS examiners report that citizens have erred in the computation of tax liability, they have, quite simply, arrived at erroneous conclusions.

In my nearly 20 years of experience dealing with the IRS and audits, I have seen countless examples of examiner errors. In some cases, the errors are so basic, one must question whether they were in fact intentional. Erroneous audit results grow not only from auditor errors, but from overt acts of tax examiners to bluff and intimidate citizens into accepting audit results which are clearly erroneous. These are just a few examples:

- 1. Where examiners wrongfully claim a citizen has insufficient proof to support an otherwise legitimate deduction and therefore the deduction is disallowed.
- 2. Where examiners wrongfully give an incorrect statement of the law to a citizen regarding a particular tax deduction or tax treatment of an item, leading to the disallowance of such item.
- 3. Where amounts of money transferred from one of the citizen's bank accounts to another (transactions known as redeposits) are double and triple counted by examiners, and therefore a citizen is said to have earned income he did not report on his return.
- 4. Where tax examiners falsely claim that citizens have no, or limited appeal rights from the decision of tax examiners, and therefore have no choice but to accept audit results which are clearly in error.
- 5. Where tax examiners falsely claim that citizens will suffer other or greater penalties if they pursue their right of appeal, and therefore accept audit results which are clearly in error.
- 6. Where tax examiners explain to citizens that the avenue of appeal is lengthy, costly, time consuming and the IRS wins its cases anyway, all the while additional accumulations of interest and penalties stack up against the citizen.
- 7. Where, in certain unusual cases but nevertheless prevalent, tax examiners will claim a citizen can be put into jail if he does not sign and accept audit results which are clearly wrong.
- 8. Where, as very commonly happens, tax examiners will threaten citizens with lien, levy and seizure of bank accounts and property if they refuse to sign and accept audit results which are clearly wrong.
- 9. Probably the single most common reason erroneous audit assessments are recorded against citizens is most citizens are simply unaware of their right of appeal. Upon completion of a tax audit, the IRS mails to the citizen a so-called 30-day letter. The letter contains the Revenue Agent's Report (RAR) which details the changes proposed to the citizen's return.

Citizens commonly mistake the RAR for a bill, which it is not. They do not understand that it is a proposed change to their tax, which

they can appeal. But with lack of understanding of the appeal right or process, and lack of funds to hire a professional, many do nothing. This leads to the issuance of a notice of deficiency, which requires the filing of a petition in the Tax Court within 90 days. If the petition is not filed, the amount of tax claimed becomes assessed without further action necessary on the part of the IRS. In effect, the citizen loses his tax audit case by default.

This is certainly not an exhaustive list of the things that commonly happen to honest, perfectly law abiding citizens during the course of routine face-to-face examinations, such as a TCMP audit. They are, however, a few of the more common examples of what takes place on a daily basis within the realm of tax law administration.

Another very compelling reason why tax audits are often wrong is the fact that tax auditors are poorly trained in the law. We have a tax law that consists of 17,000 pages of law and regulation which was changed more than 100 times just during the decade of the 1980s alone. The pure size, scope and evolution of the law makes it physically impossible for any human to understand its full scope and application.

This problem is particularly troublesome in multi-year audits, which are becoming more and more common. A multi-year audit involves more than one tax year. The IRS may, for example, attempt to examine each of the three open years on one sitting. In fact, in the current TCMP model, IRS will provide its agents with three tax returns for the each TCMP subject. They will be, the return for the primary year, and returns for the two previous years.

Problems arise in such audits when the law treats a given transaction differently in one year than it does in the next. Very commonly, an examiner will treat the transaction the same for all years in question. This makes the resulting examination report correct as to one year, but incorrect as to the next. This despite the fact the it reads identically for both years.

The fact that IRS examiners are poorly trained yet are under pressure to produce results is confirmed by a recent General Accounting Office (GAO) report. In testimony to this subcommittee, Lynda D. Willis, associate director of tax policy at GAO described many problems businesses face in complying with the tax laws. Her testimony described the results of a survey GAO conducted to determine the compliance burden faced by small businesses. See: Tax System Burden, Tax Compliance Burden Faced by Business Taxpayers, GAO/T-GGD-95-42, December 9, 1994.

Among other things, Ms. Willis said:

"The complexity of the code has a direct impact on IRS' ability to administer the code. The volume and complexity of information in the code make if difficult for IRS to ensure that its tax auditors are knowledgeable about the tax code and that their knowledge is current. Some business officials and tax expects said that IRS auditors lack sufficient knowledge about federal tax requirements, and in their opinion this deficiency has caused IRS audits to take more time than they otherwise might.* * * " Ibid, page 3.

The audits not only take more time, leading to more cost for both the agency and the private sector, but they often result in

incorrect conclusions. This leads to the assessment of taxes, penalties, interest which are simply not owed.

Recently, the GAO released the result of a study of the IRS' Coordinated Examination Program (CEP). CEP is designed to audit the largest, most complex corporations. Despite having spent 1,700 staff years to examine 1,700 such corporations, GAO was able to confirm that only 22 percent of the amount of tax proposed through audit was ever collected. See: Tax Policy and Administration, Compliance Measures and Audits of Large Corporations Need Improvement, GAO/GGD-94-70, September 1, 1994.

GAO generally cited two reasons for the tremendous difference in the amounts of tax recommended by examination, versus that assessed and collected. First is the complexity of the tax laws. This factor gave rise to "opportunities for different interpretations" of complex tax law issues. Secondly, IRS encouraged CEP teams to "recommend more taxes in the shortest time possible." This not only makes it difficult to do a complete audit, it makes it impossible to do a correct audit.

While the above mentioned report dealt with complex corporate tax audits, the results are no different in the examination of individual taxpayers, or small business taxpayers. IRS examiners are under the same pressure to close cases, and deal with the same complex and ever changing tax law.

I recently completed my own detailed analysis of the accuracy of IRS' audit results. My study was published by the Cato Institute, on April 15, 1995. Drawing exclusively from IRS' annual reports of the Commissioner, I present data which shows that IRS' audit results are consistently wrong about 50 percent of the time. See: Cato Institute Policy Analysis No. 222, Why You Can't Trust the IRS, April 15, 1995. These findings are more generous than the 22 percent found by the GAO in above-cited report. However, they are deeply troublesome from the standpoint of individual citizens.

Individual citizens certainly cannot afford the kind of legal and accounting talent available to America's largest corporations. As a result, citizens are far more likely to fall victim to erroneous statements or out-right bluffs. They are far less likely to exercise their right of appeal, which almost always leads to a more accurate result than is reached by tax examiners.

The reason for this is Appeals officers are under strict guidelines to settle cases solely on the basis of the law and facts. Incredibly, tax auditors are under no such admonition. On the contrary, they are under pressure to recommend taxes and close cases, regardless of the law and the facts. See Revenue Regulation 601.106(f)(1) regarding appeals settlement rules; compare with Revenue Regulation 601.104(a)(1) - (a)(4), regarding examination of returns.

This reality leads to audit assessments which are plain wrong about half the time. The results of TCMP audits are no more accurate than any other type of IRS examination. In fact, given that every line the return is relentlessly examined, I believe TCMP audits are more susceptible to error.

Given the IRS' error rate in the conduct of audits, it is unreasonable to continue to subject the American people to the hassle, significant expense, time and anxiety of TCMP audits. The IRS is aware of the problems it faces with regard to examiner training. The agency recognizes that constant changes to an already confusing law makes it virtually impossible for examiners with the best of intentions to apply its countless facets correctly.

In the face of this reality, the only reasonable thing to do is discontinue TCMP audits and redirect the expense to examiner training.

2. The IRS is Unable to Assimilate or Use the Data it has.

Even assuming the IRS is able to obtain accurate data through the TCMP process, the facts indicate the agency is incapable of putting the information to good use.

Over the years, the GAO has uncovered deplorable deficiencies in the IRS' own internal system of recordkeeping and accounting. These are just a few of the facts:

- a. Weaknesses, oversights and failures in the administration of the IRS information systems substantially increase the risk of fraud and seriously undercut the reliability of data used in management decisions. GAO/AIMD-93-34, September 22, 1993.
- b. The IRS lacks any degree of accountability over its automated data processing equipment. Despite having spending billions on ADP equipment in the process of modernizing IRS computers, the agency cannot account for what it has, how the equipment is used, its value, etc. GAO/AIMD-93-24, August 5, 1993.
- c. The first audit of the IRS' financial statements showed, among other things, the incredible fact that the agency was unable to account for 64 percent of its entire 1992 Congressional appropriation. The report also revealed numerous examples of fraud, malfeasance and nonfeasance on the apart of IRS employees changed with the duties of keeping the agencies books and completing its financial reports. GAO/AIMD-93-2, June 30, 1993. See also GAO/T-AIMD-93-4, August 3, 1993 (testimony of Charles Bowsher, Comptroller General of the United States).
- d. IRS was unable to correctly account for its receivables ledger. Serious problems were found in that IRS could not justify the entries claimed to be accounts receivable. Many were based upon erroneous assessments, uncredited payments, etc. GAO/AFMD-93-42, May 6, 1993.
- e. Audit of IRS' 1993 financial statements revealed ongoing, systematic problems with the agency's accounting practices. Audit findings show the IRS is simply unable to keep accurate books and records of account. These findings are similar to those set forth in paragraph (c) above. GAO/AIMD-94-120, June 15, 1994.

But there is even more compelling evidence of IRS ineptitude, specifically in the area of its enforcement programs. This is directly relevant to the question of TCMP audits.

The GAO has specifically found that the IRS' estimates of revenue generated from its enforcement programs are simply unreliable. The agency does not support its estimates with any facts that allow GAO's auditors to verify them. In the words of the GAO, "* * *In fact, however, IRS does not know how much revenue its enforcement programs actually generate." Tax Policy and Administration, IRS Needs More Reliable Information on Enforcement Revenues, GAO/GGD-90-95, June, 1990 (emphasis added).

In sum, the IRS makes glowing statements concerning the value of its enforcement programs, including TCMP, but in realty, it has no clue whether the programs ever produce the intended results. When we couple the IRS' fundamental lack of recordkeeping with audits we know are incorrect, we must conclude that TCMP audits are simply

worthless in developing the data needed for effective tax law administration.

In recent testimony before a House Appropriations Subcommittee, Jennie S. Slathis of GAO described the problems found in verifying the accuracy of IRS' enforcement initiatives. She states as follows:

"* * *According to the IRS, the revenue data to be used in measuring the success of the compliance initiatives is to come from the Enforcement Revenue Information System (ERIS) -- a relatively new system designed to account for actual collections resulting from IRS' enforcement programs and to enable IRS to more accurately measure and predict enforcement costs and revenues. ERIS is not fully operational, but IRS believes it will be by the end of the year.

"We have some concerns about the reliability of IRS' ERIS data. Those concerns derive from an October 1993 IRS Internal Audit report which says, in part, 'information in ERIS reports is still not accurate, reliable, or consistent.'* * *" Tax Administration, Tax Compliance Initiatives and Delinquent Taxes, GAO/T-GGD-95-74, February 1, 1995.

The GAO reports cited above, taken as a whole, all point to one, inescapable conclusion: The IRS is itself unable to keep books and records or prepare financial statements. It is unable to do the very things it asks every taxpayer to do.

Since the IRS is incapable of tracking something so basic as its accounts receivable, how can it be expected to assimilate and use the complex TCMP data? Since the IRS cannot provide accurate information to Congress on the success of its various enforcement programs, what good are TCMP data, even if they are valid? Since the IRS cannot even keep track of its ADP equipment, how can it be expected to track and use TCMP data? Since IRS cannot account for 64 percent its Congressional appropriation, what right does the agency have to ask any citizen to justify the entries on every line of every tax form filed with his return?

In the concluding remarks to its report on the examination of the IRS' 1993 financial statements, the GAO makes this chilling, and very relevant statement:

"Further, IRS' lack of fundamental recordkeeping is inconsistent with recordkeeping requirements placed on taxpayers in support their returns and has far reaching implications, not only to IRS' credibility as the government's tax collector, but also on the federal government as a whole to responsibly use taxpayers funds. The IRS has more direct contact with the public than most government agencies and, as a result, the public's perception of the federal government as a whole is, in many cases, based on its interactions with the IRS. If IRS does not continue to improve accountability for its financial operations, its credibility could be diminished, reducing voluntary compliance by

taxpayers." GAO/AIMD-94-120, June 15, 1994, page 38.

The question this Subcommittee should be asking is not whether the IRS should be allowed to conduct TCMP audits of honest citizens. This Subcommittee should be asking why it is the IRS, the government's tax collector, cannot comply with even the most basic recordkeeping and data reporting requirements it expects of every citizen.

All the data in the world is of absolutely no value to an agency which cannot record, assimilate or use it correctly.

3. TCMP Burden on Taxpavers.

The government bears a direct responsibility to administer the laws in a fashion which creates the least amount of burden for its citizens. Each year, it seems Congress heaps more information reporting requirements, new tax forms and more recordkeeping requirements on the average citizen in order to comply with tax laws. As the law becomes more cumbersome and complex the cost of compliance for all, including the IRS, goes up. TCMF unreasonably adds to the cost of compliance for many citizens.

TCMP selections are made on a completely random basis. Those selected are not chosen on the basis of any objective criteria. They are not suspected of making any errors. They are not suspected of cheating. Yet they are forced to undergo the most grueling kind of audit.

They must endure endless hours of preparation, copying records and reconstructing their financial activities. They must take time from work and family at their own expense to comply with an endless list of requests and questions served upon them by the examiner, only to face a new list when that one is satisfied. In many cases they must hire a tax professional to represent them. Fees for services run from \$100 to \$300 per hour. A professional's time in connection with a TCMP audit can run to 40 hours or more, depending upon the complexity of the case.

Many citizens have described the TCMP audit as a kind of rape. The agent makes repeated, sometimes unreasonable demands for information, rummages through every aspect of a person's life, drags the ordeal on month after month, and creates substantial expenses in the process. At the same time, the individual agent is not likely to understand the law he is enforcing. After all is said and done, his results are likely to be wrong.

We must ask the question, what is the point?

TCMP audits often delve into areas which are not necessarily shown on the tax return. For example, citizens are called upon to prove the income declared in the return is correct, but must do so with evidence which goes beyond bank statements and W-2 forms. To do this, the IRS often uses Form 4822, Statement of Annual Personal Estimated Living Expenses. Since one's personal living expenses are not an item in the tax return, most citizens keep no records of such expenses, including things like clothing, food, hair cuts, gifts, etc. Yet Form 4822 ask a citizen to reconstruct and report all such expenses.

If one is undergoing an audit of, say, tax year 1993, during the year 1996, he is asked to "remember" what he spent on hair cuts and the like in order to provide an "accurate" picture of his spending habits to the agent. From this "accurate" information, the agent then ascertains whether the citizen's claimed income was sufficient

to support those living expenses. This kind of "examination" is one reason the IRS' audit results are so often wrong.

TCMP audits are deeply invasive. They involve unearthing the most private aspects of a person's life. These are the kind of things the FBI or local police could never get access to without a search warrant. Yet the IRS merely demands the material and expects compliance under penalty of law. Citizens who have done nothing wrong are made to feel like criminals. Since the burden of proof in all matters is upon the citizen, not the IRS, they find themselves having to prove their innocence as to every line of the tax return.

I believe and assert there is much more to the TCMP audit than IRS is willing to tell. We know it cannot be simply a matter of data. The agency cannot correctly use the data it has. I believe the real issue is one of "presence."

For the years, the IRS has expressed the desire to "create and maintain a sense of presence" in the lives of all Americans. This idea was clearly expressed in a 1984 document entitled, Strategic Plan, IRS Document No. 6941. Creating "presence" means building the notion in the minds and hearts of all Americans, that the IRS is "watching you." The IRS insisted in its 1984 plan that creating presence was vital to "encouraging voluntary compliance."

More than anything else, TCMP is about creating presence. In this context, the results of TCMP audits are irrelevant. The data gathered is inconsequential compared to the enforcement gains achieved by persuading every American that the IRS is "watching you." This amounts to psychological warfare waged by the government of the United States, through the IRS, on its own citizens.

To the extent that TCMP is an integral part of the effort to "create and maintain presence," the undertaking is outrageous, especially in light of all the forgoing.

Given the IRS' lack of ability to do the same with regard to its own financial matters, it is unreasonable to lay those burdens at the feet of the American people.

4. Why Voluntary Compliance is Declining.

IRS maintains the reason TCMP is so necessary, is that voluntary compliance is in decline. IRS insists it needs TCMP data to understand the treads, to be able to deal with the enforcement problems of the day.

I can tell this Subcommittee in one sentence why voluntary compliance is in decline. I can explain very simply why the tax gap continues to grow, despite every enforcement program ever funded. I can explain why the number of tax return nonfilers is growing along with the underground economy. I know because I deal with these people every day. I listen to their stories. I help them through their problems.

The reason for the drop in voluntary compliance is very simple. More and more Americans are simply unable to pay the taxes they owe. Federal, state and local tax rates now consume more than 40 percent of a person's gross income. More citizens every day are forced to make a choice between paying their taxes and feeding their families. One in such a position will opt to feed the family every time -- without question and without hesitation.

To solve the problem of voluntary compliance, we must conquer the federal government's insatiable demand for more revenue. If revenue demands do not stabilize, then shrink in relationship to individual

expenses, no amount of enforcement programs or compliance initiatives will ever solve the problem. Congress must simply face the fact that it is spending too much of our money.

At the same time, we must pursue a course of radical tax reform. As evidenced by the GAO reports cited in this testimony, our system cannot possibly continue to operate under the status quo. The IRS, in its opinion, will never have enough information to enforce the law. It will never have enough money, manpower or equipment to administer the law. Yet we cannot, it seems clear, continue to allow the agency to grow in size, power and sweep, given its deplorable record of unaccountability on matters so basic as its own financial affairs.

Ultimately, to solve our nation's tax problems, we must abandon the IRS and the income tax system altogether. We must move to a system which is not dependent upon knowing the intimate details of every citizens' private life in order to collect the revenue needed to fund the government. We must move to a system which does not require 120,000 IRS employees and a budget of \$8.2 billion to administer. We must adopt a system which frees us of the requirements to file 210 million tax returns and 1.3 billion information returns annually. We must develop a system under which the American people will no longer have to chose between paying their taxes and feeding their families.

It is my considered opinion that only a national retail sales tax can accomplish all those things. I believe time has come for Congress to stop discussing bandaide treatments for a hemorrhaging patient.

Thank you.

IRS BUDGET FOR FISCAL YEAR 1997 AND THE 1996 TAX RETURN FILING SEASON

THURSDAY, MARCH 28, 1996

HOUSE OF REPRESENTATIVES, COMMITTEE ON WAYS AND MEANS, SUBCOMMITTEE ON OVERSIGHT, Washington, DC.

The Subcommittee met, pursuant to notice, at 10:14 a.m., in room 1100, Longworth House Office Building, Hon. Nancy L. Johnson (Chairman of the Subcommittee) presiding.

[The advisory announcing the hearing follows:]

ADVISORY

FROM THE COMMITTEE ON WAYS AND MEANS

SUBCOMMITTEE ON OVERSIGHT

FOR IMMEDIATE RELEASE March 19, 1996 No. OV-11 CONTACT: (202) 225-7601

Johnson Announces Hearing on Internal Revenue Service Budget for Fiscal Year 1997 and the 1996 Tax Return Filing Season

Congresswoman Nancy L. Johnson (R-CT), Chairman, Subcommittee on Oversight of the Committee on Ways and Means, today announced that the Subcommittee will hold a hearing on the Internal Revenue Service's budget proposal for fiscal year 1997 and the 1996 tax return filing season. The hearing will take place on Thursday, March 28, 1996, in the main Committee hearing room, 1100 Longworth House Office Building, beginning at 10:00 a.m.

In view of the limited time available to hear witnesses, oral testimony at this hearing will be heard from invited witnesses only. However, any individual or organization not scheduled for an oral appearance may submit a written statement for consideration by the Subcommittee and for inclusion in the printed record of the hearing.

BACKGROUND:

The Administration's fiscal year 1997 budget request for the Internal Revenue Service (IRS) totals almost \$8 billion and will support the IRS's operations in collecting nearly \$1.5 trillion in revenue and in administering the Federal tax laws. By way of comparison, the fiscal year 1996 appropriation for the IRS totaled \$7.3 billion, approximately \$900 million less than the Administration had requested and \$200 million less than the IRS received for fiscal year 1995.

The \$8 billion fiscal year 1997 budget request includes \$1.8 billion to process the tax returns which taxpayers will file in 1997; \$4.5 billion to examine tax returns; and \$1.7 billion for information systems. Almost \$850 million of the information systems request is earmarked for the Tax System Modernization (TSM) program. TSM is a long-term program which is estimated to cost over \$8 billion upon completion, and which is supposed to upgrade the IRS's computer capability and bring it closer to state-of-the-art performance levels. However, numerous experts who have reviewed TSM have criticized the IRS's ability to successfully implement TSM in its current form.

The 1996 tax return filing season is the period of time between January and April 15th when American taxpayers are expected to file 118 million tax returns. Approximately 83 million taxpayers are expected to receive an average refund of over \$1,300 in 1996. During the 1995 tax return filing season, the IRS applied rigorous compliance checks in order to identify fraudulent refund claims.

FOCUS OF THE HEARING:

As a result of the reduced level of the fiscal year 1996 appropriation, the IRS must absorb a \$200 million funding reduction during the current fiscal year. The Subcommittee is interested in reviewing how the Service is adjusting its operations to comply with the reduced funding, and how the IRS is retargeting its resources to meet the demands of the 1996 filing season and its other responsibilities in administering the nation's tax laws.

In reviewing the fiscal year 1997 budget request, the Subcommittee will review all aspects of IRS operations, and particularly the TSM program. The Subcommittee will explore the status of specific systems upgrades, such as the Integrated Case Processing system, which will allow IRS taxpayer service representatives to access IRS databases on-line in order to respond to telephone inquiries from taxpayers. The Subcommittee will also review the appropriate level of TSM funding in the future in light of the current restricted funding environment, the critical evaluation of TSM by outside experts, and the Administration's recent testimony that the program is off track and needs to be rethought.

Chairman Johnson is also concerned that the IRS hasn't been able to adequately account for the \$4 billion already invested in TSM. "While I understand that over-hauling the Service's antiquated computer systems is a major endeavor which will require mid-course adjustments, the IRS's learning curve in implementing TSM appears to be very costly. I want to make sure that the \$4 billion spent so far has not been wasted," Johnson explained.

The Subcommittee will also inquire into the progress of the 1996 tax filing season, the availability of taxpayer services, the effectiveness of anti-fraud efforts in the 1995 filing season, and what the IRS is doing in the 1996 filing season to deter improper refund claims.

DETAILS FOR SUBMISSION OF WRITTEN COMMENTS:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement, with their address and date of hearing noted, by the close of business, Thursday, April 11, 1996, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

- All statements and any accompanying exhibits for printing must be typed in single space on legal-size paper and may not
 exceed a total of 10 pages including attachments.
- Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.
- 3. A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting witness comments in response to a published request for comments by the Committee, must include on his statement or submission a list of all clients, persons, or organizations on whose behalf the witness appears.
- 4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or tie designated representative any be reached and a topical ordine or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

Note: All Committee advisories and news releases are now available over the Internet at GOPHER.HOUSE.GOV, under 'HOUSE COMMITTEE INFORMATION'.

Chairman JOHNSON. The hearing will come to order.

Some of our Members are en route, but in view of the heavy floor schedule, we would like to get started.

Good morning and welcome. The fiscal year 1997 budget proposal for the IRS would give it almost \$8 billion and almost 109,000 employees in order to collect \$1.5 trillion in revenue. This represents an increase of 10 percent over the 1996 level. I respect the prerogative of the administration to present a budget designed to carry out its priorities; however, I believe that the Congress will have some

tough, legitimate questions about this proposal.

This morning we want to learn how the IRS intends to use its resources in fiscal year 1997. Most IRS programs show only small changes, but a few programs deserve special attention. The budget proposes \$850 million for the Tax Systems Modernization Program. The TSM is supposed to upgrade the IRS' computer capability and move it closer to modern performance levels. It is essential to improve the IRS' computer capability if it is to cope with the crushing burden of processing over 1 billion documents every year, but there are many unanswered questions about the TSM Program at the present time.

No one questions the goal of TSM, but significant doubts have been raised as to whether the IRS is on the right road to achieve its goal. Two weeks ago, Deputy Secretary of the Treasury Lawrence Summers testified before a House Appropriations Subcommittee that TSM had gone "badly off track," and that it "needed

to be rethought from top to bottom."

I certainly understand that a complex computer project might need a midcourse correction, but it sounds as if the IRS is going back to square one on TSM. The question raised by this decision is: What have we gotten for the \$4 billion we have invested so far? How much of the past TSM funding will the IRS now have to just chalk up to experience? How much of that money spent so far has been wasted? And how much of it has gone for something useful and productive? And how long will it take to get TSM back on track?

We don't want TSM to become the IRS equivalent of the baggage handling system in the new Denver airport: High tech, high cost,

low performance.

Today we will examine how the IRS is absorbing the reduced funding in the current fiscal year. We want to learn what the Commissioner's priorities are in operating with fewer resources. Are all the activities being trimmed a similar amount, or are a few activi-

ties bearing the brunt of the reduction?

The 1996 tax filing season appears to be normal and uneventful. This is a welcome contrast to the disruptions which occurred last year because of the IRS' crackdown on fraudulent refund claims. I commend the Commissioner's strong action to identify and deter improper refund claims. But a regrettable side effect was a good deal of confusion and some late refunds.

Commissioner, the IRS is the one Federal agency that touches the lives of every American. How Americans view their government often is determined by how they view the IRS. A large part of the enthusiasm for pursuing a flat tax or a consumption tax is rooted in a negative attitude toward taxes and, derivatively, toward the IRS. The tax collector may never be loved, but it is a sobering message when the average person supports the elimination of the IRS.

My goal is to work with you to modernize the system and assure that the IRS delivers a uniformly high standard of professional service. Because of its tough assignment to help taxpayers who genuinely need guidance and to assure that every citizen pays his or her fair share, whether they want to or not, the quality of customer service, the attitude of every IRS employee as they deal with the public as both guide and enforcer is crucial to restoring respect, civility, and efficiency to government.

While citizens need to know and understand the many important services government delivers day in and day out that do make our lives individually and collectively better, government needs to be far more customer oriented and user friendly, and I hope to work with you toward those goals. Today's hearing to review your 1997 budget request and the current filing season are the beginning of

what I hope will be a fruitful collaboration.

Before we begin, let me thank you, Commissioner, for implementing by administrative action many of the provisions of the Taxpayer Bill of Rights when it looked like we would not get it onto the floor of the House and to the President's desk. I am pleased to report that we expect to have the new bill, which your people have also been involved in shaping, on the floor hopefully this week and very soon to the President's desk.

Commissioner Richardson, it is a pleasure to have you back with

us. Please proceed.

STATEMENT OF HON. MARGARET MILNER RICHARDSON, COMMISSIONER, INTERNAL REVENUE SERVICE; ACCOMPANIED BY MIKE DOLAN, DEPUTY COMMISSIONER; JUDY VAN ALFEN, ASSOCIATE COMMISSIONER FOR MODERNIZATION; JIM DONELSON, CHIEF OF TAXPAYER SERVICE AND ACTING CHIEF COMPLIANCE OFFICER; AND TONY MUSICK, CHIEF FINANCIAL OFFICER

Ms. RICHARDSON. Thank you. Madam Chairman and other distinguished Members of the Subcommittee, I have with me today Mike Dolan, who is on my immediate left, the Deputy Commissioner; Judy Van Alfen, who is the Associate Commissioner for Modernization; and on my right I have Jim Donelson, who is the Chief of Taxpayer Service and our Acting Chief Compliance Officer; and Tony Musick, who is our new Chief Financial Officer. We all appreciate the opportunity to be here this morning to discuss the filing season, our efforts to modernize the tax administration system, as well as our fiscal year 1997 budget request.

The IRS is in the financial services business—like a bank, a credit card company, or an insurance company—and we understand the importance of providing good customer service. Of course, we understand there are some significant differences between our business and other financial services firms. But despite these differences, like many other financial services firms, what we are seeking may be easier to describe than to achieve. We want to provide our customers with better service at lower cost, we want to use less paper, and we want to be able to take advantage of new

technologies.

We are in the midst of a major transition, as I know you are aware, Madam Chairman, but it is one that began several years ago, and it will continue for several more years. Today I would like to focus on what we are trying to do to make things easier for tax-payers, how we are doing our job more efficiently and effectively.

This filing season—and every filing season—begins with taxpayers filling out their tax returns and sending them in either through the mail or electronically. Since coming to the IRS almost 3 years ago, I have made it a top priority to try to improve service to taxpayers. For most taxpayers, this means making communicating with us easier and filing tax returns as simple as possible. While we are certainly not yet at a stage we could call perfection, I do believe in the past 3 years we have made progress in improv-

ing our service to taxpayers.

We understand that taxpayers get frustrated when they call us and repeatedly get a busy signal, and in the past 3 years we have answered more calls than ever before. But we still have taxpayers whose calls are not answered. We also have a growing number of taxpayers who visit or write us. In 1993, we heard from taxpayers by phone, visits, or letters 73 million times. Last year that grew to 118 million. But we were able to serve more taxpayers by increasing our productivity, expanding our hours of service, and installing call-routing equipment that does allow us to better manage our telephone workload. It allows us, among other things, to route calls to available assistors who may be in the next county, the next State, or even across the country. We are doing our best to try to answer more taxpayer questions more quickly and efficiently.

When I became Commissioner in 1993, not only were we unable to move calls around the country, but our assistors only had access to taxpayer account information that was stored at the particular service center their office had to rely on. Technology has allowed us to remove this artificial barrier and to enhance our ability to route calls automatically to personnel who have both the data and the expertise needed to handle taxpayers' specific questions. And we can now resolve issues with a single call 75 percent of the time,

and we are bringing more tax account information online.

But despite these improvements, not every taxpayer call is being answered, and not all taxpayers who need to be served are getting served. So we are looking for other ways to meet taxpayers' information needs.

Technology is certainly helping by creating entirely new ways for taxpayers to get forms and information from us while reducing our postage and printing costs. Taxpayers who have access to a computer and modem can get forms and information anytime anywhere in the world from our FedWorld or our Web site on the Internet. So far this year, millions of taxpayers have visited our Internet home page, and an average of 25,000 forms a day are being downloaded. Forms are also available on CD-ROM and, for the first time this year, through our automated "fax on demand" service.

One of my goals has been to make it easier for taxpayers to file their returns. Today nearly 40 percent of individual filers use our easiest forms, and over 70 percent take a standard deduction. What could be easier than filing by telephone? This filing season, over 20 million taxpayers are eligible to file their tax returns with a phone call that takes less than 10 minutes. As of March 22, over 2.5 million taxpayers have already used this option. Three years ago, our TeleFile Program was a pilot, and just last year it was available in only 10 States and we had only 680,000 returns filed that way.

Making it easier for taxpayers to both file their returns and communicate with us is only part of our effort to improve our relationships with taxpayers. As you mentioned, Madam Chairman, we worked with you and Members of the Subcommittee on the Taxpayer Bill of Rights 2, and I am pleased to say that we were able to work with you on the bill that we hope will be reported out next week and passed. But when we weren't successful in getting the legislation earlier, we did go ahead and administratively adopt many of the proposals that didn't require congressional action.

We look forward to continuing to work with you and Members of your Subcommittee on our continuing priority, which is responsible

tax administration while ensuring taxpayers' rights.

Last year when I appeared before this Subcommittee, I said that our biggest challenge was to put in place better methods to protect the tax revenue from those who improperly attempted to claim refunds. We accomplished this by using both technology and a different approach to compliance to stop improper refund claims. We used numerous systemic verifications, including checks of Social Security numbers. We established new criteria for electronic return originators, including fingerprint and credit checks, and we increased our monitoring of the EROs. We delayed about 8 percent of the refunds, and we did increase compliance resources devoted to checking those refunds for accuracy.

I am pleased to report our efforts were most successful. One-and-a-half million fewer dependents were claimed, and there were approximately 100,000 fewer earned income tax credit claims than in the prior year. In our direct compliance efforts, including prerefund audits, we prevented \$503 million in improper refunds from being

issued.

This filing season we are continuing to devote substantial resources to detecting and stopping improper and fraudulent claims for refund. We have refined our efforts to address improper refund claims based on what we learned last year.

I would also like to spend a few minutes talking about modernizing our current tax administration system. Modernization requires an ongoing effort to update technology, to improve our business processes, and to develop a flexible organization. Today I would like to touch on our efforts to update the technology.

As you pointed out, we have undertaken a series of technology modernization projects, collectively referred to as the Tax Systems Modernization Program, to modernize our information systems. It was originally designed in 1988 as a program to replace our technology. It has been redesigned since then to assist us in achieving our business vision by the year 2000, although many of the projects are scheduled for completion before then, and some, like our TeleFile Project, have already been completed.

Our TSM investments are putting a new infrastructure in place. A number of initiatives are currently underway with substantial long-term benefits. During the past 4 years, we have awarded contracts that upgrade computer center hardware, modernize operations, and allow us to utilize commercial expertise for software and hardware support, information engineering, telecommunications, and security. As of today, about \$1.7 billion in new equipment and software has been installed across the country.

Over the past several years, our technology modernization efforts have benefited from oversight of the General Accounting Office, the National Research Council, and from the Congress. On balance, we agree with the assessments that have been made. We take them seriously but, more importantly, we are doing something about them.

During the past year, management of the Tax Systems Modernization Program has changed significantly. Modernization management has been centralized under the Associate Commissioner for Modernization who has been given all of the responsibility and authority to manage and control consistently all systems development and reengineering efforts within the IRS. We also have a new Chief Information Officer, Arthur Gross, who will be working with the Associate Commissioner for Modernization, and he is joining us on April 15. He was most recently the deputy tax commissioner in New York, responsible for systems and processing in that State. He had led a broad modernization effort in that State for the past several years, and we look forward to having his counsel and expertise.

But a vital aspect of updating our technology is enhancing capabilities for safeguarding taxpayer information. We very much concur with the National Research Council's advice regarding the security of tax processing systems and the privacy of tax information. We are also relying heavily on private sector expertise to assist our technology modernization projects. We have developed a plan with the help of outside experts from other government agencies and the private sector to aggressively expand the work of our current integration support contractor. Under this new approach, the integration support contractor will assume as much of the systems integration role as our current contracts permit. This will include the architecture, systems engineering, integration, and test activities that are essential to successfully integrate the systems.

I would like to briefly touch on our 1996 budget and our fiscal year 1997 budget request. The fiscal year 1996 budget decrease we experienced posed a particular challenge to us since we require about \$200 million more each year for cost increases that are beyond our control, such as pay raises and rent increases, just to maintain the current level of operations. Our current budget allows us to run our basic operations and will not affect the processing of returns or the payment of refunds within our customer service standards of 40 days for paper filing and 21 days for electronic filing during this filing season.

But what we will not be able to accomplish again are the impressive results we achieved in the deficit reduction last year through our compliance initiative funding. We collected an additional \$803 million, more than double the \$331 million we had promised. We

have asked for an increase of \$647 million in our fiscal year 1997 budget. If instead our funding remains flat for 1997, we would experience a real reduction of between \$200 and \$400 million from our fiscal year 1996 funding level because, once again, we would be forced to absorb pay raises and increased costs, and we would be faced with difficult choices.

Like this year, we will continue to make it a priority to sustain our basic operations—processing more than 200 million tax returns and paying more than 90 million refunds. To accomplish this, however, we will, like we did last year, have to find alternative ways to serve taxpayers, and like this year, we will have to decrease the amount of face-to-face contact with taxpayers. While we will continue to process tax returns and pay refunds on time, service to taxpayers may suffer, and the amount of money collected next year could certainly be impacted. What is more difficult to measure, though, is the longer term impact of reductions on overall taxpayer compliance levels.

Madam Chairman, since becoming Commissioner almost 3 years ago, I have worked hard with our staff to try to improve our service. As I said earlier, I am pleased to report we have made significant progress. But despite that progress, we do recognize we still have much to do.

This concludes my prepared remarks, and we would certainly be happy to answer any questions you or your colleagues might have. [The prepared statement and attachments follow:]

STATEMENT OF MARGARET MILNER RICHARDSON COMMISSIONER OF INTERNAL REVENUE

BEFORE THE SUBCOMMITTEE ON OVERSIGHT HOUSE COMMITTEE ON WAYS AND MEANS MARCH 28, 1996

Madame Chairman and Distinguished Members of the Subcommittee:

With me today are Mike Dolan, Deputy Commissioner, Judy Van Alfen, Associate Commissioner for Modernization, Jim Donelson, Chief Taxpayer Service and Acting Chief Compliance Officer, and Tony Musick, Chief Financial Officer. We appreciate the opportunity to be here this morning to discuss the IRS's 1996 filling season, the results of the 1995 filling season, our efforts to modernize the tax administration system, and our FY 1997 budget request.

BACKGROUND

The IRS is in the financial services business — like a bank, a credit card company or an insurance company. We have the same basic processes — collecting money, processing data, maintaining customer accounts, and responding to account questions. Customers expect us to do this accurately and efficiently while maintaining the highest level of integrity and safeguarding their privacy.

Of course, there are some significant differences between our business and other financial services firms. We are also in the law enforcement business -- we are charged with administering and enforcing the tax laws of this country and combating financial crimes. Another significant difference is sheer volume. Compared to other financial services businesses, we have many more customers -- more than 200 million - and we handle much more money -- over a trillion dollars annually. We also operate under different constraints. We cannot modify our product line, and we do not choose our customers. And, of course, we cannot change the laws that govern our operations; they are written by others.

Despite these significant differences, like many financial services firms, what we seek is easier to describe than achieve. We want to provide customers with better service at lower cost. We want to use less paper and take full advantage of new technologies.

Some say that all businesses must learn how to "do more with less." Having thought a lot about how we can do our job better, I believe instead that we must devise innovative solutions to problems. That requires a combination of updated technology, improved business processes and a flexible organization -- the essence of modernization. We are modernizing the IRS on all three fronts.

We are in the midst of a major transition -- one that began several years ago and that will continue for many more years. As I discuss the filing season, our modernization efforts and the FY 1997 Budget Request, I would like to focus on what we are doing to make things easier for taxpayers and how we are doing our job more efficiently and effectively.

THE FILING SEASON - SERVING TAXPAYERS BETTER

The filing season begins with taxpayers filling out their tax returns and sending them, either through the mail or electronically, to the IRS. Since coming to the IRS almost three years ago, I have made it a top priority to improve our service to taxpayers. For most taxpayers, this means making communicating with us and filing returns as simple as possible. While we have yet to reach perfection, I believe in the last three years we have made progress in improving our service to taxpayers.

Making It Easier For Taxpayers

Taxpayers get frustrated when they call us and repeatedly get a busy signal. In the past three years we have answered more calls than ever before, but we still have taxpayers whose calls are not answered. We also have a growing number of taxpayers who visit or write us. For example, in 1993, we heard from taxpayers by phone, visits, or letters 73 million times. Last year, this number grew to 118 million. We expanded

access to our TeleTax recorded information line, which offers taped information on 148 topics all day every day, and refund information 16 hours a day, Monday through Friday. Last year, we answered 61 million TeleTax calls, over twice the 30 million answered in FY 1994. In FY 1995, our assistors also answered 39 million calls, an increase of more than 3 million over the prior year. We were able to serve more taxpayers by increasing productivity, expanding our hours of service, and installing call routing equipment that allows us to better manage our telephone workload. This technology allows us, among other things, to route calls to available assistors, who may be in the next county, next state or across the country. Taxpayers cannot tell the difference, but I hope they are aware of the improved service that results.

We are trying to answer taxpayer questions more quickly and more efficiently. In 1993, when I became Commissioner, not only were we unable to move calls around the country, but our assistors had access only to the taxpayer account information that was stored at the particular Service Center their office relied on. Technology has allowed us to remove this artificial geographic barrier and to enhance our ability to route calls automatically to personnel who have both the data and expertise needed to handle taxpayers' specific questions. Last year, we began providing nationwide access to certain taxpayer account information. As a result, we could resolve issues with a single call 75 percent of the time; and we are bringing more tax account information on-line.

Despite these improvements, not every taxpayer call is being answered and not all taxpayers who want to be served are being served. So we are tooking for other ways to meet taxpayers' information needs. At the outset, that means making the information we do provide so clear that taxpayers will not need to contact us.

We are also reducing the number of notices we send. We recently decided to eliminate notices that are now sent out about 46 million times a year. This is good for both the IRS (we save \$20 million in printing and postage and eliminate subsequent questions) and taxpayers who are relieved of the stress that can surface when an official looking letter from the IRS arrives in the mail. The notices we will continue to send are being rewritten in clearer language so that fewer recipients will require further explanation.

Technology is creating entirely new ways for taxpayers to get forms and information from us while reducing our postage and printing costs. Three years ago, taxpayers requesting a publication or form either had to call us to have the material mailed or they had to drop by one of our offices, their local post office or library. Not today — at least for many taxpayers. Taxpayers with access to a computer and modem can get forms and information anytime, anywhere in the world from FedWorld or our Web Site on the Internet. So far this year, millions of taxpayers have visited our Internet home page and an average of 25,000 forms a day are being downloaded. Forms are also available on CD-ROM, and, for the first time this year, through our automated "fax on demand" service.

We also sponsor VITA, the Volunteer Income Tax Assistance program, and TCE, Tax Counseling for the Elderly. With these two programs we also assist taxpayers by giving them the opportunity to have direct contact at more than 20,000 sites with volunteers trained by IRS personnel. Last year, more than 80,000 volunteers served almost 3.5 million taxpayers through both of these programs.

Easier Filing Methods

One of my goals has been to make it easier for taxpayers to file their tax returns. Current data suggests we're making progress on this front. <u>USA Today</u> recently reported on a poll that showed 52 percent of American taxpayers describe preparing their personal income taxes as easy. The Associated Press also recently reported on a poll that found that 50 percent of taxpayers insist the system is not too complicated for them personally. Nearly 40 percent of individual filers now use the easiest tax forms and more than 70 percent take the standard deduction.

What could be easier than filing by telephone? This filing season, 23 million taxpayers can file their tax returns with a phone call that takes less than ten minutes. As of March 22, 1996, 2.5 million taxpayers have already used this option. Three years ago, TeleFile was a pilot, and, just last year, when it was only available in 10 states, 680,000 returns were filed by telephone.

Beginning in FY 1994, taxpayers could file from their home computers through a third party transmitter. As of March 22, 1996, about 102,000 taxpayers had used this filing method, a significant increase from the 1,000 that filed through this service last year. Also this year, taxpayers in 31 states can satisfy both their federal and state tax obligations with a single electronic transmission, an increase from the 15 states where joint electronic filing was available in FY 1993. As of March 22, 1996, 2.7 million joint Fed/State returns have been filed — more than double the 1.1 million filed last year.

Electronic filing is not just limited to individuals. It is also available to businesses. Employers nationwide can now file their "Employer's Quarterly Tax Return" (Form 941) electronically, and almost 200,000 of these returns were processed for 1995. A TeleFile option for the simpler Form 941 returns is in the works.

Electronic filing offers advantages for both taxpayers and the IRS. Taxpayers file more accurate returns and get their refunds faster, and we receive more accurate information more quickly and eliminate the need for expensive paper processing.

Electronic commerce means more than just receiving returns electronically, it includes electronic payments as well. Most of the more than 90 million taxpayers getting refunds this year can have them directly deposited into their bank accounts. Taxpayers enjoy the safety and ease of direct deposit, and we save the expense of printing and mailing checks.

The TaxLink/Electronic Funds Transfer Payment System, used by employers to pay employment and other depository taxes electronically, is faster, easier and more accurate for tax collectors and taxpayers alike. In FY 1995, more than \$232 billion was deposited electronically, a major increase over the \$6.2 billion deposited in FY 1994.

Despite these new electronic options, the number of paper tax returns filed has increased since 1992. The good news is that the staff needed to process these returns has decreased, and in the past three years we have realized a productivity improvement of 12.4 percent in processing paper returns.

We are also using other ways to process tax payments. By directing many payments to bank lockboxes, whereby banks process payments and credit them to the Treasury Department, the deposit process has been accelerated and accuracy has been increased. In FY 1995, over \$125 billion went through the lockbox payment system, an increase of \$18 billion over the prior year.

Taxpayer Bill of Rights 2

Making it easier for taxpayers to both file their returns and communicate with us is only part of our effort to improve our relationships with taxpayers. During the last year, we have had the opportunity to work with you, Madame Chairman, and Members of this Subcommittee on the Taxpayer Bill Of Rights 2 (TBOR 2), and I was pleased to learn that the legislation was reported out of the Ways and Means Committee last week. When last year's efforts to enact TBOR 2 were not successful, working together with this Subcommittee, we administratively adopted the proposals that did not require Congressional action.

In January 1996, we published Announcement 96-5, entitled "Administrative Actions to Enhance Taxpayer Rights", to identify the TBOR 2 proposals that the IRS had either already adopted or could adopt administratively with no legislative action. The Announcement also included IRS regulatory and guidance projects that were similar in nature to the TBOR 2 proposals developed by the Committee.

As a result of this approach, the IRS has been able to provide taxpayers with some of the benefits of TBOR 2 until legislation can be enacted. For example, the IRS has already taken steps to strengthen the role of the Taxpayer Ombudsman in the IRS. The IRS has limited the number of IRS officials who can overrule a Taxpayer Assistance Order ("TAO") to only the Commissioner, Deputy Commissioner or Ombudsman. The IRS also clarified that the Ombudsman may issue a TAO to direct the IRS to pay a refund to a taxpayer to relieve a severe financial hardship and to stop a collection action to ensure review of whether the action is appropriate. The Ombudsman now also has greater power over the selection and evaluation of local Problem Resolution Officers. Finally, the Ombudsman is now required to prepare annual reports on the most serious taxpayer problems and suggest administrative and legislative solutions to those problems.

The IRS has underway two studies: one that is of particular interest to you, Madame Chairman, is on the unique problems faced by divorced and separated taxpayers under the current tax system; the other is on interest netting. To help us with these studies, we issued two Notices last week asking for public comment on issues that may arise in each of these situations.

The IRS has also issued guidance to Revenue Agents and Revenue Officers on new procedures to notify one spouse of actions taken against the other spouse to collect their joint taxes. On April 1, 1996, the IRS will put into place procedures to give taxpayers the right to appeal liens, levies and seizures proposed by the IRS. The IRS has already trained its personnel in this new Appeals procedure. And, we formalized our practice of requiring Regional Counsel to review designated summonses and limiting designated summonses to large (Coordinated Examination Program) cases, except in unique circumstances.

We also helped taxpayers by adopting a number of alternative dispute resolution initiatives, such as an Appeals mediation procedure, simultaneous Appeals/competent authority procedures and advance valuation of artworks for tax purposes. And we have reduced the paperwork burden on taxpayers by issuing a proposed Revenue Procedure on digital computer imaging for storing paper tax documents.

Madame Chairman, we look forward to continuing our work with you and the Members of this Subcommittee on one of my continuing priorities for me -- responsible tax administration while ensuring taxpayers' rights.

IMPROVING COMPLIANCE

Along with responsibility for serving taxpayers and providing easier filing methods; we must also enforce the tax laws — both civil and criminal. In addition to the improvements we have made in serving taxpayers, we are also improving our compliance operations.

Collection

For the three years prior to FY 1994, yield from our Collection operations had declined between 4 and 6 percent, partly because of a decline in productivity. In FY 1994, despite a 9.5 percent decrease in collection staffing, our Collection yield increased 3 percent. In FY 1995, the Collection yield rose by more than 7 percent -- a 10 percent increase since FY 1993.

One way we accomplished this increase was by recognizing that the earlier a debtor receives a request for payment, the greater the likelihood a debt will be paid. We are now requesting payments at the earliest possible time — by the Taxpayer Service function after account questions are resolved over the telephone, or at the close of an audit. In FY 1995, Examination secured payment of 64.2 percent of agreed tax assessments.

We have also expanded the use of an important tool — the installment agreement — to keep taxpayers in the system who cannot immediately pay all they owe. By increasing the installment agreement authority, we raised collections secured this way from \$2.28 billion in FY 1992 to \$5.4 billion in FY 1995.

As part of the effort to increase Collection yield, we are improving our knowledge of the composition of our accounts receivable inventory. When taxpayers either do not file returns or file inaccurate returns, we make assessments based on the tax laws irrespective of collection potential. We record these unpaid assessments as accounts receivable and keep them on our books for as long as they are <u>legally</u> collectible. While we attempt to collect these debts, some accounts are obviously uncollectible for various reasons, for example: the taxpayer has died or is insolvent. In other words, we know at the outset that some of these assessments will not be collected. But our gross accounts receivable does not include just unpaid taxes; it also includes the ever-increasing interest and penalties related to those unpaid taxes. In addition, the law prescribes how long we must keep accounts receivable on the books — 10 years. Thus, unlike private sector businesses, the IRS' accounts receivable cannot be written off even when we know that an account is not collectible.

Having a reliable estimate of delinquent taxes that are truly collectible is essential in enabling us to better manage our collection efforts.\(^1\) At the end of FY 1995, IRS gross accounts receivable inventory equaled \$200 billion of which 28.5% or \$56.9 billion reflected accrued interest and penalties. This is a \$29 billion increase over the FY 1994 balance. A significant portion of this growth was due to additional accruals of interest and penalties, the extension of time we are required to keep the receivables on the books from 6 to 10 years\(^2\), and to our non-filer program. The non-filer initiative was started in 1992 to encourage taxpayers who were not filing returns to get back into the system. While we realized the non-filer program would increase our accounts receivable since many were not filing because of an inability to pay their tax obligations in full, we believed it was more important to get taxpayers filing again and then assist them with ways to meet their obligations by expanding our installment agreement and offer in compromise programs.

The gross accounts receivable inventory for compliance purposes is divided into two components: Currently Not Collectible and Active Accounts Receivable.

- ♦ <u>Currently Not Collectible</u> (CNC) are accounts that a collection employee has determined a taxpayer cannot currently pay. Accounts in this category are periodically monitored, and if a taxpayer is able to pay within the statutory 10-year period, the account will be collected. At the end of FY 1995, \$87.4 billion³ -- or nearly half the gross receivable total -- is classified CNC. Of this amount:
 - 37.6% (\$32.8 billion) is accrued penalties and interest.

 Over 85% (\$75 billion) is not collectible because it is owed by defunct.
 - Over 85% (\$75 billion) is not collectible because it is owed by defunct corporations; taxpayers adjudicated bankrupt; hardships; or the inability to locate the taxpayer.
- Active Accounts Receivable are accounts that are potentially collectible and that continue to be pursued through activities ranging from notices and telephone contacts, to installment agreements and offers-in-compromise, and, ultimately, liens, levies and seizures. At the end of FY 1995, \$88.8 billion⁴ is classified in the Active Accounts Receivable category. Of this amount:
 - 41% (\$36.6 billion) the largest portion of the active account, has been assigned for enforcement action;
 - 22% (\$19.1 billion) of the inventory is either awaiting adjudication by a court or acceptance of an offer-in-compromise;

The GAO has reported and we agree that financial receivables are those that the taxpayer has agreed to or the courts have set, and that from this amount we should estimate a net realizable value of accounts that are potentially collectible. To accomplish this, we have been working with GAO on a better way to represent these amounts on our financial statements. Starting with the FY 1995 statements, we will classify amounts as financial receivables (the amounts that taxpayers have agreed to pay or courts have set), financial write-offs (financial receivables that have subsequently been determined to have no further collection potential), and compliance assessments (those amounts that taxpayers have not agreed to or on which the courts have not acted). These amounts will be audited by GAO.

FY 1995 was the last year in which the accounts receivable inventory would automatically increase because of the extension of time we must keep accounts on the books from 6 to 10 years.

Not included in this balance are Trust Fund Recovery Penalty assessments of \$6.3 billion that are potentially duplicative.

Not included in this balance are Trust Fund Recovery Penalty assessments of \$8.7 billion that are potentially duplicative and Resolution Trust Corporation assessments of \$9.0 billion that have not yet moved to Currently Not Collectible.

- 13% (\$11.7 billion) is currently being collected by sending notices to taxpayers;
- 13% (\$11.2 billion) is being collected through installment agreements;
- 2% (\$1.6 billion) is lower value cases that will be collected through systemic monitoring, such as refund offsets and yearly notices to taxpayers.

Included in these numbers is \$18.5 billion of accrued penalties and interest.

The improvements we have made in the collection process, that I described earlier, not only helped us increase our Collection yield over the last several years but these improvements are also helping us manage the accounts receivable inventory. And we will continue to increase our Collection yield through the use of technology in our field collection operation. In FY 1995, the Integrated Collection System (ICS), which provides on-line access to current account information to our revenue officers, was used in two districts. In these two districts, productivity increased more than 30 percent. This productivity translates directly to additional tax collections "in the bank." In FY 1996, seven additional districts will be using ICS, and it should be fully installed nationwide in FY 1999. Through FY 2004 this initiative alone will result in an additional \$2 billion in revenue collected.

Our FY 1996 appropriation required us to conduct a pilot project to contract out a part of our collection activity. On March 5, we issued the Request for Proposals for the pilot. We intend to award up to five contracts and initially deliver approximately 125,000 cases relating to taxpayers who are delinquent in paying their tax obligations. Payments under the contracts will be performance based; however, they will not be contingency fee contracts. Contractors and their employees will be subject to the disclosure laws, the Privacy Act, the Taxpayer Bill of Rights and applicable sections of the Fair Debt Collection Practices Act. Information provided to contractors by the IRS or collected by contractors from taxpayers cannot be used for any purposes other than fulfillment of the requirements for the awarded contract and cannot be sold or otherwise transferred by the contractor.

Examination

Our compliance program is not only about our collection activities or our traditional efforts to audit taxpayers. We continue to refine our compliance programs by developing new compliance approaches. Through programs like Advanced Issue Resolution and Advance Pricing Agreements, we are stressing early resolution of issues — a practice that saves everyone money. With Advanced Issue Resolution, we can accelerate the collection of the largest corporate assessments by resolving recurring issues and simply carrying the resolution forward to later years. Reducing the number of issues under examination is a cost savings for both taxpayers and for us. Under this procedure, taxpayers have agreed to pay about \$1.1 billion during FY 1993 - FY 1995.

The Advance Pricing Agreement program was developed as a new way to resolve intercompany pricing issues. As a cooperative process, both taxpayers and the government derive significant benefits. Taxpayers welcome certainty in a complex area and avoid a lengthy debate with the IRS. At the end of FY 1995, we had entered into 22 Advance Pricing Agreements, more than the number that had been completed in all the previous years of the program combined. Everything this year points to even higher levels of production, and we currently have 109 Advance Pricing Agreements in process.

We are also responding to taxpayer concerns, for example, those raised by the small business community. I participated in numerous town meetings with small business owners and the White House Conference on Small Business, where small business owners described one of their primary concerns as the worker classification issue -- whether workers should be classified as employees or independent contractors. We are doing what we can to respond to these concerns by revising our training

materials, offering an optional settlement program, and providing early referral of employment tax issues to Appeals.

As I stated earlier, we are finding ways to reduce the amount of paper small business owners have to store, by developing rules that permit taxpayers to use computer imaging systems to replace the paper records now required. We also raised the threshold for meals and entertainment expense documentation from \$25 to \$75, reducing the number of receipts that businesses have to retain for tax purposes.

Working with private industry, we are responding to the increased sophistication of transactions in the financial world and specialization in the business community. We have cooperatively developed Market Segment Specialization Program guidelines, focusing on the practical problems of examining a market segment and identifying particular issues of interest to the IRS. In turn, taxpayers are better informed about the non-compliance in that market and about the IRS's position on that issue. Through January 1996, we had issued 27 Market Segment guidelines covering 23 markets.

Criminal Investigation

In addition to our compliance activities in examination and collection, our Criminal Investigation Division (CI) investigates complex financial transactions of taxpayers, looking for criminal tax violations and money laundering. CI is also actively identifying and investigating new and emerging areas of tax fraud that impact on the economy and prey on honest citizens. These areas include bankruptcy, health care, insurance, motor fuels excise taxes and telemarketing. I would like to share with you the results of our efforts in two of these areas.

Health care fraud is found in a wide range of schemes including home health care, false claims/billings, rolling labs, transportation services, and kickbacks/bribes. While most of this fraud is investigated by the FBI and U.S. Postal Service using the mail fraud statutes, CI investigates them as tax violations if the income is not reported or underreported, the expenses are overstated, or the tax return is otherwise false. CI's ability to bring tax charges coupled with its expertise in money laundering investigations is often essential to the successful prosecution of health care fraud cases. In the last three fiscal years, CI initiated 344 investigations; recommended 168 prosecutions, and obtained 111 convictions in this area.

Health Care Convictions: The CEO of Integrated Systems Incorporated, John P. Milne, was sentenced on October 7, 1995 to 2 years in prison, 5 years' probation and ordered to make restitution of \$1.4 million and pay IRS \$339,780 in back taxes and penalties. Milne plead guilty to charges of tax fraud, making false claims against the U.S., making false statements to banks and mail fraud. His health care scheme involved negotiating reduced medical rates with hospitals, not disclosing the amount of the discounts to his clients and filing for full payment, then keeping the difference for himself. In this multi-agency investigation, CI's financial investigative expertise not only uncovered income tax evasion but also documented a health care scheme which had defrauded numerous health care providers. This evidence provided the proof which enabled the court to demand the \$1.4 million in restitution.

In another Health Care Fraud investigation, Jeanette G. Garrison, owner of Healthmaster Home Health Care in Macon, Georgia, was sentenced on October 30, 1995, to 33 months imprisonment, three years of supervised release and 200 hours of community service on federal charges based on criminal events that transpired while she controlled Healthmaster. She was also ordered to pay \$2.5 million in fines and \$16.5 million in restitution. Garrison plead guilty to one count of conspiracy to defraud the United States and nine counts of false statements. She conspired to defraud the Medicare Program of millions of dollars by the submission of fraudulent cost reports for reimbursement to the Medicare fiscal intermediary between 1989 and 1993. CI special agents, working with the Georgia Bureau of Investigation and the FBI, combed through hundreds of billing records, financial records and invoices to meticulously document and prove this conspiracy against the government.

<u>Telemarketing Convictions</u>. Another growing area of criminal activity is telemarketing fraud. Fraudsters use telephonic and wire communications to fraudulently promote, solicit, or market products and/or services. Monies obtained through telemarketing solicitations are then used to enrich the promoters of these

frauds. Because telemarketing fraud often crosses state borders, federal and state law enforcement agencies must work together to successfully prosecute the cases. From FY 1993 through FY 1995, 133 telemarketing investigations were initiated; 102 prosecutions recommended; and 86 convictions were obtained.

In September 1994, the Western New York Telemarketing Task Force, including agents from CI, uncovered one of the largest telemarketing cases in the Western New York area. Four corporations and 13 individuals were indicted and charged with operating a telemarketing scam that bilked hundreds of victims, mostly senior citizens throughout the United States and Canada; out of millions of dollars. Three of the individuals indicted were charged with Title 26 Section 7211, having to do with making false statements to purchasers relating to tax, a seldom used statute that can effectively be used in telemarketing fraud investigations. This statute makes it a crime for anyone to solicit payment for the sale or lease of an "article" and falsely state, orally or in writing, that any part of the payment, both sale or lease, is to pay federal tax. The Assistant United States Attorney working with the task force has utilized this statute to facilitate plea agreements for individuals cooperating with the government.

REVENUE PROTECTION

The 1995 Filing Season

Last year, I told you, Madame Chairman, and the Members of this Subcommittee that our biggest challenge was to put in place better methods to protect the tax revenue from those who improperly attempted to claim refunds. We accomplished this by use both technology and a different approach to compliance to stop improper refund claims. We used numerous systemic verifications including increased checks of social security numbers. We established new criteria for Electronic Return Originators (EROs), including fingerprint and credit checks, and increased monitoring of EROs. We delayed 7.4 million refunds -- or about 8 percent -- and increased compliance resources devoted to checking these refunds for accuracy.

I am pleased to report that our efforts were successful. One and a half million fewer dependents were claimed, and there were approximately 100,000 fewer earned income tax credit (EITC) claims than in the previous year. CI identified more than 4,100 refund schemes involving almost 60,000 returns, and prevented the issuance of \$78 million in refunds. Last year, we initiated 491 criminal investigations involving refund schemes and return preparers. Prosecution recommendations were forwarded on 404 cases, and we obtained indictments of 329 individuals and convictions in 300 cases. Eighty-two percent of the convictions resulted in prison sentences averaging over 18 months.

Through pre-refund examinations, we prevented the issuance of an additional \$425 million in refunds. We visited over 6,600 ERCs, issued 707 warnings for violations and suspended 287 EROs. Thus, last year, direct compliance efforts prevented \$503 million in improper refunds from being issued. In fact, in its August, 1995 Economic and Budget Outlook update, the Congressional Budget Office decreased anticipated EITC outlays by \$2-\$3 billion a year over seven years, stating, "EITC spending has been lower than expected this year, possibly as a result of a recent crackdown by the IRS"

The 1996 Filing Season

This filing season we are continuing to devote substantial resources to detecting and stopping improper and fraudulent claims for refund. We have refined our efforts to address improper refund claims based on what we learned last year. We are still requiring EROs to meet suitability standards, and we are continuing our ERO monitoring efforts. We also continue to look carefully for suspicious returns and check social security numbers. However, we anticipate far fewer delayed refunds this year as taxpayers now understand the importance of filing returns with correct social security numbers. In fact, so far this year, the number of social security number problems on electronically filed returns have decreased by more than 33 percent from last year.

THE 1995 COMPLIANCE INITIATIVE

⁵ These totals include cases initiated in the prior fiscal year.

In FY 1995, we received the first year of funding for a five-year plan to improve compliance with the dollars raised going directly to deficit reduction. Our FY 1995 compliance accomplishments were impressive. We closed an additional 676,000 examinations and audit coverage increased from 1.08 percent to 1.63 percent in FY 1995. We issued an additional 86,000 determination letters for exempt organizations and employee plans. And, we collected an additional \$803 million directly attributed to the compliance initiative, far exceeding the \$331 million we promised. Overall, with a five year investment of \$2 billion, we had conservatively committed to raise \$9.2 billion in additional revenue. While the loss of the Compliance Initiative impacts federal revenues, an important point that may be overlooked is the corresponding loss in state revenues, because adjustments made during our compliance efforts are used by the states to make corresponding state adjustments without the need for a state audit. MODERNIZING TAX ADMINISTRATION

Modernizing our current tax administration system requires an ongoing effort to update technology, to improve business processes, and to develop a flexible organization. These three items are the essence of modernization, and the IRS is modernizing on all these fronts.

Updating Technology

The IRS has undertaken a series of technology modernization projects -collectively referred to as the Tax Systems Modernization (TSM) Program -- to
modernize its information systems. Originally designed in 1988 as a technology
replacement program, the TSM Program has been redesigned in order to assist the IRS
in realizing its Business Vision in the year 2001, although many of the projects are
scheduled for completion before then and some projects have already been completed.

The TSM Program will enable the IRS to move from paper and more labor intensive processes to an electronic environment, enabling it to more effectively accomplish its mission, which is to collect the proper amount of revenue at the least cost and in a way that imposes the least burden on taxpayers. The TSM Program projects are designed to provide more accurate and timely taxpayer account information to enhance the IRS's customer service and compliance efforts while reducing the number of contacts between taxpayers and the IRS.

Tax administration is dependent on the receipt, analysis and utilization of information submitted by taxpayers and other sources, e.g., employers and other payors. The TSM Program projects fall into three broad categories: those that will facilitate capture of data more effectively and efficiently, those that will improve our ability to store and analyze data, and those that will distribute and use the data to improve compliance and customer service.

All of these TSM Program systems will be supported by a common infrastructure and related support services. Infrastructure components include various telecommunication components, systems administration and operational support systems, security, operating and data base management systems, and an integrated environment for systems testing, configuration control and software distribution. All of the TSM Program systems will be built to assure that confidential taxpayer information will be protected from unauthorized access and use.

Although we recognize that a great deal of work remains to be done in updating our technology, progress has already been made. As I discussed earlier, as a result of technology, taxpayers have more options for filing their returns and paying their taxes than ever before through such programs as TeleFile and Tax Link/EFTPS. Taxpayers are also able to get information from the IRS in many different ways through services like our Internet Home Page and the "fax on demand" service. We also are using technology to answer more of taxpayers' questions the first time they call by providing our employees with access to more account information. Also as I discussed earlier, technology is changing the way our compliance operations work, through such programs as the Integrated Collection System that has improved our collection productivity and the Electronic Fraud Detection System (EFDS), an automated fraud detection system that provides on-line research capabilities which are used to validate

claims and identify multi-return schemes. EFDS was used last filing season and continues to be used to stop improper claims for refund.

We are also putting a new infrastructure in place. A number of initiatives are currently underway with substantial long-term benefits. One of the keys to building a world class information management system is to make appropriate investments in the technical infrastructure -- hardware, software applications and telecommunications. During the past four years, we have awarded contracts that upgrade computer center hardware, modernize operations and allow us to utilize commercial expertise for software and hardware support, information engineering, telecommunications, and security. As of today, \$1.7 billion in new equipment and software has been installed across the country.

Over the past several years, our technology modernization efforts have benefitted from oversight from the General Accounting Office (GAO), the National Research Council (NRC), and the Congress. On balance, we agree with the assessments in the GAO and NRC reports. We take them very seriously, but more importantly, we are doing something about them. The criticisms of our technology modernization efforts can be categorized as follows:

- Accountability and Management the need to centralize management of technology modernization in one office;
- Managing Information Technology Investments the need to better prioritize technology investments;
- Software Development the need to develop procedures that ensure the development of high quality software;
- 4.) Technical Infrastructure the need to develop a comprehensive blue print of the infrastructure:
- Electronic Filing the need to develop a comprehensive strategy for electronic filing.

During the past year, management of the TSM Program has changed significantly. Modernization management has been centralized under the Associate Commissioner for Modernization, who has been given the responsibility and authority to manage and control consistently all systems development and reengineering efforts within the IRS. In September 1995, the Associate Commissioner for Modernization became responsible for the formulation, allocation, and management of all information systems resources. This was an important step in the process of ensuring that all information systems resources are used in accordance with the IRS's strategic objectives.

The Modernization Management Partnership (MMP), a management structure which includes me and the Assistant Secretary for Management/Chief Financial Officer as well as other senior IRS and Treasury Department officials, was established last year to identify and address important technology modernization issues at the Departmental level. The Deputy Secretary has taken action to strengthen the MMP so that it will function more like a board of directors, with day-to-day responsibility for the TSM Program remaining with the IRS.

In response to criticisms about the lack of a clear plan for implementing the TSM program and an adequate analytical process for establishing investment priorities, we put in place an investment review discipline to select, control, and evaluate investment decisions based on GAO best practices. An integral part of this discipline is the Investment Review Board, established in October 1995, chaired by the Associate Commissioner for Modernization, which is responsible for assessing and prioritizing information systems investments, monitoring progress of spending against plans and evaluating the results of those investments. In addition, we recently reexamined our entire modernization program to ensure that information technology investments produce the maximum business value. Based on the results of this review, we are

establishing achievable and manageable priorities for the next five years. We also have a new Chief Information Officer (CIO), Mr. Arthur Gross, who will work with the Associate Commissioner for Modernization. He plans to begin work on April 15th. Mr. Gross was previously the Deputy Tax Commissioner responsible for systems and processing for New York. In that position, he led a broad tax modernization effort for the state during the past several years.

We recognize that our software development capabilities as well as those of our contractors must be improved, and we have taken positive steps in that direction. Our contractors are required to perform at a level that produces high quality software. We are also improving our own systems development capabilities to ensure that the TSM Program is developed consistent with modern processes and standards. Specifically, we are enhancing our system architecture and test plans to provide the critical road maps for developing and implementing fully integrated systems.

A vital aspect of updating our technology is enhancing our capabilities for safeguarding taxpayer information. IRS concurs with NRC's advice regarding the security of tax processing systems and the privacy of tax information. Information systems security and integrity has been and will continue to be one of the highest priorities for the Internal Revenue Service. I have issued two policy statements - the Declaration of Privacy Principles in 1994 and the IRS Information Security Policy in 1995. Based on a similar recommendation from GAO, we recently completed a Security Concepts of Operation which provides an IRS users' view of the security capabilities in the TSM Program systems which will protect taxpayer data from unauthorized access or disclosure. Security will also be an integral part of the information systems architecture.

We are also relying heavily on private sector expertise to assist in our technology modernization projects. To meet the significant challenges of such a large-scale effort, we have the ability to access private sector skills and experience through contracts with the IRS' Federally Funded Research and Development Center (FFRDC), the Integration Support Contract (ISC) and the Treasury Information Processing Support Services (TIPSS) procurement.

We have developed a plan with the help of outside experts from other governmental agencies and the private sector to aggressively expand the work of the current Integration Support Contractor. Under this new approach, the Integration Support Contractor will assume as much of the systems integration role as the existing contract permits. This will include the architecture, systems engineering, integration and test activities that are essential to successfully integrate the systems. IRS will continue to make the decision on final design and development. Production software development work is and will be contracted out.

in addition, the newly-instituted Presidential Technology Team will bring experienced technical professionals from across government to work on technology modernization. The IRS, in fact, worked with OMB to create this concept and will be the first beneficiary of its effort.

We are working to increase electronic filing options — like TeleFile — and payment options — like TaxLink/EFTPS. To accomplish this, we are developing a comprehensive strategy for electronic filing. We are also taking a hard look at how we currently receive returns from taxpayers, and studying ways to reengineer the entire process.

Improving Business Processes

Along with updating our technology, we are also improving our business processes to make them more efficient and effective. For instance, in 1994, the IRS volunteered to serve as a pilot agency for the Government Performance and Results Act (GPRA). GPRA requires agencies to set goals, establish measures, and report on their accomplishments, as well as integrate performance measures into the budget and strategic planning process. Our participation as a GPRA pilot agency has helped us improve our budget, strategic planning and evaluation processes. This year as part of our GPRA responsibilities, we are integrating our planning, budgeting and assessment processes and will complete the first draft of an Integrated Strategic Plan and Budget next month.

We have also reengineered many of our administrative processes to be less labor intensive and to take advantage of available technology. Through an innovation we call "Employee Express," our employees can now manage their own employment accounts, directly changing their tax withholding, savings bond allotments, Thrift Savings Plan contributions and other personnel actions through the use of a touch tone telephone or centrally located kiosks. In the past, these employees filled out forms and sent them to their personnel offices where other employees made the changes to the payroll system.

We have also fully automated our travel accounting system, and this system was showcased as an example of a government agency implementing the best practices of the private sector at a March 8 hearing on Government-Wide Travel Management before the Senate Committee on Governmental Affairs, Subcommittee on Oversight of Government Management and the District of Columbia. In reengineering this process, we were able to eliminate all but two steps: a certification of the claim by the traveler and the approval by the supervisor. Employees are reimbursed in about five to seven days. In FY 1995, we processed 83 percent of our travel vouchers or about 325,000 vouchers electronically.

We have also changed our business processes so that we can serve taxpayers better. For example, as I stated earlier, we have eliminated certain notices we send to taxpayers, and we are in the process of reviewing the remaining notices to make them more understandable. We are providing information to taxpayers in new ways, for instance through our Internet Home Page. Also, as I discussed earlier, in our compliance efforts, we are rethinking the way we accomplish our mission and putting more emphasis on working with taxpayers on difficult issues with such tools as alternate dispute resolution and Market Segment guidance. We will continue reviewing our processes and make changes that will make us more efficient and make it easier for taxpayers to deal with us.

Business Structure

The remaining part of our modernization efforts involves realigning our organizational structure to make it more efficient and effective. We are concentrating on the work currently performed by Service Centers, Computing Centers, Automated Collection and Taxpayer Service telephone sites, and district offices. During FY 1994 and 1995, we consolidated our 70 phone and correspondence operations into 34 and will consolidate ultimately in 23 Customer Service Centers. We will soon be operating with three Computing Centers responsible for centralized mainframe computing instead of the twelve operating today.

On October 1, 1995, the number of regions was reduced from seven to four, the staff in the remaining four regions was reduced, and we began to consolidate from 63 district headquarters to 33 offices. The district consolidations are ahead of schedule and will be completed by October 1. In the summer of 1993, we decreased the number of locations providing administrative support services from more than 80 to 24; three more will be eliminated this year. Despite this 38 percent decrease in support services managers and an overall decrease of 20 percent of support services employees, the job is getting done.

FY 1997 BUDGET REQUEST -- FY 1996 BUDGET

I would like to discuss briefly the IRS's FY 1996 Budget and our FY 1997 Budget request. I have included as an Appendix a summary of the FY 1997 request. As you know, the IRS submitted a budget request for FY 1996 of \$8.2 billion, and received an appropriation of \$7.348 billion, less than the IRS's \$7.483 billion FY 1995 appropriation. This decrease posed a particular challenge to us since we require about \$200 million more each year for cost increases beyond our control, such as pay raises and rent increases, just to maintain our current level of operations. Our FY 1996 budget allows us to run our basic operations and will not affect the processing of returns or the payment of refunds within our customer service standards of 40 days for paper filing and 21 days for electronic filing during the 1996 filing season.

What we will not be able to accomplish again are the impressive results we achieved in deficit reduction last year through our Compliance Initiative funding. Based

on our current FY 1996 funding, we will not be able to perform some 290,000 examinations, with a potential loss in revenue collection of \$324.8 million. Examinations through our information reporting program will also be affected. For example, reductions in our document matching program and our substitute for return program, an effective means of addressing non-filing, could result in a potential loss of \$417 million in collected revenue.

Madame Chairman, in your invitation letter you asked us to try to anticipate the effect on IRS operations if the President and Congress approve an FY 1997 appropriation level which is no greater than the FY 1996 level. Flat funding really means a \$200 to \$400 million reduction from our FY 1996 funding level because we must absorb pay raises and increased costs. As a result, we would be faced with difficult choices.

Like this year, we will make it a priority to sustain our basic operations — processing more than 200 million tax returns and paying more than 90 million refunds. To accomplish this, however, we will, like we did this year, have to find alternate ways to serve taxpayers, and, like this year, we will have to decrease the amount of face to face contact with taxpayers. The number of audits will decrease, with a corresponding decrease in the audit coverage rate, and some of our collection operations may have to be curtailed. While we will continue to process tax returns and pay refunds on time, service to taxpayers may suffer and the amount of money collected next year could be impacted. But what is more difficult to measure is the longer term impact of reductions on overall taxpayer compliance levels.

CONCLUSION

Since becoming Commissioner almost three years ago, I have worked hard to improve our service. I am pleased to report progress. Despite that progress, we recognize that we still have much to do.

FY 1997 BUDGET IN BRIEF

Internal Revenue Service

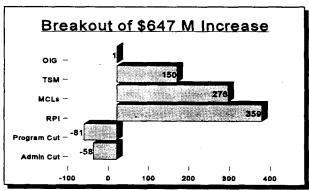

I. Introduction-A Three-Part Investment in Tax Administration

or FY 1997, the Internal Revenue Service has proposed a series of investments that will substantially reduce the burden on the American taxpayer, enhance compliance, and maximize revenue collections. The Service is submitting budget proposals for FY 1997 that total \$7.995 Billion and 109,050 FTE. The total budget request represents an increase of \$647 Million and 2,699 FTE over the FY 1996 operating level. Our FY 1997 budget consists of three equally significant and critical investment components:

- A. The Tax Systems Modernization (TSM) Program. IRS is in the financial services business. The Service performs the same basic functions—collecting money, processing data, maintaining customer accounts, and responding to customer questions. Its 200 million customers expect it to do these activities accurately and efficiently, while maintaining the highest level of integrity and safeguarding their privacy. The TSM Program projects are designed to provide customers with better, faster service as well as enhance compliance. IRS has requested \$150 Million in additional TSM Program funding in FY 1997 for four tax systems modernization investments. These investments will finance immediate and tangible improvements in our service to taxpayers, with emphasis on electronic receipt of tax returns and payments, extensive data capture, streamlined storage and retrieval of data, and early identification of issues with as many as possible resolved with a single telephone call. In response to guidance received from Congress, the National Research Council and GAO, the Service will extensively use contractor support in developing and integrating modernized operational systems.
- B. Revenue Protection Initiative. The Service is requesting \$359 Million and 3,820 FTE for a Revenue Protection Initiative (RPI) that is estimated to generate \$1.5 Billion in FY 1997—a return on investment of better than 4 to 1. During the outyears—FY 1999 and beyond, the increase to enforcement revenues from this investment will exceed \$3 Billion annually. All staffing increases will be placed in call sites and service center based enforcement programs. Not only do these telephone and correspondence activities represent highly cost effective investments that emphasize up-front treatments and early contacts with taxpayers, they are also less intrusive and burdensome than traditional face-to-face enforcement actions that rely on revenue agent and revenue officer involvement. In reviewing the proposed FY 1997 initiative, Congress should consider the proven record of delivering the revenue promised in connection

with the FY 1995 Compliance Initiative. In FY 1995, the IRS received the first year of funding for what had been a five year plan to improve compliance with the dollars collected going directly to deficit reduction. The FY 1995 accomplishments were impressive. Over \$800 Million was collected, far exceeding the \$331 Million promised. While the loss of the Compliance Initiative impacts federal revenues, an important point that may be overlooked is the loss in state revenues, because adjustments made during IRS compliance efforts are used by the states to make corresponding state adjustments without the need for a state audit.

C. Maintaining Current Levels of Service. The Service needs \$276 Million just to maintain its FY 1996 program levels in FY 1997. These additional resources, which are offset by administrative and program reductions totaling \$139 Million, are needed to cover the expected increase in the number of returns filed. The resources also are used to pay for unavoidable staffing related expenses, such as pay increases. Finally, the additional resources are needed for inflationary increases to non-staffing related expenses, including postage, printing, and essential contracts, such as those for National Archives and Records Administration and Financial Management Services. These costs represent bills the IRS does not control, but must pay. Without these resources, the Service will be forced to reduce programs, or to shortchange funds intended for training, supplies, enforcement travel and essential enforcement expenses.

Total Decreases: \$139 Million

Total Increases: \$786 Million

Note: A detailed breakout of increases and decreases is contained in Appendix A-Budget Overview.

II. Mission and Objectives-Collecting Revenue to Finance the Government

he mission of the Internal Revenue Service is to collect the proper amount of tax revenue at the least cost; serve the public by continually improving the quality of our products and services; and perform in a manner warranting the highest degree of public confidence in our integrity, efficiency and fairness. To achieve its mission, the Service has identified three strategic objectives.

- A. Increase Voluntary Compliance. IRS encourages and assists taxpayers to file timely and accurate returns and pay on time. When taxpayers do not comply, appropriate enforcement action needs to be taken.
- B. Maximize Customer Satisfaction and Reduce Burden. The Service works to reduce the time and expense to taxpayers, tax professionals, and others in complying with the tax laws, while increasing their satisfaction with the tax system.
- C. Achieve Quality-driven Productivity through Systems Improvements and Employee Development. IRS is using systems improvement tools and techniques to develop a highly-trained work force.

III. Performance Measures Hierarchy - Results-Based Budgeting

s. one of the country's largest financial services organizations, the IRS needs to be a leader in managing its own finances. The IRS volunteered to serve as a pilot for the Government Performance and Results Act (GPRA), which requires agencies to: formulate strategic plans that articulate their mission, goals, and objectives; develop annual performance plans that spell out annual targets against the strategic goals; measure program performance against their strategic goals and objectives; and hold themselves accountable for achieving results.

As part of its GPRA responsibilities, and to integrate its planning, budgeting and assessment processes, IRS has developed a hierarchy of performance measures. At the top of this hierarchy of measures is a barometer of overall Service performance. This indicator compares the amount of revenue collected during a fiscal year, minus the IRS costs of collecting that revenue and minus the monetized value of the burden hours placed on taxpayers in meeting their tax obligations, with the amount of revenue that would have been collected if all taxpayers had paid their full tax liability.

The second level of the measures hierarchy contains measures for the Service's three strategic objectives. Also at this level are measures that require the interrelated efforts of multiple functions. The mission and objective level measures and performance targets for FY 1997 are shown in the following table. The multi-functional measures can be found in Appendix B-Performance Measures Hierarchy.

Finally, the third level of the measures hierarchy contains the measures for the Service's 18 budget activities. These 18 activities represent the Service's various functional components, each activity contributes toward the achievement of the Service's mission and objectives. Details on these measures are also shown in Appendix B--Performance Measures Hierarchy.

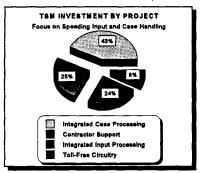

IRS PERFORMANCE MEASURESMI	ISSION AN	п овјес	TIVES
Performance Measures:	FY 95	FY 96	FY 97
Mission. Collect the proper amount of tax	evenue al l	he east co	
Revenue Collected - (Budget+Burden) Total True Tax Liability	.7766	.7825	.7887
Objective: Increase Compliance, rockie

Objective: Achieve Quality-Driven Product	vity. 15 ans		
Revenue Collected per Dollar of IRS Budget	\$172	\$185	\$181

IV. The Tax Systems Modernization Program

he Service is requesting \$150 Million for a series of Tax Systems Modernization Program investments. These investments will finance immediate and tangible improvements in IRS' service to taxpayers. The additional resources will be used for the following projects:

A. Integrated Case Processing System/Integrated Collection System. With the resources provided by this initiative, IRS employees will be provided with greater access to information and the ability to resolve issues over the telephone by installing 3,500 Integrated Case Processing workstations, 22% of the total workstations required. The Service will also

automate many of the activities of field revenue officers, by implementing the Integrated

Collection System in 20 of 33 districts, providing access to 60% of revenue officers. Finally, IRS will modernize telecommunications infrastructure and data and voice connectivity by funding 14 additional sites for universal wiring, approximately 15% of the total universal wiring requirements.

Chart breaks out \$150 M TSM Proposed Increase.

B. Contractor Support. With the resources provided by this initiative, we will provide funding for contractor support in developing and integrating modernized operational systems, in response to guidance received from Congress, the National Research Council and GAO. The Service will use its major integrator to perform the necessary architecture, systems engineering and design tasks so that specification of hardware, software, and telecommunications products will lead to a fully functioning system. The integrator also will play a major role in the design and development of the

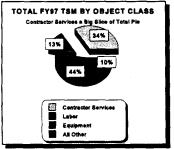

Chart breaks out total \$850 M TSM Request.

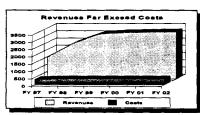

Workload Management System, which will provide the IRS with a corporate system to track and prioritize workload.

C. Integrated Input Processing System. With the resources provided by this initiative, the universe of taxpayers that can file electronically by telephone will be expanded through funding toll free circuitry costs associated with expanding Telefile.

D. Toll Free Circuitry. With the resources provided by this initiative, the Service will resolve many more taxpayer inquiries through a combination of increased on-line assistance and self service applications, using Voice Response Units, which permit callers to route themselves to interactive systems or to specially trained IRS assistors.

V. Revenue Protection Initiative-A Modest Investment with a Big Return

the Revenue Protection Initiative (RPI) is a continuation of the Service's long term strategy to improve voluntary compliance. Consistent with the Service's business vision, the emphasis is on resolving issues by telephone and avoiding more costly face to face contacts with taxpayers. The return on investment is significant—4 to 1 in FY 1997 and 7 to 1 from FY 1997 to FY 2002.

Total Revenues: \$16B

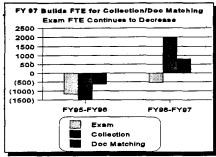

Total Costs: \$2.4B

The remaining one-third of the total program is for three programs. First, Document Matching increases will finance enhancements to the Underreporter Program, which compares data from information returns with filed returns, and also to the Substitute For Return Program, which creates returns for taxpayers who fail to file returns. Second, Examination increases will fund more correspondence audits by service center employees, which will increase the audit coverage rate from 1.4% to 1.5% while expanding revenues.

RPI involves four major programs. Collection represents about two thirds of the total program increase. Staffing for Automated Collection System call site and Service Center Collection Branch programs will generate more than \$1.25 Billion in revenue in FY 1997. Beyond these increases, the Collection component includes 240 FTE for the Individual Tax Identification Numbering System (ITIN). Scheduled for implementation in the Philadelphia Service Center in July, 1996, ITIN will—during its first year in operation—generate valid TINs for over one million taxpayers (mostly non-resident aliens) who do not have social security numbers.

FY 97 I	REVENUE	INITIAT	TVE
Program	FTE	\$(000)	Revenue
Collection	2,490	\$263	\$1,265
Exam-SC	300	\$ 35	\$88
CI(QRDT)	230	\$2 1	
Doc Match	800	\$ 40	\$136
TOTAL	3,820	\$359	\$1,489

FY 97 Benefit Cost Ratio is 4 to 1.

Includes Base and Increases, Exam excludes Appeals

be used for Questionable Refund Detection Teams (QRDT), aimed at protecting revenues by prosecuting individuals involved in large scale fraud schemes.

Third, the Criminal Investigation increase will

As shown in the chart on the left, the Service's revenue producing activities were reduced in FY 1996. This initiative would restore the reductions to Collection and Document Matching and in the process bring in additional resources and reduce the Federal deficit. The total resources for Examination,

which absorbed a big share of the program reduction discussed below, would continue to decrease. The impact of total FY 1997 staffing on some key performance measures is shown at the right:

KEY PERFORMA	NCE MEAS	SURES

VI. Maintaining Current Levels of Service

o maintain current operations and protect the integrity of the filing season, the Service must have the resources to pay for both the inflationary costs associated with statutory pay and other mandatory increases in support costs, and the expected increases in the number of returns filed.

A. Mandatory and inflationary Costs Related to IRS Staff:

 Pay Raise and Benefit Increases. The statutory pay increase for FY 1997 is expected to be 3.1%. Total cost is \$155 Million. Without this increase the Service would be forced to reduce FTE and disrupt program delivery.

- Annualization This increase is needed to annualize the FY 96 pay increase. Total cost is \$28 Million. Without this increase the Service would be forced to reduce FTE and disrupt program delivery.
 - Non-Pay Raise Labor Increases. IRS has experienced \$61 Million in labor cost growth in excess of that budgeted for in the usual pay raise and personnel benefit inflation. This is because promotion costs result from

career ladder advancements, above journey level promotions, and within grade increases. Without senior graded employees, the Service would be hampered in working higher graded cases in Examination, Collection and other budget activities. Absent this increase the Service would be forced to reduce FTE and programs.

B. Service Center Workload Growth. Resources will cover the projected increase in Service Center workload (processing tax returns and issuing refunds) which is due to growth in the taxpayer population and tax law changes. Primary tax returns are expected to reach 199.5 million in FY 1997, an increase of 2.4 million from the current year estimate of 197.1 million. Supplemental documents (amended returns, extensions to file, etc.) are projected to increase. 5 million from the FY 1996 level of 12.1 million.

VII. Program Decreases

here are two categories of decreases. First, there is a program reduction that represents the Service's portion of a base program cut applied to most Departmental bureaus to help balance the Federal budget over the next seven years. Second, there is the fourth year's installment of administrative cost reductions mandated by Executive Order.

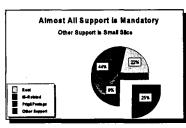

A. Program Reduction. Because a base reduction cannot be achieved through further administrative savings, the cut is being taken as a program reduction that could have some impact on the Service's ability to collect revenue in FY 1997. This reduction is being taken in the more traditional enforcement job categories—those that engage in face-to-face examination and collection activities. While these positions continue to be vital to the overall enforcement efforts, and will always play a major role in collecting revenue, the IRS business vision calls for shifting the balance of the enforcement programs toward those that are featured in the Revenue

Protection Initiative (RPI), discussed above. RPI consists of programs based in the service centers and call sites that deal with taxpayers by telephone and through correspondence. Without RPI, the FY 1997 program reduction to traditional "back-end" enforcement functions performed by Revenue Agents and Revenue Officers is not offset with increases to new "front-end" enforcement functions.

B. Administrative Reduction Pursuant to Executive Order. This reduction reflects the FY 1997 adjustment relating to Executive Order 12837, which requires agencies to

Special Agents	88
Tax Auditors	91
Tech/Prof/Clerical	470
TOTAL	1,341

reduce administrative costs by not less than 14 percent from FY 1994 and FY 1997. This is to be achieved by annual reductions of three percent (five percent in 1997) to the baseline FY

Other Support pays for training, case travel, enforcement expenses, etc.

1994 amount, adjusted for inflation. These reductions have exhausted the Service's ability to make support reductions. Although IRS has a support budget of \$2 Billion, over three fourths of it is either information systems related, and used to purchase ADP equipment or telecommunications, or is mandatory, and pays for categories such as rent, postage, and printing. The remaining one fourth, has been reduced severely, what is left is used for case related travel; enforcement expenses, including lien

fees; training; and services and supplies, such as computer discs.

VIII. Conclusion

he FY 1997 dollars invested in IRS will be well spent. The Service has proven that it can deliver on its promises. Our investment request is not large when compared with the potential benefits--both in additional revenue collections and in improved service to

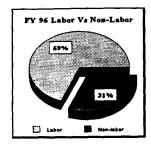

taxpayers.

Chairman JOHNSON. Thank you, Commissioner. I appreciate your testimony. And for the Members' knowledge, included in your testimony is quite a long section on debt collection, and you may get a chance to address that in the course of the questions.

Before we get into that, however, let me turn to some other matters, just to return to the part of your testimony where you discussed the impact of your screens last year and your efforts to reduce fraud, particularly in the EITC Program. The outcome was very impressive. Are those screens working this year? Do you have reason to believe that you are going to be able to maintain the progress you made last year? Do you think there will be any increased benefit from the work that you have done to reduce fraud in that area?

Ms. RICHARDSON. Very much so, Madam Chairman. We installed our electronic fraud detection system and a number of filters this year based on things we learned last year. We feel that we certainly weren't going to lessen our efforts, but we were able to refine what we were doing, which I think accounts for the fact that, as you pointed out earlier, we are having a much smoother filing season. But we have certainly not lessened our commitment to preventing refund fraud.

Chairman JOHNSON. There are some other areas where you have a lot of concern about fraud, one of which is health care fraud.

Ms. RICHARDSON. Right.

Chairman JOHNSON. Could you discuss your efforts in that area? And are there any new things in this filing season that you are doing to try to identify fraud? As a Member of the Health Subcommittee of this Committee, we are keenly aware of the problems in some of the provider service areas.

Ms. RICHARDSON. Well, as you and I have discussed, health care fraud is an area that is of grave concern to us and to other Federal law enforcement agencies, as well as State law enforcement agencies. And it is an area of growing concern. It is not particularly geared to a filing season, so we don't have anything that we do that is unique to the filing season. However, our Criminal Investigation Division is working closely with other law enforcement agencies in a number of major health care fraud investigations. We reported on a couple of convictions in our written testimony. I would be happy to provide you and the Committee more information about it.

[The following was subsequently received:]

Many fraud experts estimate that at least 10 percent of all funds expended on health care is lost to fraud. This would mean that over \$100 billion is lost annually to fraud.

IRS' current criminal investigations reflect that the scope of health care fraud is extraordinary, not only in the financial losses incurred, but also in the malicious intent of the perpetrators who prey on the most vulnerable members of our society.

IRS currently has 183 health care fraud cases under criminal investigation. The number of cases under investigation has increased from 76 in FY 1993 to 183 currently. The current inventory of cases consists of the "classic" types of health care fraud schemes involving fraudulent claims made by physicians, clinics, and others involved with the health care industry. In addition, they also encompass a broader range of related industries, such as ambulance and patient transportation services, which are not commonly thought to be a part of the health care industry. Since health care fraud is a multi-faceted problem that is pervasive throughout the industry, we anticipate an even greater commitment of IRS' criminal resources in the future.

The cornerstone to combating health care fraud is cooperation between federal law enforcement agencies and industry. Cooperative efforts magnify the results which could be achieved through individual agency efforts and represent the most effective use of IRS' scarce resources. The cooperative efforts currently underway are best exemplified by the Health Care Fraud Task Forces mandated by the Attorney General. These task forces have been established in every judicial district under the leadership of the respective United States Attorney. IRS agents are members of these task forces where their unique skills are in demand in the investigation and prosecution of these complex financial crimes.

The diversity of health care cases under investigation by the IRS are illustrated by the following examples:

- On February 28, 1996, a former dentist was sentenced to two years in prison for defrauding the Medicaid Program and income tax evasion. To generate fraudulent Medicaid billings, the dentist extracted, filled, and installed crowns on healthy teeth of poor children. This scheme began in 1985 and continued until 1992. IRS' investigation established that in tax years 1987-1989, the defendant failed to report over \$219,000 in income annually.
- Taxicab Scheme On October 20, 1995, forty-two individuals were
 indicted with cheating the Medicaid system out of at least \$4 million
 by falsifying transportation costs. The investigation substantiated
 several types of fraud including submitting claims for services not
 performed and over billing Medicaid for services when actually
 provided. Defendants face prison terms ranging from one to thirty
 years and fines from \$100,000 to \$250,000.
- <u>Pharmacist</u> On October 12, 1995, George A. DiLeo, a former pharmacist, entered into a plea agreement with federal prosecutors by admitting he defrauded \$350,000 from state and federal government insurance programs and failed to report \$274,000 in income to the IRS. DiLeo was sentenced to 8 months in a halfway house, 3 years probation, and 200 hours community service.

Chairman JOHNSON. Are you making any changes in your screens or enforcement or forms or routine business in order to reduce the possibility of fraud in this area?

Ms. RICHARDSON. I might have Jim Donelson comment.

Mr. Donelson. Madam Chair, if I may, on the compliance side, the criminal investigation organization has open cases in the health care industry. We know that there is approximately \$100 billion annually that experts estimate is lost through fraud in the health care industry, and we are concerned about that money flowing through that industry and the potential of money laundering and other aspects of, as you describe it, fraud in that industry. So we do have cases throughout the country that have been initiated by our criminal investigators.

Chairman Johnson. The \$100 billion is the industry activity. That is not—

Mr. DONELSON. Exactly. It is not the tax implication.

Chairman JOHNSON. In terms of the reduction in your budget last year, and particularly looking to the future, some of the things you are doing like encouraging filing by telephone, making your forms available, some of the projects you have done to make it easier to pay your taxes and easier to get the information you need to do so have also reduced some of the burden on your staff.

Ms. RICHARDSON. That is correct.

Chairman JOHNSON. In looking at absorbing reductions, has there been any reduction in taxpayer services?

Ms. RICHARDSON. Well, we have certainly had to reduce the face-to-face contact, as I mentioned in my oral statement. But we have tried to provide alternatives for taxpayers to get information through our automated telephone system, our TeleTax system. We have had, I think, about 28 million calls this year that we have already answered through our TeleTax system. It is a system where you can get refund information, the status of your refund, and there are automated answers to 148 of the most frequently asked questions.

As I mentioned, we have our forms and publications on the Internet. We have a fax-on-demand system for forms as well. And we have almost 20,000 volunteer tax counseling for the elderly sites this year. So we have done what we could to try to serve more customers, but not necessarily do it in a face-to-face way.

Chairman JOHNSON. From the comments that I get from my constituents, my conclusion is that you have successfully improved your ability to service taxpayers in a number of automated ways and that you actually do have the personnel to satisfy the walk-in business and the face-to-face contact that is necessary. Would that be your conclusion?

Ms. RICHARDSON. Well, obviously we would always like to be able to serve more people and answer more phone calls.

Chairman JOHNSON. I understand.

Ms. RICHARDSON. I think anybody in business, and particularly in the customer service business, would like to answer every call on the first ring. But we understand that resources are somewhat limited.

Chairman JOHNSON. What is the primary focus of your professional education and training efforts? And to what extent are they going to be affected by tight budgets?

Ms. RICHARDSON. I might ask Jim Donelson to address that. He is both Chief, Taxpayer Service and Acting Chief Compliance Offi-

cer and knows a lot about the professional education issues.

Chairman Johnson. And as you are talking about that, would you talk about if there are impacts on your training programs, which ones. And are you doing it equally across the board, or are there programs that you are committed to retaining at the same level or stronger? I want to get a better idea of the training component, how it affects staff capability, and how reductions in funding are being handled.

Ms. RICHARDSON. Excuse me. I might just say in a general way, though, what we have tried to do in the last several years and will continue to do is analyze our training money so that we can provide the highest quality training with the least amount of cost. We are doing much more with distance learning, using videos, videoconferencing, and teleconferencing. A good bit of our training money in the past had gone to pay for travel and lodging as people came for offsite training. We are trying to shift that balance so that we can provide high-quality training to a greater number of people.

Mr. Donelson. Madam Chairman, if I may, we have had to take some reduction and cuts in our continuing professional education and training, as well as our outservice training where we send our employees out to receive training outside the Agency. We are continuing to give the basic training to our employees and making the cuts as judiciously as possible where we think we can afford to take them. I am sure that there are employees that wish they could have certain training courses that we just can't afford to send them to as we may have in the past, and we have done a lot, as the Commissioner has said, by using technology to train people across the country.

Our Office of Chief Counsel has a very excellent process that they use for satellite training around the country, and we are engaging in that to help train our examination people, for example. And we continue to run our CID, our criminal investigation people, through the Glynnco Program, as well as all of the other Treasury enforcement agencies. So we have taken cuts. We have tried to absorb them as judiciously as possible.

Chairman JOHNSON. Thank you very much. I am going to recognize my colleague, Congressman Laughlin, for some questions, and then we will come back to the TSM issue. Thank you.

Mr. LAUGHLIN. Thank you, Madam Chairman.

Commissioner Richardson, one of the most serious criticisms that has been leveled at the Tax Systems Modernization Program is that there is a lack of focus and an inability to establish priorities. Both the General Accounting Office and the National Research Council have raised this repeatedly in their reports.

Have you prioritized your systems development efforts? And can you provide us with a list of programs where you will focus your

resources?

Ms. RICHARDSON. Yes, Mr. Laughlin, and as I mentioned in my oral statement, we have taken those criticisms very seriously, and

I think they are valid criticisms. I would like to get Mr. Dolan to tell you what efforts we have had underway this past year to

refocus the program and reprioritize the various projects.

Mr. Dolan. One of the things we did, Mr. Laughlin, is we looked at—as this endeavor started, as the Commissioner said in her testimony, back in the late eighties, it was, I think, designed originally more as a replacement of technology, and what we have done very aggressively in the last several months is put the cart maybe a little bit back behind the horse in the sense of looking at some of our very basic business choices and looking at the parts of our business for which we most wanted to leverage the technology.

We went through last summer something we called a rescoping effort which essentially had us take all of our projects and priorities and apply them against a metric that the General Accounting Office had advanced to us as a best practices set of metrics. We evaluated our investments both in terms of their business value to us and their risk on a cost and schedule basis. And we essentially have redone our entire suite of investments in what we now think is a much tighter focused set of increments that both are high value on the side of achievability and high value with respect to the benefit they bring to the customer and customer service, to compliance, and then to us in terms of productivity.

Mr. LAUGHLIN. Well, could you give us the list of the programs

where you are now going to focus as a result of these efforts?

Ms. RICHARDSON. I would be happy to submit these to you for the record. We have four reports that we are in the process of finalizing for the Appropriations Subcommittee, and one of those reports will have that list in it. We would be happy to provide that to you as well

Mr. LAUGHLIN. Provide it to the Chairwoman, if you would. [The following was subsequently received:]

Paper Filing	Process Remaining Paper More Efficiently	Document Processing System (DPS) Service Center Recognition/Image Processing System (SCRIPS) Lockbox	Modernization Foundation	Robust Infrastructure	Servicewide Technical Infrastructure (STI) Software Development Environment (SDE) Enterprise Security System (ESS) Customer Support and Automated Operations (CSAO) Revenue General Ledger System (RGLS) Telecommunications	Сотріїапсе	Give Employees Access to Complete Information and Modern Tools	Integrated Collection System (ICS) Compliance Research Information System (CRIS) Compliance Data Warehouse (CDW) Examination Support Electronic Fraud Detection System (EFDS)
Electronic Filing	Provide Alternative Means of Filing and Paying	Electronic Federal Tax Payment System (EFTPS) Electronic Management System (EMS) CyberFile TeleFile Simplified Tax and Wage Reporting System (STAWRS)	Modernizati	Bulld and Maintain a Robust Infrastructure	Workload Management System (WMS) Corporate Accounts Processing System (CAPS) Sevice Center Replacement System (SCRS) Consolidation Corporate Systems Modernization/Mirror Image Acquisition (CSM/MIA)	Customer Service	Give Employees Access to Complete Information and Modern Tools	Customer Service/Integrated Case Processing Automated Self-Service Applications Toll-Free Operations

Table 3-1. TSM Projects by Program Components

Mr. LAUGHLIN. In the past there have been serious questions with respect to your ability to leverage the resources provided by outside contractors. Can you tell us how you plan to improve the use of the outside resources?

Ms. RICHARDSON. Particularly in respect to the Tax Systems Modernization Project?

Mr. LAUGHLIN. Yes.

Ms. RICHARDSON. As I mentioned in my opening statement, we have a systems integrator, and we are moving to utilize them to the fullest extent possible under the contract. Most of the software development on the big projects that we have underway or will undertake will be done by outside contractors. We are working with our systems integrator to make sure that all of the projects integrate as they come together in the final analysis.

Mr. LAUGHLIN. In that area, our staff has given us some information, and I have got to tell you, I share their concern that there appears to be high tech, high cost, but low performance. This brings to mind the debacle at the Denver airport in their baggage-handling system. And in my earlier life in Congress, I was on the Aviation Subcommittee, and we heard too much about what was

going wrong there.

Can you tell us what is happening from your management viewpoint that will alleviate the concern that we have that we are going

to have a Denver airport baggage problem here?

Ms. RICHARDSON. Well, as I mentioned in my opening statement—and I think we went into more detail in the written statement—we have taken to heart the criticisms. We have put in place a different management structure than we had in the past. All of the authority for modernization—the budget, the resources, and reengineering efforts, not just the technology piece but the reengineering of our business processes—is currently the responsibility of the Associate Commissioner for Modernization. We have a new Chief Information Officer who will be joining us in 2 weeks who has had extensive experience in technology modernization in a major tax administration system.

Mr. Dolan mentioned we moved to reprioritize. We had a project last fall where we reprioritized our investments. We have set up an investment review board so that each and every project has to be rigorously scrubbed for its business investment potential to aid us in our business. A very strict business case, using some of the GAO best practices that we worked with them on, has to be made

in order for a project to be funded.

We also recognize that many of the projects that people would like to have had or would like to have done are no longer affordable. The unlimited budgets that looked like people were going to have in the late eighties and maybe early nineties are not going to be there, so we are trying to focus our attention on the projects that we think are most important for us to provide good customer service and also to enhance compliance. Other projects will not be funded unless they meet these rigorous criteria.

Mr. LAUGHLIN. In your review, have you identified programs that are no longer needed because of changes in technology, because of new programs? And are you in the process of identifying any that

are required by law that are no longer needed? And I think on that last point, you and I had this discussion yesterday.

Ms. RICHARDSON. Right.

Mr. LAUGHLIN. If so, what can we do to eliminate those that are no longer needed because of changes that you have either implemented through technological advances or new programs?

Ms. RICHARDSON. As I mentioned to you yesterday, we will give some thought to those on the question that they may not be needed

because of changes in the law and I will get back to you.

Mr. LAUGHLIN. And that will include elimination of some programs that we may not need anymore because of either new programs or new innovations that the Service has implemented.

Ms. RICHARDSON. Right.

Mr. LAUGHLIN. You have also spent a great deal of time on developing a business plan for tax system modernization. I understand you are working on a plan to make sure that you develop integrated systems to implement the business plan. When do we get to the implementation itself? Do you have the contractors you need to do the development work?

Ms. RICHARDSON. Again, the reports that will be coming out within the next 30 days should hopefully address the overall plan, the blueprints, and I believe we have most of the contracts in place that we feel we need in order to accomplish our objectives under that business plan. I would ask the Associate Commissioner, Judy

Van Alfen, if she would like to elaborate on that.

Ms. Van Alfen. Yes, we do have contracts in place that will help us deliver our goals. As both the Commissioner and the Deputy have mentioned, we have been very much involved in looking at all of our investments and laying them out on a 5-year plan, and also breaking them down in a 2-year rollout. We have also strengthened our processes so that we can do a better evaluation of those investments as we move forward.

The contract that we have in place will assist us greatly in moving out of the integrator role which we have chosen to take in the

past and moving our integration contractor into that rule.

Ms. RICHARDSON. One project I might mention, Mr. Laughlin, is our integrated collection system which is being used by collection officers. It was used last year in two districts and is being rolled out to more districts this year. But in the two districts where it was fully operational last year, productivity actually increased by

over 30 percent, which translates into money in the bank.

Mr. Laughlin. The Federal Government has been pursuing for some time a long-term exercise to reduce the size of the Federal work force, yet the 1997 fiscal year IRS budget proposal proposes to increase the work force at the Internal Revenue Service by 2,699 employees. Why should the IRS be exempt from the downsizing that is occurring throughout the Federal Government? And, second, what effect has the reduced 1996 appropriation had on IRS personnel? Does the Service expect any furlough days or any reduction in force?

Ms. RICHARDSON. Mr. Laughlin, I think in fiscal year 1991 we had about 119,000 FTEs in our budget. This year in fiscal year 1996 we have 106,000 FTEs. So we have certainly not been exempt from any reductions in the Federal work force.

We are 8,000 FTE below where we were 1 year ago. Most of that money and most of those people are directly involved in either frontline collection activities, frontline compliance activities, or in processing tax returns and making sure that money is timely deposited in the Federal Treasury and making sure that people are paying their proper share of taxes, as Chairman Johnson mentioned in her opening statement. Many taxpayers are concerned that while they are paying their proper share, others are not. They want to be assured that others are paying their share of taxes.

At the same time, we don't feel we should be exempt from scrutiny about how we spend our money and whether we use it wisely. And I have said on every occasion meeting with employees, that we, too, need to enhance our productivity and find new solutions to old problems. But I think that the increases that are being proposed for next year are largely in the compliance area and will

largely go to raise money that will go for deficit reduction.

Mr. Laughlin. Madam Chairman, I will yield back. Thank you. Chairman Johnson. Thank you. To that last general point, I think some of the projects the IRS has taken on are impressive and have been very successful. The telefiling seems to be going very well. It is clearly improving the quality of taxpayer service and will relieve your staff, and the broader that initiative becomes—now it is very limited to a small group of taxpayers—the more important a resource it will be for taxpayers and the IRS and the more it will enable us to reduce the number of employees in an intelligent and responsive fashion.

There are others of the Tax Systems Modernization Projects that have been very fruitful for us, so for that reason, because I know some of the projects have been very successful, I do want to put on the record and ask you to talk a little bit about the truly shock-

ing depth of criticism of the Tax Modernization Project.

The GAO said there is little tangible evidence that actions being taken will correct the pervasive management and technical weaknesses that continue to plague TSM. GAO described the IRS' software development capability as unlikely to build TSM in a timely and economic manner, and the systems are unlikely to perform as intended. The IRS has placed its software development capability at the lowest level, described as ad hoc and sometimes chaotic, and indicating significant weaknesses.

Now, even for GAO, that is pretty strong criticism, and GAO has worked with you over all the years that you have implemented this system. So words of that nature are very concerning to this Over-

sight Committee.

In addition, the National Research Council just last month reported that the IRS has had serious technical capability problems that cast doubt on the overall success of TSM if they are not solved. If the IRS does not begin to improve its development processes—and you have spoken here to some of those efforts that you have made to improve your development processes. But they say if you don't take strong corrective action, TSM will degenerate into a collection of individual projects that are poorly integrated, with inadequate privacy and security safeguards that may or may not be able to cope with the increased workload.

Now, these are very strong statements, very recent statements, followed by Deputy Secretary of the Treasury Larry Summers' testimony before the Treasury and Postal Appropriations Committee that TSM has gone badly off track and it needs to be rethought from bottom to top.

Now, you are familiar with all those statements, but the depth of their criticism is very concerning to me, and when they talked specifically about the Integrated Case Processing Project, a \$64 million project in 1997, their conclusion was that frontline employees had not had enough input in its development to assure its usefulness to end users.

Now, you are making some changes. They are at the top. The problem doesn't entirely seem to be at the top. There seems to be a systemic issue here that if it is not addressed, it almost doesn't matter how much money you put into technology if it isn't going to be integrated and if the frontline people haven't been part of generating the solutions.

Now, I say this as one who represents a manufacturing district, machine tools, bearings, those kinds of industries that suffered extraordinary challenge at the hands of targeted and grossly unfair foreign competition. But as they tried to survive, they rethought from the bottom. And when they first tried, they rethought from the top and they failed. And not until they rethought from the bot-

tom did they succeed.

The level of criticism that is coming from the National Research Council recently and from the GAO I hear in the light of my experience as the consequence of the old bureaucratic tendency to solve from the top. And that isn't just a public sector problem. That is a private sector problem. Authority tends to believe it can find solutions, and what I want to know is: What is the problem? When you look back at what you have been through—because you got a lot of good people, and you have really worked hard on this. And you have in certain pockets. I mean, I have known this, but I saw it with you in my own office recently. You have made some very significant improvements in your equipment, in your capability, and are able to serve taxpayers at certain levels and in certain instances very much better. On the other hand, you still can't adjust a change in address or if a taxpayer gets married.

The cases that tend to come to the Members' offices are those kinds of cases: For 3 years now we have been dunned because they can't get through their system that we are now married and we

have one name and not two.

So the profound level of criticism that you are receiving is of great concern to me, and having been involved in it in good faith and having accomplished some measurable achievements, to what do you attribute this criticism? And what are you going to do to address it, aside from putting new people in the boxes? Because we had new people actually in the boxes a few years ago.

Ms. RICHARDSON. Well, in fairness, the boxes have changed. We did have a Chief Information Officer, but we did not have an Associate Commissioner for Modernization. And one of the early criticisms I think of both the General Accounting Office and certainly the National Research Council was that we needed a single point of accountability for all of modernization and that accountability

had to be not just for the technology piece of it but for the business side of it as well.

As I mentioned, that position was actually created last year. Judy began in October after her predecessor retired. I think that having that single point of accountability has made a significant difference because it has allowed her and her staff to really take charge of all of the resources for technology, not just what would fall under the Tax Systems Modernization Program.

Chairman JOHNSON. Not by way of criticism, but just by way of information, was there not a single point of accountability sooner because you really thought communication would do it? Or what prevented that from happening sooner? Was it lack of real understanding of the sort of vertically integrated process that has to

make change?

I do appreciate that you have done that now. I don't understand why that didn't happen sooner, why it wasn't clear to the Agency that more authority had to be invested in the person or in the

group that was going to lead this.

Ms. RICHARDSON. I can't speak to this situation prior to my time. I think that one of the issues and one we touched on earlier—and it is not, I think, unique either to the Federal Government or to the private sector—is that the project began as an upgrade of technology without a lot of thought given to changing business processes. And I think it was in part viewed within the province of the Information Systems Division and the Chief Information Officer. People on the business side, compliance, taxpayer service, and other parts of the organization, were interested in modernizing technology, but I don't know that they were integrated into what was happening with the technology modernization that was being led by the Chief Information Officer's efforts.

Chairman JOHNSON. OK. Let's get that a little clearer because that makes a lot of sense to me. What I hear you saying is that

it started out as a technology project. Ms. RICHARDSON. Yes, ma'am.

Chairman JOHNSON. But it became a review of how the whole

agency does its business.

Ms. RICHARDSON. That is correct. The technology modernization began—or thinking for it began certainly in the late eighties, but I think in response to both criticisms from the General Accounting Office as well as the National Research Council, the organization realized that it needed to really rethink its business processes and then be able to leverage technology. You didn't just automate old ways of doing business. That caused a real change in approach, change in thinking, and change in the way we began to look at the whole process of modernization.

Chairman JOHNSON. And in addition to appointing a single point of accountability, what changes are you going to make to ensure that there is much deeper involvement from the Agency itself? Because it is a fairly recent comment that was made that the ICP is going to have problems and is not ready to go operational because there wasn't enough frontline employee involvement in its develop-

ment.

Ms. RICHARDSON. I might let Mr. Donelson take a crack at some of this, but he and I were both out at our Fresno Service Center

last week—I think it was last week or the week before—looking at where we are basically prototyping our customer service and the use of ICP. We very much have taken into account what frontline employees think, want, and need in trying to make ICP accessible to the people who will actually have to use the system, not just the people who were designing the system or who were developing the software.

We have two prototypes—one in Nashville, which is a district office, and one in Fresno, which is a service center. We have moved ahead with the prototype in order for our frontline employees who are using the systems to obtain experience and help in the development process so that we can make a system that works for the ultimate customer, that is, the frontline employee, as opposed to someone sitting back in Washington or sitting back in a design studio.

Chairman JOHNSON. What specific role did those employees have

in the process of change?

Mr. DONELSON. The employees have input into the various changes that are made as we try to improve the product. We have had a version we call 1.5 that has been operating in Fresno, and suggestions from employees as to how that should be enhanced—

Chairman JOHNSON. And is the suggestion process informal or

formal?

Mr. DONELSON. It is formal. And they——Chairman JOHNSON. What form does it take?

Mr. DONELSON. Well, we have working groups that have been at this for some time who are a mixture of higher level managers as well as employees, union representatives as well as managers.

Chairman JOHNSON. When you hear that kind of criticism of your ICP, your Integrated Case Processing Project, does it concern you?

Mr. DONELSON. I will answer that. Absolutely. But one of the reasons the Commissioner and I——

Chairman JOHNSON. Because the feedback from outside experts indicates that the IRS may be trying to go operational with ICP too quickly, which could be a mistake. For example, there is concern that frontline employees have not had enough input in its development in order to assure its usefulness to end users. This is a big issue because if this project doesn't reflect the level of horizontal involvement in planning and doesn't come out with a technology that really is powerful to the people in the frontline in their daily lives, then other projects will be seen as in jeopardy.

Mr. Donelson. Madam Chairman, the Commissioner and I were out in Fresno just 2 weeks ago because of that kind of criticism that we have heard, and we both went out to see it live, and the demonstration that we saw was presented by a union official, as a matter of fact, an employee who represents his fellow employees. And I can only describe his enthusiasm as overwhelming. He walked us through the system, showed us all the terrific aspects of it from his vantage point, how it makes his job not only easier but more fulfilling because he gets to solve taxpayers' problems with one call. He was extremely enthusiastic about it, and he said it was very easy to learn. He said he learned it in just 4 hours of kind of working with the system and teaching himself, as well as the instruction that he was given. So I think that that was an indi-

cation to me that the needs of our employees will be met by this system.

Ms. RICHARDSON. I think that they also had a very formal role in designing the workstations, designing the functionality, as the word seems to be, and to make it suitable for our frontline assistors.

Mr. DOLAN. Madam Chairman, if you would permit, you ticked off a string of criticisms that both thread themselves through the GAO and the NRC and the last part of it we have been talking about is the ICP. One of the difficult things in a hearing like this is to sort of say two things. One is that the essence of the criticism is an essence that we agree with, and at the same time get a chance to talk about how, when all those words and all those criticisms and all those things aggregate in reports that build on each other, sometimes reporting essentially the same thing and other reports that look like there are now five reports that say the same thing, and also dealing with language like "little evidence that actions will"—well, part of our frustration is we are in the midst of reacting about as aggressively as we know how to a body of work that we actually asked get done and that culminated in a briefing last April, a formal report last July, as a template for how, if we were to do all that we could do, how we could really ratchet ourselves from this series of places where we didn't have our act as well together as it might be, into this admittedly world class undertaking. And I think what I would like to hope is that as we deliver against this middle of April date to the appropriators, what will be resident in the four sets of reports that basically our appropriators asked us to come back with is not anything that would allow anybody to say "little evidence," but hopefully something that would say a heck of a lot of evidence.

Now, some of that evidence will be evidence of work in progress, because one of the other things you talked about was our software maturity level. If you read that report on its face, someone might infer that we should take an organization that is today, by metrics that the Carnegie-Mellon folks use, a level 1 organization, and because we are resolved to improve it, should in 3 or 4 or 6 months make that a level 2 organization. It doesn't happen that way. Experts inside and outside will tell us that it doesn't happen that way. They will tell us that as an organization trying to do what we are doing, we had better have level 2 or better skills available to us, and so we have made a very conscious decision that some part of our inside cadre must get to level 2, but we have also made a conscious decision an awful lot of that software is going to be written on the outside, and it is going to be written by people who are already level 2 or above. Our integration support contractor is a level 3 organization.

So what on the face of it is criticism that we say is right on, you can't do this world class endeavor if you are operating at level 1, but when we get a chance to work behind some of those recommendations and talk about, first, what we are doing, and, second, what we will do more of, I would like to believe we could satisfy you that we are not standing still but, quite the contrary, aggressively moving to deal with the essence of those. And your ICP example is another one. That report upon which that data is drawn

is based on observations that at this point have to be, conservatively stated, 18 months old. We are in a pilot which is the way we chose to make sure that the front-end involvements around this get done correctly before we roll it to the entire organization.

A series of iterations have done exactly what you have suggested is the right thing to do, which is to get the iterations of the people using the systems to come back and make a version 1.0 grow to a version 1.5, grow to a version 2.0, all before that gets then visited on the organization as an operational system to roll out across the board.

So the criticism on the front end of if you don't do it this way it will be a failure, is accurate criticism, but the dipstick was taken 18 months ago and I think today we could lay out a series of things we have done which are, indeed are, the positive kind of reactions from that observation.

Chairman Johnson. Well, I do believe that you as an agency have achieved some real improvements in recent years, and out there on the frontline you are doing a better job in many regards, and I think the EITC fraud effort that you made last year was a very successful one. And while it involved some delay—and this is sort of off the subject of tax systems modernization, but there are many areas in which you actually have pressed hard and have some significant success to show for it. I thought your collection figures were very impressive.

As I listen to what you are saying and put together the information that you have given me and that we have talked about over the last year, I am pleased to see the aggressive actions that you are taking to deal with the top-level issues and the architectural issues in a sense, the biggest and most difficult issues that everything else has to fit into. And I think probably the best thing for us to think in terms of is an oversight hearing in about 6 months on how far have you gotten, what did this mean. Because we don't have the same timeframe anymore that we had when this project started 5 or 6 years ago. So there does have to be some real payoff to hiring some of these people. You are more knowledgeable below that person and to work with that person, and so at that time we certainly want to get a better view of how the architectural issues are moving and also of frontline involvement amongst employees.

Thank you for your comments on those issues.

Mr. Laughlin.

Mr. LAUGHLIN. Thank you, Madam Chairman.

Commissioner Richardson, I have a couple more questions on your testimony today and I want to ask the question of you in conjunction with some statements that Chairman Jim Lightfoot of Iowa said about the Modernization Program being a \$4 billion fiasco. In your testimony you talk about, "As of today, \$1.7 billion in new equipment and software has been installed across the country." Somewhere in here, my information is it is about \$3.5 billion, and Chairman Lightfoot has a \$4 billion price tag.

Ms. RICHARDSON. He rounded it up, he told me.

Mr. LAUGHLIN. OK. Let's just use the \$3.5 billion. But when we use your figure of \$1.7 billion for equipment, it seems a staggering amount of money left over for overhead and salaries and consultant

studies, and I just want to ask you: Is all of the almost \$2 billion

going for salaries and overhead?

Ms. RICHARDSON. We would be happy to supply you with even more detailed figures for the record. I believe that \$3.5 billion has been appropriated to date, and of that amount, \$2.7 billion has been spent. And when I say appropriated to date, I mean through this fiscal year.

[The following was subsequently received:]

The amount obligated on TSM through the end of FY 1995 was \$2.77 billion, with \$84 million of the funds appropriated between FY 1988 -1995 available for expenditure during FY 1996. Below are the amounts expended (and obligated) through FY 1995.

Amounts Expended through FY 95 (Dollars In Millions)

Category	Dollars
Salaries/Benefits (FTE)	\$647
Computer Hardware/Operations	\$623
Software, Commercial Off the Shelf (COTS)	\$76
Service Contracts	\$560*
Telecommunications	\$331
Site Preparation Costs	\$279
Support, Training and Travel	\$262

^{*}Includes contracts for Engineering/Integration, Strategic Planning/IV&V, and Software Development.

In addition, TSM was appropriated \$695 million in FY 1996, of which \$265 million has been committed/obligated to date. An additional \$317 million has been distributed to the Financial Plan and is being committed, \$100 million is fenced pending submission of the report to Congress on the Status of IRS' Management and Implementation of Tax Systems Modernization by the Secretary of Treasury. The balance of \$13 million will be distributed within the next few weeks based on Investment Review Board (IRB) priorities. Below is a delineation of the total amounts obligated through March 22, 1996.

FY 1996 Obligations To Date (as of 3/22/96)
(Dollars In Millions)

Category	Dollars \$48 (payroll data thru 2/96)	
Salaries/Benefits		
Equipment	\$53	
Services	\$157	
Supplies	\$3	
Support	\$4	

Mr. Laughlin. Let me tell you why I am asking this question. I saw in the newspaper today where the Postal Service is using not tax money but revenue money from postage and the Postal Service talking about funding both political conventions. And I am not suggesting that the IRS is doing—

Ms. RICHARDSON. We are not going to do that, I promise you.

Mr. LAUGHLIN. I think that is an absolute misuse of postal revenues to fund political conventions or the World Series or the Rose Bowl or the Cotton Bowl, if it is ever played again in Texas. But

the concern I have is: Where is this money going?

Then I read a report today that some of the labor unions have outfitted a brandnew jet, or the head of some union, I am hopeful that we will get a report that all of this is going to modernization of equipment and not recarpeting of the Victoria, Texas, IRS office, which happens to be down the hall from my office.

Ms. RICHARDSON. Right.

Mr. LAUGHLIN. I don't suspect that is happening, or my staff would have told me.

Ms. RICHARDSON. No, I can assure you—

Mr. LAUGHLIN. Do you see where I am headed? I think this Committee is entitled to know where is this \$2 billion going.

Ms. RICHARDSON. Absolutely. And I would be happy to provide you great detail for the record. But I might ask Judy Van Alfen to

give you some sense of it.

Ms. VAN ALFEN. Yes, we have been appropriated \$3.54 billion. We have spent \$2.77 billion, and we have in our budget for this year \$695 million. We have spent money on telecommunications, including expansion of telecommunications so that we could deliver our integrated case projects and our ADP acquisitions and operations costs, off-the-shelf software. It pays for contractor costs for development of software, engineering and integration, strategic planning and support by our contractors. It also pays for site preparation to be able to install our initiatives. It does cover IRS salaries, travel, and training in connection with the various projects, and we have some other supports costs. We will be happy to give you further breakdowns on that.

Mr. LAUGHLIN. Fine. And, Commissioner, again your written testimony says, "We have developed a plan with the help of outside experts from other governmental agencies and the private sector to aggressively expand the work of the current Integration Support Contractor. Under this new approach, the Integration Support Contractor will assume as much of the systems integration role as the

existing contract permits."

I want to key in on "existing contract permits," because my question to you is: Why not modify the contract to make the contractor a real integrator by making him the prime contractor? It is my understanding that the outside contractors can't implement anything without IRS permission. And it seems to me you don't get good input or innovation if the den mother has to approve everything. It occurs to me that we ought to have more flexibility and consider modifying the contract.

Ms. RICHARDSON. As I understand it—and I am certainly not a contract lawyer, and I would be happy to provide you with some people who can give you much more detail, we cannot unilaterally

modify the contract that we have with either our systems integrator, or any other, and turn them into a prime contractor. In order to do something like that, there are a number of legal requirements that would have to be met, and we are not in a position to do that without some significant changes, I think either approval of Congress or rebidding of the contracts. But it is not something that can be done unilaterally or even bilaterally with the one contractor.

Mr. LAUGHLIN. Sure. I would just ask you to review that area, and it doesn't have to be made a part of the record, but I certainly would ask you to make some type of response or report to Chairwoman Johnson—

Ms. RICHARDSON. One of our four reports to Congress that will be coming out in the next 30 days will discuss the role of the integrator and what we are doing to try to get ourselves out of being the integrator.

Mr. LAUGHLIN. And I would like in that report for you to address to the Chairwoman the role of the contractor and being able to implement innovations free of the constraints imposed by the IRS, or the shackles or whatever word we want to use, because I think when you look at private industry, they have gone through a tremendous amount of change in the last few years that we in government have been either unable or unwilling to do. And if you will just address that to Chairwoman Johnson.

Ms. RICHARDSON. Absolutely.

Mr. LAUGHLIN. It is not necessary to respond at this time.

Chairman JOHNSON. I would also like when you do that to be as

specific as possible because that phrase caught my eye, too.

What kinds of things are in the existing contracts that are impediments to innovation? And what would be the cost of rebidding? How can we get out from under that? There may be ways that we can help you do that. I can understand how contracts developed a number of years ago might not serve you well now, but I would like a better understanding of what the existing contract impediments are and how you plan to overcome them, and that leads me to another question I wanted to bring up, which is: Why are you serving as your own prime contractor? And what are the pros and cons of that? The FAA did that in trying to develop their new air traffic control computer network.

Mr. LAUGHLIN. I was going to make reference to that.

Chairman JOHNSON. I used to be on the Public Works Committee, too.

Mr. LAUGHLIN. You all were doing it that long ago?

Chairman JOHNSON. That is right, and sat through the first years of that planning and were really appalled how every time we had a report, the report sounded great, but in the end the system didn't work.

Mr. LAUGHLIN. I would just like to add, Commissioner, that what Chairwoman Johnson has asked is so important because I went through those aviation hearings on implementing a new computer system for the FAA and our airliners, and I may be wrong, but it was in the billions of dollars that had been spent, and we still don't have a modern system after years, because they sold the company to get rid of the contract. I think it would be irresponsible on the

part of this Oversight Subcommittee not to have a full and com-

plete report on that and to look at it closely.

Chairman Johnson. It is instructive that the Congress came to the conclusion that the only way you could keep a system that large technologically current was to get it out from under the bureaucracy. So what are the barriers within the structure of the bureaucracy and the way the bureaucracy proceeds that are interfering with the accomplishment of this architectural issue and some of the contractual problems? We will look forward to that report, and I would be happy to get those on the Committee who are most interested together for an informal discussion if that would be more appropriate.

There are a couple of other issues that I did want to pursue if

my colleague is finished.

Mr. LAUGHLIN. Absolutely. I yield back the balance of my time. Chairman JOHNSON. The National Research Council did criticize the security features of TSM. That is extremely important. If we can't guarantee people information security, we are going to have very big problems on our hands. And as we move into TeleFile and CyberFile, if there are doubts about the security of the TSM system, it will simply fail.

So how can the IRS expand the filing options to the Internet and assure information security? What are you doing to assure that?

Ms. RICHARDSON. Well, we don't want to develop and are not planning to develop any of our systems without proper regard to security. There is a security concept of operations and security architecture that is under development, and I think we elaborated more on that in the written testimony. I would be happy to give a fuller briefing to the Committee about what we are doing. Specifically, as to any kind of direct filing or Internet-related filing, we would never go forward with any program until it could be assured that such a program could be made absolutely secure.

Chairman JOHNSON. How do you respond to the criticisms that the National Research Council made about your security features?

Are you familiar with them?

Ms. RICHARDSON. I will let Mike Dolan answer the question.

Mr. Dolan. A couple, Madam Chairman. We actually had a fairly robust closeout conversation with them around this point, and I think the thing that we took most from their observation and the follow-on conversation was that the architecture that we are currently operating under, which is a very distributed—it is a process by which an awful lot of our data gets distributed widely in the organization. The NRC said to us two things:

One is that we have got to be very conscious that to overlay on that kind of an architecture the security we want and need is a costly undertaking. And so they encouraged us to be sure that we made the right kind of choices surrounding business needs of distributed data versus cost of securing it the way you need to. They encouraged us to make the right kinds of tradeoffs and that we do that up front, recognizing the kinds of cost consequences of our decision.

The other thing they asked us to be sure we weren't doing was looking only at internal security. They acknowledged that we had placed an inordinate amount—not inordinate, an extraordinary

amount of inside security in all of our plans and architectures, and they said they wanted evidence that the way we were building the security levels was also mindful of all the sort of outside penetration attempts that we have seen elsewhere in government.

I think we will be able to satisfy hopefully both you and them

from our security architecture that we have done exactly that.

Chairman JOHNSON. Thank you. We will be interested in discuss-

ing that information with you when you have completed it.

I want to just conclude by raising the issue of the Service Center Recognition Image Processing System, SCRIPS. SCRIPS was developed to electronically scan instead of manually keypunch into the IRS computer system certain tax forms. In February of this year, last month, an internal audit report prepared by the IRS Inspection Service was critical of the SCRIPS performance and questioned whether it was ready for wide-scale use.

Has SCRIPS met all the performance goals originally set for it? Has SCRIPS captured all information on the forms it scans or only part of the data? What have been the results from the SCRIPS

Pilot Program?

Ms. VAN ALFEN. Madam Chairman, SCRIPS has not met all of the performance goals that we had in place and that we had originally set and desired that the system would deliver on. However, this year it is functioning much better. We have made some upgrades and some workflow improvements and it is showing much improved performance this year.

We encountered some major integration issues with it early on, but we feel comfortable that we are working through those, and it

is performing much better.

Chairman JOHNSON. So what percentage of the workload that you originally scheduled for SCRIPS has the IRS had to shift to the traditional processing pipelines perhaps last year and this year?

Ms. VAN ALFEN. Last year we did have to shift some of our workload back to the pipeline processing because we were not able to process it all the way through.

Chairman JOHNSON. Fifty percent?

Ms. VAN ALFEN. On one particular form type, yes, that is correct.

Chairman JOHNSON. And how about this year?

Ms. VAN ALFEN. This year we are still processing 50 percent of one form type. However, in the other forms that we have identified, we are processing those through the system.

Chairman JOHNSON. OK. Thank you very much. That concludes my questions, and I thank the panel for being with us this morn-

ing.

Mr. Herger has been detained and has been unable to join us before we have completed our discussion, and we will have some follow-on questions for you which he will submit and we will enter in the record.

COMMITTEE ON WAYS AND MEANS

COMMITTEE ON THE BUDGET

Congress of the United States

House of Representatives Washington, BC 20515-0502

March 21, 1996

Margaret Richardson Commissioner Of The Internal Revenue Service Room 3000 1111 Constitution Avenue, NW Washington, District of Columbia 20224

Dear Madam Commissioner:

Sierra Pacific Industries, a significant employer in my district, filed a request for a private letter ruling on January 30, 1996 concerning the application of Internal Revenue Code section 1374 to the harvesting of timber. Upon receipt of a favorable ruling, Sierra Pacific intends to make an election to be taxed as an S corporation. The ruling requested was entirely consistent with a series of recent private letter rulings issued by the Service. Nonetheless, Sierra Pacific was recently informed that the request is being closed without the issuance of a ruling. I understand that the Service has taken similar steps with respect to several other taxpayers and has decided to suspend consideration of private rulings in the area while it analyzes the treatment of timber harvesting under section 1374.

I have two major concerns to bring to your attention with regard to this matter. First, as you are well aware, the President has proposed legislation that would make it prohibitively expensive for companies such as Sierra Pacific to elect S corporation status. The administration recently announced that the effective date of the proposed legislation is being delayed to January 1, 1997. Therefore, it is imperative that the Service conclude its review of this issue in a timely fashion so that Sierra Pacific, as well as any other affected taxpayer, will have the opportunity to apply for a favorable ruling. Resolving the issue in a manner favorable to taxpayers will do little good if they are then prevented from making an S election because of the proposed section 1374 legislation.

The second major concern I have is that by closing down the private ruling process in this area, the Service has shut down the flow of factual information concerning timber operations. My constituent informs me that timber operations vary widely from region to region and state to state. It is possible that these factual differences could be important in your consideration of the overall treatment of the timber industry. Therefore, I urge the service not to resolve these complex issues in a limited factual setting, but to seek input from and be open to meeting with affected taxpayers prior to reaching a final decision.

I am confident that you will take these concerns seriously, and look forward to your response. In particular, I would like your commitment to see that this issue is resolved in a timely fashion.

Sincerely,

Wally Herger Member of Congress

DEPARTMENT OF THE TREASURY INTERNAL REVENUE SERVICE WASHINGTON, D.C. 20224

The Honorable Wally Herger House of Representatives \Washington, D.C. 20515-0502

APR 23 1996

Dear Congressman Herger:

Thank you for your March 21, 1996 letter in which you expressed concern that the § 1374 timber issues involved in a ruling request submitted by one of your constituents, Sierra Pacific Industries, be resolved in a timely and orderly fashion. We appreciate your concerns in this matter and assure you that we are dedicated to resolving the complex issues involved in this matter as soon as possible.

In your letter, you expressed two particular concerns regarding your constituent's ruling request. First, you expressed concern that our temporary ruling suspension on § 1374 timber issues may have inadvertedly cut off the flow of information from other taxpayers that could prove helpful in resolving those very issues. We do not intend to close off the flow of factual information or decide these issues in a limited factual setting. We are willing to meet in a presubmission conference with any taxpayer contemplating a ruling request to learn of that taxpayer's factual setting and hear any arguments they wish to make. In fact, we held such a presubmission conference with your constituent on January 30, 1996, in which we learned a great deal about the timber industry in northern california. At that conference, Sierra Pacific Industries' tax representative submitted a well thought out memorandum discussing a number of the complex issues involved. This memorandum is being thoroughly considered in resolving the § 1374 timber issues.

Second, you pointed out that the President has proposed legislation that would make it prohibitively expensive for companies such as Sierra Pacific Industries to elect S status on or after January 1, 1997. You stated that it is therefore imperative that we conclude our review of this matter in a timely and orderly fashion. We assure you that the § 1374 timber issues are receiving our foremost attention, and we are confident that a resolution of these issues will occur well before the January 1, 1997 effective date of the President's proposed legislation. Furthermore, you can rest assured that once a resolution has been reached, your constituent will be promptly notified. If your constituent resubmits the ruling request, we also intend to grant expeditious treatment to ensure that they receive our response well before January 1, 1997.

If you have any further concerns or questions regarding this matter, please feel free to contact me at (202) 622-7720 or Attorneys Mark Jennings and Gene Raineri of my staff at (202) 622-7530.

Sincerely.

Bernita L. Thigpen (Acting) Deputy Assistant Chief Counsel (Corporate)

Jon D. Gartman

Secretary and Director of Taxes

JDG/br

Chairman JOHNSON. Thank you, Commissioner Richardson.

Ms. RICHARDSON. Thank you very much.

Chairman JOHNSON. And my thanks to your staff.

The next panel is Lynda Willis, the Director of Tax Policy and Administration Issues at the U.S. GAO.

I would ask my colleague to take over for a few minutes, and I will return very shortly. But I would like you, Ms. Willis, to proceed.

STATEMENT OF LYNDA D. WILLIS, DIRECTOR, TAX POLICY AND ADMINISTRATION ISSUES, GENERAL GOVERNMENT DIVISION, U.S. GENERAL ACCOUNTING OFFICE: ACCOMPANIED BY RONA B. STILLMAN, PH.D., SCIENTIST. COMPUTERS AND TELECOMMUNICATIONS, ACCOUNTING AND INFORMATION MANAGEMENT DIVISION

Ms. WILLIS. Thank you, Madam Chairman. We are pleased to be here today to participate in the Subcommittee's inquiry into the Internal Revenue Service's financial condition for 1996, the status of the 1996 filing season, and the administration's fiscal year 1997 budget request.

With me today is Dr. Rona Stillman, who is the GAO executive responsible for our work evaluating tax systems modernization.

My statement today makes the following four points:

First, programs directed at identifying noncompliance and, to a lesser extent, assisting taxpayers absorbed a substantial portion of the 1996 budget cuts.

Second, the 1996 filing season seems to be going more smoothly

than last year's in some key respects.

Third, TSM continues to be plagued by numerous management and technical weaknesses that put additional investments at risk.

And, fourth——

Mr. LAUGHLIN [presiding]. Could I interrupt you. Did the Commissioner leave somebody from her staff here?

[A show of hands.]

OK. Very good. Please proceed.

Ms. WILLIS. And, fourth, although IRS has taken some actions to address our previous concerns with compliance initiatives, some issues remain.

Turning first to IRS' 1996 financial condition, in fiscal year 1996 IRS had an appropriation of \$7.3 billion, \$160 million less than its 1995 appropriation and \$860 million less than the President requested. To accommodate its reduced budget, IRS took a number of actions. These included a hiring freeze, offering early outs without incentives, reducing awards, travel, and overtime costs, reducing the work hours of seasonal employees, and cutting back on the use of nonpermanent staff.

In making its staffing reductions, IRS wanted to ensure that it had enough staff to process tax returns and issue refunds in a timely manner. As a result, programs directed at identifying noncompliance, such as document matching, automated collection, or ACS, and questionable refund detection, absorbs most of the cuts. Affected to a lesser extent were taxpayer assistance programs.

Turning to the filing season, preliminary information indicates that in certain key aspects the 1996 filing season is progressing much more smoothly than the 1995 season. However, there are still several outstanding concerns. Available data indicate that IRS has been successful in not adversely affecting its ability to do what it sees as its most critical functions: Processing returns and issuing refunds. As of March 15, IRS Service Centers had processed 71 percent of the paper individual income tax returns they had received and had done so within about the same 8- to 13-day cycle time as last year. IRS officials told us that refunds may be going out a couple of days slower than last year, but still within the 40 days that IRS promises taxpayers.

The performance of IRS' new document imaging system, or SCRIPS, that we just talked about has improved in 1996, but remains far from the level of performance IRS had originally expected. Although IRS made changes to SCRIPS after the 1995 filing season to enhance its performance, we are concerned that more specific performance expectations for SCRIPS this filing season were not established. Without those expectations, it is difficult to

determine which enhancements were cost beneficial.

As of March 15, the number of individual income tax returns filed electronically had increased substantially compared to the same time last year. This is true even though the overall number of returns filed as of this date was down slightly. Most of the growth was in TeleFile, which went nationwide this year. Although the number of electronic returns is higher than last year, as of March 15 it was still about 16 percent fewer than the number filed at the same point in time 2 years ago.

Last year IRS also took several steps to better ensure that taxpayers were entitled to their refunds, dependents, and earned income credits they claimed. The most visible of these involve the delay of millions of refunds to allow IRS time to verify Social Security numbers and to do compliance checks. Although those efforts appear to have significant deterrent effect, they were not without problems. Specifically, IRS identified many more missing, invalid, and duplicate Social Security numbers than it was able to pursue and ended up releasing the refunds without resolving the problems and delayed millions of refunds for taxpayers that had valid Social Security numbers to check for duplicates, but also ended up releasing those refunds without doing the checks.

IRS took steps this year to address some of the problems it encountered in 1995. It has said it is being more selective in deciding which cases to investigate and which refunds to delay. Statistics indicate that IRS is, indeed, delaying fewer refunds this year. The impact of delaying fewer refunds is also reflected in higher telephone accessibility rates for the 1996 filing season, according to IRS, although the rate is still very low. Accessibility is at 20 percent as of March 9, up from 8 percent for the 1995 filing season. IRS attributes the improved accessibility primarily to the lower number of calls received this year. The number of calls received is down approximately 40 percent.

Although IRS has apparently been able to process returns and issue refunds this year without significant problems, staffing cuts in other areas could be affecting its ability to serve taxpayers and

identify questionable refunds.

In 1996 IRS closed 93 walk-in assistance sites and reduced the operating hours for some of the remaining 442. IRS data show that walk-in sites have served about 16 percent fewer taxpayers through March 9 than in the same time last year. However, I should note that taxpayers are able to obtain assistance and service from other sources, although maybe not as easily.

IRS' primary program for detecting questionable refund claims also absorbed staffing cuts in 1996, a decrease of 31 percent. IRS told us that because of the Staff Reduction Program, procedures were changed to better target staff efforts. In an attempt to recoup most of these staff reductions, IRS' budget request for 1997 includes \$21 million and 230 FTEs for the Questionable Refund Program. This is part of the revenue initiative I will discuss later.

Moving now to TSM, which began in 1986, is key to IRS' future business vision. IRS' 1997 budget request for TSM is \$850 million, \$155 million more than 1996. We have raised significant concerns about TSM and continue to believe that additional investments are at risk and we are concerned about how effectively IRS can use the requested funds until it corrects fundamental technical and mana-

gerial weaknesses.

While IRS has initiated a number of activities and made some progress in addressing our recommendations to improve the management of TSM, none of our recommendations have been fully satisfied. As a result, we do not believe that IRS can make effective use of TSM systems development funds at this time. Our concern is heightened by the fact that IRS would not give us specific information on its plans for spending the \$850 million requested for TSM in 1997. Information that is available on the \$155 million increase raises additional concerns in that it contains an additional \$29 million for CyberFile. We believe CyberFile is poorly developed and does not adequately address the security requirements needed to protect taxpayer data.

Finally, IRS 1997 budget request contains \$359 million for revenue protection or compliance initiatives. To help Congress deliberate on that portion of their request, you asked that we summarize our past work on compliance initiatives. That work has raised

the following issues:

First, prior to fiscal year 1995, IRS consistently used at least some compliance initiative funds to cover budget shortfalls in base operations. To ensure IRS spent 1995 fiscal year compliance initiative funds as intended, its ability to use those funds for other pur-

poses was restricted by Congress.

Second, until recently, IRS was unable to track actual revenues generated by the compliance initiatives. For the last several years, IRS has been implementing an enforcement revenue information system that is intended to report the actual revenue from compliance programs. However, in the past, concerns have been expressed about the reliability of that data, and IRS has been working to resolve those concerns. We will test the reliability of the data as a part of our audit of IRS' 1996 financial statements.

Third, for several years, we have encouraged IRS to shift its collection focus from revenue officers, who generally collect delinquent taxes through face-to-face contact with taxpayers, to more productive processes like ACS that emphasize early telephone contact. Al-

though IRS reduced the number of revenue officer positions in its 1995 compliance initiative, it planned to hire about 750. IRS is now diverting some revenue officers to ACS to mitigate the impact of

ACS' 1996 staffing reductions.

The \$359 million is expected to fund 3,830 additional compliance staff. According to IRS, most of those staff are for areas such as ACS and document matching that were significantly affected by the 1996 staffing cuts. However, IRS' budget shows that total compliance staffing is expected to increase by only 2,390 positions in 1997. Almost all of the difference is because the budget also includes a decrease of over 1,300 FTEs for law enforcement. According to IRS, the decrease will come from more traditional enforcement job categories such as revenue officers.

One effect of the increases and decreases in the 1997 budget, if implemented as described, would be to alter the mix of collection staffing toward the kind of mix we have advocated in the past.

In conclusion, although IRS has made some changes, certain questions remain regarding the revenue initiatives. Specifically, one, will IRS spend the additional funds for additional compliance staff? Two, does IRS have reliable data on the revenue generated by its enforcement activities? And, three, will IRS be able to achieve the new staffing mix?

That concludes my statement. I would be happy to answer any

questions you may have.

[The prepared statement follows:]

STATEMENT OF LYNDA D. WILLIS DIRECTOR, TAX POLICY AND ADMINISTRATION ISSUES GENERAL GOVERNMENT DIVISION U.S. GENERAL ACCOUNTING OFFICE

Madam Chairman and Members of the Subcommittee:

We are pleased to be here today to participate in the Subcommittee's inquiry into the Internal Revenue Service's (IRS) financial condition for 1996, the status of the 1996 filling season, and the administration's fiscal year 1997 budget request for IRS.

Our statement is based on work we have been doing for the Subcommittee and our past reviews of filing season activities, Tax Systems Modernization (TSM), and compliance initiatives.

In our statement, we address the following four issues:

- -- According to IRS officials, IRS' actions to reduce staffing through a hiring freeze and an early-out program were not sufficient to cover the labor-cost shortfall that resulted from an approximately \$860-million reduction in IRS' budget request for fiscal year 1996. To further cover the shortfall, IRS reduced support costs, cut the number of hours for seasonal employees, and reduced the number of nonpermanent staff. In making these reductions, IRS wanted to ensure that it had enough staff to process tax returns and issue refunds in a timely manner. As a result, programs directed at identifying noncompliance and, to a lesser extent, assisting taxpayers, absorbed most of the cuts.
- -- Notwithstanding the budget cuts that affected some of IRS' taxpayer assistance programs, this year's filing season seems to be progressing more smoothly than did last year's in some key respects. Most importantly, IRS is delaying fewer refunds this year while it validates Social Security Numbers (SSN) and Earned Income Credit claims. IRS revised its procedures for 1996 in an attempt to better target its efforts and impose less of a burden on honest taxpayers. Also, telephone accessibility has improved, and more taxpayers are using alternative return-filing methods. Although this filing season appears to be going more smoothly in these respects, there are still several concerns. For example, (1) although telephone accessibility has improved, it is still very low; (2) IRS closed many walk-in sites this year that had provided assistance to taxpayers in the past; and (3) the document imaging system being used to process some individual income tax forms is still not meeting its original expectations.
- -- The administration is requesting almost \$8 billion for IRS for fiscal year 1997, an increase of \$647 million from fiscal year 1996. Of that request, \$850 million is for TSM, \$155 million more than in 1996. TSM is plagued by numerous managerial and technical weaknesses that we identified in a July 1995 report. Although IRS has initiated actions in response to these weaknesses, those efforts provide little assurance that the weaknesses will be corrected in the near term. As a result, we believe that additional investments in TSM are at risk.
- The largest program increase in IRS' fiscal year 1997 budget request is \$359 million for certain compliance programs. Our past work on compliance initiatives identified several problem areas, including (1) IRS' inability to fully implement past initiatives, (2) the inaccuracy of IRS' tracking of the revenue from such initiatives, and (3) the focus of past collection initiatives on hiring revenue officers instead of more productive collection staff.

¹Tax Systems Modernization: Management and Technical Weaknesses Must Be Corrected If Modernization Is To Succeed (GAO/AIMD-95-156, July 26, 1995).

Although IRS has taken some actions to address our concerns, some issues remain, particularly in terms of the reliability of IRS' data.

OVERVIEW OF IRS' FINANCIAL CONDITION IN FISCAL YEAR 1996

IRS' fiscal year 1996 appropriation was \$7.3 billion. That amount was about \$860 million less than the President requested for fiscal year 1996 and about \$160 million less than IRS' fiscal year 1995 appropriation.

In June 1995, anticipating possible reductions from the amount the President had requested for fiscal year 1996, IRS began taking steps to reduce its staffing levels. On June 30, 1995, IRS announced a hiring freeze. Earlier in 1995, IRS had announced an early-out program without incentives for employees affected by its district office and regional office consolidations. After enactment of its final appropriation, IRS reopened the early-out program through February 3, 1996, and made it available to all employees. About 1,690 staff retired as a result of this program.

To further cut costs, IRS officials said that IRS (1) reduced employee cash awards by 20 percent, for a savings of \$11 million; (2) reduced travel and overtime costs by \$49 million; (3) reduced the workhours of seasonal employees by as much as 40 percent; and (4) cut back on the use of nonpermanent staff, such as term employees. IRS officials also said that the above actions enabled them to avert a reduction-in-force (RIF). According to IRS officials, by the time IRS would have been able to implement a RIF for fiscal year 1996, the cost would have exceed the savings.

As of March 1, 1996, according to IRS officials, IRS had about \$140 million in unfunded mandatory nonlabor costs for fiscal year 1996. Some of those unfunded costs were for telecommunications, postage, and rent. IRS officials said that they are hoping to resolve these unfunded costs without having to resort to furloughs.

Part of the \$140 million shortfall stems from lower user-fee receipts than expected. IRS' fiscal year 1996 appropriation assumed a receipt of \$119 million from user fees. IRS now expects to receive from \$60 to \$70 million in such fees for fiscal year 1996.

Staffing Cuts in the Document Matching Program and at Automated Collection System Call Sites

As noted earlier, IRS' actions to reduce labor costs involved steps directed at seasonal and nonpermanent staff. Most of IRS' seasonal and non-permanent staff (1) help process tax returns during the filing season, (2) assist taxpayers either at walk-in offices or over the telephone, and (3) work in compliance programs that do not require face-to-face interaction with taxpayers. IRS officials told us that in deciding which areas to cut, IRS wanted to ensure that it could process tax

 $^{^2}$ According to IRS officials, IRS considered eliminating all cash awards but decided against that option.

³Although IRS' seasonal staff work less than a traditional 40-hour week, 52-week schedule, they are permanent employees.

^{&#}x27;Term employees are hired for a finite period of time. During that time, they have employment rights similar to those of permanent employees. However, they can be released once their term expires.

returns and issue refunds in a timely manner. As a result, most of IRS' staffing cuts affected its compliance programs, with some cuts in the taxpayer service area.

According to IRS officials, the two compliance programs that employ the largest number of seasonal and term staff are (1) the Document Matching program, through which IRS identifies taxpayers that either underreport their income or do not file required tax returns, and (2) the Automated Collection System (ACS), through which IRS staff try to contact delinquent taxpayers or nonfilers by telephone and resolve the delinquency. Because IRS' cost-cutting measures for fiscal year 1996 focused on seasonal and nonpermanent staff, these two programs were significantly affected.

Document matching

Through the Document Matching program, IRS matches income reported on tax returns with information provided by third parties, such as wage information from employers and interest and dividend information from financial institutions. Those matches are to identify taxpayers that underreported their income (underreporters) and those that did not file required tax returns (nonfilers).

According to IRS, it spent about 1,950 staff years on underreporter activities in fiscal year 1995 and closed 4.1 million cases with recommended tax assessments of \$1.7 billion. Because of staff reductions, IRS estimates that it will spend about 1,300 staff years on underreporter activities in 1996—about a 33-percent reduction—and close about 1.5 million fewer cases. IRS estimates that its assessments from closed cases will be \$1.4 billion, \$300 million less than in 1995. IRS' matching program also identifies taxpayers who have not claimed refunds to which they are entitled. In fiscal year 1995, IRS issued \$120 million in refunds through that program. IRS expects that amount to drop to \$95 million in 1996 because of staff reductions.

Also under the Document Matching program, IRS creates returns for nonfilers using information documents provided by third parties. According to IRS, it spent about 600 staff years on that effort in fiscal year 1995, closed about 810,000 cases, and assessed \$1.9 billion. Because of staff reductions, IRS estimates that it will spend about 370 staff years on this effort in fiscal year 1996—about a 38-percent reduction—and close about 180,000 fewer cases. IRS estimates that assessments from closed cases will be \$1.3 billion, \$650 million less than in 1995.

Automated Collection System

Once a tax delinquency or delinquent return is identified, IRS uses a three-stage process to collect the tax or secure the return. In the first stage, taxpayers are mailed a series of notices. If the case is not resolved at this point and meets certain criteria, it is transferred to ACS. At this stage, IRS staff in call sites contact the taxpayer or nonfiler by telephone. If the case remains unresolved at this point and meets certain criteria, it is transferred to a revenue officer, who is to visit the taxpayer or nonfiler or take other steps to secure the delinquent return and/or collect the delinquent tax.

Because of various factors discussed in the appendix, ACS had a significant number of seasonal, term, and other than full-time permanent staff at the end of fiscal year 1995--66 percent more than it had at the end of fiscal year 1994. As a result, ACS was targeted for a significant staff reduction when IRS decided to reduce the number of hours for seasonal staff and not extend appointments for term employees.

IRS officials subsequently decided that the budget impact on ACS was too severe. To mitigate the impact, IRS negotiated with the National Treasury Employees Union to allow the detail of about 300 revenue officers and other compliance staff to ACS. These details are to remain in effect for at least 1 year. IRS officials said that they plan to revisit this agreement with the union once IRS knows its budget situation for fiscal year 1997.

THE 1996 FILING SEASON SEEMS TO BE GOING MORE SMOOTHLY THAN LAST YEAR'S IN CERTAIN KEY RESPECTS

On the basis of our past filing season reviews, we had several questions going into the 1996 filing season:

- -- How will IRS' staffing reductions for fiscal year 1996 affect its ability to process returns and assist taxpayers?
- -- Will last year's drop in the number of electronic filings be reversed?
- -- What can taxpayers expect in the way of refund delays in 1996?
- -- Will the steady decline in the accessibility of IRS' telephone assistance over the past several years continue?
- -- Has the performance of IRS' Service Center Recognition/Image Processing System (SCRIPS) improved?

As discussed below, preliminary information addressing these questions indicates that, in certain key respects, the 1996 filling season is progressing more smoothly than did the 1995 season. As also discussed below, however, there are still several concerns that we will be monitoring during our continuing assessment of filing season activities. Specifically, (1) although telephone accessibility is up, it is still very low; (2) IRS closed many walk-in sites this year that had provided assistance to taxpayers in the past; and (3) SCRIPS is still not meeting its original expectations.

Effect of Staffing Cuts on Filing Season

In deciding where to make the staffing cuts for fiscal year 1996, IRS wanted to make sure it had enough staff to do its most critical functions--process returns and issue refunds--in a timely manner. Available data indicate that IRS has been successful in that regard. As of March 15, 1996, IRS' 10 service centers had processed 71 percent of the paper individual income tax returns they had received (the same percent as last year), and the centers were processing that workload in about the same cycle time as last year (within an average of 8 to 13 days, depending on the type of individual income tax return filed).

IRS service center officials told us that refunds may be going out a couple of days slower than last year but still within the 40 days that IRS promises taxpayers in its customer service standards. Service center officials told us that IRS had decided to focus on meeting the 40-day standard in 1996 rather than incur the extra costs associated with trying to beat it. However, we were unable to verify whether the refund cycle time has changed because the data we use to track refund timeliness were not available at the time we prepared this statement.

Although IRS has apparently been able to process returns and issue refunds this year without any significant problems, staffing cuts in other areas could be affecting its ability to serve taxpayers and identify questionable refund claims.

Taxpayer service

In the taxpayer service area, IRS closed 93 walk-in assistance sites, reduced the operating hours of some of the 442 sites that remained open, and eliminated free electronic filing at 195 of the sites. According to IRS, the closed sites were selected on the basis of their historical volume of work and their proximity to other walk-in sites. As an indication of the effect of these closures and cutbacks, IRS data show that walk-in sites served about 1.7 million taxpayers from January 1 through March 9, 1996—about 16 percent fewer taxpayers than were served at the same time last year.

Walk-in sites provide various free services, including copies of the more commonly used forms and publications, help in preparing returns, and answers to tax law questions. There are other ways taxpayers can obtain those services free, although maybe not as easily.

Taxpayers needing forms and publications, for example, might find them at their local library or can get them by calling IRS' toll-free forms-ordering number. Our reviews of past filing seasons showed that taxpayers were generally able to get through to IRS when they called the forms-ordering number, and the forms distribution centers did a good job accurately filling orders. However, according to IRS, it will generally take from 7 to 15 workdays to receive what you order, if it is in stock. Taxpayers with access to a computer can download forms from Internet or the FedWorld computer bulletin board. Forms are also available on CD-ROM and through IRS' "fax on demand" service.

Taxpayers who need help preparing their returns and do not want to pay for that help might be able to take advantage of the tax preparation services offered at sites around the country that are part of the Volunteer Income Tax Assistance and Tax Counseling for the Elderly programs.

Taxpayers who need answers to tax law questions could call IRS toll-free tax assistance number (which we discuss later) or IRS TeleTax system, which has prerecorded information on about 150 topics. As of March 16, 1996, the number of tax law calls to TeleTax had increased by about 10 percent over last year (4.5 million this year compared with 4.1 million last year).

Still another option for free assistance is IRS' World Wide Web site on the Internet. Among other things, IRS' site includes copies of forms, information similar to that on TeleTax, and some interactive scenarios that taxpayers can use to help them answer some commonly asked guestions. IRS reported on March 18, 1996, that its World Wide Web site had been accessed more than 25 million times since January 8, 1996.

Questionable refund program

IRS' primary program for detecting questionable refund claims also absorbed staffing cuts in 1996. According to IRS data, the 10 service centers have been allocated a total of about 379 full-time equivalents for that program in fiscal year 1996 compared with 551 full-time equivalents in 1995—a decrease of 31 percent. IRS officials told us that, because of the staff reduction, program procedures were changed in an attempt to better target the staffs' efforts. We do not know the initial impact of these changes because we have not yet seen any statistics on the number of questionable refund claims detected in 1996. In an attempt to recoup most of those staff reductions, IRS' budget request for fiscal year 1997 includes \$21 million and 230 full-time equivalent positions for the questionable refund detection program. That request is part of the revenue protection initiative discussed later.

Alternative Ways of Filing

As of March 15, 1996, the number of individual income tax returns filed in ways other than the traditional paper format has increased substantially compared to the same time last year. That is true even though the overall number of returns filed as of March 15 was down slightly from last year. As shown in table 1, most of the growth in alternative filings is due to 1040PC and TeleFile. 5

Table 1: Individual Income Tax Returns Received, 1994-1996

Type of filing	March 15, 1996	March 17, 1995	March 18, 1994
Traditional paper	36,258,000	40,787,000	38,333,000
Electronic	9,811,000	9,259,000	11,647,000
TeleFile	2,379,000	592,000	459,000
1040PC	2,767,000	673,000	1,723,000
TOTAL	51,215,000	51,311,000	52,162,000

Source: IRS' Management Information System for Top Level Executives.

Growth in the use of 1040PC is due, in part, to the largest user rejoining the program after dropping out in 1995. The growth in TeleFile is due primarily to its expanded availability. It is now available nationwide; it was only available to taxpayers in 10 states in 1995. IRS' budget request for fiscal year 1997 includes \$7 million to allow expansion of TeleFile to other forms and taxpayers. Although IRS has made substantial progress in expanding the use of TeleFile and further expansion seems logical, it is important to note that only about 12 percent of the more than 20 million 1040EZ taxpayers who IRS estimated would be eligible to use the system in 1996 had actually used it as of March 15. In past reports, we have discussed the benefits of TeleFile to taxpayers (e.g., reduced filing time, fewer errors, and quicker refunds) and the presumed benefit to IRS in reduced processing costs. In addition to expanding TeleFile, it seems that IRS could increase participation in the program by (1) determining why many currently eligible users are not participating and (2) taking steps to address any identified barriers to their fuller participation.

SUnder TeleFile, certain taxpayers who are eligible to file a Form 1040EZ are allowed to file using a toll-free number on touch-tone telephones. Under the 1040PC method, a taxpayer or tax return preparer uses computer software that produces tax returns in an answer-sheet format. The 1040PC shows the tax return line number and the data (dollar amount, name, etc.) on that line. Only lines on which the taxpayer or preparer has made an entry are included on the 1040PC. Under the third alternative filing method, electronic filing, returns are transmitted over communication lines to an IRS service center, where they are automatically edited and processed.

For the 1995 filing season, IRS required that preparers provide taxpayers with some type of descriptive printout or legend that explained each line on the taxpayer's 1040PC return. According to an official of a private tax preparation firm that had been the largest user of 1040PCs, the firm chose to stop participating in 1995 rather than incur the extra cost associated with providing the legend.

Last year was the first year since electronic filing started in 1986 that the number of returns received electronically decreased from the number received the prior year. Although the number of electronic returns is on the rise this year compared with last, the number filed as of March 15 was still about 16 percent fewer than the number filed at the same time 2 years ago. As we recommended in October 1995, if IRS is to reach its goal of 80 million electronic returns in 2001, it needs to (1) identify those groups of taxpayers who offer the greatest opportunity to reduce IRS' paper processing workload and operating costs if they were to file electronically and (2) develop strategies that focus resources on eliminating or alleviating impediments, such as the program's cost, that inhibit those groups from participating.

Refund Delays

Last year, IRS took several steps in an attempt to better ensure that persons were entitled to the refunds, dependents, and Earned Income Credits they were claiming. The most visible of those efforts involved the delay of millions of refunds to allow IRS time to verify SSNs and do compliance checks. Although those efforts appeared to have had a significant deterrent effect (e.g., preliminary information indicates that 1.9 million fewer dependents were claimed in 1995 than were in 1994), they were not without problems.

IRS (1) identified many more missing, invalid, and duplicate SSNs than it was able to pursue and ended up releasing the refunds without resolving the problems and (2) delayed millions of refunds for taxpayers whose returns had valid SSNs to check for duplicate SSNs but ended up releasing those refunds after several weeks without doing the checks. Many taxpayers and practitioners were surprised that IRS delayed some refunds even if all of the SSNs on the return were good. They were also upset that IRS split some refunds--issuing part of the refund and delaying the rest--but only honored a taxpayer's direct deposit request for the first part of the refund.

As we noted in our report to the Subcommittee on the 1995 filing season, IRS identified fewer fraudulent returns during the first 9 months of 1995 than it did during the same period in 1994, and the percentage of fraudulent refunds it stopped before issuance declined. Neither we nor IRS know whether those decreases were due to a decline in the incidence of fraud or a decline in the effectiveness of IRS' detection efforts. The Director of IRS' Office of Refund Fraud expressed the belief that there were fewer fraudulent returns to be identified in 1995. He opined that the additional controls IRS implemented in 1995 and knowledge of those actions had deterred persons from filing fraudulent returns.

IRS took steps this year to address some of the problems it encountered in implementing its new procedures in 1995. For example, IRS has said that it is being more selective in deciding which cases to investigate and which refunds to delay this year-trying to focus its resources on the most egregious cases and minimize the burden on honest taxpayers.

Statistics on the number of notices sent to taxpayers in 1996 concerning SSN problems and refund delays indicate that IRS is indeed delaying fewer refunds. As of March 9, 1996, IRS had mailed about 56-percent fewer refund-delay notices than at the same time last year. Another indicator that fewer refunds are

Tax Administration: Electronic Filing Falling Short of Expectations (GAO/GGD-96-12, Oct. 31, 1995).

⁶We limited our comparison to the first 9 months because IRS had not compiled data for the last quarter of 1995.

being delayed in 1996 is the decrease in the number of "where is my refund" calls to IRS. Taxpayers wanting to know the status of their refunds can call TeleTax and get information through the use of an interactive telephone menu. This filing season, as of March 16, 1996, IRS reported receiving 26.5 million such calls--a decrease of about 15 percent from the 31.0 million it reported receiving as of the same time last year.

Telephone Accessibility

For the past several years, taxpayers have had difficulty reaching IRS by telephone. As we reported to the Subcommittee in December 1995, IRS data showed that (1) an estimated 46.9 million callers made 236 million call attempts to IRS for tax assistance between January 1 and April 15, 1995 and (2) IRS was able to respond to only 19.2 million of those attempts—an accessibility rate of 8 percent.

Accessibility has improved this year, although it is still low. IRS data for January 1 through March 9, 1996, showed 63.3 million call attempts, of which 12.7 million were answered—an accessibility rate of about 20 percent. As of the same time last year, IRS reported receiving about 107 million call attempts, of which 11.7 million were answered—an accessibility rate of about 11 percent. As the data indicate, a major reason for the improved accessibility is the significant drop in call attempts. IRS attributed that drop to (1) fewer refund delay notices being issued, as discussed earlier; (2) a slippage in the number of returns filed; and (3) IRS efforts to publicize other information sources, such as Internet.

SCRIPS

In our report to the Subcommittee on the 1995 filing season, we noted that IRS' new document imaging system--SCRIPS--did not perform as expected, leading to increased returns processing costs and lower-than-expected productivity. To For example, SCRIPS had such significant downtime that two of the five service centers that were using SCRIPS stopped using it to process Forms 1040EZ. As a result, IRS had to redirect more of the Form 1040EZ processing workload to its manual data entry system. After the 1995 filing season, IRS identified hardware and software upgrades that would be needed to correct the SCRIPS performance problems. IRS made some of those changes for the 1996 filing season.

Our discussions with IRS officials and our review of processing rate data indicate that SCRIPS' performance has improved in 1996. Specifically, SCRIPS is processing at faster rates in three of the five centers and operating with less system downtime in all five centers. However, the two centers that stopped using SCRIPS to process Forms 1040EZ last year are experiencing slower processing rates than those of last year. Despite the improved performance, SCRIPS is far from the level of performance IRS had originally expected. For example, IRS originally planned to be processing all Forms 1040EZ on SCRIPS by 1996; it now expects to process about 50 percent of the Forms 1040EZ received in 1996 on SCRIPS. The remaining forms are being processed through IRS' manual data entry system.

Although IRS made changes to SCRIPS and performance has improved, we are concerned that IRS did not establish more specific performance expectations for SCRIPS this filing season. IRS specified volume expectations by form type, but it did not

⁹The 1995 Tax Filing Season: IRS Performance Indicators Provide Incomplete Information About Some Problems (GAO/GGD-96-48, Dec. 29, 1995).

¹⁰GAO/GGD-96-48.

establish expectations for improvements in processing rates or reductions in system down time that should result from the enhancements made for the 1996 filing season. Without those expectations, it will be difficult for IRS to determine which enhancements were cost beneficial. We are currently reviewing SCRIPS and plan to report our results later this year.

ADDITIONAL INVESTMENTS IN TSM ARE AT RISK GIVEN CURRENT MANAGERIAL AND TECHNICAL WEAKNESSES

TSM, which began in 1986, is key to IRS' vision of a virtually paper-free work environment in which taxpayer account updates are rapid and taxpayer information is readily available to IRS employees to respond to taxpayer inquiries. IRS' fiscal year 1997 request for TSM is \$850 million, a \$155 million increase from IRS' proposed operating level for fiscal year 1996. We continue to believe that TSM is a high risk and are concerned about how effectively IRS can use the requested funds until it corrects some fundamental technical and managerial weaknesses.

The Treasury, Postal Service and General Government Appropriations Act for 1996 "fenced" \$100 million in TSM funding until the Secretary of the Treasury reports to the Senate and House Appropriations Committees on IRS' progress in responding to the recommendations we made in a July 1995 report on TSM.11

Many of our recommendations were intended to correct critical IRS management and technical weaknesses by December 31, 1995. Without these corrections, IRS will not have the sound management and technical practices it needs to successfully meet TSM objectives in a cost effective and expeditious manner. A recent National Research Council report on TSM had a similar message. The Council's recommendations parallel the recommendations we made involving IRS' (1) business strategy to reduce reliance on paper, (2) strategic information management practices, (3) software development capabilities, (4) technical infrastructures, and (5) organizational controls.

In our March 14, 1996, testimony before the Subcommittee on Treasury, Postal Service and General Government, House Committee on Appropriations, we assessed IRS' progress in responding to our recommendations. ¹³ Because IRS' progress report on implementing our recommendations was not finalized, our assessment was based on several follow-up meetings with IRS officials and a review of various planning documents. According to the Deputy Secretary of the Treasury, the Department is currently reviewing IRS' progress report and plans to submit it to Congress "as soon as possible."

IRS has initiated a number of activities and made some progress in addressing our recommendations to improve management of information systems; enhance its software development capability; and better define, perform, and manage TSM's technical activities. However, none of these steps, either individually or in the aggregate, has fully satisfied any of our recommendations.

As a result, we do not believe that IRS can make effective use of TSM systems development funds at this time. Our concern is heightened by the fact that IRS would not give us specific information on its plans for spending the \$850 million being

¹¹GAO/AIMD-95-156.

¹²Continued Review of the Tax Systems Modernization of the Internal Revenue Service-Final Report, Computer Science and Telecommunications Board, National Research Council, 1996.

¹³Tax Systems Modernization: Status of Tax Systems Modernization. Tax Delinquencies, and the Fotential for Return Free Filing (GAO/T-GGD/AIMD-96-88, Mar. 14, 1996).

requested for TSM in fiscal year 1997. IRS' budget request contains some general information on its plans for the \$155 million increase over the proposed operating level for fiscal year 1996. However, the information provided raises additional concerns. In this regard, IRS is requesting an additional \$29 million for Cyberfile, an electronic filing system. Earlier this week, we testified that Cyberfile is a poorly developed system that does not adequately address the security requirements needed to protect taxpayer data. 14

FISCAL YEAR 1997 BUDGET REQUEST INCLUDES \$359 MILLION FOR REVENUE PROTECTION INITIATIVES

In every year but one from 1990 through 1995, Congress has appropriated IRS funds for various compliance initiatives aimed at increasing IRS' enforcement staff with the expectation that the increase would produce more revenue. For fiscal year 1995, Congress appropriated \$405 million for compliance initiatives. In estimating the revenue that would be generated from those initiatives--\$9.2 billion--IRS assumed that Congress would continue to provide \$405 million for the additional staffing over the next 4 years. However, Congress did not provide the second-year funding installment for fiscal year 1996.

IRS' fiscal year 1997 budget request includes \$359 million for "revenue protection initiatives". Although the name has changed, these initiatives are directed toward achieving the same goal as were previous compliance initiatives—to increase revenue. To help Congress deliberate on this portion of IRS' budget request, you asked that we summarize our past work on compliance initiatives. That work focused on the following issues:

- -- Before fiscal year 1995, IRS consistently used at least some of the compliance initiative funds for purposes other than those that Congress intended. Specifically, IRS used these funds to cover budget shortfalls in base operations. As a result, many of the past compliance initiatives were never fully implemented. To ensure that IRS spent fiscal year 1995 compliance initiative funds as intended, the Appropriation Committees restricted IRS' ability to use those funds for other purposes.
- Before fiscal year 1995, IRS only tracked the staffing and revenue associated with an initiative. Using this approach, IRS could claim that compliance initiatives had met their revenue goal even if IRS' base staffing had declined, which was often the case. We recommended that IRS provide Congress with information on the total revenue achieved-from both base staffing and compliance initiative staffing-to ensure that Congress had a more accurate picture of IRS' total compliance program. 15 IRS revised its tracking approach for fiscal year 1995.
- -- Although IRS revised its tracking approach, we cannot yet comment on the accuracy of the revenue figures in IRS' tracking reports. Until recently, IRS had to estimate the amount of revenue derived from its compliance efforts because it was unable to track actual revenue-regardless of whether it was generated from compliance initiative staff or base staff. For the last several years, IRS has been implementing an Enforcement Revenue Information System (ERIS) that is intended to report the actual revenue from

¹⁴Tax Systems Modernization: Management and Technical Weaknesses Must Be Overcome to Achieve Success (GAO/T-AIMD-96-75, Mar. 26, 1996).

¹⁵Tax Administration: Congress Needs More Information on Compliance Initiative Results (GAO/GGD-92-118, July 31, 1992).

various compliance programs. In the past, we have discussed concerns about the reliability of ERIS data, and IRS has been working to resolve those problems. We plan to test the reliability of ERIS data as part of our audit of IRS' fiscal year 1996 financial statements.

-- Although we generally supported the fiscal year 1995 compliance initiatives, we did not support hiring more revenue officers. For several years, we have encouraged IRS to shift its collection focus from revenue officers, who generally collect delinquent taxes through face-to-face contact with taxpayers, to more productive processes like ACS, that emphasize early telephone contact. Although IRS subsequently reduced the number of revenue officers for that initiative, it still planned to hire about 750 in fiscal year 1995. As noted earlier, IRS is now diverting some revenue officers --who are paid at higher rates than ACS staffir-to ACS to mitigate the impact of ACS staffing reductions.

The \$359 million included in IRS' fiscal year budget request for the revenue protection initiatives is expected to fund 3,820 additional compliance staff. According to IRS, most of those staff are for areas, such as ACS and Document Matching, that were significantly affected by fiscal year 1996 staffing cuts.

Despite the 3,820 additional staff associated with the revenue protection initiatives, IRS budget shows that total compliance staffing is expected to increase by only 2,390 positions in fiscal year 1997. Almost all of that difference is because IRS' budget also includes a decrease of 1,341 full-time equivalents for tax law enforcement. That decrease is part of IRS' contribution to reductions in base programs to reduce the federal deficit. According to IRS, the decrease of 1,341 positions will come from the more traditional enforcement job categories—those, such as revenue officers and revenue agents, that engage in face-to-face audit and collection activities. IRS' budget states that although "these positions still comprise the lion's share of IRS enforcement efforts, they also represent, on the margin, the least efficient use of IRS resources." According to IRS officials, these staff reductions will be achieved through attrition.

Thus, one effect of the increases and decreases in IRS' compliance staffing for fiscal year 1997, if IRS' budget request is approved and is implemented as IRS has described, would be to alter the mix of that staffing. IRS would have fewer revenue officers, for example, and more ACS staff--the kind of mix that we have advocated in the past.

In conclusion, although IRS has made some changes, there are certain questions that remain appropriate in discussing the revenue protection initiatives: (1) will IRS spend the additional funds for additional compliance staff? (2) does IRS have reliable data on the revenue generated by its enforcement activities? and (3) will IRS be able to achieve the new staffing mix?

That concludes $\ensuremath{\mathsf{my}}$ statement. We welcome any questions that you $\ensuremath{\mathsf{may}}$ have.

APPENDIX APPENDIX

FACTORS AFFECTING ACS STAFFING FOR FISCAL YEAR 1996

Factors surrounding IRS' organizational and business restructuring led to ACS having a large number of seasonal, term and other than full-time permanent staff at the end of fiscal year 1995. As a result, ACS was targeted for a significant staff reduction given IRS' cost-cutting approach for fiscal year 1996.

IRS' customer service vision calls for combining into 23 customer service sites the work of at least 70 organizational units that employ staff who do not have face-to-face interactions with taxpayers. These centers are to employ staff who will work primarily by telephone to assist taxpayers, collect delinquent taxes, and adjust taxpayer accounts. As part of this consolidation, IRS is to close 10 of its 20 ACS sites.

After IRS announced which 10 sites would be closed, two things happened. First, ACS employees who could find other positions left ACS. Some of these employees were hired for revenue officer positions that became available as part of the fiscal year 1995 compliance initiatives. Second, the 10 ACS sites that were scheduled to close could hire only term and seasonal staff, according to an IRS official. Therefore, at the end of fiscal year 1995, ACS had 448 seasonal, term, and other than full-time permanent staff--66 percent higher than the number at the end of fiscal year 1994.

Mr. LAUGHLIN. Thank you very much.

Dr. Stillman, are you testifying?

Ms. STILLMAN. I am available to answer any questions you may have in the TSM area.

Mr. LAUGHLIN. Thank you.

Ms. Willis, how long do you think it will take the IRS to put the TSM back on the right track? And how will we know if the new track is any better than the current track?

Ms. WILLIS. Let me refer that question to Dr. Stillman.

Ms. STILLMAN. We made a series of recommendations in a July 1995 report, over a dozen recommendations, specific recommendations telling IRS what they needed to do to put themselves in a better position to invest their large budget in it well, to build their systems well, and to manage it well. We have dates on those ranging from June 1995 to improve their investment strategy and prioritize their investments through December 1995 to make technical improvements.

At that time IRS agreed with the recommendations, and in their written comments took no exceptions to the dates. At this point they have implemented none of those recommendations.

Mr. LAUGHLIN. That was my question.

Ms. STILLMAN. They have completely implemented none.

Mr. LAUGHLIN. Have you seen any implementation of any of the

12 that you recommended 9 months ago?

Ms. STILLMAN. We have seen activities aimed at making progress on those recommendations. Those activities neither individually nor in the aggregate completely addressed any of the over a dozen recommendations.

Mr. LAUGHLIN. And when you made the recommendations, the IRS agreed with them?

Ms. Stillman. They did so in writing at the back of that report.

Mr. LAUGHLIN. And you have seen no implementation?

Ms. STILLMAN. We see no effective implementation at this point.

Mr. LAUGHLIN. It is kind of like me saying I am going to marry you and then not show up.

Ms. STILLMAN. Absolutely.

Mr. LAUGHLIN. How will the intervention of the Treasury Depart-

ment affect the timetable and acquisition costs for TSM?

Ms. STILLMAN. We did not evaluate that specifically, and I don't have that answer for you now. There are joint activities including Treasury and IRS. I am unable to tell you what the time or quality effect of that is.

Mr. LAUGHLIN. Dr. Stillman, this may be something you should answer. In the prepared statement by Ms. Willis, you talk about having seen no steps that satisfy your recommendations, and then you say, "we do not believe the IRS can make effective use of TSM system development funds at this time."

What do you recommend?

Ms. STILLMAN. It is quite clear that IRS cannot control from an investment perspective or from a technical perspective their very large budget, in the neighborhood of \$850 million or \$700 million or \$1 billion annually.

What would seem to be more prudent would be for IRS to identify what it needs for basic day-to-day operations, what it needs to

continue current operations. Major developments over that, I think, should have to be justified convincingly to the Congress, perhaps in supplement appropriations requests.

Mr. LAUGHLIN. Is this an area where the existing contracts should be reviewed for modification to determine whether any of the outside contracting agencies would be more appropriate to

manage the development of TSM?

Ms. STILLMAN. We made one recommendation in our July 1995 report directly addressing the use of contractors, and that was that in all new contracts, IRS should require that their contractors perform software development at a repeatable level, the Software Engineering Institute's level 2. That would give you some confidence that, in fact, IRS could deliver repeatably products of reasonable quality, on time, and within budget.

There is no evidence that IRS requires all its contractors to perform at SEI level 2, and, in fact, CyberFile is an example of a contractual effort that IRS has undertaken since our report that does not require that its contractors build software at SEI capability

level 2.

Mr. LAUGHLIN. Ms. Willis, early in your remarks, you said some issues remain dealing with TSM, and I am not smart enough or knowledgeable enough to keep up. Did you address those concerns later in your testimony?

Ms. WILLIS. The issues that remain with TSM, as Dr. Stillman alluded to, are the issues associated around the managerial and technical weaknesses that we identified that we attempted to address through our recommendations.

Mr. LAUGHLIN. Are there any other issues remaining that either you or Dr. Stillman have not testified to at this point in your testimony?

Ms. WILLIS. No.

Mr. LAUGHLIN. What are the advantages and disadvantages of having the IRS act as its own prime contractor? And would you recommend that the IRS continue as its own prime contractor, or

would you recommend they seek outside help?

Ms. Stillman. We have had some discussions with IRS and its integration support contractor in the past. It is unclear to me what IRS means by a prime contractor, what prime contractor responsibilities connote to IRS. It is unclear to me what obstacles they see in using the integration support contractor as an integration contractor. IRS has explained to me that the integration support contractor acts in an advisory role. I have asked the question, What precludes IRS from taking the integration support contractor's advice in every case or in most cases? And I have never gotten an answer that I understood.

Mr. LAUGHLIN. When will the IRS be capable of making realtime, online adjustments to a taxpayer's account? What benefits would the taxpayer and the IRS enjoy from such a capability? And do you have any idea when the IRS will have its computers connected in such a fashion as it will not have to transport the data tapes around the country by airplane?

Ms. WILLIS. Mr. Laughlin, I don't think there is any question that there are great benefits to the taxpayer and to IRS for IRS being able to immediately access and make corrections to taxpayer

accounts. It would help not only reduce taxpayer frustration in dealing with the IRS, but also would allow IRS to more efficiently address taxpayer concerns.

I will ask Dr. Stillman to elaborate, but my understanding at this point in time is that we do not have any confidence in when

IRS will be able to provide that service to taxpayers.

Ms. STILLMAN. As a level 1 organization, which IRS itself knows it is, IRS develops systems without using disciplined processes. It doesn't use tools to estimate how systems will perform, on what schedule they can deliver, and what they will cost, and therefore there is no basis for any confidence in any of their estimates in any of those areas.

Mr. LAUGHLIN. Last year the IRS experienced problems in the testing of SCRIPS. It is my understanding SCRIPS is supposed to image the data on Form 1040EZ, Form 941, and Form 1040PC. How well is SCRIPS performing during this filing season? And does it catch all the data on the forms it scans or only part of the data?

Ms. WILLIS. This filing season SCRIPS is working better than it did last year. In the five centers where SCRIPS is in place, it has less downtime than it did last year. In the two centers that ceased using SCRIPS last year, they are reporting they are able to continue using it, but it is operating at a much slower rate than what they had anticipated.

Right now they are capturing about 50 percent of the 1040EZ forms through the SCRIPS process, and the rest are being done

through manual data entry.

Mr. LAUGHLIN. How effective was the IRS Antifraud Compliance Program during the 1995 filing season? And in connection, how many taxpayers who filed accurate returns last year nevertheless had their refunds delayed? Earlier in your testimony, you talked about invalid Social Security numbers and refunds, if you can work that into your response. And I have got to tell you in my area of the country, which is south Texas—you probably thought I was from the North—we hear a lot about Americans retiring to Mexico, and then their Social Security numbers getting jumbled up, and never having paid into the system. Can you respond to that?

I asked too many questions. Let me start over.

How effective was the IRS antifraud program? And talk about the—

Ms. WILLIS. The IRS 1995 fraud detection efforts were effective. As the Commissioner noted in her testimony and we noted in ours, there was a reduction in the number of dependents claimed. There were a number of fraudulent or noncompliant refunds identified and held up. However, there were also a number of taxpayers who filed accurate returns with appropriate Social Security numbers who also had their tax returns held up while IRS intended to look for duplicate uses of SSNs. That match was never done, and as a result, these refunds were held up and were ultimately released without any follow-up checks being done.

In addition, for some of the returns where there were missing or invalid SSNs, IRS went and worked with the taxpayer and discovered there was a fairly high no-change rate. By that I mean that the information on the return, while the missing or invalid SSN

was incorrect, the information regarding the refund was correct, and the taxpayer did, indeed, warrant it.

I am not sure that I understand your question about Mexico.

Mr. LAUGHLIN. Forget that part. I will rephrase the question, though. Is there a satisfactory system for pursuing invalid Social Security numbers? And let me direct your attention to credit card abuse to focus where I am trying to go.

I had a credit card stolen, a gasoline company credit card, and I didn't know it. But the company called me after several days because there were charges being made outside the geographic area where I normally charged. I thought it was wonderful. I had no clue it was missing.

Is there anything in the IRS system that will trigger them, trip them that there is an invalid Social Security—how do they address that?

Ms. WILLIS. If you were attempting to file a return electronically and the Social Security number is either missing or invalid, IRS filters will kick that back and not allow you to file it. So they do have a system within the Electronic Filing Program to identify missing or invalid SSNs which prohibits the filing of the return.

In terms of paper returns, they have a process where the return is actually filed, and then they go back through and look for missing and invalid SSNs. They do not have a system that would allow them to say that your SSN was used on somebody else's return and notify you to that effect.

Mr. LAUGHLIN. Now, let me go to Mexico, but we can go to any other country where Americans will retire and move, and a substantial amount of people do that. People will retire, move to another country, and receive their refunds or their Social Security using numbers that often get transferred around, and then you have fraud. What is in the system to prevent that from happening?

Ms. WILLIS. Sir, we really haven't done any work to look at that question.

Mr. LAUGHLIN. Madam Chairman, that completes my questioning, and I not only yield the time back to you, but your Chairman's chair, also.

Chairman JOHNSON. Thank you, Congressman Laughlin, for taking over in that interim. I will recognize Mr. Portman.

Mr. PORTMAN. Thank you, Madam Chair. And, Mr. Chair, you

did a superb job as always.

I was a little disappointed in your brief response with regard to the SCRIPS Program. I come from Cincinnati and have toured the Covington Service Center where SCRIPS is up and going, and about a year ago I had a very upbeat assessment from the local IRS office as to how it was working. I actually witnessed it working. And it is my view that if this can work, in fact, we will see instant modernization in the sense that there will be less need for manual input. And if we can't do SCRIPS right, it seems to me it doesn't bode well for TSM.

So my thought is, we need a little more information as to what is wrong with SCRIPS, why isn't it working, why do we have the downtime—do you have any other information? Have you all spent much time on SCRIPS? I know there has been an internal audit, I guess, but has GAO spent much time looking at that?

Ms. WILLIS. We are currently in the process of doing an evaluation of SCRIPS and identifying what the problems have been, how it is, indeed, performing against expectations over time, and whether the improvements that are being made are bringing it up to the performance levels expected. We expect to be able to report out on that later this year.

Mr. PORTMAN. Is it your thought, with regard to the 1040EZ and perhaps some of the other forms that are easier to scan, that this is a solution to some of the existing problems in the system, mak-

ing it more efficient, expediting returns and so on?

Ms. WILLIS. The ability to optically scan returns would definitely make certain parts of the system more efficient. It would reduce the amount of manual data entry that is required and allow IRS to process the returns more quickly.

Mr. PORTMAN. Reducing mistakes? Ms. WILLIS. Reducing mistakes.

Mr. PORTMAN. That would seem to me to be an obvious benefit.

Ms. WILLIS. Right.

Mr. PORTMAN. It is not officially part of TSM; is that correct? Is it a separate undertaking?

Ms. WILLIS. My understanding is it is included under the TSM

umbrella.

Mr. PORTMAN. OK. I know in Covington it has already begun.

Ms. WILLIS. Right.

Mr. Portman. Perhaps I should be directing these questions to our friends from Treasury or IRS, but it is something that is up and going, I know, in our area through the Covington Service Center.

Ms. WILLIS. Right, it is up and running in five sites across the United States.

Mr. PORTMAN. OK. And is your report coming out in the short term after the filing season? Or when would you expect to have it ready?

Ms. WILLIS. It will be later this summer.

Mr. PORTMAN. Later this summer?

Ms. WILLIS. Right after we have a chance to get the data and

analyze this year's filing season.

Mr. PORTMAN. And obviously you are taking into account the internal audit that has been done. The report done by the Service with regard to SCRIPS?

Ms. WILLIS. Yes.

Mr. Portman. I for one and I think this Subcommittee would be very interested to hear more about what you all are coming up with and to see whether this is an area where we can make some progress. Again, if we can't do it with SCRIPS that would seem more fundamental than some of the other TSM undertakings we were discussing, it seems to me we have a real problem. So we need to focus on that, and if it doesn't work, then move on to other ways to gain efficiency.

Thank you, Madam Chair.

Chairman JOHNSON. We do have a vote that has been called. Let me very briefly ask a question, because I share the gentleman's interest in SCRIPS, and I appreciate his pursuing that questioning. In your estimation, was there a problem in the development of SCRIPS with input from the frontline people, from the users? Or

was that not a problem?

Ms. WILLIS. That is one of the issues that we are looking at right now. To date, our work has been focused more on how well SCRIPS is performing, whether it is meeting the performance expectations processing the returns that IRS expected it to process.

Chairman JOHNSON. I realize it is not the same issue as ICP, but

I wondered if there was a parallel there.

I am sobered by your comments in your testimony. You believe that "None of the steps that have been taken, either individually or in the aggregate, has fully satisfied any of our recommendations. As a result, we do not believe that the IRS can make effective use of TSM systems development funds at this time."

Are there no projects under the Systems Modernization Program that you think can benefit from additional investment this year?

Ms. Stillman. When we evaluated IRS' capability and maturity to develop systems in general, we asked them to identify specific pockets of expertise that they had, centers of excellence where we would go and assess how well, at those centers of excellence, IRS developed software. It turned out they had none, and nowhere within IRS are they developing software using disciplined repeatable processes. Nowhere.

Chairman JOHNSON. And you also go on to say that the IRS would not give you specific information on its plans for spending

the \$850 million?

Ms. STILLMAN. That is correct. The kind of information that would have provided some evidence of progress would be a prioritized list of investments and for each their cost and their benefits and how they would contribute to the overall business goals of tax systems modernization.

We would have liked that list prior to their rescoping and postrescoping efforts so we could evaluate the value added by those rescoping efforts. We have gotten none of that, not before and not after, and no explicit criteria for making those prioritizations. They say they have done that, and we have asked them precisely what criteria they used. We have been unable to get that information.

Chairman JOHNSON. Thank you very much. Are there other ques-

tions by the Members of the Subcommittee?

[No response.]

Chairman JOHNSON. We will adjourn this panel, and I thank you for your testimony. It was very helpful to us at a difficult time.

Ms. WILLIS. Thank you. Ms. STILLMAN. Thank you.

Chairman JOHNSON. I thank the panel.

I would ask Mr. Clagett to make his opening statement before we go to vote, and then we can be thinking about that. That is a 5-minute window for you, Mr. Clagett. But then we will all hear that, and whenever there is a series of votes, it is harder for Members to return. So some of us will be back, but it will be at least 20 minutes. Perhaps the staff meanwhile can find out how many votes there are, and we will be able to give people a better idea of what time we will resume.

Mr. Clagett, chairman of the Committee on Continued Review of the Tax Systems Modernization of the IRS, the National Research Council. Mr. Clagett, we are happy to have you and appreciate the input of the National Research Council throughout this process.

STATEMENT OF ROBERT P. CLAGETT, CHAIRMAN, COMMITTEE ON CONTINUED REVIEW OF THE TAX SYSTEMS MODERNIZATION OF THE INTERNAL REVENUE SERVICE, NATIONAL RESEARCH COUNCIL

Mr. CLAGETT. I am glad to be here. Indeed, I am the chairman of the committee. I am also a lecturer at the University of Rhode Island now and am a member of the National Academy of Engineering.

As I think you know, the National Research Council is the operating arm of the National Academy of Sciences, the National Academy of Engineering, and the Institute of Medicine, chartered way back in 1863, the original NAS. Its charter is to advise the government, and through them, that is what this committee has been doing.

The project I chaired involved an original Committee followed by an extension, and there were some membership changes during that time. We have produced six reports, and my remarks are going to refer to the latest report, which was distributed in February 1996. That publication is the "Continuing Review of the Tax Systems Modernization of the Internal Revenue Service," and it was released to the IRS in December 1995.

I want to point out that the IRS was the sponsor of this project, but consistent with the NRC policy, it did not preview any of the recommendations. The Committee, the original and the extension, that I chaired was rich in both private sector experience with large systems and large systems developments and with technical expertise.

My Committee and I strongly believe that modernization of the information systems at the IRS is very important. Indeed, that is not the question at all. The Service has a lot of old computer equipment, and it certainly is difficult for them to maintain it. Only a part of the returns processing now is computerized, with taxpayer paper files the main mode of operation still. Modernization would enable better customer service and better agency and government performance.

In the course of our work, we focused on the ability of the IRS to modernize while monitoring its progress. We made several recommendations relating to the IRS structure and management, and they have been implemented. Among them, for example, they have established focused units to address the needs in architecture and privacy and elevated positions in human resources and, most importantly, as you have heard, for the management of the tax systems modernization, the modernization executive position, which is now an Associate Commissioner level.

Through such actions, the IRS has improved its organization involved with TSM. A central concern of our committee was management, and it runs the spectrum from vision through planning and implementation. Quoting from our 1996 report, "The committee believes that 'success' starts with a concise business vision, a well-organized modernization process, a clear systems architecture, a complete development plan, and a strong set of metrics to determine

progress." The IRS has created a vision statement, and it has begun the process of reengineering its business processes. However,

these efforts remain somewhat disjointed from TSM.

Of greatest concern are the enduring deficiencies in technical management. It is in this area that progress must be made if TSM is going to succeed. Those deficiencies show up in the IRS' own software and system development organization, its lack of a concise statement of the system architecture, its approach to and slow rate of improvement in development processes, and its incomplete attention to system and data security. The committee frequently expressed concerns in the six reports that I have mentioned over the 5 years about the lack of experience in large systems development and implementation within the IRS management. This deficiency shows up in the rate of internal progress and in the nature and effectiveness of interactions with contractors involved in TSM development.

I would say here, as I have said repeatedly to the IRS, that the Service should not have had in-house capability to take on such a large project when it started. That condition was no embarrassment. But it should have assessed the size and complexity in developing such a large project and then acquired the trained, experienced management team needed to direct it. In fact, that is the way most private industries approach such a project. Instead, it relied on competent in-house management who were—and are—generalists who have advanced through the IRS through many years. They are good people. They know how to run the IRS as it exists today. At the same time, they have not grasped our recommendations as to what it takes to develop a huge information system such

as TSM.

Quoting again from our report, "The IRS must implement the fol-

Chairman JOHNSON. Excuse me, Mr. Clagett. You are at the point in your testimony where you are going to go into detail on your recommendations.

Mr. CLAGETT. Fine.

Chairman Johnson. I am going to ask you to suspend because we only have 3 minutes left to vote.

Mr. CLAGETT. Fair enough.

Chairman JOHNSON. We have two votes, and we will reconvene about 12:30.

Mr. CLAGETT. That is fine.

[Recess.]

Chairman Johnson. Mr. Clagett, we will resume. We have Mr. Hancock here and myself, and we will resume. Please feel free to take your time.

Mr. CLAGETT. Thank you very much. I will start off where I

stopped.

Quoting from our report, "The IRS must implement the following recommendations immediately and forcefully; otherwise, the goals of the TSM effort are in serious jeopardy"—and that is a quote, of course, from our report. And I am going to comment and tick off those basic recommendations.

Recommendation 1, Acquire more technical management expertise, through both hiring and contracting, starting with a highly

qualified Chief Information Officer to fill the vacant position. And, of course, I am pleased to note that they have now done so. It might be interesting to talk some time about the effort they had and the frustration in trying to find somebody within the constraints both of salary and the position, of the caliber they wanted.

Chairman JOHNSON. If I may interrupt you, I am glad you mentioned that, because that is something we should come back to and that we will be very interested in, particularly in your perspective on it, since you do see this in many areas where the government is seeking scientific or other expertise. I know when we worked on the air traffic controllers issues, we simply had to change the pay structure in order to get people into the more difficult areas like O'Hare and Kennedy.

Mr. CLAGETT. Well, perhaps after I finish we can talk, because I have, indeed, thought about the way in which an agency can go about it, and maybe we can talk some more about that.

Chairman JOHNSON. Thank you.

Mr. CLAGETT. So I am pleased they have got such a person. I hope he has the background and experience that will really help TSM become effective.

The second recommendation was to effectively integrate the operational and technical goals by developing a proper set of metrics to measure performance. That is, at the very outset, know what it is you want to accomplish; in other words, know when TSM has succeeded, and then start to develop the systems, instead of developing the systems and then trying to figure out what those goals should be. Those metrics are still not in place.

Recommendation 3, Develop an adequate architectural definition and design led by the Systems Architects Office—they do have one now—and enforced by a strong set of interface specifications for key applications of systems—and that includes security—and a process for maintaining them properly. I would be glad to talk some more about that as well.

Significantly increase the scope, level of effort, management attention, and tools devoted to security development. Next, the SEI level 2 issue that was mentioned by GAO is very important. I would add not only for internal, but if, indeed, their contractors are at level 2 and beyond, I doubt that there is a significant amount of communication between the two if inside the IRS they are at level 1. That would be tough.

Recommendation 5, Implement an overall process improvement plan. I have just gone into that. That is the SEI level 2 challenge.

Recommendation 6, Focus efforts on the Integrated Case Processing System. That is the target system we picked. The main message here is pick one, do it well, develop it, test it, put it in the field, prove it out, and use your best people to do that, and then move on to the next one. We think integrated case processing is central to the whole TSM effort, and that is why we recommend that project.

Absent sufficient followthrough, new approaches to TSM may be necessary. We have thought about what alternatives there are. One would be to assess, justify, and fund each component project individually. Another possibility is to outsource the whole system as a project. The committee believes, however, that correcting the defi-

ciencies that have been identified and strengthening management is the best course of action for both the IRS and the country. That is the tone, as you know, of our report. We have expressed concern with the problems we have raised here and that we have raised previously, I might add. In fact, this last report specifically talks about how many times we have raised over the 5 years most of these same problems.

So we suggest that some ongoing mechanism be established that can both advise the Commissioner and foster constructive interaction between the IRS and its oversight organizations to assure the best possible focus, decisionmaking, and communication.

With that, I thank you and I will be glad to try to answer any

questions you have.

[The prepared statement follows:]

Statement of

Robert P. Clagett Chairman of the Committee on Continued Review of the Tax Systems Modernization of the Internal Revenue Service National Research Council, Member of the National Academy of Engineering, and Lecturer at the University of Rhode Island

Good Morning, Mr. Chairman and members of the Committee. 1 am Robert P. Clagett, lecturer at the University of Rhode Island and chairman of the National Research Council's Committee on Continued Review of the Tax Systems Modernization of the Internal Revenue Service. 1 am also a member of the National Academy of Engineering. The National Research Council is the operating arm of the National Academy of Sciences, National Academy of Engineering, and Institute of Medicine, chartered by Congress in 1863 to advise the government on matters of science and technology.

The project that I chaired involved an original committee followed by an extension with some membership changes. It produced six reports over a period of five years. My remarks today will draw from the February 1996 publication. Continuing Review of the Tax Systems Modernization of the Internal Revenue Service, which was released to the Internal Revenue Service in December 1995. The IRS was the sponsor for this project, but consistent with NRC policy did not preview the findings and recommendations. The committee, original and extension, that I chaired was rich in private sector experience with large systems development and management as well as technological expertise.

My committee and I strongly believe that modernization of the information systems of the IRS is very important. The Service still has a lot of old computer equipment, which is difficult to maintain. Only a part of returns processing is computerized, with taxpayer paper files the main mode of operation. Modernization would enable better customer service and better agency and government performance. In the course of our work we focused on the ability of the IRS to modernize, while monitoring its progress. We made several recommendations relating to IRS structure and management that have been implemented. Among them, for example, are establishment of focused units to address needs in architecture and privacy and elevation of positions with responsibility for human resources and for management of Tax Systems Modernization (the Modernization Executive position, now with Associate Commissioner status). Through such actions the IRS has improved its organization.

A central concern of our committee was management, running across a spectrum from vision through planning and implementation. Quoting from our 1996 report, "The committee believes that 'success' starts with a concise business vision, a well-organized modernization process, a clear systems architecture, a complete development plan, and a strong set of metrics to determine progress." The IRS has created a vision statement and it has begun a process of re-engineering its business processes. However, these efforts remain somewhat disjointed from TSM.

Of greatest concern are the enduring deficiencies in technical management. It is in this area that progress must be made if TSM is to succeed. Those deficiencies show up in the IRS' own software and system development organization, its lack of a concise statement of the system architecture, its approach to and slow rate of improvement in development processes, and its incomplete attention to system and data security. The committee frequently expressed concern about the lack of experience in large systems development and implementation within IRS management. This deficiency shows up in the rate of internal progress and in the nature and effectiveness of interactions with contractors involved in TSM development.

I would say here, as I have said repeatedly to the IRS, that the Service should not have had the inhouse capability to take on such a large project when it started. That condition was no embarrassment. But it should have assessed the size and complexity of developing such a large project and then acquired the trained, experienced management team needed to direct it. Instead, it relied on competent in-house managers who were—and are—generalists who have advanced within IRS for many years. These are good people who know how to run the IRS as it exists today. At the same time, they have not grasped our recommendations as to what it takes to develop a huge information system such as TSM.

Quoting again from our report, "The IRS must implement the following recommendations immediately and forcefully, otherwise the goals of the TSM effort are in serious jeopardy:

- "Recommendation 1. Acquire more technical management expertise, through both hiring and contracting, starting with a highly qualified Chief Information Officer to fill the vacant position.
- I am pleased to note that the position has recently been filled. I sincerely hope the new CIO has the background and experience to help TSM be effective. Qualified, trained, and experienced managers are needed at other levels as well.
 - "Recommendation 2. Effectively integrate operational and technical goals by developing a proper set of metrics to measure performance.
 - "Recommendation 3. Develop an adequate architectural definition and design, led by the Systems Architects Office and enforced by a strong set of interface specifications for key applications or systems, and a process for maintaining them properly.
 - "Recommendation 4. Significantly increase the scope, level of effort, management attention, and tools devoted to security development.
 - "Recommendation 5. Implement an overall process improvement plan. Specifically, require mature software and systems development processes across the entire development organization within 2 years, reaching maturity level 2 on the Software Engineering Institute Capability Maturity Model for Software (CMM) and maturity level 2 on the most pertinent process areas of the Industrial Collaboration Systems Engineering Capability Maturity Model.
 - "Recommendation 6. Focus efforts on the Integrated Case Processing (ICP) project, applying the best talent within the IRS, to demonstrate a mature development ability, to develop processes and procedures for all IRS projects, and to determine the long-term needs of the re-engineered IRS. Furthermore, TSM funding for projects that do not support the focus project directly should be reduced until definite improvement is shown."

Absent sufficient follow-through, new approaches to TSM may be necessary. One possibility would be to assess, justify, and fund each component project individually. Another possibility is to outsource the whole system as a project. The committee believes, however, that correcting the deficiencies it has identified and strengthening its management is the best course of action for the IRS and the country. It has expressed concern that the problems raised here, like some of the specific recommendations, have been raised previously. We therefore have suggested that some ongoing mechanism be established that can both advise the Commissioner and foster constructive interaction between the IRS and its oversight organizations, to assure the best possible focus, decision-making, and communication.

Chairman JOHNSON. I would like you to discuss more fully Recommendation 4, The scope, level of effort, management attention, and tools devoted to security development, but also perhaps in the context of developing also that management effort and the tools in other areas as well.

Mr. CLAGETT. You heard from the Commissioner and her staff that they have, indeed, after, I must say, substantial urging, developed what they call a security architecture. Early on in our discussion, they had not done what has to come first. In fact, you have to establish what level of privacy and privacy criteria you need before you can develop a security strategy. That took a lot of discussion, and I mentioned early on that one of the areas of organization that they improved was to bring in a high level privacy person, and that person immediately started with his staff to develop those sets of privacy criteria.

After that—and this has now only been 1½ years or so—they began to develop security requirements, and they do now have a security architecture document. What must follow that, however, is taking that security architecture document and now move down some levels to what are the specific security systems and system standards that are going to be used by the developers in each of those modules of TSM. That has not been done.

So as you see in the report, if you go into the field and talk to developers, they do not now have guidelines on what secure system is going to be used, either for their own projects or much less one that would be standardized across all the developments. And so they are doing what you would expect them to do. They don't wait. They go ahead and establish their own approaches to security.

Chairman JOHNSON. So the subcontractors or the contractors that IRS is working with have not been given the security document, the architectural document that the IRS has developed?

Mr. CLAGETT. They have been given an architectural document, but that does not establish specific standards that are going to be used throughout TSM. Those are not yet established.

Chairman JOHNSON. So the contractors really need a far more

specific document?

Mr. CLAGETT. That is a need both inside and outside. I must say that many of the systems are still developed and/or guided by internal IRS people. In fact, I think every one of the current service centers has a software development team, a large software development team. Their old mode used to be that they farmed out all of their development, essentially, to their regions. In those days, that was a strength in that it did, as you mentioned earlier, involve the field. But even in the old days, there was a lot of local input to a local design. However, it was designed for one area, and they had a lot of problems then duplicating it across all the other service centers.

They still use those development capabilities, and they are good. But our concern is that, absent a fully set group of standards for TSM, neither good interfaces nor communication among all those systems is going to happen nor will you see an effective security system.

Chairman JOHNSON. How do you explain that?

Mr. CLAGETT. How do I explain that? Well, I would like to back up because I have thought a lot about this after spending all these years looking at it. And knowing what most—I certainly won't say all, but what many private industry people would do, it goes something like this: You decide that you need a new system, a very large one, and so the first thing you do is decide what is it you want to have this new system accomplish when it is completed. Those are the metrics I am talking about. What kinds of performance do I want? And, of course, at the same time, or maybe even prior to that, they are asking themselves, when we get this capability or as we get it, how do we want to do business in a new way. And so those two things are done up front. Then most chief executive officers will look around and say we don't have the capability in-house to take on such a large system, so they will make a concerted effort to hire the best possible people they can get; some individual to lead the project who has large system experience and technical experience, and then expect that person to also bring in a cadre of outside people.

I don't think there is any reason, as I said in my testimony, for the IRS or any other agency to be embarrassed that they don't have the capability in-house when they start. What they don't tend to do is try to find outsiders who can lead with that kind of experience. Therefore, now I get back to why they do it the way they do it. In my view, they start doing the development, and in the case of TSM, as you have heard, TSM was preceded by some individual areas of development. And from that, they decided what we really want to do is a major one, the basis of which was to get all of the forms digitized as they come in so that they could then put them in the central database. Once you have got a central database, then you can pull out a taxpayer's complete file. Today, as you know, the front and back of the first page of the 1040 is all that is digitized. So all those other pages are not, and if you as a taxpayer ask them a question, they have to pull out those paper files, and that takes a lot of time.

The goal of TSM is to be able to pull up online most of that. In fact, one of the most meaningful metrics that was established some years ago in the business vision was to be able to respond to tax-payers' questions something like 80 percent of the time on the first call. It is a great goal, and it would make a wonderful thing. It requires all of this to be put together, starting with the database. It certainly means that all the systems they develop under TSM have got to communicate with each other, and that is why we are so worried about the architecture and the standards.

So when IRS, absent that concept, started, I believe what they did was start with the development and then say, maybe under some of our prodding and GAO's, we need to have an architecture and we need to have standards of interface. And that is backward, because the designers are way along in developing some systems, both inside the IRS and outside, without those standards. And that is why the committee has eventually become rather pessimistic that under the current mode you are really going to end up with a TSM. You are going to end up with a bunch of individual systems, but the chances of them both communicating with each other well and having a secure system are not great.

Chairman JOHNSON. Is hiring one skilled leader enough? Mr. CLAGETT. No.

Chairman JOHNSON. What are going to be the barriers, from your experience of watching this process, to hiring the complement of

people? I mean, is it money?

Mr. CLAGETT. Yes. We were pretty naive, I must say, as a group of people coming in here to look at what IRS was doing, and we really did think that what you needed to do was enhance what they are doing, get some people from the outside. The CIO search is a

good example.

I am reasonably sure that the Commissioner is very frustrated that, one, they had a nationwide search and hired a search firm—and they should speak to this, not me. But she, I know, was frustrated because she talked to me about getting input from our committee to help her, to get really top-drawer people. It turns out not many people even applied because the pay levels and so forth are well known. And it would have taken, I am sure, to get the kind of CIO that you would find in a comparable private firm taking on a project of the same size, it would take double or triple, at least, the salary they were able to offer.

So that has been a frustration for them. I don't know how—the only way I can conceive of it is not to make that person part of the civil service system, but to do what most private people do now. When they hire somebody at that level, it is usually on a contract. It is usually a contract for several years in which part of that large

remuneration depends on performance of the individual.

Chairman JOHNSON. Why didn't they choose that course of action?

Mr. CLAGETT. I don't know, and I am not even sure that it is available to them. I did hear that if they did such a thing under a contract, that contract has to come under, if they want to do it quickly, one of their existing contracts. So that individual would have to work with one of those contractors for some time. I don't really know much about that. I know that it is a problem for them.

But to your other question, would one person or a few help? One of the reasons we have been talking about it for so long was—well, I will say it bluntly. We were having a hard time really communicating with the IRS about what we meant about a systems architecture, about what we meant about changing the level of capability. And it is not surprising when you look at the background of the IRS folks. Most of them are excellent administrators, came up through IRS, as I said earlier. Their background is certainly limited on large projects.

So then we thought, well, the thing to do is to get some outside experts in. I now have a different opinion. I now—as Mr. Portman mentioned earlier, I really don't think it is effective for a Federal agency to either have onhand or try to get the level of experience in seldom approached, very large, complex computer systems. And so I think a much better method would be to have a prime contractor do the development, have enough internal expertise to develop the contract, and then have that prime contractor have cost, performance, time kinds of requirements, and even have incentives, or disincentives if they don't meet those deadlines. That would give

the prime the ability to hire the level of people they need, if they didn't have them, and get the job done.

There might be one other thing. I know there is some talk now about helping CIOs, that there may be—and I don't have any familiarity with the structure. There may be a way to have a cadre of people with that kind of experience available to loan to an agency when they start into such a project. But as was mentioned earlier, IRS is not the first to have a problem creating such a large system.

Chairman Johnson. I would appreciate your thoughts about what problems have to be dealt with to get qualified, trained, and experienced managers underneath the CIO or how to address that level of operation, whether that is more appropriately addressed through contract at this point or not. I think we have no shot of getting any support from the Appropriations Committee, nor should we, unless the Agency can be far more specific and unless there are some plans that really everybody agrees will bring to them the expertise they need in the time they need it to do the work that has to be accomplished.

Mr. CLAGETT. I would have to say that by now our committee,

at any rate, is rather pessimistic also.

Chairman JOHNSON. I do see that. On the other hand, the public need is to accomplish this, and we are either going to accomplish it badly or well. I mean, it is going to go forward because the computer capability of this agency is simply intolerable and much too outdated. If we don't do anything, it will simply break down, and there we will be. So we are going to have to go forward. And to avoid continued loss both of time and money, we really do have to help the Agency get the resources it needs and somehow press for-

ward on the proper use of those resources.

Mr. CLAGETT. I quite agree with that. As a matter of fact, even though I think, you know, long term—as I said, maybe it is not appropriate for an agency to do it—there is a substantial investment in TSM now, and our recommendation is, and certainly mine, I will refer to the committee's recommendation or at least comment on it, and that is, as is said in the report, to pick one project and to put their best people on it, and that means not do the other projects but to focus on one, complete it, test it, put it in the field, learn from it, use it as a training vehicle for their own people. That would take longer to do but at a slower pace. While they are doing that, I would add, they could be finishing the standards, both the interface standards and the security standards, to make sure that a system would be able to communicate. And I think at this point that is probably the best way to go to allow you to move forward and use as much as you can of the current expenditures and effort to come up with a system.

Chairman JOHNSON. Thank you. Let me recognize Mr. Portman. Mr. PORTMAN. I thank the Chair, and I have just a few follow-up questions of a general nature.

I am hearing in your testimony a little different emphasis than I see in the summary of the report.

Mr. CLAGETT. Oh, OK.

Mr. PORTMAN. It seems to me the report, indeed, does believe there are a number of deficiencies, and one, the CIO having been hired I guess is something that has been addressed, although from your conversation earlier I am not convinced that you think that the background and expertise is there, without getting into the individual person. But I sense from the report that you all believe that there is a need for what you call an ongoing mechanism to interact between the Secretary and this project generally and with the technical community, and you believe that there can be some improvements in management and so on. What I am hearing from you, though, is that perhaps it would have been best at the outset to have contracted this project out in total, much as we do in other areas of the government—environmental cleanup would be one that comes to mind, where there is technical expertise required and the government simply can't afford to keep that kind of expertise in the civil service; therefore, it is outsourced.

Is that a fair summary?

Mr. CLAGETT. That is a correct reading, Mr. Portman, and I should probably emphasize that last bit about contracting out was my opinion. It was not something that the committee addressed. It is my conclusion thinking about this thing after going through all that.

We have been recommending a strong person. In fact, we had recommended from the beginning that either the Deputy Commissioner, current Deputy Commissioner, be the person responsible because that person has enough clout to get the job done, or to have someone at that level do the job, beyond the CIO.

It took several years for that to begin. In the meantime, of course, during all that time, the CIO had the development responsibility. So when the former CIO retired, we had been saying you

need to have more expertise.

That was our solution during all of this time, and it certainly is still necessary to make sure that you get the maximum benefit from the funds that have been expended. However, as I said, I have now myself come to the conclusion that starting a new one, that

is not the way to go.

Mr. PORTMAN. Taking off your National Research Council hat, though, for a moment and just speaking in your individual capacity, given where we are in the process, would you now recommend that the Service, indeed, look at the possibility of contracting out some of these specific projects? I think in your testimony you mentioned the ICP as an example that could be, in a sense, showcased as one that could be successful if it was focused on. Or would you recommend that the Service continue to focus on internal expertise and capability to do that?

Mr. CLAGETT. I think it is pretty late to start changing, and ICP is largely done in-house. DPS, for example, is done essentially out-

side. That is the document reading, digitizing system.

So what we were suggesting was one that was independent of which system they pick, but that they pick one and focus on it. And we were also recommending one that is being done in-house in order to enhance, build on their own internal expertise at this time. And I still think that is probably the best way.

If there are units that are not now already well underway either inside or outside, I believe they would be better off done outside with a contractor. But one of the problems you see is that it was

not—I was struck by the earlier testimony between the Chairman and the GAO that IRS has some very good examples of achievements in individual developments, and that is so. What they haven't done well in my opinion and the Committee's is with a very, very large system like this, they started developing all of them at once. And they did so without setting the standards and the architecture first.

But they do have a lot of capable people inside, and our suggestion was that they pick an important project and put their best people on it and use that as an internal learning and training mechanism for the next project rather than trying to do all these on such a broad front at the same time. In other words, they have stretched all their people and I believe some of the outside contrac-

tors quite thin by doing it that way.

Mr. Portman. All right. That is very helpful. Again, without trying to paraphrase what you are saying, but your recommendation then would be to focus on specific projects to the extent those projects are already being undertaken internally and have made some progress, to continue along that path, develop the expertise internally; projects that are not already inside projects, to consider aggressive outsourcing or outside contractors for those; and all along to stress the need for systems architecture and standards first and then filling in the design logically which would follow.

Mr. CLAGETT. Yes.

Mr. PORTMAN. And security is your other primary issue you feel has not been handled well.

Mr. CLAGETT. We are very concerned about that, because if they don't set enough detailed standards, then as I said, since security in information systems is not something that can be a stand-alone package, it has got to be something that works at both ends, as I am sure you know. And that means you have got to have standards so that all of the designers of the new systems design their security systems to the same standards so that they work.

Mr. Portman. Well, thank you. As the Chair said, there is an appropriations issue here, and there are some interesting ways in which your testimony I think could give direction to the Agency as it looks at its appropriations challenge. Because if you can focus on some doable projects and see some success, I think then you have more likelihood of having—not those of us on this panel, but those of us who control the purse strings being more likely to be understanding and to want to support it. So I thank you for testifying.

Mr. CLAGETT. I must just in passing say I have personally tried for some time to convince the IRS to do that just because I said in industry a chief executive officer with such a project certainly wouldn't sit still for 4 or 5 years without seeing some end result, something completed and implemented. And wouldn't it be better for you to do the same, both for internal and all of your oversight people? That is not the way in which they approached it.

Mr. PORTMAN. Thank you.

Chairman JOHNSON. Thank you very much, Mr. Clagett. We will get back to you and see if there isn't some very specific assistance we can provide in this period, because it is an important moment.

Mr. CLAGETT. OK. I need to remind you, though, that we had a contract, as you know, with IRS, NRC did. That has expired. That

report that you have is our last one. The committee is all volunteers, and so I would say—I will speak personally. The only reward you get after spending all those years learning about it and giving advice is if somebody listens to the advice.

Chairman JOHNSON. Right.

Mr. CLAGETT. That is really the satisfaction. So I am certainly willing to do so.

Chairman JOHNSON. Well, thank you. I appreciate that. Why is

the contract expired?

Mr. CLAGETT. Why? Well, remember, this was the IRS' contract. They had a specified period of time. It was originally 2 years to look over TSM and make recommendations as to whether or not they were doing it right. They extended that for 2 years because the process and the project was continuing to go.

I will have to tell you that after 5 years, the committee, and that includes the chairman, was pretty well tapped out in coming down here making recommendations and not seeing a lot happen. And so

most of us were not willing to go ahead.

But I think the contractual arrangement with the National Research Council was one that had to be a specified time and a specified number of reports.

Chairman JOHNSON. Thank you.

Mr. CLAGETT. Yes.

Chairman JOHNSON. Thank you very much.

Let me call forward Joseph Lane on behalf of the National Association of Enrolled Agents. Sorry you had to wait so long, Mr. Lane.

You may proceed, Mr. Lane. Thank you for joining us this afternoon. We appreciate your perspective on these issues.

STATEMENT OF JOSEPH F. LANE, ENROLLED AGENT, NATIONAL ASSOCIATION OF ENROLLED AGENTS

Mr. Lane. Thank you. We appreciate the opportunity to come back before the Committee and share some of the insights that our members have about the budget situation with IRS and also the current filing season.

We have prepared some written testimony, and I would request that the Committee accept that. I would be happy to just highlight some of the written testimony and then be willing to take questions

from Members, if that meets with your approval.

We attempted to get a lot of input for this session today by going out with an e-mail poll of our members. We received scores of comments from members all around the country, so we are pretty confident in the positions we are taking as an organization with respect to the overall impressions that our members have of the IRS current filing season.

We also tried to take into consideration the average taxpayer that is going to be dealing with IRS, particularly in addressing this budget situation. As we heard this morning from the Commissioner, and we reviewed her written testimony, the budget cutbacks that were necessitated by the financial situation the Service finds itself in resulted in a lot of taxpayer service reductions. We have had an unprecedented report of the increase in the number of taxpayers who are coming to our members asking them for forms because they can't get them elsewhere.

Now, we applaud the Service's efforts this year to make forms available through CD–ROM and through the Internet. I understand that some 25,000 forms a day are being downloaded. But not everybody has a computer, and one of the concerns we have is the reductions in the taxpayer service forms distribution at the local level, the closure of some of these offices, the movement of some of the personnel from what were smaller rural offices into major centers has really necessitated a search and destroy mission on the part of some taxpayers just to be able to comply with their tax filing requirements. We have some problems with that.

I think one of the things we enjoy in this country is a very high compliance rate. Part of the reason we do that is because the American taxpayers are willing to go ahead and go through this self-assessment process. Part of the cost of that system ought to be providing them access to information to allow them to meet those responsibilities without going to too much trouble on their own and

also making it easy for them to file.

Now, the Service has made some major steps in the last couple of years in making it easier to get online to get information. Their new Web site is a vast improvement over their prior FedWorld site. The information they have now made available to people who have their own tax software programs and computers to file by modem, we applaud that. But the average person does not have a computer. The average person does not have access to an Internet account. The average person probably does not have a CD-ROM hooked into their computer, if they have a computer. And that person can't get service.

When we are looking at a telephone system in taxpayer service that answers 35 percent of the calls that come in, that is a problem. I dare say if I only answered 35 percent of the phone calls I had, I wouldn't be in business very long. I would submit to the Members if you only answered 35 percent of the calls that came to your office, you wouldn't be elected next time.

So there is a concern that that level of service needs to be addressed because you cannot have taxpayers trying to get in repeatedly, because I think eventually it affects voluntary compliance.

This light is—

Chairman JOHNSON. It is just a warning. When it gets red, you will have had 5 minutes. You don't have to stop immediately, but it is to give us all some indication.

Mr. LANE. OK. So we are concerned. We believe that part of a well-designed taxpayer service component within the Service is a necessary component for the voluntary compliance system. People have to be able to access the system, get information to fulfill their

requirements.

I think also in hearing some of the testimony today, the Service obviously is focusing on getting the tax returns they get processed, depositing the checks that they get, and having some degree of control over compliance. So what they have had to do in terms of their allocation of resources is focus on the money that is owed and the processing of the tax returns that come in the door. That makes sense. But somewhere along the line, the short end of the stick has been given to the taxpayer service function, and that has really had a dramatic impact on the average taxpayer out in the street. So I

would urge you on the 1997 budget to take a look at the allocations within that budget, what is happening in the taxpayer service area in terms of making it easier for taxpayers to access the service and

increase the quality.

With respect to the current filing season, I have to tell you that there is a vast improvement this year over the prior year. We have many fewer complaints from our Members and from taxpayers in general about the quality of the processing within the Service. I think the revenue initiative adjustments they made this year are clearly working. They are not delaying unnecessarily tax returns and refunds that were due to people that had legitimate filings. And I have to report that the problem resolution officers that we have talked to around the country in preparation for this testimony have all reported a much, much lower level of taxpayer complaints flowing into their offices.

So, in general, given the situation that the Service found itself in this year with the budget restrictions, the bad weather in the East, and the possibility of a tax law change right up to the last minute, I think they deserve a round of applause for the job they are doing in this current filing season. I think the information we

got from GAO indicates that it is running fairly smoothly.

In closing, I would like to add one important thing that we have noticed, and that is, some of the cutbacks that the Service has had to do because of the budget situation have affected things like continuing professional education for their employees. Now, this creates a problem for taxpayers because we are in a period of change right now, both in the examination function and the collection function.

As you will recall from the hearings last year, we had exam taking a whole new direction with respect to the financial status or economic reality auditing. We have a new set of collection standards that were implemented last September 1 with respect to national and local standards. And we have a lot of discrepancies being reported by our members in the way that these new standards are being applied across the Nation by revenue officers. One of our concerns is if there is a cutback in continuing professional education training, we are going to have this inconsistency cropping up more and more.

Another part of the problem that we are concerned about with the budget reductions is the district directors have had to curtail their communications with the practitioner community. Many of them eliminated their local newsletter. That newsletter served as a vehicle to communicate procedural changes within the Service that helped tax practitioners advise their clients.

Those types of cuts, while they are understandable given the budget situation, are very shortsighted, because eventually it catches up with the system by having people doing stuff that is out of date, not being aware of new procedures, not being aware of

changes that the Service has implemented.

The overall impression we have of the budget problems within the Service is there is a tremendous morale problem at the lower levels of the Service. This is driven by several factors. There are rumors throughout the organization that because they are underbudgeted something in the neighborhood of 8,000 full-time equivalents this year, the average employee will be asked to take anywhere from 8 to 11 days furlough time this year without pay. There are rumors in almost every office that there is going to be a RIF, a reduction in force.

When you talk to people in the offices that are not in major cities, there is discussion about the task force that is looking at the whole question of IRS rents, justifying any area office that is under 10,000 square feet. If implemented, that closes a lot of small offices serving rural communities. Our members are also concerned that we are being asked to go to Sacramento or Chicago to deal with an appeal that might have been closed locally 2 years ago, but that office is gone now.

There are also some real concerns about the reorganization that IRS is going through. The number of districts by October 1 this year will go from 63 to 33. They have eliminated 30 districts. Many of you are serving from congressional districts that now have been combined with other States, and that is of concern to our members

and to taxpayers in those areas.

We are also very concerned about employee morale, so much so that we would urge the Committee to have GAO conduct a review of IRS employee morale. In any tax administration system, tax collectors and tax enforcers like revenue officers, revenue agents, and tax auditors, are not exactly the most popular people on the block. Everybody understands that. That is the nature of the business they are in. But you need to keep them happy to a certain degree with their working environment, because the last thing you need is 30,000 or 40,000 disgruntled tax enforcement people roaming around the country. What happens is that their frustrations get taken out on the taxpayers they get assigned to them. That is a major concern of ours and obviously of the Committee as I understand that this Committee is considering the possibility of holding some hearings later this year on the whole IRS collection and enforcement area.

We are hearing more and more horror stories coming out of the field about specific cases where we have problems with employees not following procedures, and that to me is indicative of a morale problem. IRS had a serious number of resignations and retirements this year, partly as a result of the rumors with respect to the changes in the Service and partly as a result of reorganizations, and that has not contributed to making the IRS a happy place to work within. That is being reflected now in the cases we are seeing come forward to our National Government Relations Committee for action. So we would urge you to take a look at that whole area. Maybe it is appropriate for GAO to conduct a review of that.

One last thing, in the TSM area, I am very concerned both as a tax practitioner and a taxpayer about this question of the IRS technical capability. As you know, I am from Menlo Park, California. That is the heart of Silicon Valley. I have a fair number of Silicon Valley entrepreneurs who are clients of mine. There is a lot of discussion about the impact that we are going to have in terms of our voluntary compliance system when we see more and more electronic commerce happening on the Internet. We have electronic cash. We have virtual banks, and we have encryption technology that is getting better and better. The concern that I have as a tax-

payer is we have a potential disaster brewing out there for our voluntary compliance system if we have an environment where transactions cannot be traced. And we are getting very close to the day when that is going to be a reality.

The Service needs to have as much technological assistance as it can get at this time, perhaps through contracting, as the gentleman that just appeared before me suggested. They need to buy the expertise. Quite frankly, the CIO position that they are offering something at SES level 3 or \$108,000 or \$112,000 a year, would in private industry, be a \$400,000 or \$500,000 job with pretty attractive stock options. In addition, if that person guided a successful program they would be in line for a couple of million dollars in compensation. It is way beyond the reach of the government.

We are concerned about asking the government to race in an Indianapolis 500 in a 1936 Plymouth against Formula One cars. We have the potential for a real problem for the voluntary compliance system. I think this fuels a lot of taxpayer discomfort with the current tax system. It fuels the whole discussion about why we need a flat tax or should we throw the whole system out the window. Average taxpayers don't mind paying their taxes if they feel that they are paying their fair share and no more, and everyone else is paying their fair share as well. If there is a widespread perception that there are significant unreported income transactions happening on the Internet, which I think is a good possibility, and that they are virtually untraceable because of this encryption technology, you are going to see a major tax revolt in this country. We are very concerned about that as tax practitioners and as taxpayers.

[The prepared statement follows:]

STATEMENT OF JOSEPH F. LANE, EA ON BEHALF OF THE NATIONAL ASSOCIATION OF ENROLLED AGENTS

Madam Chair, Members of the Subcommittee, my name is Joseph F. Lane. I am an Enrolled Agent in private practice in Menlo Park, California. I thank you for your invitation to testify on behalf of the National Association of Enrolled Agents regarding the proposed FY 1997 IRS Budget and the status of the current tax filing season.

I am testifying today on behalf of the more than 9,000 members of the National Association of Enrolled Agents (NAEA). As the members of the Subcommittee well know, Enrolled Agents are the only tax professionals possessing a Federal license to represent taxpayers before the Internal Revenue Service. Our members represent more than four million (4,000,000) individual and small business taxpayers annually. NAEA is especially appreciative of the interest this Subcommittee has taken in the matter of Internal Revenue Service practices and procedures and their impact on taxpayers. We pledge our support to assist the Subcommittee in the future on issues which affect the general taxpaying public.

The Proposed FY 1997 Budget

As small business owners, the members of NAEA fully support the concept that the Federal government should be as careful and diligent in spending the revenues it receives in taxes as taxpayers are in earning those revenues. It is important to all taxpayers to be confident in the ability of the government to adequately account for the expenditures it makes on behalf of taxpayers. It is also important for taxpayers to recognize that certain functions of government need to be adequately funded in order to be effective. We believe that with respect to this last point, the FY 1997 IRS budget needs to be considered in light of the impact of the FY 1996 budget cuts on IRS operations.

During the course of our preparation of today's testimony, we conducted an e-mail poll of our members to solicit their feedback on the issues being examined by the Committee. We received scores of messages from members all over the country and have incorporated many of their comments throughout our prepared statement.

In addressing our comments today, we have tried to take into account the realities of tax compliance for all taxpayers, not only those who are the clients of our members. We point this out because we think the Congress needs to be aware of the effect reductions in Taxpayer Service staffing and availability have had on the general taxpaying public. When the Service has to curtail the availability of telephone and walk-in assistance to taxpayers, the taxpayers that are directly affected are those with the fewest alternative resources to turn to for information. Our members' clients will get their questions answered and their tax returns prepared because they have sought out competent professional advice and have the resources to pay for that advice. About 50% of the taxpayers filing returns in 1996 will seek professional assistance.

Who will service the rest of the taxpayers who need questions resolved in their effort to comply with the law? There are many volunteer organizations, such as senior citizen community centers, college accounting organizations, and other entities which provide free or low-cost taxpayer assistance to certain constituencies. The IRS' own Volunteers In Tax Administration (VITA) program provides a structure and support system for several of these volunteer efforts. Many of our own members volunteer their time as well in these community efforts. However, all of these efforts put together cannot replace the IRS' Taxpayer Service function.

We believe a well-funded and well-staffed Taxpayer Service organization is vital to insure the viability of our voluntary compliance system. We have one of the most complex tax systems in the industrial world. At the same time, we enjoy one of the highest levels of voluntary compliance in the world. The cost of securing this compliance is providing taxpayers with answers to their legitimate questions and assistance in meeting their filing responsibilities. To fail to provide this support is to risk further decline in compliance levels. Everyone involved in tax administration understands that the most expensive way to secure compliance is one-onone enforcement. The most efficient and cost-effective way to secure high compliance levels is to provide readily accessible information in the most inexpensive way to the widest number of taxpayers, enabling them to comply with their tax filing and paying obligations.

The current budget provides for an inadequate level of service on the Taxpayer Service telephone system. The Service itself estimated that it will be able to answer only 35% of the calls taxpayers make this year. Our members have reported an unprecedented increase in the number of requests they receive in their offices from taxpayers who are not their clients but who are seeking tax forms. These are taxpayers who are trying to comply with the law! They should not have to go on a search and rescue mission to locate forms!

Many of our members report that even the special telephone lines IRS established for practitioners have been going unanswered for up to 30 minutes at a time. One of our members reported that he has not been able to get through to the Atlanta Service Center yet this year! The inability of the practitioner to access the Service through the designated "hottine" merely adds additional volume to the already overloaded public lines.

Other members have told us about attempts to secure new Federal Employer Identification Numbers (EINs) from Service Centers. This used to be taken care of in a phone call but is now requiring weeks because the Service had to reassign the employees to other tasks. If taxpayers are unable to secure EINs in timely fashion, there will be delays in filing of returns or returns will be filed without EINs resulting in even greater backlogs for the IRS.

Due to cut-backs in Taxpayer Service staffing, we have heard complaints about the unavailability of Examination employees to finish audits they began months ago because they are assigned to handle walk-in service. While delaying an audit may seem to some to be a relief, to those taxpayers with audit deficiencies these delays add considerable additional interest charges, not to mention additional professional fees.

The budget reductions have also complicated the processing of other than Taxpayer Service workloads. We have heard complaints from practitioners who now have to travel to cities farther away than before due to IRS office closings or personnel reassignments. The span of control of some Group Managers has been increased substantially, in one case from 11 employees to over 30 located in two posts of duty. This manager spends hours a day shuttling between the posts.

Another area of major concern to us is the announcement made at liaison meetings with practitioner organizations that the Service cannot afford to hold Continuing Professional Education classes this year for employees. This has already caused problems and inconsistencies in how Revenue Officers are applying the new National/Local standards in Collection Division cases.

As another example, we have worked for years to urge the Service to develop a system of Appeals for Collection cases to enable taxpayers to get enforcement actions reviewed prior to implementation. Finally, the Service agreed and the new system is to be implemented next week. We are very concerned with the ability of Appeals to shoulder new work reviewing Collection decisions on liens, levies and seizures when their traditional workload is starting to rise due to attrition caused by senior staff retirements and resignations.

It is reported that the IRS will not be printing Publications 17 and 334 next year as a budget saving measure. Package X may be dropped as well. These are critical publications for many taxpayers who do their own returns, for the many volunteer tax organizations that service their communities, for adult education programs that offer tax and small business courses for individuals who contemplate starting their own enterprises, and for many smaller tax preparation firms which cannot afford extensive tax libraries. To eliminate these publications will prove to be a false economy for certain.

Also due to budget constraints, many district directors have stopped publishing their practitioner newsletters. In California alone, we know of five district directors who have shelved their newsletters. These publications are invaluable, particularly during filing season, to help practitioners keep up with changes in practice and procedure within the IRS. Again, practitioner groups are working with the National Office to fill the gaps, but these efforts do not replace consistent outreach which the district directors have been successfully using in the past.

One of the consequences of the FY 1996 Budget reductions that causes us a great deal of concern is the impact on IRS morale. We understand, perhaps more than most taxpayers because we deal with them everyday in representing our clients, how difficult a job the Service employees have to perform. There has been a decidedly negative impact on employee morale in the past year. The prospect of unpaid leave days being mandated has had a discouraging effect on employees. Rumors of a Reduction in Force or RIF are rampant in every office.

Our members have reported that certain enforcement employees have started to exhibit an attitude of callousness to the plight of taxpayers far in excess of their usual indifference. No one who works for IRS ever expects to be courted at cocktail parties but they do have the right to expect that those they work for appreciate the difficulty of their positions and respect them for the tough job they perform. In the current political climate, it is very effective to launch ad hominem attacks against the IRS, government employees, and the tax system. We would hope that constructive criticism would spur an honest debate about the kind of tax system we should have in this country. We are concerned, however, that these gratuitous attacks will only cause further decline in the morale of employees.

As you know, there have been a great many retirements from the Service this past year. In fact, during Calendar Year 1995, 45 senior executives retired. We have been told by some retirees that they left because they no longer felt the organization had the Congressional support it needed to fulfill its mission. This attitude concerns us because our current tax administration system depends on having competent, well-intentioned people on both sides of the table. The ability of the Service to continue to attract capable, dedicated employees is of primary importance for a continued well-balanced tax administration system. The system as currently constituted cannot support a dramatic increase in cases that have to be referred to Problem Resolution or forwarded on to Appeals simply because disgruntled employees start taking their frustrations out on taxpayers. It is difficult enough for some taxpayers to deal with the Service under normal conditions. It is impossible to predict what Kafkaesque nightmare could result if the Service were not able to attract and retain the usually high calibre employees they have had in the past. With the staffing cutbacks, downsizing and reorganizations of late, we are fearful that they may be on the verge of such a situation.

We suggest it may be an appropriate time for the Congress to instruct the GAO to conduct an in-depth employee attitude survey within the Service. Once the attitudes of those expected to do the difficult job of collecting society's bills is assessed, Congress may be in a better position to deliberate changes that affect those employees. We recognize that this topic is not one the committee is addressing in today's hearings but we urge the committee to consider this suggestion and offer our cooperation in any effort undertaken.

The 1995 Tax Return Filing Season

We believe the Service is to be commended for the efforts made this year to expand the vehicles available for taxpayers to secure assistance with their tax filing requirements without a concomitant increase in cost to the Service. The expansion of electronic filing capacity to individuals with their own tax software and computers who elect to file via modem is a welcome development. The new IRS home page on the World Wide Web is orders of magnitude better than the old FedWorld site. The availability of tax forms for downloading has proved very beneficial to taxpayers with computer access. The forms themselves are much more user friendly including the 1040, with color yet! The newly revised Publication 334, Tax Guide for Small Business, and new Publication 583, Starting a Small Business, have won the acclaim of practitioners and small business taxpayers alike. The expansion of the TeleTax program has yielded very positive support from taxpayers in all walks of life. The study group the Service has convened to eliminate unnecessary notices will cut down on needless taxpayer calls to Service telephone sites and free up scarce resources for deployment on more important tasks. Our discussions with the upper management of the Service lead us to conclude that the effort to reassess the traditional ways of interacting with taxpayers will continue to receive significant emphasis and we anticipate more improvements in the future.

Our members report they have encountered far fewer problems this year compared to last year in the area of refund processing and electronic filing. It would appear that the changes the Service

announced in its revenue protection strategy have indeed had the desired effect of involving fewer taxpayer delays in processing. The Problem Resolution officers with whom we have spoken report far fewer problems this year.

We were advised of some problems with the processing of TeleTax returns earlier in the season but now believe those difficulties have been addressed and resolved.

All in all, our members have reported that the current filing season is proceeding rather smoothly from a processing standpoint. When one considers the difficulties the Service confronted this year -- bad weather in the East, possible tax law changes, and significant budget reductions -- it deserves a round of applause for the relative ease of the current filing season.

Summary

We thank the Committee for the opportunity to appear before you today and provide our views on these vital topics. We remain committed to assist in any additional matter where the general taxpaying public has an interest. We will be happy to respond to questions from the Committee.

Chairman JOHNSON. Thank you, Mr. Lane. I appreciate your testimony, and I appreciated your enumeration at the end of it in more detail of your comments about the things they have accomplished and the ways in which the current filing system is going better than past filing systems. And I thought your comment about the difference between what the Service offers to those with computers and modems and what it offers to others was very helpful. Certainly it offers a nice small business opportunity for our local libraries and some of our community-based organizations that have good computer capability. And that may be one area that we want to pursue to assure that all of our libraries are properly equipped in this era in which I think IRS service delivery is going to go increasingly toward use of tools that computers offer rather than individual people, as important as that is.

You do also make some very strong statements about morale—I think that really is a problem—and about the callousness that you find in some of the IRS people, in excess of anything you have ever seen. I do think the IRS people, as most Federal employees have, have taken some really unfair blows through the budget process. It is really unfortunate that much of the discussion about tax reform also involves maligning very good, hard-working, competent public employees who are on the whole doing a pretty good job with

limited resources.

I would mention to you that the IRS has just come out with new guidelines governing the use of the economic reality audits or life-style audits. I made some very strong statements in the Full Committee hearing when we worked on the Taxpayer Bill of Rights, and the IRS has chosen to include my remarks in the distribution with their manual. So people will see how terribly important it is to not only elected officials but also the general public and folks like you, that these audits be used when there is a cause or a reason or an indication and not randomly or erratically. And that is important, especially in an era when there is dissatisfaction, much of it legitimate, in not letting that spill over onto the taxpayers.

Unfortunately, I have to leave. I appreciate your testimony, and when we come back to that hearing in the future, we may look to

you for further input at that time.

Mr. LANE. We would be happy to provide it.

Chairman JOHNSON. I am going to recognize Mr. Hancock, and if he will take over the gavel, he and Mr. Portman may have questions.

Mr. Lane. Thank you again for the invitation.

Mr. HANCOCK. I have just got a couple of questions about your statement that transactions over the Internet can't be traced.

Mr. LANE. That is right.

Mr. HANCOCK. I don't understand how that works. I mean, if you put something on the Internet, almost anybody can pick it up if the information is there.

Mr. Lane. Well, the encryption, as I understand it—I am not a software engineer, but I am fairly familiar with this information. But as I understand it, the encryption technology is so far advanced now that you are going to see, probably within the next 2 or 3 months, a major jump in the number of transactions on the Internet that are encrypted so they are anonymous. Basically there

are electronic cash transactions happening where you could have funds transferred in virtual banks, so the bank does not exist physically anyplace except in one location and the rest of it is online.

Mr. HANCOCK. Well, let me make this comment, Mr. Lane. For everything man can invent, another man can figure out how to circumvent, because you are not going to come up with anything that cannot be counteracted. The fact remains that when people get to the point, as you mentioned earlier, that they feel they are overtaxed, they are going to start trying to figure out some way to keep from paying it.

Mr. LANE. That is right.

Mr. HANCOCK. And nobody really wants to take the chances on going to jail and what have you. And, boy, you are opening the door.

Now, there is only one solution, and that is to get the tax structure back to where people feel like they are paying their fair share.

Mr. LANE. Well, I can't disagree with you on that.

Mr. HANCOCK. OK. I think a good book to read would be Adams' "The Good and Evil of Taxation," which maybe you have already read. This is the history of society as to what has happened when the citizens start feeling that they have been overtaxed.

I would also like to ask you this question. You mentioned being able to figure out your income tax on CD-ROM. Why should it even be necessary for somebody to have a CD-ROM to fill out their income tax return?

Mr. Lane. Well, I think the point was that with a CD-ROM disk, you can put all the tax forms that are available on one disk, and make those available in the library. If somebody needs a form, they can stop by and pick them up. That is a very cost-effective way of distributing forms.

Mr. HANCOCK. Well, it is cost effective, but why have a tax structure set up that way in the first place? And let me ask you this question. I understand, and I think I know what the answer is, but how many of these forms are merely statistical informational forms that actually it costs the taxpayer and the government more money to keep the records for statistical purposes than it does in realizing revenue?

Mr. LANE. Well, I don't know—

Mr. Hancock. Now, that is conjecture, you know. I mean, you have got to guess at it. That is one part of the question. The other part of the question is: I understand that about 70 percent of the income tax returns are filed on the short form, so, therefore, you are only concerned about the 30 percent that use the long forms. My question is: How many of the people using those short forms do it for two reasons. One, they don't want to do the paperwork, they don't know how, or they don't understand the law. Therefore, they just go ahead and pay their taxes, and do not keep track of their deductions and fill out the long form. Two, how many people use the short form because they fear the IRS and they know that they don't have anything to fear as long as they just go on ahead and send in their W-2 and forget about it? How many people do that and actually pay more taxes than they really would owe if, in fact, they did go on ahead and fill out the long forms?

Mr. Lane. Well, to answer part of your question, I believe there is something in the neighborhood of about 60 million 1040A, 1040EZ type forms filed. I don't have the exact number. I think it is in the neighborhood of 60 million.

To the extent that we could establish what portion of that tax was overpaid because people didn't take deductions they were entitled to, I don't know of any study anywhere that took a look at

that.

Mr. HANCOCK. Well, I am asking you. Mr. LANE. I see your point, though.

Mr. HANCOCK. Have you ever had anybody come to you about filling out their tax return and say, hey, I don't want to take these deductions and take a chance. I would just as soon go on ahead and pay more than I owe. Have you ever had people tell you that?

Mr. Lane. I have heard that from people, people that had prior audits from IRS, for example, and didn't want to deal with them

again on it. Yes, I have had that.

Mr. HANCOCK. Sure.

Mr. Lane. Let me tell you, about half the taxpayers in the country seek professional assistance to get their tax returns done every year. So about half the returns are preparer prepared, and the

other half are sent in by taxpayers.

Mr. HANCOCK. But even with a professional tax preparer's help, how many times have you had people come in and say, look, I realize that I can save maybe a couple hundred bucks, but it just isn't worth it. I would rather just go on ahead, send the government the extra \$200, rather than take a chance that I might get audited or that they might question it, you know, if I get this refund?

Mr. Lane. Well, I could tell you there are several areas where that absolutely does happen. One of them is anybody that has a business that has a home office. Until there is some material change done in the way this home office stuff is administered, you are going to continue to see taxpayers say, no, I don't want to start a fight with them, just leave that deduction off my return, even though they are entitled to it.

Mr. Hancock. Well, they do it with automobile expenses, too.

Mr. LANE. They do it with car expenses, another area. I don't have the information to answer what percentage of revenue is over-collected.

Mr. HANCOCK. I understand that there is no statistical information

Mr. LANE. But it does happen.

Mr. HANCOCK. But there are a lot of people who do it. You know, in my position as a Member of Congress, I run into a lot of people. And I am not out in the country clubs on weekends. I am out at the truck stops, and I get a lot of this type of information: Look, I don't really feel like I owe the money, but I am just going to go ahead and do it. And I still maintain computers are great up to a point, but without computers there is no way we could have an income tax law like we have got.

Mr. Lane. There is no question about that. There is a certain amount of mythology that surrounds IRS. Some people are doing what you are talking about because they believe they can stay underneath the IRS radar. They may have income that they are not

disclosing, or they just don't want any hassles with IRS. They believe that by filing a short form you don't get audited. There is a

lot of mythology about that.

I can't tell you what percentage of clients that come to me every year to get their tax return done because they have never been audited as long as I have been doing their tax return. Well, you know, they don't realize that only 1 percent of the taxpayers get audited. That is like saying as long as this mike has been here, I haven't been audited, so this mike is my good luck piece.

Mr. Hancock. Well, let me ask you a hypothetical, probably facetious question. What would happen if a group got together, including some Members of Congress and IRS, and sat back and said how could we design the tax law to where we can get the revenues of government that we need where people wouldn't have to use computers, and analyze it from that standpoint? I wonder how we would change it. I wonder if we could forget about the government's problem of Internal Revenue agents being trained and then having the private sector hire them.

Mr. Lane. I can answer it this way. I have been teaching tax professionals for about 10 years now, and I facetiously have said on many occasions that it ought to be a felony for Members of Congress to get professional assistance with doing their own tax returns, and it ought to be a felony for them to use a computer to

do so. OK?

Now, I have said that kiddingly, but I could tell you this: If computers were taken out of the equation, I wouldn't stay in this business any longer. It is too frustrating to try and do these things by hand.

Mr. HANCOCK. The law would have to be changed; correct?

Mr. LANE. You would have to change it.

Mr. HANCOCK. You know, I would even contribute to an organization and send them some money if somebody would sit back and just visualize a tax system without computers. How could we design a tax law that the average Ph.D. without a computer could fill out? You know, we might come up with something even better. You know, that is not a bad idea at all, the more I think about it. We might come up with something that would beat Bill Archer's sales tax and Dick Armey's flat tax. Gosh knows we wouldn't have to worry about industry, hiring all the Internal Revenue agents after they are trained, because this thing would be so simple you wouldn't have to have that much training.

I think we ought to talk about that, Rob.

Mr. Lane. Well, one of the encouraging things about this tax debate we are having now, hopefully—I mean, in a perfect environment—it will lead to a situation where there will be an honest debate about what kind of tax system we ought to have in this country.

Mr. HANCOCK. But the fact remains that with all these forms and everything, you have got all kinds of inaccurate statistical information because by the time you get it in the computer it is 5 years old, anyway. By the time you come up with the figures from the tax return, they don't have any meaning. They won't know for 5 years what the 1995 results are, actually.

Mr. LANE. Well, with respect to TCMP, you are right.

Mr. HANCOCK. Right.

Mr. Lane. Yes.

Mr. HANCOCK. Thank you. I am going to think about that a little bit. We just might put together something on that order.

Mr. PORTMAN. I think I just figured out what Mel is going to be

doing next year.

As you may know, Mr. Lane, Mr. Hancock has a long history in the tax area, and he is retiring from Congress. But it sounds like he is going to be busy. You will probably be testifying before us next year at this time, Mel.

Mr. Lane. They could probably arrange a desk for you at the

Cato Institute down the street.

Mr. PORTMAN. He is even more radical than they are.

Mr. HANCOCK. Well, I just don't think—pardon me, Rob. I just don't think that filling out your income return ought to drive a person to drink. I mean, they ought to be able to do it without getting so frustrated that they have to go get a shot of bourbon after they have filled it out.

Thank you.

Mr. PORTMAN. I am going to miss him.

Mr. Lane, first of all, thanks for coming back again. It is always a pleasure to have you before the Subcommittee and Committee.

Mr. LANE. My pleasure.

Mr. PORTMAN. You worked for the Service at one point, didn't you?

Mr. LANE. Yes, I did.

Mr. PORTMAN. Yes, as I recall, he is one of those guys that got

hired away. Where is Mel?

I just had a couple of quick questions. First of all, you should give yourself more credit for not having your clients audited. You might have had something to do with it. But back home, I have gotten a number of letters from people about date stamping, and this is in connection with the budget cuts you talked about. I just wondered if you had had that experience with some of your members, folks who are calling or writing and saying at our local office—this is in Cincinnati, Ohio—there used to be a clerk behind the counter, and you could take a return in and have it date stamped, which avoided having to send it by certified mail.

Had you heard that complaint raised from any of your members?

That the date stamp service has been eliminated?

Mr. LANE. It is happening in California right in an office near us. They used to have a person that would man that desk, and that desk is closed now. It is gone.

Mr. PORTMAN. Is it still closed?

Mr. LANE. Yes.

Mr. Portman. OK. I think, again, so much of the blame for the way our current system works resides up here because we are passing the laws and we are providing the budgets and, therefore, forcing the Agency to look for places to cut. But I think from what I understand about this particular problem, it doesn't make any sense to make that decision not to have date stamping because it actually will end up saving the Service money over the longer haul. It is an interesting way to wake people up as to the budget problem, because a lot of these professionals, many of your members,

I am sure, were shocked when they found out those desks were closed. And I wanted to check and see if that was also a problem elsewhere.

It is my understanding in Cincinnati that has been resolved, although I am not sure and will now look into it more.

You mentioned two things in your testimony. One is that the 1995 calendar year filing is going pretty well. In fact, I think you even say that it is going smoothly, rather smoothly from a processing standpoint. You also, though, then talk about, Mr. Lane, this attitude of callousness that is far in excess of the usual indifference. And I just wanted to touch on that briefly.

You mentioned a morale problem. You talked about the immediate budget cuts and the impact that might be having. You talked about the reorganization, the RIFs. I am in an area, as I suppose most if not all members are, where there has been reorganization, and I didn't oppose that. In fact, I was supportive of it with the idea that we could get some efficiencies out of the system and have more bang for the buck, in a sense. But to what do you attribute this callousness? Do you think it is a combination of all these factors? How would you pinpoint it?

Mr. Lane. I think it clearly is a reflection of employee frustration with the system and uncertainty about their job future, and to a certain degree, it is almost acting out. You can have a situation where there is no other way they can get back at the system, so the way they do it is make sure they follow the book right down the line or be unreasonable in the way that they are making demands on people. This is a very small minority of the employees there, but we see it on a national level because our members fax these situations on to us and say, can you get us some help on this?

It just seems to me the level of e-mail and telephone calls I am getting and the volume we are seeing in our government relations office here in Washington indicates an increase in the sort of unreasonable behavior on the part of some of these enforcement people. And it is a callousness. It is a disregard for the impact their actions have on the taxpayer.

Now, in some cases when we get into these things, the actions are warranted. In other cases, they are not warranted. If they are clearly not warranted, we have to go to upper management to get them to back off.

But my concern is I am trying to look at it in a macrosense. Every one of these individual cases on a case-by-case basis you can see some justification as to why the employee has taken that position. You can also see some justification why the taxpayer is taking the position. But on a macrolevel, when I look at the totality of the complaints that we are starting to see from members, it confirms feedback I am getting from friends of mine that are still within the Service and from employees that I am dealing with on a regular basis, which reflects that there is a real morale problem within the organization.

Now, you know, part of the problem in terms of any enforcement effort you are involved in is the insularity of thinking within the organization. Partly it is a function of reality. My dad was a police officer, a career police officer. You know, all of his friends tended to be other cops, and the reason for that was partly because they tended to work odd hours, so they had Tuesday afternoons off when everybody else was at work. But also part of it was this kind of usthem thing.

That is very true in the IRS. IRS people tend to socialize with other IRS people. I think you will see in any situation that an attitude, if it is a positive attitude, is reinforced by management coming down and saying, yes, you know, this is good behavior and it has got to be rewarded, and this is bad behavior. Everybody assumes when you go to work for IRS you are not going to be the belle of every cocktail party. That is just a given. It kills more conversations at cocktail parties when you are at someone's house and they say, Where do you work? And you say IRS. It is amazing how many people have to refresh their drink at that time. I think Mr. Hancock might have had a point about needing that bourbon. They just disappear.

So there is a situation in terms of morale within the organization, and right now because of the political season and because of all of this discussion we have had about the tax system, there are ad hominem attacks daily on IRS employees, on the tax system, and on the government in general. I think the problem with that is that if that leads to a constructive discussion about what kind of a tax system we ought to have in this country, that is fine. That is the purpose of democracy. If the only result is that you have a whole bunch of demoralized enforcement people running around with badges now and the only way they can take it out is on the people, that's bad.

Mr. PORTMAN. You have got the same bad system or a system that is comparably bad.

Mr. LANE. Yes.

Mr. PORTMAN. Well, I would agree with you. The irony of it is that the reason we have such a problem—and I think Mel and I would agree on this—is because of the laws that these people are asked to enforce. If it wasn't so darn complicated, if there weren't all these judgment calls to be made, 50 different results from 50 expert tax preparers, as Money Magazine told us last week, you wouldn't have the degree of frustration and the degree of morale problems.

Mr. LANE. That is right.

Mr. PORTMAN. But also, I think given our current system and given where we are, there are probably ways to improve it. And from what you have said, it sounds like part of that can come from leadership, from both elected officials and within the Agency, to try to improve that situation. You talked about the incentives you could put in. You talked about just providing leadership in the sense of saying, hey, it is not the agent's fault; this is a system that is bad; let's work as best we can within it. I think we probably all have some responsibility there.

But I would hope that, in fact, the discussion over the next year will include the fact that we are the people who are going to be responsible for cleaning up the system so that those agents can do their job better. I would also hope we will have fewer agents, frankly, because I think that is part of the consequence of a system that needs fewer judgment calls and less complexity.

Mr. Lane. I think one of the other things that could be driving this is the reorganization of IRS, which has eliminated 30 districts by consolidating districts, has taken the managerial oversight structure out of a lot of areas. What you have now is an agent who is responsible to a group manager who might be 500 miles away, who has a branch chief that, in the case of Hawaii, is 3,000 miles away in Seattle.

Mr. PORTMAN. Do you think the reorganization is a bad idea? How do you come down on it?

Mr. Lane. You know, that is a tough one. I can understand the Service's situation. They had basically an unchanged, 40-year-old organizational structure that was appropriate in a day when it took 12 hours to get to California in a prop jet and you didn't have fax machines and you didn't have teleconferencing. But on the other level——

Mr. PORTMAN. As I understand it, a lot of the RIFs would have occurred—not even RIFs, necessarily, but transfers at the middle management level, that it was part of the IRS catching up with the rest of the private sector to become a leaner operation.

Mr. Lane. What has happened, it has stripped out the management level in a lot of these small districts. So, for example, in Montana and Idaho and those places, you have the agents that are on the street and their supervisors, and that is it. There is nothing else above them. You have to go to another State to get a branch chief or a division chief involved. One of the frustrations to the practitioner community and to taxpayers in those locales is what is the chance of a branch chief getting over to Missoula every week where there used to be a branch chief sitting there?

So you had an appeal process that went up above, and that to a certain degree kept people in check. Now the concern, I know, in Senator Stevens' Committee the other day, there was quite an extensive discussion about what happened to the State of Alaska when they did away with the district director and sent him to Seattle. But we are reflecting that from our membership as well in those States that have been affected. People feel that they are not being supervised anymore, so they can go do what they want to do.

Mr. PORTMAN. Well, maybe that is something after a year or two we will have a better sense of, too, as that system begins to adjust to the new levels of leadership and management.

I thank you very much for coming again today, and I will now, Mr. Chairman, leave it up to you to finish this hearing.

Mr. LANE. Thank you.

Mr. HANCOCK. One final question. Have you ever heard anybody say I would be willing to pay more taxes if I didn't have to keep all these records and fill out these forms?

Mr. Lane. I have heard people say that they wished they had a simpler system. I have heard people say they would be willing to pay more if they knew everybody was paying their share. And I don't argue with you. You know, as a tax professional, I know some people on your Committee might think that we are dealing from self-interest. There is no one more in favor of tax simplification than the people that have to fill out these forms every year. Believe me.

I have a client who is the director of the Stanford linear accelerator unit out in Menlo Park, and we get laughing every year and talking about stuff and tax law changes. And I said to him, "Just imagine if you had to go to work January 1 every year and the laws of physics were repealed and you had to learn a whole new set of physics laws to go do your job." That is what we are dealing with.

You know, we have had 27 tax law changes in the last 29 years. Mr. HANCOCK. Do you think we need to change the laws a little bit to give you all some legal liability protection for making mistakes? You know, there are a bunch of CPAs getting sued now as a result of improperly completing tax returns due to Internal Revenue laws that nobody really understands.

Mr. LANE. Yes.

Mr. HANCOCK. So, really, you are assuming some liability when you fill out somebody's tax return.

Mr. Lane. That is a cost of doing business. You have got to commit yourself to maintaining a professional library to let you stay out of a lawsuit.

Mr. HANCOCK. Let's work on it. Thank you.

Mr. LANE. Thank you.

Mr. HANCOCK. This hearing is adjourned. Thank you.

Mr. LANE. Thank you very much.

[Whereupon, at 2 p.m., the hearing was adjourned.]

TAX DEBT COLLECTION ISSUES

THURSDAY, APRIL 25, 1996

House of Representatives, Committee on Ways and Means, Subcommittee on Oversight, Washington, DC.

The Subcommittee met, pursuant to notice, at 9:39 a.m., in room 1100, Longworth House Office Building, Hon. Nancy Johnson (Chairman of the Subcommittee) presiding.

[The advisory announcing the hearing follows:]

ADVISORY

FROM THE COMMITTEE ON WAYS AND MEANS

SUBCOMMITTEE ON OVERSIGHT

FOR IMMEDIATE RELEASE April 17, 1996 No. OV-12 CONTACT: (202)-225-7601

Johnson Announces Hearing on Tax Debt Collection Issues

Congresswoman Nancy L. Johnson (R-CT), Chairman of the Subcommittee on Oversight of the Committee on Ways and Means, today announced that the Subcommittee will hold a hearing to examine a number of tax debt collection issues, including: (1) the status of the Internal Revenue Service (IRS) accounts receivable inventory; (2) issues relating to the use of private collection agencies to collect delinquent Federal tax debts; (3) provisions in H.R. 2234, the "Debt Collection Improvement Act of 1995" relating to IRS levy authority; and (4) H.R. 757, relating to Federal tax refund offset authority for purposes of collecting delinquent State tax debts. The hearing will take place on Thursday, April 25, 1996, in the main Committee hearing room, 1100 Longworth House Office Building, beginning at 9:30 a.m.

In view of the limited time available to hear witnesses, oral testimony at this hearing will be heard from invited witnesses only. However, any individual or organization not scheduled for an oral appearance may submit a written statement for consideration by the Subcommittee and for inclusion in the printed record of the hearing.

BACKGROUND:

The IRS accounts receivable inventory is composed primarily of delinquent taxes owed by individuals, corporations and other taxpayers. At the end of fiscal year (FY) 1995, IRS gross accounts receivable equaled approximately \$200 billion, of which 28.5 percent (\$56.9 billion) reflected accrued interest and penalties. This is a \$29 billion increase over the FY 1994 balance. For the past several years, both the General Accounting Office (GAO) and the Office of Management and Budget have identified accounts receivable as a high risk area for the IRS.

To enhance the IRS's efforts to collect delinquent taxes, GAO has recommended that the IRS test the use of private collection companies to support its collection efforts (see e.g., GAO/GGD-93-67, GAO/HR-95-6). The FY 1996 Treasury, Postal Service and General Government appropriation (P.L. 104-52) directed the IRS to use \$13 million of the funds appropriated for Tax Law Enforcement to conduct a pilot demonstration project on the use of private collection agencies to secure delinquent tax debt. IRS issued a "Request for Proposals" on March 5, 1996, to solicit bids from private collection firms and attorneys for contracts to perform certain IRS tax debt collection activities.

H.R. 2234, the "Debt Collection Improvement Act of 1995" contains provisions to enhance the IRS's current authority to collect delinquent tax debt by establishing an automated levy system whereby the IRS would levy upon non-means tested Federal payments. Currently, the IRS has authority to levy upon property (including wages, salary, and other income) to satisfy delinquent tax debt. However, the IRS does not have an efficient, cost-effective process in place with which to identify delinquent taxpayers receiving Federal payments or to expedite issuance of notices of levy upon Federal departments and agencies making payments to delinquent taxpayers.

H.R. 757, introduced by Congressman Andy Jacobs (D-IN), would expand the authority under Internal Revenue Code section 6402 to allow for offset of Federal tax refunds to satisfy past-due State taxes.

FOCUS OF THE HEARING:

The Subcommittee will examine the composition of the IRS accounts receivable and the effectiveness of measures put into place over the past several years to improve its management of the receivables inventory.

The Subcommittee will also examine issues relating to outsourcing certain Federal tax debt collection activities, including: (1) the IRS's pilot private collection demonstration project; (2) legal issues relating to outsourcing, including consideration of which tax debt collection activities carried on the IRS are "inherently governmental" and must be performed by Federal employees, and measures needed to ensure taxpayers' privacy rights; (3) the types of activities that can be outsourced to private collection agencies; (4) the experience at the State level of outsourcing the collection of State tax debts; (5) options for compensating private debt collectors for tax debt collection services; and (6) the effect of using appropriated funds for private debt collection services instead of additional funding for collection efforts by IRS personnel.

In addition, the Subcommittee will consider the ramifications of provisions in H.R. 2234 to enhance the IRS's current authority to collect delinquent tax debt by establishing an automated levy system, and issues relating to expanding the authority under Code section 6402 to allow for offset of Federal tax refunds to satisfy past-due State taxes.

DETAILS FOR SUBMISSION OF WRITTEN COMMENTS:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement, with their address and date of hearing noted, by the close of business, Thursday, May 9, 1996, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements the to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

- All statements and any accompanying exhibits for printing must be typed in single space on legal-size paper and may not exceed a total of 10 pages including attachments.
- Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.
- A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting written comments in response to a published request for comments by the Committee, must include on his statement or submission a list of all clients, persons, or organizations on whose behalf the witness appears.
- 4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or nummary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

Note: All Committee advisories and news releases are now available over the Internet at GOPHER.HOUSE.GOV, under 'HOUSE COMMITTEE INFORMATION'.

Chairman JOHNSON. The Subcommittee will come to order. Today, the Subcommittee will examine a number of Federal tax debt collection issues, including the status of the IRS' accounts receivable inventory; issues relating to the use of private collection agencies to assist in the collection of delinquent Federal taxes; provisions in H.R. 2234, the Debt Collection Improvement Act of 1995, relating to IRS levy authority; and H.R. 757, relating to the Federal tax refund offset authority for purposes of collecting delinquent State debts.

This hearing is held in furtherance of an exchange of letters between the Committee on Ways and Means and the Committee on Government Reform and Oversight during the deliberations on the Balanced Budget Act of 1995. Representative Steve Horn, Chairman of the Government Reform Committee's Subcommittee on Government Management Information Technology, offered an amendment to the Balanced Budget Amendment which embodied a modified version of H.R. 2234. A draft version of the Horn amendment contains several substantive tax provisions within the jurisdiction of this Subcommittee, including provisions relating to the IRS' use of private debt collection firms to assist in the collection of delinquent Federal taxes, provisions to give the IRS authority to impose continuous levies on non-means-tested Federal payments, and a provision to expand the Federal tax refund offset authority under the IRS Code, section 6402, to allow offsets of State tax debts.

At the request of Chairman Archer, these provisions were deleted from the Horn amendment and Chairman Archer and Congressman Horn entered into an exchange of letters with the understanding the Ways and Means Committee would review the provisions within its jurisdiction at its earliest convenience. The issues will be examined at the hearing today, including those items that were deleted from the Horn substitute amendment to H.R. 2234.

Mr. Horn will be testifying at the hearing this morning, as will the Ranking Democrat of the Government Management Subcommittee, Representative Carolyn Maloney. We welcome them to this Subcommittee and before that, we welcome our colleagues from this Subcommittee, Hon. Andy Jacobs and Hon. John Ensign, who will offer testimony on their bill, H.R. 757, relating to the expansion of the Federal tax refund offset authority for State tax debts. A similar provision was included in the Horn substitute.

Today, at this hearing, we will be looking at something that has been of great interest to me, personally, and that is the nature of what we call uncollectible taxes. Because part of dealing with this problem is to begin talking about what is uncollectible in a way that is more accurate and more specifically reflects reality; and in a way that will better communicate to the public what portion of that pot of about \$200 billion is collectible, what portion is not, and for what reasons under what circumstances.

I am interested in making changes in the law that will allow us to explain to ourselves, as a society, far more accurately what portion of the taxes due should have been collected and were not.

It is a pleasure to have you here, Mr. Jacobs and Mr. Ensign, and we will be happy for you to proceed.

[The opening statements of Ms. Johnson, Mr. Matsui, and Mr. Ramstad follow:]

Opening Statement of the Honorable Nancy L. Johnson Hearing to Examine Federal Tax Debt Collection Issues

Today, the Subcommittee will examine a number of federal tax debt collection issues, including: (1) the status of the Internal Revenue Service accounts receivable inventory; (2) issues relating to the use of private collection agencies to assist in the collection of delinquent Federal taxes; (3) provisions in H.R. 2234, the "Debt Collection Improvement Act of 1995" relating to IRS levy authority; and (4) H.R. 757, relating to Federal tax refund offset authority for purposes of collecting delinquent State tax debts.

This hearing is being held in furtherance of an exchange of letters last November between the Committees on Ways and Means and Government Reform and Oversight. During the deliberations on H.R. 2491 (the "Balanced Budget Act of 1995"), Representative Steve Horn, Chairman of the Government Reform Committee's Subcommittee on Government Management, Information and Technology, offered an amendment to the Balanced Budget Act which embodied a modified version of H.R. 2234.

A draft version of the Horn amendment contained several substantive tax provisions within the jurisdiction of the Ways and Means Committee, including: (1) provisions relating to IRS's use of private debt collection firms to assist in the collection of delinquent federal taxes; (2) provisions to give the IRS authority to impose continuous levies on non-means tested Federal payments; and (3) a provision to expand the Federal tax refund offset authority under Internal Revenue Code section 6402 to allow offsets for State tax debts.

At the request of Chairman Archer, these provisions were deleted from the Horn amendment and Chairmen Archer and Horn entered into an exchange of letters with the understanding that the Ways and Means Committee would review the provisions within its jurisdiction at its earliest convenience. The issues that will be examined at the hearing today include those items that were deleted from the Horn substitute amendment to H.R. 2234.

Mr. Horn will be testifying at the hearing this morning, as will the Ranking Democrat on the Government Management Subcommittee, Representative Carolyn B. Maloney. We welcome both of you to the Ways and Means Committee.

The first witness this morning is our esteemed colleague on the Committee, Representative Andy Jacobs, who will offer testimony on his bill, H.R. 757, relating to the expansion of Federal tax refund offset authority for State tax debts. A similar provision was included in the Horn Substitute.

OPENING STATEMENT OF CONGRESSMAN MATSUI

Subcommittee on Oversight Committee on Ways and Means Thursday, April 25, 1996

Today, the Subcommittee on Oversight will be discussing several very important issues about IRS's management and collection of delinquent tax debts. The public expects not only that IRS collect taxes in a fair and equitable manner, but also that IRS collect taxes due the Federal Government in an efficient manner. I look forward to hearing from the Administration about its proposals to streamline the tax debt collection process, as well as from State tax commissioners about their experiences in collecting delinquent tax debts.

The IRS's accounts receivable inventory currently is approximately \$200 billion, which reflects an increase of about \$29 billion since the end of fiscal year 1994. This level of uncollected taxes can not be ignored. It also is important to note that more than half of the IRS accounts receivable amount is what IRS calls "currently not collectible", and IRS has estimated that about \$46 billion is "collectible."

While it is true that no one loves the tax collector, I do think that it is very unfortunate that the fiscal year 1996 appropriations bill for the IRS cancelled one of IRS's major initiatives for collecting delinquent taxes. Specifically, I am referring to the Republican's failure to fund the second year of IRS's 5-year "compliance initiative" to collect over \$9 billion in additional revenues. During the first year of the initiative, IRS collected an additional \$803 million in taxes, more than double the amount expected.

Instead, the Republicans mandated that IRS spend \$13 million to establish a debt collection "project" using private collection agencies and attorneys. IRS will give private collection companies tax debt information on 125,000 taxpayers--individuals and businesses--in Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Nevada, Oregon, Utah, Washington, and Wyoming, for follow-up contact.

I want to note that the IRS Commissioner has been quite outspoken about her opposition to private debt collection in the tax area. The hard-fought taxpayer rights protections that this Committee, and particularly this Subcommittee, have developed over the past decade should not be cast aside in the search for a quick collection fix. Clearly, as IRS implements the mandated private debt collection "pilot program," it is imperative that IRS proceed carefully and protect taxpayer rights. At the conclusion of its test, I look forward to the results of the debt collection contract awards, and Treasury's analysis of the appropriateness of using private firms to collect delinquent Federal taxes.

In addition, the Administration proposes that the Committee adopt legislation to allow IRS to establish an automated levy process whereby 15% of a non-means-tested Federal payment would offset, on a continuous basis, to satisfy a delinquent Federal tax debt. While I recognize that IRS currently has broad authority to levy against taxpayer assets and income sources, including Social Security benefits, the Subcommittee should carefully analyze exactly how hardship cases and Social Security beneficiaries would be treated under an automated levy system. Of significance I should note that the non-tax debt collection provisions contained in the final fiscal year 1996 appropriations bill, which has been signed into law, provides Social Security beneficiaries with a \$9,000 annual exclusion, and Veterans with a complete exclusion, from administrative offset. I would hope that this Subcommittee would carefully consider the underlying policy and administrative rationale for providing such safeguards, in the context of Federal tax debts.

Finally, I look forward to hearing from my colleagues about the proposed offset of Federal tax refunds for certain State tax debts. Currently, more than 30 States, including California, offset State tax refunds for delinquent Federal tax debt. The States now seek reciprocal treatment from the Federal Government which I support. Congressman Jacobs and a distinguished panel of State tax administrators are here today to explain the value of providing State offset authority against Federal tax refunds, and their experience in refund offset programs to date. I personally would like to welcome Mr. Gerald Goldberg, the Executive Director of the California Franchise Tax Board.

Statement of Hon. Jim Ramstad

Before the House Committee on Ways and Means, Subcommittee on Oversight
April 25, 1996

Hearing on Federal Tax Debt Collection

Thank you, Chairwoman Johnson, for calling this hearing today.

It's always important, as we seek to privatize those functions of the federal government that can and should be contracted out, to make sure we are acting with appropriate deliberation and care.

While on its face the issue of whether to contract out to private debt collection services those cases which the IRS does not have the personnel to address seems to make sense -- especially given the fact that some \$200 billion in delinquent debt is currently in the accounts receivable inventory -- there are clearly complicated issues involved.

That's why it is important that this Subcommittee fully investigate the issue before recommending to the full committee the implementation of private collection of delinquent tax debt.

I look forward to the testimony of the witnesses and appreciate their coming here today to help us better understand the pros and cons of private collection.

Chairman JOHNSON. Mr. Jacobs

STATEMENT OF HON. ANDY JACOBS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF INDIANA

Mr. JACOBS. Thank you.

The situation calls for me to be brief, Madam Chairman, and brief I shall be. The bill is H.R. 757. As far as I know, the only question about it is a so-called source tax which was outlawed prospectively but not retrospectively already and my suggestion is that this bill be amended to make clear that the same principal applies retrospectively, which is to say that any refund to any citizen of any State, a Federal tax refund, which is applied to a State tax could not be applied to—I should say a delinquent payment of a State tax—should not be applied in cases where that delinquency involves a source tax on the part of the State.

I think that would remove all controversy from the bill and probably all opposition to the bill. The whole idea is quite simple. Obviously, I am a former police officer who used to celebrate cooperation among police departments. God knows where we would be if we didn't have that cooperation, and this simply applies the same

principal to the Federal and State governments.

Right now, I think 31 State governments allow attachment by the Federal Government of refunds to their citizens where there is valid claim by the Federal Government for delinquent taxes from those respective citizens. So, this would really be a matter of reciprocity as far as those 31 States are concerned. It would induce the cooperation of other States in the two-way street of instruments to recoup delinquent taxes.

I should add that the bill provides that these are not just delinquent taxes in the opinion of the tax collectors, but where final adjudication has occurred that they are, in fact, delinquent taxes.

That is about it.

Chairman JOHNSON. OK.

Mr. Ensign.

STATEMENT OF HON. JOHN ENSIGN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEVADA

Mr. ENSIGN. Thank you, Madam Chairman.

I am very happy to hear what my colleague said about the amendment. That is the most concerning portion of the bill that affects residents from the State of Nevada or really any State who has people moving there from other States, especially retirees. The source tax was outlawed just recently and signed into law. It passed unanimously out of both the House and the Senate.

I recently had several townhall meetings on taxes in my district and I can tell you tax collection is one of the biggest issues with voters. Anything that concerns the IRS and expanding the powers of the Federal Government is very concerning to voters in my dis-

trict but, also voters, I am sure, across the country.

It is normally easier for political bodies to raise revenue by increasing enforcement mechanisms for taxes already in law than it is to raise revenue by passing new taxes or increasing current taxes. This is not to say I oppose attempts to enforce collection from those who have avoided paying taxes legally owed. In fact, in

the recently passed health care bill, my long-term care amendment was paid for by a provision that enforced collection from billionaires who renounced their U.S. citizenship for the purposes of avoiding U.S. taxes.

As Federal legislators, we not only have the right but we have the responsibility to ensure our government's tax collection methods are effective, efficient, but also fair. I want to stress the fairness issue because it is at the root of my concerns with specific provisions of these bills. On January 10 of this year, as I mentioned, President Clinton signed into law the repeal of the source tax.

H.R. 2234, the Debt Collection Improvement Act of 1995 and H.R. 757 contain one provision about which I am very alarmed. The provision is that which expands Federal tax refund offset authority to the States. I understand the Federal Government currently has the ability to offset State tax refunds in the States Mr. Jacobs mentioned and that these States seek reciprocity.

Although I have misgivings about the tax refund expansion to States in collecting claims from their residents, I will not focus on this provision. What I am strongly opposed to are the sections of the bill that allow States to grab Federal tax refund checks from

the residents of other States.

In my opinion, this would directly contradict the intention of the source tax repeal signed into law less than 4 months ago. And, in fact, it would allow States to recoup all past source-tax claims immediately upon enactment. It would also open up a new loophole for States to go after nonresidents.

As an example, for Federal tax year 1994, the IRS returned a little over \$87 billion to individual taxpayers in the form of Federal tax refunds. If, as I understand, about one-half of all the refund offsets would be taken from nonresidents, then that means about \$44 billion are available to be taken by the States from individuals who do not work, live, boat, play in the parks, or drive on the roads in the State that is taxing them.

In a time of tight budgetary times, such a policy would create tremendous incentives for States to look for ways to capture these refunds. There is also a concern regarding due process. Article V, section 1 of our constitution specifically addresses that States will

interact with each other in full faith and credit.

My point is that our judicial system currently has a mechanism for States to collect claims from residents of other States through the courts. While we might agree this is not the most efficient system, I would oppose short-circuiting the judicial system by allowing fiscally aggressive States to bill my constituents or any non-resident.

As a representative from a State that was deeply affected by the source tax, I can tell you we and any other representatives will have to answer letters from constituents who can't understand why another State is taking their Federal tax refunds.

Let us remember that just last week this House passed TBOR, the Taxpayer Bill of Rights, which was written and courageously passed by you, Madam Chairman and Mr. Matsui. I am sure that many would agree we must be very careful in the new ways we look to increase revenue collection to ensure we do not create another tax monster we cannot control.

Allowing States to tap into refunds of nonresidents or source tax 2, as I call it, is such a monster, and I urge this Subcommittee to oppose it.

Thank you, Madam Chairman, for allowing me to testify.
